This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

I.—WITNESSES EXAMINED.

Name.	Description.	Page.
1. Cooke, C. W. Radcliffe, 88th day -	M.P., for Hereford; and chairman of the National Association of Cider Makers.	1
2. Spencer, Aubrey, 88th day - -	Assistant Commissioner. Reported on the counties of Oxford, Gloucester, Berks, and Wilts, the neighbourhood of Taunton, Somerset, and on the Vale of Aylesbury and county of Hertford.	10
3. Speir, John, 89th day - -	Assistant-Commissioner. Reported on the counties of Ayr, Wigtown, Kirkcudbright and Dumfries.	17
4. Baker, George Frederick, 90th day	Tenant farmer and miller in Northamptonshire - -	33
5. Price, Langford Lovell, 90th day -	Treasurer of Oriel College, Oxford - - -	38
6. Pringle, Robert Hunter, 91st and 92nd days.	Assistant-Commissioner. Reported on the counties of Bedford, Huntingdon, and Northampton; also on South Durham, and North and East Ridings of Yorkshire.	41 & 58
7. Hope, James, 92nd day - -	Assistant-Commissioner. Reported on the counties of Roxburgh, Berwick, Selkirk, Peebles, Linlithgow, Edinburgh, Haddington, Banff, Nairn, and Elgin.	68
8. Eyre, George Edward Briscoe, 93rd day.	Landowner in the New Forest - - - -	75
9. Rew, Robert Henry, 93rd and 112th days.	Assistant-Commissioner. Reported on the Heathfield District of Sussex; on North Devon, Dorset, Norfolk, and the Salisbury Plain District of Wiltshire.	82 & 430
10. Berry, Walter Wheeler, 94th day	Hop-grower and farmer in Kent. Representative of the Canterbury Farmers' Club and Chamber of Agriculture. A member of the Council and Executive Committees of the Mansion House Association on Railway and Canal Traffic.	93
11. Samson, Ernest, 94th day - -	Secretary of the National Association of Cider Makers -	97
12. Fox, Arthur Wilson, 95th and 111th days.	Assistant-Commissioner. Reported on the counties of Lincoln, Suffolk, Cumberland, and Cambridge.	104 & 408
13. Taylor, Seth, 96th day - -	Flour merchant, and owner of the Waterloo Mills, London.	120
14. Hughes, Colonel Hugh Robert, 96th and 104th days.	Agent for Sir Watkin Williams Wynn, and owner of land in Wales.	131 & 270
15. Gillespie, Rev. John, 97th day -	A Director of the Highland and Agricultural Society -	139
16. Kinnear, John Boyd, 97th day -	Landowner in Fifeshire, and formerly M.P. for East Fife	146
17. Davidson, James Inglis, 97th day -	Farmer and land valuator in Scotland, and an Inspector of Estate Improvements under the Board of Agriculture.	148
18. Hannah, J. M., 98th day - -	Tenant-farmer in Ayrshire - - - -	155
19. Munro, William, 98th day -	Assessor of Railways and Canals for Scotland. Formerly Government Assessor of lands and heritages in Lanarkshire, and Inspector of Stamps and Taxes for the northern division of Scotland.	158
20. Black, James, 98th day - -	Tenant-farmer and landowner in the county of Elgin -	163
21. Stuart, A. R., 99th day - -	Tenant-farmer in Banffshire - - - -	172
22. Peile, H. R. B., 99th day - -	Agent for Sir Michael Shaw Stewart in Renfrewshire -	181
23. Dickie, Robert, 99th day - -	Tenant-farmer in Argyllshire - - - -	185
24. Elliot, Walter, 99th day - -	Tenant-farmer in Selkirkshire - - - -	189
25. Gordon, Alexander Moreson, 99th day.	Landowner in Aberdeenshire. Convener of the County of Aberdeen, and Chairman of the Committee of the County Council administering the Contagious Diseases (Animals) Acts. Vice-President of the Royal Northern Agricultural Society, and a Director of the Highland and Agricultural Society.	193

Name.	Description.	Page.
26. Flockhart, J., 100th day - -	Land Agent, Fifeshire - - - - -	196
27. Gilchrist, John, 100th day -	Farmer in Lanarkshire, and lecturer on Agricultural subjects in Scotland.	202
28. Elder, Hugh, 100th day - -	Tenant-farmer in Haddingtonshire, and President of the Scottish Chamber of Agriculture.	206
29. Dun, John, 100th day - -	Wool merchant and tenant farmer in Selkirkshire -	208
30. Guild, Alexander, 100th and 101st day.	A member of the firm of Reid and Guild, Writers to the Signet, Edinburgh.	212 & 215
31. Gibson, Walter H., 101st day -	Tenant-farmer in East Lothian - - - -	219
32. Drew, James, 101st day - -	Factor of the Galloway Estates - - - -	221
33. Fyshe, James, 102nd day - -	Tenant-farmer in Fifeshire - - - -	225
34. Ballingall, John, 102nd day -	Tenant-farmer in East Fifeshire - - -	231
35. Mitchell, John, 102nd day - -	Tenant-farmer in North Fifeshire - - -	235
36. Smith, Andrew, 102nd day -	Tenant-farmer in East Lothian - - - -	237
37. Riddell, George, 103rd day -	Grazier in East Lothian, formerly tenant farmer in Midlothian.	241
38. Campbell, Alexander, 103rd day -	Tenant-farmer, and representative of the Breadalbane Agricultural Association.	248
39. Rutherford, Walter, 103rd day -	Tenant-farmer in Perthshire, and agent in Roxburghshire	253
40. McConnell, William, 103rd day -	Farmer in Wigtownshire - - - -	257
41. Gibb, Dr. R. S., 103rd day - -	Farmer in Berwickshire - - - -	263
42. Russell, Thomas, 103rd day -	Chairman of the Teaching and Staff Committee of the Glasgow and West of Scotland Technical College, and Chairman of the County Council of Buteshire.	266
43. Wright, R. Patrick, 103rd day -	Professor of Agriculture in the Glasgow and West of Scotland Technical College.	267
44. Roberts, Thomas, 104th day -	Tenant-farmer in Carnarvonshire - - -	277
45. Nunnelley, Edward Miall, 105th day.	Farmer in East Northamptonshire - - -	281
46. Britten, Richard, 105th day -	Tenant-farmer in Northamptonshire - - -	293
47. Finn, George W., 105th day -	Farmer and auctioneer and valuer, Faversham - -	297
48. Jenkins, Blandy, 106th day -	Landowner in Glamorganshire - - - -	302
49. Pennant, Philip Pennant, 106th day.	Landowner and Chairman of Quarter Sessions in Flintshire, Chairman of the Flintshire and Denbighshire Dairy School, late President of the Vale of Clwyd Chamber of Agriculture, and Treasurer and Member of the Agricultural Committee of the North Wales University College.	310
50. Williams, Owen, 106th day -	Tenant-farmer in Denbighshire - - - -	321
51. Jones, Thomas, 107th day - -	Tenant-farmer and valuer in Merionethshire - -	327
52. Fisher, John Thomas, 107th day -	Tenant-farmer in Pembrokeshire - - -	335
53. Dutfield, Thomas, 107th day -	Farmer in Monmouthshire; Chairman of the District Council, Member of the County Council, and a Vice-Chairman of the Newport Board of Guardians.	341
54. Davies, William, 107th day -	Tenant-farmer and valuer, and County Councillor in Denbighshire.	348
55. Darby, Alfred, 108th day - -	Land Agent in Essex and a Land Office Inspector under the Board of Agriculture.	353
56. Turnbull, Robert E., 108th day -	A member of the firm Alfred Mansell & Co., Land Agents, Valuers and Auctioneers, Shrewsbury. Formerly Head Agent for the Caworth Castle Estate Cumberland, the Norfolk Estate, Northumberland, and the Castle Howard Estate, Yorkshire.	359
57. Price, Owen, 109th day - -	Farmer and valuer in Breconshire, Chairman of the Craig School Board, Chairman of the Maescar Parish Council, and Secretary of the Dwyrmock Agricultural Society.	368

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON

AGRICULTURE.

At 23, Great George Street, Westminster, S.W.

Eighty-eighth Day.

Friday, 26th April 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Rt. Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary*.
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries*.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

Mr. CHARLES W. RADCLIFFE COOKE, M.P., called and examined.

46,152. (*Chairman.*) You are, as we all know, Member for Hereford, and Chairman of the National Association of Cidermakers?—Yes.

46,153. You have given great attention to the subject of the cider industry?—I have.

Acreage of orchards in England.

46,154. Will you tell us in general terms what are the points which you have to bring before us in connection with that industry?—The principal cider districts of England lie in the west Midland and south-western parts of the island. In the west Midland district the principal cider counties are Hereford, Gloucester, and Worcester; and in the south-western district the counties of Devon and Somerset. These five counties contain, according to the latest agricultural returns under orcharding, exclusive of market gardens and cottage gardens, 114,614 acres. This area in most of these counties would in the main be occupied by vintage apple, and pear trees, and may be considered the cider producing district of England *par excellence*. The counties adjacent to these districts of Cornwall, Dorset, Monmouth, Salop, and Wilts contain in the aggregate 21,118 acres under orcharding, mostly apples and pears, and may be termed a semi-cider producing district. The total area in all these districts under orcharding is therefore 135,732 acres. It has been the practice of writers on this subject to deduct one-sixth of this for land under apples and pears for the table, and for other fruits grown in orchards. Making this deduction the total area under vintage fruits would be 113,110 acres.

46,155. (*Mr. Lambert.*) What is your definition of "vintage fruit"?—Fruit exclusively used for the making of cider or perry, though I should say that there are some vintage apples which are good for cooking, but no vintage pears that I know of. I think that this deduction of one-sixth would do fairly well for Herefordshire but would be insufficient for some of the other counties, such as Worcestershire, where there are considerable orchards, outside the market garden districts, of cherries and the like.

46,156. (*Chairman.*) Has the acreage been decreasing, or the reverse, of late years?—It has been increasing mostly, but in some counties, not so much as in others. It has been a little decreasing in some.

46,157. Can you state what the increase has been as compared with 10 or 20 years ago?—There is a table in the last Agricultural Returns which exactly goes into that, and to that I beg to refer the Commissioners. I should prefer to confine my observations in the main to the county of Hereford and the parts adjacent thereto, as that is the district with which I am best acquainted. The situation, climate, and soil of Herefordshire are so well described in the Agricultural Survey of the county made for the Board of Agriculture about 100 years ago, and reprinted with additions by the orders of the Board in 1805, that I need do no more here than refer the Commissioners to that report, and say that both the soil over the greater part of the county, and the climate in all but the extreme westerly and north-westerly parts are admirably suited for the growth of the apple and the pear, the climate being soft and mild, and the soil mostly a rich loam. About Ross, in the county of Hereford, there is a considerable stretch of light rye land which is not now considered so fitted for vintage fruit as the deeper soils in the valleys of the Frome, the Lugg, and the Leddon. But in former years an opposite opinion was held of these ryelands which were then celebrated for the quality of the cider produced on them. I have no doubt.

Orchards in Herefordshir.

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

that with proper attention and suitable sorts of fruit, they would regain their ancient celebrity in this respect. Indeed, there is one orchard near Ross planted with Kingston black apples, an apple very well-known in Devonshire and Somerset, and introduced into Herefordshire from Somersetshire by a Mr. Palmer between 40 and 50 years ago, which is noted for the superior quality of the cider made from it. The total cultivated area of Herefordshire is by the latest published returns 445,608 acres, of which a 17th part or rather more, 16·8, is orcharding, of which there are 26,435 acres, say 26,400. Deducting one-sixth from this would leave 22,000 acres of vintage fruit. I think this an under-estimate on many grounds. It is not compulsory on occupiers to make these returns, and many neglect to do so; and there are throughout the county fruit trees, singly and in clumps, the remains of former orchards, which it is impossible to include in the returns of orchards. I have many such on my own property, and when I farmed part of it I never attempted to include these in the returns, although some are great pear trees yielding in a fair season from 50 to 100 gallons each, and more. Mr. Evelyn, in his "Pomona" says, of some pear trees they will yield three or four hogsheads, and as he almost always speaks of Herefordshire, I presume he means the hogshead of Herefordshire, which consists of 100 to 110 gallons, not the hogshead of Somerset or Devon which holds 54 or 60. But taking the area under vintage fruit to be as above, namely, 22,000 acres, what will be the average annual production of cider and perry? Old writers such as Evelyn, Dr. Beale, Worlidge, and others made, so far as I can judge, a higher estimate of the yield of orchards when in full bearing than we should do now. In their day they computed the yield of an acre of vintage fruit to be from 600 to 1,000 gallons. At this rate the orchards of Herefordshire should yield from 13,200,000 to 22,000,000 gallons a year. The authors of the Herefordshire "Pomona" give 200 gallons per acre as a very low average, and 3*d.* per gallon as a very low price. At this rate the orchards of Herefordshire should yield 4,400,000 gallons a year, of the value of 55,000*l.* or 2*l.* 10*s.* per acre. Mr. Samson, the Secretary of the National Association of Cidermakers, who is acquainted with the county of Somerset, tells me for that part of the cider district this is a very low estimate, and he will give you, if you call him, an estimate of what the total yield there is. I should be disposed to put the average yield at 300 gallons an acre, and the value at 4*d.*, though I should consider this still a low estimate. The total yield for the county would then be 6,600,000 gallons, and the value 110,000*l.*, or at the rate of 5*l.* per acre. I have here some estimates of the yield per acre of small holders whose land I am acquainted with. J. M., 2½ acres of orchard in the parish of Much Marcle, in the county of Hereford—he has over-estimated his acreage, which is really two acres and a quarter, but taking his view he makes on an average six hogsheads of 110 gallons each of cider and perry a year, which sells at an average price of 7*d.* per gallon. This works out at 7*l.* 14*s.* per acre, taking his estimate of the land—it should be more, of course, showing that my estimate of 5*l.* an acre was not a high one. Also six hogsheads a year of 110 gallons each, sold at 7*d.* per gallon, come to 19*l.* 5*s.*; deducting labour, 2*l.* 5*s.*, the return per acre is 6*l.* 16*s.*

Production of cider in Herefordshire.

46,158. (*Captain Owen Thomas.*) Is that 7*d.* per gallon the retail or wholesale price?—7*d.* per gallon is the retail price. He sells as a retailer. When I say "retailer," of course I do not mean retailing in the legal sense of selling small quantities; I mean that he sells to his customers hogsheads at a time; he sells 110 gallons and gets 7*d.* a gallon for them.

46,159. (*Viscount Cobham.*) He does not sell to the trade, do you mean?—He may sell to the trade. He gives me an account for the last few years of what he has made, and he averages that, and he says he has seldom sold cider below 6*d.*, and he has had as much as 11*d.*

46,160. Partly wholesale and partly retail?—A man having no shop would never sell less than a hogshead or a 60 gallon cask, because he would have no vessels to put the liquor into; and he does not bottle. I buy some cider from him every year lately, and I always give him when good 8*d.* a gallon. He is in my employment.

Orchards in Herefordshire and other counties compared.

46,161. (*Chairman.*) Might I ask you whether these orchards are generally parts of farms?—Yes.

46,162. There are not very many people who cultivate the thing exclusively, and do nothing else?—They are almost invariably part of the farm.

46,163. Every farm has a few acres?—Almost every farm has a few acres.

46,164. How many generally?—It is quite impossible to say.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,165. What is the kind of average?—Six, eight, ten, fourteen, fifteen, or twenty acres.

46,166. I see that Hereford has a much larger proportion of this acreage than any other county?—Yes, it has.

46,167. As compared with Devonshire it is three times as much?—Yes, but then a great deal of Devon is moorland.

46,168. As compared with Somersetshire it has twice as much?—Yes, it has.

Condition of Herefordshire orchards.

46,169. What are parts of Herefordshire where they mainly exist—all over the whole county?—Generally all over the whole county. The best orchards, the finest fruits, grow in the valleys of the Leddon, Lugg, and Frome. There is also some very fine cider and perry too, especially good perry, grown in the neighbourhood of Ross. As I mentioned before, the pear tree will flourish where the apple will not. In this particular instance I have given, the land is the man's own property, and it is all he has. It is a little orchard of his own. The present condition of the orchards of vintage fruit is not so good as it might be. Some of the old sorts have not continued to be propagated owing partly to the teaching of Mr. Thomas Andrew Knight, a well-known horticulturist and philanthropist, who flourished at the end of last century and the beginning of this in Herefordshire, whose doctrine was that no sort of fruit lasted longer than the original tree which gave rise to it. This theory has been amply disproved, but for some years it had a vogue, was copied and adopted by writers on fruit culture of the period, and doubtless had its effect in checking the continued grafting of the older sorts. Then the attention of farmers at the end of last century and the first half of this was directed to corn growing, from which more regular returns were received than from fruit. Consequently, the orchards were neglected, and many grubbed up. Moreover, the short-sighted policy of cider dealers and manufacturers in watering the liquor and doctoring inferior stuff brought the liquor into general discredit and lessened the demand for it. Hence neglect to prune and renovate orchards, and carelessness and want of cleanliness in the making of the cider and perry. Some planting has been done of late years, but until quite recently that has been in the direction of planting pot fruit, which is fruit for sale for the table, rather than vintage fruit. Efforts were made under the auspices of the Woolhope Naturalists Field Club, commencing nearly 20 years ago, to revive some of the most celebrated sorts, such as the Fox Whelp and Skyrme's Kernel, amongst apples, and the Taynton Squash among pears, but I do not think that these efforts have met with much success. There have, however, always been persons interested in the industry who have devoted attention to the introduction and propagation of good vintage fruits. To them we owe some excellent sorts, such as the Eggleton Styre, raised by the late Mr. W. Hill, of Lower Eggleton, near Ledbury, Herefordshire, about 1840; the Kingston Black, introduced into Herefordshire by the late Mr. Palmer, of Bollitree, near Ross, about 1820; Pym Square, originating from a pip planted by Mr. Izard, of Eastnor, Ledbury, about 1840; and the Rejuvenated Fox Whelp, restored at Cowarne by Mr. Yeomans, about 80 years ago. Our orchards, besides suffering from neglect, are greatly damaged by destructive insects which in many years occasion the ruin of the crop. Of these the American blight, the winter moth, and the Codlin moth are the most destructive, especially the latter. It is possible, no doubt, by lime washing the trees, applying insecticides, and in other ways, as set out in the report of the Board of Agriculture on Insects, &c., injurious to Crops, issued in 1892, to lessen and perhaps ultimately eradicate these pests; but none of the processes, so far as I know, are certain in their effect, and all are expensive in their application. It is useless for one farmer to adopt these remedies if others in the neighbourhood neglect them, and we cannot expect concerted action unless under the impulse of the Legislature, and with the assistance of the State. This, I consider, one of the most important parts of this subject, as we cannot hope to promote the trade in ciders unless the orchards from which the cider is to be made are in a healthy and productive state. The following are, in my opinion, some of the best sorts of cider fruit. I will take the apples first:—Cider Lady's finger (early, hardy, free bearing); Coccagee, Devon (late, hardy, free bearing); Cowarne Red (very hardy); Cummy Norman (hardy and free bearing); Dymock Red, Eggleton Styre (midseason, hardy, free bearing); Forest Styre, Fox Whelp, Hagloe Crab, Kingston Black (late), Royal Wilding (late, hardy, shy bearer); Skyrne's Kernel (late, hardy, shy bearer); Strawberry

Varieties of cider apples.

Mr. C. W. E. Cooke, M.P. 26 Apr. 1895.

Norman (midseason, free bearer); Tanners Red (hardy, late); White Bache (free bearer); Woodsill (midseason). Then for pears I take the following:—Barland (early); Black Huffcap, Butt pear (late); Longland (late, hardy, free bearer); Moorcroft (early); Oldfield(midseason, free bearer); Pine pear (late, hardy); Red pear (midseason, very hardy); Rockpear (late, hardy); Taynton Squash (very early, hardy free bearer). A gentleman in Hereford, who has a fine taste in cider, and has frequently judged at the Royal and other shows gives me another list in which he to some extent agrees with me. The following is his list:—Apples, Tanner's Red, Red Styre, Yellow Styre, Eggleton Styre, Styre Wilding, Fox Whelp, Skyrme's Kernel, Old Redstreak, Royal Wilding, Cherry Pearmain, Cowarne Red, Burford Red, Black Kingston, Joeby Crab, Dymock Red. Pears:—Barland, Huffcap Oldfield, Taynton Squash. I have been particular in enumerating the best sorts of vintage, apples and pears, because there is, I know, a notion abroad, it is rather a revived notion than a new one, that cider and perry can be made from any apples and pears, no matter what. This is a mistake. Cider can indeed be made from table fruit, but it is poor and thin in quality owing to the absence in such fruit of constituents, the chief of which is tannin, which are essential to the production of cider and perry of prime quality and long keeping. The best authorities on the subject both French and English agree on this head. A pear from which is made one of the most celebrated of all perries, a perry frequently recommended by medical men in nephritic disorders, namely, the Barland pear, is so nauseous to the taste that even pigs will not eat it. I lay some stress on this point, because a recent writer on cider, a gentleman whom I know very well, and whom I have suggested should be called by the Commission, because he is an able, clever, energetic man, engaged in the trade, has in a paper which appeared in last year's Journal of the Bath and West of England Society, advocated the cutting down of all the existing vintage fruit trees, which cover, as I have shown, over 100,000 acres, the planting in their stead of table fruit, and the making of cider from the refuse thereof after the best has been disposed of for culinary and dessert purposes. Such a course, if it were ever adopted, which is not likely, would be ruinous to the English cider trade. The orchards of vintage fruits now in being produce, when the liquor is well made, ciders and perries which for quality are unsurpassed the world over. No cider and perry made in America or on the Continent can for quality touch cider and perry made from the best sorts of vintage apples and pears. We have in this an advantage over our foreign competitors which we should be fools to throw away. Cease to make cider of this class, and make it only from table fruit, and we should place ourselves on an equality with our foreign rivals. Besides, whilst our young orchards were growing up, the Americans would gain possession of our markets, and as we should then have no liquor of superior quality to set against theirs they would indubitably retain that possession. I will, if the Commissioners wish, describe the process of cider making, and the improvements that have been made therein of late years, but I hardly think it essential to this inquiry that I should do so. I will, however, shortly mention the practical changes that have taken place in cider-making. There has been a tendency of late years among farmers to sell their vintage fruit instead of making it into cider themselves—some of the sharper sorts for jam making—making jams called by other names than apple jams—but the bulk of it to manufacturers who make cider and perry on a large scale. Others have the habit, which has long prevailed, of grinding their fruit and pressing it, and selling the juice just as it comes from the press to the dealers in whose hands it undergoes the process of fermentation which makes cider and perry of it. The advantages of this course are that the farmer saves trouble, and that where the manufacturer understands his business, and has acquaintance with the qualities of the various sorts of fruit which he buys can produce a liquor in larger quantities and more uniform in character than a number of different farmers could, and can therefore meet better than they could a demand for a liquor that will not vary much in appearance, strength, and flavour. The disadvantages are that the fruit sold in bulk often contains sorts which mellow at different periods. That is the reason why on farms cider-making lasts over such a long time, from September to December, and even into the new year, because the sorts are not all ready for grinding at once. These often contain sorts which mellow at different periods; the farmer naturally wants to sell all his fruit at the same time, and he knocks them all down, whether ripe or not.

Changes in cider making.

46,170. Why should not the famer sell at different periods?—Because there would be so much more haulage and more expense. To make good liquor these ought to be kept separate, and made at different times. In transit, too, the fruit is liable to be much bruised. For instance, the fruit is gathered and placed in heaps by the grower. It is then loaded in waggons and taken to the railway station, there unloaded, and put into trucks. At the station of destination it is unloaded again and put into waggons, and finally unloaded from these and placed on the premises of the manufacturer. These frequent handlings of the fruit often so knock it about that you would not be able out of thousands of apples to find one without a bruise. There are, I am glad to say, some manufacturers who are as careful as they can be to keep the various sorts separate, who offer a higher price to farmers for bagging their fruit, and who endeavour to grind the sorts at the time when they are fit for the press. On the other hand, there are, I am sorry to say, manufacturers as well as dealers who are far from scrupulous, who, to use a common expression, make five hogsheads out of three by the addition of water, and who do not hesitate in scarce seasons to buy foreign cider, blend it with English, and sell it to the customer as all English. There are also other practices, difficult to discover and detect, which have brought discredit on the cider trade and have given a bad name to the liquor itself, and so in the long run defeated the object of those who follow them by lessening the demand for this drink. Now, whilst I am of opinion that for the production of cider of somewhat low grade but of uniform quality, for which for draught purposes if sound and genuine, there will, I believe, be an increasing demand (I have a letter this morning from Wolverhampton—I have letters every day—asking me why they could not get cider there), it is desirable and convenient that cider should be made on a large scale in manufactories, I nevertheless think that the highest class ciders and perries will always be best made by such of the growers themselves as will give personal care and attention to the subject. It is, I think, a mistake to liken cider and perry solely to beer, of which liquor it may be said that practically only one sort exists. Cider would be more truly likened to the light wines of France. There we have the *vin ordinaire*, a liquor of low alcoholic strength, drunk freely on draught; yet side by side with this we have the richer, choicer, and more highly flavoured clarets, such as Château Lafitte and Leoville, for which there is a large demand, and at a remunerative price. Now we have from our best vintage fruits ciders and perries which exceed in excellence common draught cider as much as the highly flavoured clarets do *vin ordinaire*. If you want to know how good cider was made from the best fruits, and in the best manner, you should read a book which, no doubt, all the Commissioners have heard of, and probably have, that is Evelyn's "Pomona;" there is collected, at any rate in the fifth edition, which I have, many testimonies as to the excellence of the cider then made, and comparisons with the best wines of France—all to the discredit of those wines. These prime ciders and perries we should not, in my judgment, neglect, but, on the contrary, try to increase the quantity of, and the demand for, because, as I have already said, we have in them liquors with which no continental or American rivals can compete. I hope to live to see the day when it shall be as much a matter of pride for a country gentleman to have in his cellar for his friends the finest sorts of Foxwhelp and Styre cider, and Taynton squash and Oldfield perry, as it is now to have choice foreign wines at five or six times the price. That was the feeling at the latter end of the 17th century and the beginning of it, and during the greater part of the 17th century, and I do not see why it should not be renewed. I will not take up the time of the Commission with enlarging on the wholesome qualities of cider and perry, for they are now generally acknowledged. We in the cider districts have long known that for certain kidney complaints they are invaluable, and that cider is a specific against gout; but medical men are now slowly acquiring the knowledge we have long possessed. In Germany and France cider is now prescribed for gout, and a doctor in London, who is a specialist in that disorder, is making, at my request, experiments with cider and perry, with which I have supplied him, and, as far as he has gone, with favourable results. That there will be a considerable demand for good cider I have no manner of doubt, and especially in the North of England. I was at Buxton in the autumn of this last year, and took my own cider up with me, thinking I should not find any. However, I did find some there, and at one public-house to which I went I was told they were out of it, so I could not have any at that time. I was told that in the summer time they sold quite as much cider as beer to the working classes.

Mr. C. W. E. Cooke, M.P. 26 Apr. 1895.

Cider and wines compared.

46,171. How do you account for the neglected state of the orchards?—I thought I partly accounted for it by saying that farmers turned their attention at the latter end of last century and the beginning of this to corn growing,

Neglect of orchards.

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

corn was then, as we all know, at a very high price, and from which more regular returns were derived, and also from the fact that the cider dealers at that period were unscrupulous enough, for their own ends, to deteriorate the liquor and render it very distasteful to the general public, and that of course lessened the demand for it. Farmers became therefore careless in the production of a drink for which they could not get so good a price as they had formerly got, and they made their liquor in a very rough way. The result was that in their own neighbourhood the labourers and the people accustomed to it could drink this rough cider and liked it very much, even when it approached vinegar, but no stranger coming into the country could stomach it.

Fall in price of cider.

46,172. Is there any fall in the price of the average produce?—Yes, there is a decided fall, but I cannot say exactly when the fall began or how it proceeded.

46,173. I mean during the last 15 years?—Yes, I think so. That is partly owing to the fact that 20 years ago or more—more than that possibly—farmers used to give their men a great deal of cider at harvest time, and farmers then sold a great deal of cider at 4*d*. or 5*d*. a gallon for harvest work. There is not nearly so much now demanded, and the labourers drink an inferior kind of beer instead. I was told the other day by a farmer in my own parish that, on looking into his father's books of some 60 or 70 years ago, he found that his father used to sell cider straight from the mill, no doubt of good quality, at one shilling a gallon, whereas the price is now 2½*d*. or 3*d*. per gallon, no doubt the quality is not quite so good. Then there were facilities for the disposal of it. At Upton-on-Severn there was a kind of port which they could reach, whence it could be sent to Bristol, but that does not exist now.

46,174. Have the farm hands taken to drinking something else in harvest time, or do they drink less than they used to do?—They do not drink less, I think. They drink inferior beers called farmer's beer. I never tasted it.

46,175. They drink more beer than they did?—I think they drink rather more beer.

46,176. Have they given up cider?—I think to some extent they have.

46,177. And that to some extent has diminished the demand for the lower qualities, I suppose?—It has to some extent.

46,178. Now take the higher qualities of cider, has the price fallen, or has the price been maintained?—The price of that kind of cider is rather a variable quantity, but I think it is fairly well maintained.

Value of cider orchards.

46,179. What is the annual value of a good cider orchard?—Do you mean to rent, or for the occupier?

46,180. Is there any means of ascertaining what the average value of a good cider orchard is?—Those farmers who sell their vintage fruit as a rule never like to sell it under 5*l*. an acre.

46,181. Sell their fruit?—They never like to sell their vintage fruit at less than 5*l*. an acre, and they get more for sometimes.

46,182. What will the superior qualities sell for?—The price varies enormously, according to the quality, and according to the years. In years when there is plenty of fruit you would not get more than 1*l*. a ton at the lowest, and from that you would go to 4*l*. a ton at the highest. Some of the manufacturers give for choice fruits, and fruits carefully selected, 8*s*. or 10*s*. a ton more than they do for inferior fruits or fruits less well handled. I have a letter here from a manufacturer to that effect.

Varieties of cider apples.

46,183. Have any varieties of cider apples disappeared altogether?—Yes, I think so. I think many mentioned by Evelyn, and the old writers have gone entirely. I do not think that you can find the old Red Streak which was very much spoken of by Phillips in his "Cider"—you do not get the true Red Streak now.

46,184. Are there any new varieties?—Yes.

46,185. Of excellence?—Well there are some new ones; I mentioned a few of them. One is the Eggleton Styre, which grew from a pip about 40 or 50 years ago, planted by Mr. Hill, of Eggleton, near Ledbury. Then there is the Kingston Black, which was introduced from Somersetshire into Herefordshire; I do not know how long that has been in existence in Somersetshire. There is another apple called Pym Square, after the name of an apple in Devonshire, but not quite the same apple, it is better known in Herefordshire as Izard's Kernel; it grew from a kernel planted by Mr. Izard, in Eastnor, about 1840, and it is a very good sort.

46,186. How long does it take for an apple orchard to get into good bearing?—They will bear after seven, eight, or nine years.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,187. How long does it take them to get into full bearing?—From 15 to 20 years.

Development of an apple orchard.

46,188. Then do they go on for a very great number of years?—They will go on for 50 or 60 years or more.

46,189. Do the landowners generally allow their tenants to increase their orchards, or no?—The subject has hardly come under discussion, because the matter has not been mooted.

Acreage of orchards in Herefordshire.

46,190. I see that in the year 1882 the orchards in Herefordshire were 27,000?—Yes, they have decreased a little.

46,191. 1892 they were 26,000; so there is some reduction?—There is a reduction.

46,192. Then apparently between 1893 they had risen again to 26,400?—Yes.

46,193. Showing a slight increase?—Yes; that is from the planting.

46,194. So that you may say of late years it has been very stationary?—Rather stationary.

46,195. There has been no new planting?—No.

46,196. That is, on any scale?—Not of vintage fruit to any great extent, but there has been some of pot fruit.

46,197. (*Viscount Cobham.*) Apple culture is only a subordinate part of the farmer's business, for the most part, is it not?—Now it is only that, but it might be made a very important part, and was.

46,198. As long as it is only a subordinate part of the business it is not likely to be very much improved, is it?—I think there is a very great opening for the small holders, such as the man I just now mentioned. I dare say the larger farmers will, to save themselves trouble, be inclined to sell their fruit to manufacturers who will establish themselves at more centres in the districts than they have as yet.

Size of holdings.

46,199. In Herefordshire are the holdings held by farmers mostly of 50 to 100 acres or so?—150 acres is about the average, I think, of what we call the big farms.

46,200. Does the possession of an orchard affect the rent of the farm?—Of course it must be taken into consideration.

46,201. But it does not generally make very much difference, does it?—Yes, no doubt of it; unquestionably it does.

Orchards and cider in Vale of Gloucester.

46,202. (*Sir Nigel Kingscote.*) Do you know the vale between Gloucester and Bristol?—Not very well. I know what you mean; I know about it, but I do not know it personally.

46,203. There are very large orchards there, are there not?—Yes, and beautiful fruit.

46,204. And a great deal of what is wrongfully called, as I hold, rough cider is made there?—Yes.

46,205. Do you know the quality of it?—Yes, I know the quality; it is a good strong cider.

46,206. The results are very different from the other cider; I am talking of the best of the rough cider. Have you had any experience in the selling of that?—No, but I have tasted some which was 100 years old.

46,207. Is there any market for that?—There is not the slightest doubt that there is a market for good cider.

Market for cider.

46,208. But where?—I cannot tell you where there is a market for that cider, but I have been told by everyone who produces cider that they find no difficulty of disposing of the cider if it be good.

46,209. I am informed to the contrary as regards this rough cider, which they used formerly to be able to sell to the people in the neighbourhood to drink; I am told that they have a great difficulty now in disposing of it?—When you speak of rough cider, I suppose you mean what we call hard cider, that is, cider so fermented that all the sugar is turned into alcohol.

46,210. Yes?—The general public will not take that cider; they want something a little sweeter. The fermentation ought to be stopped before it gets to the point of turning all the sugar into alcohol.

46,211. Then you do not think there would be very much made out of that cider?—There might be if it was made in a better way. There would be an immense sale for it if the fermentation was stopped at the proper time, and if the farmers were scientifically taught how to stop that fermentation.

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,212. Then you think it is the fault of the manufacturer?—It is the fault of the manufacturer. The cider itself is extremely good in quality there, or it would not last 100 years as I have mentioned. That rough cider, although it is not so pleasant, is more wholesome than the sweet cider; no doubt of it.

Rent of orchard land.

46,213. (*Mr. Whitehead.*) What is about the rental of orchard land in Herefordshire?—I could hardly say, because the orchards are let together with the farms; it would be about 2*l.* 10*s.* or 3*l.* an acre, or something like that, if let separately.

46,214. (*Viscount Cobham.*) That would be good grass land?—Grass in an orchard is a great consideration, because it is generally better there than elsewhere.

Extent of orchard land.

46,215. (*Mr. Whitehead.*) Is there much land that would grow vintage fruits in Herefordshire?—Yes.

46,216. Besides what is already planted?—Yes.

46,217. Then why is not more planted; what is the reason?—I thought I mentioned the causes, and that I said that the deterioration of the orchards, which would be naturally the same as causing them not to be planted, is due to the ceasing of the demand for cider and perry, and to the making of cider of the class described by Sir Nigel Kingscote, which is only consumed within the district by people who like it.

Extent of cider industry.

46,218. (*Mr. Chaplin.*) Your evidence is confined, I think, mainly to the county of Hereford and the neighbourhood?—Yes. I know somewhat of Worcestershire, where there are a great many fruit trees—pear trees chiefly—and I am on the borders of Gloucestershire.

46,219. In those districts the growing of apples and pears is a very important part of the agricultural industry, is it not?—It undoubtedly is.

46,220. What is its proportion compared with the whole industry?—What is the proportion of the one industry to another?

46,221. I mean what proportion of the agricultural industry is represented by the cider industry in those parts?—I could not answer that question at all.

46,222. But still it is quite sufficient to be a very important element?—It is a very considerable industry.

46,223. I think you said that the demand for cider had been falling off?—The demand for cider fell off a few years ago; now, owing to the efforts that have been made in various directions, it is considerably increasing.

46,224. Efforts in what direction—for the improvement of the cider?—For the improvement of and for drawing the attention of the public to the excellence of the liquor.

Demand for cider.

46,225. Is the demand now so steadily increasing?—The demand now is increasing.

46,226. Therefore you think that with certain assistance the cider industry might be considerably developed?—Very much.

46,227. And that you would regard as very important to the agricultural industry in those parts?—Yes, decidedly so.

46,228. (*Chairman.*) Has the price risen on the average since this increased demand?—I could hardly say that at present.

46,229. At all events there is a better demand for it?—There certainly is a better demand for it.

Cost of orchard planting.

46,230. (*Mr. Lambert.*) What would be the cost of planting an orchard?—We generally reckon that when a tree is entirely out of harm's way the cost for the original purchase, the planting, and the protection (which is the chief thing), does not come very far short of 1*l.* a tree.

46,231. How much does that run to an acre?—It depends upon how close you plant the trees. Evelyn speaks of planting the trees 20 ft. apart, but they must have been very small trees. I do not suppose you can plant an orchard of large trees at the rate of more than 30 or 40 to the acre.

46,232. That would cost about 40*l.* an acre, then?—Ultimately; spread over a large number of years. The trees themselves, if bought from the nursery men, cost about 2*s.* 6*d.* a-piece; then there would be the planting, then bushing, which would have to be renewed about every three years—they would not renew it oftener than that, I daresay.

Improvement in manufacture of cider.

46,233. You look, I presume, to a better method of making cider for an increased demand for it?—I certainly do. A great deal of the cider that is made on the farms is spoilt owing to the ignorance of the maker, of the scientific principles which underlie the practice.

46,234. That is, there is a very large amount of waste, if I may so term it, which goes on now in not bringing the cider already made up to the value that it would attain were it to be made by scientific principles?—If it were made better, of course, it would be more valuable.

46,235. But there is a considerable amount that is not made well, and, therefore, which would have been more valuable if properly made?—Of course.

Co-operative cider manufactories.

46,236. (*Chairman.*) Is it possible that there might be co-operative cider manufactories within the rural districts?—There is at this present moment an association or a company being formed in the neighbourhood of Leominster, with the view of making better cider. I have not heard any more particulars about it, but I daresay the farmers are going to join.

46,237. Is it of a co-operative character?—I do not know the principles on which it is formed, but it is a sort of combination of capital.

46,238. (*Mr. Everett.*) Which pay the most, the pear orchards or the apple orchards for vintage?—They are mixed. The pear, as a rule, bears more regularly and gives more fruit and more liquor, but the liquor is not so valuable as the apple juice is, and farmers do not get so much for the pears, because they sell the pears at about 10*s.* a ton less, except in the case of special sorts.

46,239. Have either cider or perry been taxed, do you happen to know?—Yes.

Cultivation of table fruit.

46,240. (*Chairman.*) Do you consider there is much room for the increase of orchards for table purposes?—Yes, I think there might be, but there is very much pretty fruit brought from abroad and the Colonies, and although it tastes extremely poor its appearance is in its favour, and people will buy it.

46,241. I see there has been a considerable increase in the orchards of Kent, which I presume are wholly for the table?—They are mostly for the table. Formerly they used to make good cider in Kent, and there is a maker of cider in Norfolk, I believe, now, who cannot always procure the apples in Norfolk for his cider, and who buys largely from Kent.

46,242. Practically the Kentish orchards are for the table?—They are.

46,243. The increase in the orchards there would rather indicate a growing demand?—Yes. They are nearer the markets there, and the land is more suitable.

46,244. Do you think, on the whole, that Kent is better suited for the growth of apples for table purposes than other counties?—I do not think that it is better suited; I know that good vintage fruit, if properly selected, will grow in Kent, but at the present time it pays the people better to grow apples and pears for the table, and pot fruit.

Rent of orchard land.

46,245. (*Mr. Dalton.*) Has the rent of these orchards gone up or down of late years?—It has not varied.

46,246. It has maintained itself?—It has pretty well maintained itself.

Compensation for renovation of orchards.

46,247. (*Chairman.*) Now will you go to the suggestions you have to make?—The first of the suggestions I should make for the promotion of the industry is an amendment of the Agricultural Holdings Act, 1883, by including in Part II. of the Schedule to the Act the renovation of orchards, and the planting of new orchards not exceeding one acre in extent. In the second part of the schedule the tenant is required to give notice to the landlord of his intention, but he does not require the leave of the landlord. This amendment would give the tenant a little more liberty than he now has with regard to renovating orchards where trees are blown down or grubbed up, because they are old, and new ones put in their places.

46,248. You would place orchards to that extent under Part II. of the Schedule?—I would. I would not alter Part I., which contains, as you know, the "planting of "orchards or fruit bushes"; I would keep that in, but I would have this exception as to one acre. I think that would considerably help small holders. I would not extend it beyond one acre, because the larger sort of plantation would be made by a larger farmer, who might come, as many do, in Herefordshire, as there are so many changes now in farms, from Wales, where he would know nothing whatever about orchard planting. He ought to be in communication with his landlord, and ought to get some sort of authority from either his landlord, who does know the land, or from the agent, who knows the land also, as to what sorts of fruit to plant there, or otherwise he might make a botch of it. That is why I think that in cases exceeding one acre the Act ought to be left as it is. The small holders would probably be people who

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

live in the neighbourhood and they would know themselves what to do, and the notice to the landlord would put the two into a communication; they would know pretty well what sort of fruit to plant.

46,249. Would you limit it to one acre once for all?—I put down one acre as being a small area.

46,250. Would you limit it to one acre with reference to the farm since there has been any vacancy?—It would apply naturally to farms, but if the farmer was going to plant an orchard on a large scale he would probably apply under Part I, and get the leave of his landlord.

Legislation of compulsory destruction of insect pests.

46,251. Will you go on to your next point, please?—Then I suggest the passing an Act similar to that passed by the Tasmanian Parliament for the destruction of insect pests. I mentioned just now with regard to insect pests, that it is very little use for one farmer to try to get rid of them unless all in the same neighbourhood do so. It is impossible to make farmers combine, and they have not the money to go to the expense individually. There is a great deal of expense connected with this. But if the Legislature passed an Act something on the lines of the Tasmanian Act, which I have here, I do not know whether I need read it ——

46,252. Will you state the general effect of it?—The general effect of it is, as far as I remember, that the country is divided into certain fruit districts, and those districts into subdivisions; and that there is a board appointed from the people in the district, who are responsible for the conduct of the orchards in the district. Then inspectors are sent round at certain seasons to see the state of those orchards, and to order that at certain times, certain things shall be done. There is, I believe, a tax levied upon the owners or occupiers, I suppose, for the payment of expenses, and the farmer is required to do certain things, in the case of infected trees to destroy all the fruit thereof, and there are rules and regulations to that effect. The result, I am told is, that in some of those districts the insect pests are entirely eradicated. A gentleman who was in Tasmania a short time ago, saw me the other day, and told me so. The whole of this Act is summarised in the December number of the Board of Agriculture Journal.

46,253. Has it been very successful there?—So I was told by this gentleman; of course I only know from hearsay, as I have never been there.

46,254. How is the expense of it carried out, by a rate levied?—That appears to be by a rate levied, but in regard to England, we have got into a very bad state naturally, a very much worse state than they could by any possibility be in in Tasmania, because our orchards are older than theirs; we are rated very heavily, and all our other expenses are extremely heavy, and neither landlords nor tenants have any more than they can do with. My suggestion, therefore, would be that the State should be at the expense of this, as it is abroad.

46,255. Have you estimated what the expense would be?—No, I have not gone into that; it is impossible for me to do that.

46,256. Impossible?—Quite impossible.

46,257. What would be the processes they would adopt?—They would order the trees at certain times to be scraped, at certain periods of the year to be lime washed, and at certain other suitable periods when this codlin moth was in evidence to be syringed with such insecticides as are suggested by the Board of Agriculture, or somethink of that sort. The insecticides are rather expensive, and the syringes or engines that would be employed would also be expensive, because although the Board of Agriculture speaks of garden-engines there are not many garden-engines that would syringe our large pear trees, or some of our apple trees with any effect; they would have to be special engines for that purpose.

46,258. (*Captain Owen Thomas.*) Would that be necessary every year?—Until the pest was eradicated; afterwards, of course, there would be no necessity.

46,259. (*Mr. Dalton.*) Would you have to destroy any trees?—We might; we do now cut down trees that are useless.

46,260. Do they pay compensation in Tasmania for any injury done?—I do not know; it does not say so in the book I have here.

46,261. I suppose the hop growers expend a considerable amount of money in getting rid of the insects?—Yes, they do; but then you see how very different their system is. They have rows, and the plants grow only up to a certain height, and they can pass their engine between the rows and wash them as they go. Besides, there are only about 7,000 acres of hop ground in Herefordshire.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,262. If this destruction of insects is to be carried out at the expense of the State for the benefit of the apple growers, might not the hop growers claim that they should share in this beneficial expenditure?—They might ask it I daresay, when they heard what we had been doing.

46,263. (*Mr. Whitehead.*) That would apply to all farmers equally, would it not, who were troubled with insects?—It would, but then there is this to be said with regard to these insects: in the course of time we may hope they will be entirely eradicated, or eradicated to such an extent that the expense yearly would be very small indeed, whereas in the case of hop growing the washing must be pretty nearly every year.

46,264. (*Captain Owen Thomas.*) Do you not think it would be fair to ask the landlord who gets the rent to do this?—No, because the landlords are so seriously impoverished.

46,265. (*Mr. Whitehead.*) Do not the Herefordshire fruit growers take precautions against insects now without any State interference?—Yes, some of them do against the winter moth; they grease the trees. I did it in my own little way, and my neighbours did so, and so on. We have caught a great many insects in this way. But that simply, as a rule, catches one or two sorts, and those not the most destructive.

46,266. But it is found to be useful?—It is found to be useful, no doubt.

46,267. Will not others follow the example when they see that it pays them?—Yes, some do.

46,268. Is it not a question of paying?—For that small thing, simply putting grease bands round trees, I should not ask the State to pay; it is quite a different thing to syringe large trees with expensive engines and expensive insecticides.

State experimental fruit farms and nurseries.

46,269. (*Chairman.*) Then what is your next proposal?—The establishment of at least two experimental fruit farms and nurseries supported by the State, one in Herefordshire for the west midland cider districts, and one in Somerset or Devon for the south western cider districts. Attached to these stations should be laboratories in which the scientific principles underlying the practice of cider making could be taught and demonstrated, and where analyses of ciders and perries, fruits and soils could be made free of charge, or at a low rate. Such places would furnish in time trained men to go through the districts and teach farmers. I think this is very important.

46,270. Has anything been done by the county in this direction?—Not in this direction, with the sole exception of sending round lecturers to give lectures on cider making.

Instruction in cider-making.

46,271. I mean in that direction?—They have done a little in that way. In Gloucestershire this very gentleman, whom I spoke of, whose views on the subject of pot fruit and cider are heretical, but who otherwise is an able and clever man when he gets off those views, can give very good advice to farmers as to cleanliness, and so on, and as to the processes of fermentation. In Herefordshire they have not been so successful in finding good teachers.

46,272. They have endeavoured to do it?—They have endeavoured to do it, but the difficulty is to find scientifically trained men.

46,273. Who are competent to teach the farmers?—Men who can teach the scientific principles that underlie the business. The practice of experienced cidermakers is so good from long experience that they know very well what to do, but they do not know the reason why, and when they neglect it, or when a thing goes wrong, they do not know what to be at.

46,274. (*Viscount Cobham.*) Have they endeavoured to teach the proper management of orchards in Herefordshire?—Yes, I think we do know pretty well what we ought to do, only it is rather too expensive in regard to these insecticides. But I regard the two cider districts of the Midlands and Somersetshire as somewhat different, and I think it is desirable, therefore, to establish two experimental fruit farms and nurseries, one for the Midlands and one for Somersetshire. I think a county is rather too small an area, and you could not ask the county council to establish one. I believe that in Hertfordshire Lord Cowper has presented or loaned the county council of that county land for an experimental farm. It would be an extremely good thing if others followed his example, but I am quite sure in our neighbourhood we are not likely to do so. These experimental farms would be valuable in this way: it is extremely desirable to restore, as I have said,

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

some of the old and best vintage fruits, and also, where possible, to get new vintage fruits. If you plant a number of apple pips out of perhaps a thousand, you will not get five or six that are worth anything, and during all the time you are waiting for them to grow you have the land occupied by all those trees—10 or 15 years—doing nothing. No farmer—in fact, no one—would undertake that, but the State could at an experimental fruit farm. Then in the case of the grafts of old trees, a friend of mine down in Monmouthshire, who is the technical instructor to the Monmouthshire County Council, has purely out of friendship at a sort of experimental farm there, attached to an industrial school, established a small nursery, and there he has this year grafted for me grafts of three or four of the best sorts of cider and perry fruit; but that, of course, can only be done on a very small scale by an individual. It ought to be done by the State in these experimental nurseries, and then when the trees have been fully established they ought to be given gratis to the farmers and the landowners in the neighbourhood in the same way as they are given abroad. I find that in France there are premiums given by the State on agriculture, that is to say, on silk culture, to the extent of 200,000*l.*, and on the re-constitution of vineyards (which would be a similar thing to what I require now, namely, the re-constitution of the orchards), over 40,000*l.* was spent, and also that in many cases grants of trees to a very great extent were made to the landowners and the occupiers of land by the State free of expense. If they can do those things on the Continent, and help agriculture to a great extent there to compete with us, I think we ought to do the same. With regard to the analysis of cider and perry fruits that is a very expensive process; I asked the people at the Cirencester Agricultural College whether they would analyse for me, and they said, "No, not without being well paid for it, because they had really no "funds but the fees from students." I sent up to a gentleman whom I know very well and hope will be called before this Commission—an analyst—about a handful of pears last year of a particular sort which had made some very good perry the year before, an unnamed sort, in order that they might be analysed. He analysed them and sent me the result, nothing apparently very elaborate, but for this I shall have to pay him 30*s.* No farmer would go in for that to any great extent, but if the State did it it would be extremely valuable. Then the other day the member for South Glamorganshire, Mr. Williams, said he thought in the county of Glamorgan there were soils very well suited for the growth of vintage apples, but he did not know what sorts to recommend, nor did anybody there. If there were an experimental farm or a laboratory situated in the neighbourhood say in Herefordshire or in Somersetshire, specimens of the soil could be analysed, and the results of the experiments at these farms would show what fruit was best suited for those soils, and the farmers could plant with some hope of success. Now it is merely a chance whether the fruit suits the soil, or the soil the fruit.

State assistance for orchard planting.

46,275. (*Chairman.*) What is your next proposal?—The offering of premiums by the State for the planting of orchards with the best kinds of vintage fruits, and the gratuitous distribution by the State of stocks grafted with such fruits. I find in a return which has been made to this Commission, and which consists of reports of Her Majesty's representatives on the Organization of Departments of Agriculture in foreign countries, that abroad they do give premiums to small occupiers and small owners for planting vineyards to the extent sometimes of about 8*l.* apiece; if they can do that there I think they ought to do it in this country.

National Association of cider makers.

46,276. Then I think you further suggest that there should be grants by the State to the National Association for Cider Making?—Yes. The objects of the National Association are stated in a paper which I have here to be the establishment of a central organization, representative of all persons concerned directly or indirectly in the cider-making industry of the United Kingdom in order that when questions which affect their interests arise they may be able to give expression to their views thereon with more force and effect through such an organized body than they could individually. If I state how the association arose that might perhaps sufficiently explain the matter. I wrote a letter to the "Times" more than a year ago I suppose—I do not know exactly the date—on the subject of cider which seemed to have attracted more attention than its merits deserved—at any rate I was flooded with a mass of correspondence, and I saw that there were a great number of persons deeply interested in the industry who wanted to know where they could get this cider. It was impossible for me to deal with it, so I spoke to others interested in it and they all said, "We must combine in some way or another." That was the origin of this association. If this association had a subvention of a moderate amount, say 300*l.* or 400*l.* from the State the members consisting of persons always engaged in the industry and knowing what the industry wants, could give advice to the Board of Agriculture and to these experimental stations and fruit farms, which would be extremely valuable to them because they would know where to go and whom to consult.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895

State purchase of canals.

46,277. Your next suggestion, I see, has reference to the purchase of canals by the State?—Yes. You will remember, I daresay, that about five or six months ago one or two very excellent articles appeared in the "Times" newspaper on the acquisition of canals by the State. As far as I recollect—I am sorry that I have not got the pamphlet here, and that I mislaid it, for I could not find it this morning—the proposal was that the best way of dealing with the question of the railway tariffs, which are vexing everybody, without going to law with the railway companies, would be to establish another mode of conveyance in competition with them—a cheaper mode of conveyance in competition with them, and that that might be done by means of the State acquiring the canals, for, I forget the exact sum, but, I think, something like 20 million pounds, which, of course, could be easily got, as a canal stock could be easily formed, for in the present day people all want safe investments, and probably the stock would be in great demand and floated at a premium. The result would be that the canals of the country, a great many of which are now entirely out of order, would be all improved, and that for bulky goods, such as cider, there would be a means of conveyance in competition with the railway companies which would probably lower the rates on that, and on all agricultural produce throughout the country.

46,278. This is rather a general suggestion?—That is a general suggestion, but, of course, we are naturally interested in the question of railway rates as well as other people.

Adulteration of cider.

46,279. Your next suggestion has reference to the adulteration of cider, has it not?—Yes; the adulteration of cider is rather a difficult question. With regard to the Sale of Food and Drugs Act, if that were carried out according to the letter and the spirit of the Act probably that might be sufficient. For example, take the addition of water to cider, Section 6 makes it an offence where an ingredient is added so as to fraudulently increase the weight, bulk, or measure of the food or drug, or of the sale of an inferior quality thereof, that would apply to cider essences and things of that kind added to inferior stuff; but with regard to beer this Act has not been found of any use. There have hardly been any prosecutions under it, and in consequence in a recent Revenue Act, 48 & 49 Vict. c. 51., a clause occurs intended for the suppression of the adulteration of beer. I think some Act containing some such clause would do very well for us in regard to our cider. By Section 8 it is enacted that a "Brewer of beer for sale shall not adulterate beer or add "any matter or thing thereto (except finings for the purpose of classification, or other matter or thing sanctioned "by the Commissioners of Inland Revenue), before the "same is delivered for consumption, and any beer found "to be adulterated or mixed with any other matter or "thing (except as aforesaid) in the possession of a brewer "for sale shall be forfeited," and so on. That would meet the case of cider as well as the case of beer. As it has been found necessary to supplement the Food and Drugs Act by that enactment, I think it may be fairly inferred that the Food and Drugs Act is not applied sufficiently to the case of cider any more than it is to the case of beer. Then with regard to the Merchandise Marks Act, I do not think that applies, because you can hardly speak of "cider" as being a trade description, and what is condemned in the principal section of that Act is a false trade description. What we really aim at and what we want to prevent is, what, I suppose, some will consider a measure of protection, but I do not. We want to prevent people buying American cider blending it with English and selling it as English cider. We want them to say what it is. We think that people who sell a drink that is for consumption should state what it is. In fact, I go as far as to say this, that anything which is consumed by the people, the people ought to know what it is made of. There is such a vogue in favour of adulteration at the present time that the trade adulterators can always appeal to the sympathies of the public. I am afraid there is a large quantity of American cider imported into this country; a great many English cider dealers buy this American cider, they mix it with English cider and sell it altogether as English cider. We do not want at all that

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

the customer shall be compelled to ask for English cider, because you could not enforce such a regulation as that. A man asks for cider; if he asks for cider he ought to know whether it is English cider or American cider, or a mixture of English and American cider, and then he can take his choice. If he thinks English cider is better than American, or that American is better than English, he will buy that; if he prefers the mixture he will buy that. In that way we hope that the superior quality of English cider will prevail over the American.

Survey of cider districts by Board of Agriculture.

46,280. Then you desire that the Board of Agriculture should have power to appoint some person or commissioner to survey the cider districts?—Yes. The former Board of Agriculture, I do not know when it terminated its existence, but it was clearly in existence in the early part of this century, issued, I suppose for every county in England, what was called a survey, and I have here the survey for the county of Hereford. It is a very complete and exhaustive survey with regard to the cider industry, and I think now, considering the condition into which that industry has fallen, and the efforts that are going to be made to restore it, that it would be desirable for the Board of Agriculture to justify its existence, if I may use the expression, and make a survey of the kingdom, especially with regard to this industry.

46,281. You have spoken of the importance of stimulating the planting of orchards by small holders?—Yes.

Small holdings in Herefordshire.

46,282. Are there many small holders of land in Herefordshire?—Yes. there are some, and there certainly will be more under the Act of Parliament for which, I suppose I may say, you are responsible.

46,283. What do you consider to be small holdings, as you use the term?—Anything from an acre upwards to 10, or 11, or 12 acres.

46,284. Beyond that there are a great number of small farms of about 50 acres and up to 100?—Yes. I am afraid I have not got the particulars of my own parish; I had them, but I have mislaid them; they are something like that.

46,285. Could you say that the county has a good number of small farms?—There is a fair sprinkling of small farms, I may say, in the county of Hereford, and in consequence of the passing of the Parish Councils Act there are a great many applications for pieces of land. There were at the last meeting of our parish council more than 20 applicants for pieces of land of four acres, one acre, and so on—a great many of them for four acres.

46,286. Those would rather be for allotments?—A four-acre lot may be called an allotment, but it is not an allotment. A man could plant it as an orchard to great advantage if he had the means to do so.

46,287. But those would be held by labouring men, who would be working as labourers, I suppose?—They would be held some by labouring men and some by what we call tradesmen, that is people who are carpenters, sawyers, and so on.

46,288. Now going upwards to the class of small farmers who devote the whole of their time to their farm would you say that Hereford is a county where many such exist?—Yes, there are a good many—"a good few," as we call it.

Demand for farms.

46,289. Where small farms are vacant do they let readily?—They let more readily than large farms.

46,290. At a higher rent relatively?—There is a little more rent, because there is more expense attaching to the letting of small farms.

46,291. Should you say that generally in Herefordshire there is no difficulty in letting land?—I do not think there is any difficulty in letting land.

46,292. Then there is a demand for farms when they are vacant?—A great many Welshmen come.

46,293. A great many Welshmen?—Yes, they leave their country and come to Herefordshire.

46,294. (*Captain Owen Thomas.*) They are very good farmers, are they not?—I do not express an opinion on that subject.

Depression in Herefordshire.

46,295. (*Chairman.*) There appear to be some parts of Herefordshire which have suffered very much less from depression than others?—Yes.

46,296. I observe that in the Union of Dore the assessment of land has been maintained to almost the full amount?—Yes.

46,297. The same is the case with the Union of Hereford?—That would be partly fruit and partly hops.

46,298. And Kington?—Hops and cattle there.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,299. Ledbury?—That is a great cider country.

46,300. And a hop country too, is it not?—It is a hop country in parts. I do not live very far from there.

46,301. Then the cider industry and the hop industry in those districts probably have kept up the rent of land?—To a great extent they have, but it has not been done this last year in hops.

46,302. In the Union of Ross the fall in the value of land has been very great, namely, from 860,000*l.* to 63,000*l.*?—Yes. Lord Ashburton sold a large property there lately at about 20*l.* an acre.

46,303. Is that a different kind of land?—That is a lighter land altogether; it is what they call "rye land," and is very good for turnips.

46,304. But neither for orchards nor hop growing?—There are some orchards, and there might be more if the sorts of fruit were properly selected, because there are some kinds of fruit that would grow well on that land.

46,305. It is not a hop country, I suppose?—No.

46,306. Then in the Union of Bromyard, the fall in the assessment of the land has been from 76,000*l.* to 62,000*l.*?—That is a much poorer land round there altogether.

46,307. May we say that where land is good, and where the cider industry and hop industry prevail, there the assessment on the value of land has been maintained?—Yes, I think you may say that.

State distribution of plants and seeds.

46,308. (*Mr. Whitehead.*) Are you aware that the distribution of plants and trees was adopted by the United States very largely some years ago?—Yes.

46,309. Do you know that they have discontinued that to a great extent?—Yes, because the quantity of seeds was so enormous and people never acknowledged the receipt of them; they did not care about them. But we should acknowledge the receipt of them and care about them very much.

46,310. That distribution was a failure, was it not?—It was a failure because they did not proceed on proper business-like lines at all.

Difficulty in obtaining good trees.

46,311. Cannot you depend at all upon getting good sorts of trees from nurserymen?—No, we cannot. Only the other day a nurseryman at Hereford told me, speaking of the desire now to promote the growth of vintage fruits, that he was asked by a gentleman to supply him with a dozen Barland pear trees, which, as Lord Cobham knows, are good sorts and are grown very much in Worcestershire. He could only supply him with six. I asked him how he managed. He said, "I made up the rest with Blackney Red." That is a very free growing sort, but worth very little as a perry pear. And so that nurseryman had no more than six of the Barland pear trees on his plantation. When it is known that there is a demand they will grow more of these trees.

46,312-3. That would be a nurseryman in a small way of business?—He was in a fairly large way of business.

46,314. Then you think they could not be supplied by local nurserymen?—I do not think they could.

46,315. And that it is necessary to have State intervention in order to supply farmers with proper fruit trees?—Yes.

Compensation for renovation of orchards.

46,316. (*Mr. Chaplin.*) You speak of the renovation of orchards, and you propose as an amendment to the Agricultural Holdings Act that that should be included in Part II. of the Schedule; what would be the cost of the renovation of orchards per acre according to your view?—It would depend upon the state of the orchard to be renovated, and, therefore, of course I do not know.

46,317. Supposing it was in a bad condition?—It would cost a good deal.

46,318. What is the utmost cost that you think it would come to?—That is a question I could not possibly answer without seeing the place.

46,319. Could you give the average cost?—No, I could not give the average cost either.

46,320. But surely you have some idea of what would be the cost of renovation?—I have some idea of what the cost of planting a tree is. As I have already said, the cost of planting a tree and the expense of keeping it and fencing it until it is out of harm's way is generally reckoned amongst us to be about 1*l.*; of course, if you had to put 20 trees in the place of 20 old trees it would cost you altogether in the course of time 20*l.*

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,321. My object in asking is this that if it is included in the second part of the schedule the improvement might be made as, of course, you know without the landlord's consent?—Yes.

46,322. And I want to know how much per acre the landlord may possibly become liable to under those circumstances?—I cannot say that, because there would be a question of what would be renovation. If the acre was completely bare of trees, and it was replanted, then it would not be renovation; if there was a considerable amount of old trees upon it and they were blown down, or cut down, or decayed, and the orchard had to be filled up again, then it would be renovation. My scheme or idea is in general terms, and anyone who wanted to pass an Act on the lines of it would have to be more precise in the wording.

46,323. At all events, it might come to as much as 20*l.* an acre?—I daresay it might, but that would be spread over a number of years. And it would not be out of harm's way until it was nearly 15 years old.

46,324. What is the cost of planting new orchards per acre?—In planting new orchards the cost of the trees would be about 2*s.* 6*d.* apiece, and the labour of a man planting them would not be very much, of course. Suppose you planted 40 trees, that would be 5*l.* for the trees if they were half-a-crown each, and grafted with the best fruits, and then about 5*s.* at a rough guess would have to be paid for the labour, which would bring the cost to about 5*l.* 5*s.* Then, of course, after that there would be fencing, and the cost of that would depend upon the character of the fencing. If the fences were posts and rails, three posts and rails or two posts and rails would be a good deal more expensive than bushing; the bushing would not come to very much, it would be merely the labour in that case.

46,325. At all events, the liability in the case of the planting of a new orchard would not be very serious?—It would not.

Experimental fruit farms.

46,326. With regard to the experimental fruit farms that you suggest, these, I understand, are to be solely for the purpose of cider?—I do not know. If you had got trees there and planted them, I think I should make use of the space if there was room enough for other sorts of fruit. I think it would be just as well.

46,327. You would go in for general experiments?—General experiments in fruit culture; I do not see why, if there was room, other fruit should not be grown.

46,328. They are to be carried on by the State?—They are to be carried on at the expense of the State, the same as they are in other countries.

46,329. And under the control of the State, that is, under the Board of Agriculture?—Under the Board of Agriculture. Then some use might be made of the Botanical Garden at Kew, I should think; I do not know of what use it is now.

State purchase of canals.

46,330. (*Mr. Long.*) You propose that the State should buy up the canals, and make them a competing mode of conveyance as against the railways?—Yes.

46,331. Do you propose to the railways that they shall contribute their share of this purchase money?—No; many of them are owners of the canals, and they would have to be paid for selling them.

46,332. How would the money be found?—By a loan.

46,333. By a guarantee loan?—It would be by canal stock.

46,334. Supposing that the canals did not turn out a profitable venture?—Of course it would be a risk; there is a certain risk in all undertakings.

46,335. You do not propose that there should be any guarantee?—I do not think there need be any guarantee.

46,336. Why should the State step in?—To find the money; and of course it would be done *en bloc* then.

46,337. Then there would be a State guarantee?—In that case there would be naturally a State guarantee as there is in all State loans.

46,338. In the event of failure the State would make good the deficit?—Yes.

46,339. In which case the railway would have to contribute its share of the sum the State would have to make up?—Naturally.

46,340. I put these questions in order that we may understand what the railways have got to anticipate?—The railways would suffer with the rest of us.

46,341. (*Mr. Lambert.*) The general community would benefit very much from having lower railway rates?—Certainly they would benefit very much.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

46,342. (*Mr. Dalton.*) Do you merely propose that they should buy up existing canals, or that they should make other ones besides?—Making other canals is quite another question. At present I should be satisfied with buying up the existing canals. It is rather a large order in any case.

Importation of foreign cider.

46,343. Is there much American and French cider imported into this country?—In 1893, 558,108 gallons of foreign cider were imported into this country, and of this about 537,000 gallons, so far as I recollect, were American. The importation of American cider has largely increased during the last year—very largely indeed.

46,344. What is the quality of it?—It is in my opinion poor stuff, because it is most of it made from the refuse of table fruit, and not from vintage fruit; that is why it is not of such good quality, but it is a sweet, pleasant stuff which some people might like.

46,345. Is the French cider good?—Yes, it is good, but there is very little imported into this country; it is mostly consumed at home. Only about 20,000 gallons are imported into this country.

46,346. Is there any encouragement given by the State in France to the production of cider?—I do not know about cider, and I will not answer as to that, because I am not quite certain about it. I know that a great deal of instruction has been given by the State, and that prizes have been given to persons who have written books on cider. There is a very good book on cider written by M. Hauchecorne, for which I think he got a money prize.

46,347. Do you think the French cider is better than the English cider?—I do not think it is better than the English cider, but it is much better than the American cider, because it is made from a similar kind of fruit to ours.

Labour.

46,348. To what extent do the orchards give employment to the working classes? Is it only during the time of the gathering of the fruit?—Yes, mainly during the fruit season.

46,349. How large an orchard do you think a working man could manage in addition to doing his ordinary work for a farmer?—He could manage an orchard of three or four acres very well, because there is very little to be done to it.

Rent of orchard land.

46,350. (*Captain Owen Thomae.*) What is the average rent of orchards in Herefordshire?—As I have mentioned before it is difficult to say, because the orchards are let as a rule with the farms; but I might say at 2*l.* 10*s.* or 3*l.* an acre perhaps.

46,351. I believe the planting of these orchards was done formerly by the tenants at their own expense?—It is so long since any planting has been done that it is not in my recollection, but I should think not.

State assistance to cider making.

46,352. You are evidently much in favour of State grants to improve and further develope the industry?—Yes. I am comparing it with what has been done in foreign countries. The report to this Commission, to which I have already referred, shows how very much has been done abroad, and I think we ought not to fall behind-hand in the race. We have got into a low condition, and we must be helped by the State.

46,353. Would you also advocate grants by the State to assist wheat-growers and cattle-breeders and market-gardeners?—No. The market-garden industry is very good. You have had evidence before you to show that it is fairly good.

46,354. And you say the cider industry is fairly good?—I think there is a demand for it, and I say that, in order to improve and renovate our orchards and bring them up to the standard that ought to be attained, would be a very expensive process, therefore we ought to be helped.

46,355. Do you not think that other farmers ought to be helped if they are suffering far more than the cider growers?—If they can show as good a case as the cider farmers can I think they ought to be helped.

46,356. There is hardly an acre of land that lets so high as orchard land; when you come to think of it you will find in England land not worth more, perhaps, than 1*s.* or 2*s.* an acre, and there is no assistance advocated for the landowners, but in the case of the orchards, where the landlord gets 2*l.* 10*s.* an acre do you not think that he ought to assist his tenants?—He only gets that in with

Digitized by Google

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

the rest of the farm. He does not let that land specially at 2*l.* 10*s.* or 3*l.* an acre. It is let with the rest of the farm, and the rest of the farm is very often let at a very low rent, say, 5*s.* or 10*s.*, or something like that.

46,357. You said that the orchards paid 2*l.* 10*s.* if let separately?—If let separately, but, as a matter of fact, and, of course, we are only dealing with matters of fact, they are never let separately.

46,358–9. I think you said in answer to another question that a tenant when he sells his orchard gets 5*l.* an acre for it?—Yes; he thinks he ought to get 5*l.* an acre for the fruit.

Duty on cider.

46,360. (*Mr. Everett.*) There is no tax upon cider or perry now is there?—No.

46,361. It is an alcoholic drink which is free from taxation, and, therefore, an exception to all other drinks?—There is a license for selling it retail.

46,362. But there is no excise duty on it?—No.

46,363. But there was?—Yes.

46,364. How long ago is that?—A great many years ago; as long ago as 80 years ago, perhaps; I do not know.

46,365. I hope it will keep free?—I hope it will; we should be very glad to get beer equally free.

Increased consumption of cider.

46,366. (*Mr. Lambert.*) There is a very great opening for cider drinking in this country, is there not?—There is a very great opening for it. The tendency of the day is for light beverages; and there is also this to be considered that the temperance party require something wholesome that they can drink and they have not got it at present.

46,367. Is cider a temperance beverage?—It is a beverage that you can drink without harm. There are various degrees of cider, but the cider that would be generally sold if the industry was promoted would be draught cider such as cyclists and other people travelling about the roads would take, and that would not be a strong alcoholic beverage, it would not contain nearly so much alcoholic as a great many temperance drinks do now, and therefore, on the ground of temperance, I think it ought to be advocated.

Small holdings.

46,368. (*Mr. Channing.*) You were speaking of the small holdings of four acres, is encouragement given to workmen to plant those now in your neighbourhood?—No encouragement is given to plant them; they never think of planting them with anything.

46,369. I thought you said these small holdings of four acres would be planted with trees?—They would if the State would help them and give them the proper trees. That is what I said. I think they would plant them then.

46,370. Now about the renovation of orchards, is that merely the replacing of the old trees or do you include in it the grubbing up of the ground and the whole renovation of the soil itself?—I do not understand what you mean by the grubbing up of the ground.

Mr. C. W. R. Cooke, M.P. 26 Apr. 1895.

Compensation for renovation of orchards.

46,371. Do you mean the general improvement of the land or merely replacing the trees?—I meant the replacing of the trees.

46,372. Then in your opinion would leases which prohibit a tenant from getting compensation for replacing trees be fair?—I never heard of any such leases.

Consumption of cider by farm labourers.

46,373. (*Chairman.*) You stated that the farm labourers have to some extent given up cider, and taken to beer?—I believe they have, I am sorry to say.

46,374. How do you account for that?—Because I suppose they could get the beer cheaper. I do not know whether it was that or what the reason was; I really cannot say.

46,375. It is rather an unfavourable sign as regards cider that a large number of men should have given up cider and taken to beer?—Perhaps it was too extreme for me to say that a large number of men had given it up.

46,376. (*Mr. Lambert.*) I think in cider drinking counties at any rate the men infinitely prefer good cider to beer?—They certainly do, and if they could get better cider than they can at their public-houses they would invariably take it in preference to the beer, I believe certainly in preference to the class of beer they get there; and they would not get so muddled.

46,377. (*Chairman.*) Do the farmers supply beer now instead of cider at harvest time?—They do not supply so much drink now as they did to the labourers, but in our part of the country, they generally supply cider.

46,378. Cider, not beer?—Yes, I know of none who supply beer about us.

46,379. (*Mr. Dalton.*) Is cider cheaper than beer?—Yes, I think it is.

46,380. When you have it of the same alcoholic strength as beer?—Beer varies; what would it be, would it have five per cent. of alcohol?

46,381. I do not know, I am referring to strong cider?—Strong good cider of course is more expensive than wash—than weak stuff.

46,382. Do the labouring men prefer the beer because it is stronger?—I do not know exactly what their preference is, so I cannot say that. The cider that is supplied to them is what we call as a rule family cider, which is cider made a second time over with water.

The witness withdrew.

Mr. A. Spencer.

Mr. Aubrey Spencer called and examined.

Mr. A. Spencer.

Quality of land in counties of Oxford, Gloucester, Berks, and Wilts.

46,383. (*Chairman.*) As we know, you are an Assistant Commissioner appointed to examine into the state of agriculture in the counties of Oxford, Gloucester, Wilts, and Berks, and on the neighbourhood of Taunton (Somerset), and also in the Vale of Aylesbury and the county of Hertford?—Yes.

46,384. We will begin with your report upon the counties of Oxford, Gloucester, Wilts and Berks; the districts which you visited in those counties comprise land of very different qualities, do they not?—Yes, very different indeed.

46,385. On the one hand some of the very poorest land in that part of England?—Certainly.

46,386. Such as land at the top of the Cotswold Hills and the poor lands of Berkshire?—Yes.

46,387. And on the other hand, the richer districts of Gloucester and in some parts of Wilts?—In some parts of Wilts there is very good grass land. Then there is first class arable land round Wallingford, for instance, that is in the northern part of Berkshire.

46,388. I presume you found a great difference of condition in these various districts?—Yes, very great.

Demand for farms.

46,389. Take the better land in Gloucestershire, Wiltshire, and Oxfordshire; did you find that the farms there were letting easily or not?—In the grass districts in the Vale of Gloucester, and in North Wilts, the land on the whole seemed to be letting freely; I mean to say there were plenty of applicants for farms in the good pasture districts. Oxfordshire is more of an arable district, but it is not such a poor arable district as the Cotswolds. There, again, the farms seemed to be fully let; but there was some difficulty in letting as I understood.

46,390. (*Mr. Chaplin.*) When you speak of the grass districts, are you speaking of districts throughout all these counties that you have examined? Does what you say about the grass districts apply to all of them?—I think that applies to all, but of course, the better grass land is more in demand than the land of poorer quality. As an instance of that I mention that when I was at Trowbridge, I saw some good grass land there; and an agent told me that whenever he had a small farm to let he had men coming to him before breakfast and all through the day, in order to try and get it.

46,391. (*Chairman.*) Should you say that in those districts there was a greater demand for the small farms than for the large ones?—I think so.

46,392. (*Mr. Long.*) May we know what you mean by a small farm?—I mean a farm of about 100 or 200 acres.

46,393. (*Chairman.*) Up to 200 acres would you call it a small farm?—Yes.

46,394. From 50 acres upwards?—Yes.

46,395. And you say that in those districts there is a considerable demand for farms of that size?—Of good quality.

Digitized by Google

Mr. A. Spencer.
26 Apr. 1895.

Reductions of rent.

46,396. Could you form any general estimate as to the comparative reductions of rent on this better land, as compared with the reductions on the worst lands?—The worst land of all has gone down 60 per cent. or more, as far as I could estimate it; but the better land in some cases has not gone down more than 15 per cent. or 20 per cent., and accommodation land has sometimes not gone down at all.

46,397. By accommodation land you mean land in the neighbourhood of the small towns, I presume?—Small towns, or a bit of specially good grass land.

46,398. I suppose in case of the larger towns there would be a larger radius around them of good land?—For instance, around Oxford there are some meadows that let at as much as 7*l.* an acre.

Value of land.

46,399. Has land around Oxford maintained its old value, should you say?—Only just in the very immediate neighbourhood, and then only for accommodation land. When you once get away from Oxford, you find the land has fallen considerably.

46,400. Did you go into the neighbourhood of Gloucester?—Yes, I went to Gloucester and had a meeting there.

46,401. I see that in the Union of Gloucester the rateable value of land, according to a return that I have in my hand, has been reduced only from 57,000*l.* to 54,000*l.*, indicating a very small reduction in the value of land there?—Those figures would bear out what I heard about it. That is all good grass land.

46,402. Were you in the neighbourhood of Dursley?—Yes, I went to Dursley.

46,403. I see that there the rateable value has been reduced from 38,000*l.* to 37,000*l.* only?—Yes, that would be so.

46,404. Is a good deal of that land valuable land?—Yes, a good deal of that would be on Lord Fitzhardinge's estate, the Berkeley estate.

46,405. Then probably the rents are low, and it has not been necessary to reduce them very much?—They have not been reduced to the extent that they have been reduced in other cases, because none of the land about there has been reduced to the same extent as poor arable land has; it is very good pasture land.

46,406. In Cirencester I see the rateable value of the land has been reduced from 90,000*l.* to 62,000*l.*?—Yes, that is poor Cotswold land.

46,407. Then in Northleach the reduction has been from 67,000*l.* to 37,000*l.*?—Yes, I think the land in that union has probably fallen more than in any other part that I have visited.

46,408. (*Mr. Long.*) Northleach has?—I should think so.

46,409. More than Salisbury Plain? I did not go to the poor arable parts of Wiltshire; I did not visit Salisbury Plain.

46,410. You went to Devizes?—I went to North Wilts, but Mr. Rew went into the Salisbury Plain district.

46,411. (*Chairman.*) I see that in Thornbury the land has gone down from 94,000*l.* to 87,000*l.*?—Yes, I was there too.

46,412. That is an inconsiderable drop?—That is more, perhaps, than the best grass land about Gloucester, but not so much as the poorer land.

46,413. Then, coming to the poorer land, did you say that there was any great difficulty in letting farms there?—Very great difficulty indeed, especially in the Cotswold Hill district; there is the greatest difficulty in letting farms.

Land unlet.

46,414. Has much land there been unlet altogether?—A very large quantity indeed. North of Cirencester, in the Cheltenham and Northleach directions, a very large quantity is unlet.

46,415. Is it in the hands of its owners?—Yes, principally.

46,416. Do they cultivate it?—Some cultivate and some have let it go down altogether. There is one fairly large estate I saw where land is given up to producing rabbits.

Condition of tenant farmers.

46,417. I see that at page 30 of your report you speak of a bank manager who took a cheerful view of the present state of things, and said that the farmers' balances in his district were maintained, that they owed less money than they had done, and that their personal expenditure and rentals had been cut down, and that apparently their financial position was not bad?—Yes.

46,418. What district was that in?—That came from a banker at Cirencester. The district round Cirencester includes not only the Cotswold land, but some better grass land on the south side of Cirencester; it does not merely include the poor land. I think I ought to say that another banker in the same town took a less cheerful view of the situation, although he did not take a very poor view of it.

Mr. A. Spencer.
26 Apr. 1895.

46,419. Then you say that on the better land or medium class land, where the rents have been reduced, and where the farmers' expenditure, personal and otherwise, has been reduced, the farmers held their own?—Speaking of arable land?

46,420. Yes?—They have generally until the last year or two. The drop in prices which has taken place since last summer might modify the statement.

46,421. Do you refer to the latest fall in the price of wheat?—Yes, up to, say, 1893, I think that might be said; but 1893 was a very crushing year, and 1894 was still more so, owing to the fall in prices.

46,422. In the case of the grass land I suppose they have still maintained their position?—Yes. Of course 1893 was a very trying year for the grass farmers on account of the failure of all pasture crops.

46,423. That was an exceptional year owing to the extraordinary drought?—Yes.

46,424. But I suppose that last year they to some extent regained their position?—Yes. I am afraid that since I have been there dairy produce has rather fallen, but that I do not know of my own knowledge; milk, I understood, fell a good deal this last winter, or did not maintain its price.

Dairying in the Cotswold district.

46,425. Do you think that the farmers in that district have gone too much into milk, and have given up making butter and cheese?—I cannot say that, because I think they have gone in for what they consider pays them best. I was told by several people that if you can sell your milk at 6*d.* per gallon or more it pays better than making butter with it; on the other hand, I think there is room for the development of the butter industry. I think it suffers very much from the fact that a good deal of the butter made is not of a very good quality, and there is the difficulty of the want of uniformity in the quality.

46,426. There is much to be done in the improvement of the general quality of the butter?—There is much to be done in that direction. Of course the technical education schemes are doing, and have done, no doubt, a great deal of good, but then unfortunately the market price of butter, as the farmers have pointed out to me, is usually regulated by the worst quality of butter. If a farmer makes good butter and gets a private customer for it he very often does pretty well, but if he has to send it to market he cannot get such a good price for it.

46,427. Then the whole market is depressed by the bad condition of a certain quantity of butter?—Yes.

46,428. That shows the extreme importance of endeavouring to maintain a uniform quality?—Yes.

Butter factories.

46,429. Is anything being done in the direction of co-operative butter factories?—I did not meet any within my district, but there are butter factories to which the farmers sell their milk. It is not a co-operative system, but at Berkeley, at Melksham, and at Devizes there are butter factories where the company or the private owner, whichever it may be, buys the milk and manufactures the butter and sells it. I believe they all do a pretty good business.

46,430. (*Viscount Cobham.*) Were they started by landowners?—No, I think they are private speculations.

46,431. Commercial speculations?—Generally commercial speculations.

46,432. (*Chairman.*) Has there been a considerable change in the cultivation of the land in those districts that you have been in; has much been laid down to grass?—I think land has been laid down to grass wherever it is suitable for it, but some of the districts I visited are not suitable for laying down to grass. The stone-brash land in Oxfordshire does not lay down well to grass they say. No doubt a certain quantity has been laid down, but I do not think it can proceed very much further because it does not form good grass. It is the same with the Cotswold district.

Judicial rents.

46,433. Did you find among the farmers that you saw that there was any desire for judicial rents?—Very little. There were one or two cases I met, but they were quite exceptional.

Digitized by Google

Mr. A. Spencer.
24 Apr. 1895.

46,434. Should you say that the general view of the farmers in the district has been against it?—Certainly I should say so in those districts that I visited.

46,435. Did you meet the farmers at any considerable number of meetings?—Yes, I held a great many meetings.

46,436. Was the subject discussed then? — It was occasionally suggested but did not meet with the approval of the greater number of the farmers present. I think I heard more about it perhaps at Taunton than at any other place I visited. There are one or two there who have some feelings in that direction, but even there it was not supported by the majority of farmers.

Reduction of rent.

46,437. Was it generally considered then that the landowners had reduced their rents sufficiently?—Complaints were frequently made that rents had not been reduced sufficiently early in some cases; on the other hand it was frequently said to me, "We think the landlords have behaved very liberally to us and have reduced their rents as much as could fairly be expected."

46,438. Perhaps both landlords and tenants did not appreciate soon enough the nature of the difficulty?—I think that there can be no doubt that that was so.

46,439. If the landlords did not make sufficient reductions, on the other hand perhaps the tenants did not sufficiently press them?—Quite so.

46,440. Neither party to the bargain sufficiently early appreciated the change that was coming about?—I do not think they foresaw what was coming.

Immigrant farmers.

46,441. Have you found that there was a considerable number of Cornish farmers and Devonshire farmers who have come into the districts which you visited?—In Oxfordshire there are a good many Cornish and Devonshire farmers, and some from Somersetshire. There are some on Lord Sherborne's Estate in the Cotswold district. I did not hear of them elsewhere there, but in Oxfordshire there is a considerable immigration of Cornishmen.

46,442. What class of farmers are they? — Stock farmers.

46,443. Small farmers or large farmers?—They have farms from 200 to 300 acres.

46,444. Have they brought sufficient capital with them?—Some have capital.

46,445. Do they live in a rather different style to the other farmers or not?—I do not think that is so noticeable as it would be in the case of the Scotch farmers I saw in Hertfordshire. I do not think the Cornish farmer lives very differently. Perhaps he would not spend so much as the old-fashioned Oxfordshire farmer, and he is more thrifty.

46,446. Does he work?—He works, no doubt, himself to some extent.

Low price of feeding stuffs.

46,447. Do you find that the farmers have gained very much by the low price of feeding stuffs?—The farmers on grass land certainly have, and the cheap price of corn has benefitted them.

46,448. It has been of great benefit to them?—Many of the farmers in the Vale of Gloucester said to me: "The cheap price of corn has enabled us to hold out; that is the only thing that enables us to hold on lately"—especially in the year 1893, when the supply of grass was so short.

46,449. It has practically made up for the low price of other things which they sell?—Yes; but then, of course, they are not corn growers.

46,450. (*Mr. Chaplin.*) What farmers are those?—Grass farmers, stock raisers, or dairy farmers.

46,451. (*Chairman.*) They have increased their consumption of corn, you think?—I should think so.

Bank loans.

46,452. (*Viscount Cobham.*) You have a paragraph on page 30 to the effect that you are informed "that in days of prosperity there was no difficulty in farmers obtaining loans from bankers, but that no banker would now entertain an application for more than a short temporary advance, except upon the security of a guarantee from some person of approved financial position." Was that statement made to you by a banker?—Yes.

46,453. And he also spoke to you of the serious losses made a few years ago upon farmers' accounts?—Yes, in some cases.

46,454. Should you say from your experience that this is a fact of general application?—That farmers do not get advances now?

46,455. That farmers' accounts have been much restricted, and that there have been great losses made upon them by bankers?—No, I do not think so; but I think that some banks, for some reason or other, had more money outstanding on loans to farmers than others, or, possibly, did not call it in sufficiently soon.

Mr. A. Spencer.
26 Apr. 1895.

46,456. Do you mean to say that occasional advances only are made to farmers who are known to be solvent?—Temporary advances would only be made to farmers who are known to be solvent.

46,457. I thought you laid stress on "temporary advances to tide over exceptional necessity such as the getting in of the harvest," which are "occasionally made to farmers who are known to be solvent"; the inference from that is that that is the only class of advance now made to farmers?—Except on good outside security I think that is so. A banker said to me if a customer comes to us and says, "I have not got enough money to get my harvest in," or something of that sort, or "I want it for two or three months for some particular object," they would, unless they knew him to be in a shaky position, probably let him have it.

46,458. Do you not think farmers can get advances in the ordinary course of their business upon the security of their stock?—I do not think they ever do that. That would necessitate a bill of sale, and bankers have told me that they never advance money on a bill of sale on the stock.

Rabbit farming.

46,459. You say that one large estate is given over to rabbit-cultivation?—Yes.

46,460. Is that done systematically?—Yes, I think it is.

46,461. In a commercial way?—Yes.

46,462. Did you see it?—Yes, I went over it. I think the grass land is run over in the summer with sheep to a certain extent, and is otherwise given up to rabbits. There are large plantations, and rabbits are allowed to run over the grass land, and they are trapped.

46,463. About how many acres would there be of this rabbit farm?—This land, which is let go down in this way, is about 2,000 or 3,000 acres. I do not think you can call it exactly a rabbit farm; it is a case of a large estate where there are rabbits, which are not kept down, but are rather encouraged to increase.

46,464. Is it a warren?—It is not an enclosed warren.

46,465. It has not any rabbit fencing?—No.

46,466. The rabbits are not fed artificially?—No, they are simply kept wild; in fact it is rather a complaint amongst some of the neighbouring farmers that the rabbits run over their land.

46,467. You do not know of a regular rabbit-warren?—No, I have not seen that, where I went. The gentleman to whom this land belongs, said he made about 7*s.* 6*d.* an acre from his rabbits.

46,468. (*Mr. Chaplin.*) Unenclosed?—Yes. I suppose that would be the grass part of it; I do not suppose that he would reckon in the plantations. There are large plantations there.

46,469. (*Viscount Cobham.*) I suppose he had given up arable farming on that farm?—Yes, except upon the better portion in the valley.

46,470. And the rabbits had to live upon the grass and the trees?—Yes.

46,471. I suppose there would be very great difficulty in the worst parts of the Cotswolds to try any other system than that they are trying now?—I think so.

Laying land down to grass.

46,472. Grass cannot be laid down to any great extent, can it?—No, I think the old grass was good before it was ploughed up, it was a sort of down grass. It has always been a great sheep district. It was a great wool-producing district in the middle ages, I believe. They told me in some of the towns there that they frequently find foreign coins which they attribute to the people who came to England to buy the wool. England was a great wool-exporting country at that time, and no doubt the Cotswolds was a great sheep-producing district, and the Cotswold sheep which produce a heavy class of wool were bred there. In those days I suppose it must have been all grass.

46,473. Long-established down grass?—Yes.

46,474. That is nearly all gone now?—It is nearly all gone, and I suppose the sheep were wintered in the woods. Of course there were in those days no turnips to winter them.

46,475. That grass would take many years to replace, I suppose?—Hundreds of years. In Berkshire they said it

Digitized by Google

Mr. A. Spencer.

26 Apr. 1895.

would take at least 100 years to get old down land after it had once been ploughed.

46,476. (*Sir Nigel Kingscote.*) I suppose that in Gloucestershire on the Cotswolds, and in Berkshire and Wiltshire, you saw adjoining the down land an immense quantity of land which had been broken up for the sake of growing corn upon it, which ought never to have been touched?—Yes, certainly in the case of some of that which has gone down to rough grass now, the difference between the grass that it now produces and the old down is very noticeable. You see them side by side sometimes. One is very poor stuff, and the other is beautiful rich sward which is still very valuable.

Deficiency and deterioration of labour.

46,477. Did you hear very much complaint in the Cotswolds of the want of labour or of the deterioration of labour?—I heard that everywhere. I think everywhere that I went there was a certain amount of complaint of deterioration; but opinions differ a good deal on that. I do not think I heard it specially in the Cotswold district.

46,478. But you heard it as rather a universal complaint?—Yes.

Cider making.

46,479. You went through the Vale of Berkeley. I think you were in the room this morning when Mr. Cooke was examined; could I ask you a question or two now about cider-making?—I heard a little about that.

46,480. Did you find in going through that district that they put great store upon their orchards?—They rather complained that they were not as valuable as they used to be.

46,481. Was that because they do not make so much cider, and their trees bore cider apples and not fruit apples?—Yes, I think that is so, and they complained that cider had fallen in price. Perhaps I may mention that one of the reasons that they gave for it was that so many of the public-houses now are tied to breweries, and the breweries discourage the sale of cider in competition with their own beer. They say that has caused a fall in the value of cider.

46,482. And that the farmers do not give the same quantity of cider to their workmen as they used to do?—They cannot give it on account of the Truck Acts. That I have noticed also in Worcestershire, where I went for the Labour Commission. There the cider has been thrown on the farmers' hands owing to their having to discontinue giving it to their men.

46,483. (*Viscount Cobham.*) I think that enactment is a dead letter in some counties?—It is in Somersetshire. I went there for the Labour Commission and it is clearly a dead letter there. In Worcestershire there had been prosecutions, and there was a great uncertainty as to whether they could give cider or not.

46,484. (*Sir Nigel Kingscote.*) Did you find that the orchards in the vale had been filled up with other trees?—I was told that there was a considerable demand for a large-sized apple for the Midland towns, either an eating or a cooking apple, and to a certain extent I believe they are being filled up, but, of course, it is an expensive process; I suppose there is some difficulty in finding money to do it in many cases.

Fruit growing.

46,485. (*Mr. Whitehead.*) Is fruit-growing increasing at all in that part of the country?—According to the returns the orchards have increased in Gloucestershire, but I think the increase is in the way of fruit not for cider but for eating or cooking purposes.

46,486. And for other kinds of fruit probably bush fruits?—Yes, I think more in the way of apples and pears, but to a certain extent bush fruits too. It is always said that the difficulty of the railway traffic is the great drawback to that.

Compensation for consumption of home-grown corn.

46,487. (*Mr. Gilmour.*) Did you get any practical suggestions from these farmers or from any others how they propose to prove their consumption of home-grown produce—how it could be checked so as to avoid fraud?—I heard a good deal about the foreign meat.

46,488. I am referring to the home-grown and home-consumed produce; did you get any practical suggestions how that could be carried out so as to prevent fraud?—You mean in the way of giving compensation for home-grown corn?

46,489. Yes; if they claim compensation how are they going to prove it to the satisfaction of the other party?—There was a great difficulty in making any suggestion of that sort. When I suggested that there would be a difficulty in checking it, some farmers said we could show it by our books. Some farmers keep books in which they say they could show it. Another thing which was said was "anybody would know how much corn this farm "ought to produce, and by looking at the books you "could see how much was sold and how much was used "at home." Further than that I did not hear any suggestion. It is acknowledged that the checking of it is rather a difficult question.

Mr. Spencer

26 Apr. 1895.

46,490. On the whole it would rather point to this then that it is a very difficult thing to come to a fair way of managing it?—It is very difficult to devise some effectual means of checking it.

Agricultural education.

46,491. Did you hear any suggestions as to the way in which the provisions of technical education should be dealt with in these different counties—for agricultural purposes only I mean?—Farmers do not believe very much in technical education, as a rule, but all county councils are making efforts in that direction. I think in every district I went to there is a dairy school going round or a cheese-making school, or something of that kind.

46,492. But there was nothing very new except what you have mentioned in your report, I take it?—No.

46,493. (*Mr. Chaplin.*) Generally speaking you found, I suppose, a great deal of depression in your district?—Yes.

Fall in prices.

46,494. And the agriculturists, I gather from your report, all give pretty much the same cause for it, namely, the fall in prices?—Yes, certainly.

46,495. Do they attribute part of it to the seasons?—Part of it to the seasons but more to the fall in prices.

Land unlet.

46,496. In some parts there is very little land that is let at all, is that not so?—In the Cotswold district I should think the land unlet is more than the land which is let.

46,497. In the Cotswolds?—On the poorer part of the Cotswolds.

46,498. Does that hold good anywhere else?—On the Chiltern Hills district, in Oxfordshire, I think there is very little land that is let.

Uncultivated land.

46,499. Have you found in any parts of the country that you have had to inquire into what land has gone out of cultivation altogether?—A certain amount of land on the Cotswolds has gone out of cultivation—that is where this rabbit breeding that I was speaking of goes on.

46,500. I observe you say in paragraph 77 "on the "Oxfordshire side of the Thames between Caversham and "Wallingford a good deal of land has gone out of cul-"tivation"?—That is on the Chiltern Hills.

46,501. Is that where this land has been devoted to a rabbit farm?—No, the rabbit farm is on the Cotswolds, that is in Gloucestershire. The Chiltern Hills consist of poor land with a great deal of beech woods.

46,502. In both of those parts of your district there is land out of cultivation?—Yes.

Rabbit farming.

46,503. Tell me a little more about the rabbits. From what you say have you any reason to suppose that that system of farming, so to speak, might be extended with advantage; can you believe that land devoted to rabbits in that way would produce 7*s.* 6*d.* an acre?—No, I do not think it would; I am not quite sure that I was right about that figure of 7*s.* 6*d.* I rather think it was 2*s.* 6*d.* when I come to think of it now.

46,504. I think that sounds rather more like it?—I am pretty sure it is 2*s.* 6*d.* now.

46,505. Then you do not see any great opening in that respect?—I do not think there is any great opening with the rabbits.

46,506. You heard a good deal of course from these distressed agriculturists as to the remedies they suggested?—Yes.

Import duties on manufactures.

46,507. Am I right in supposing from what I read of your reports, that they rely mainly upon import duties, upon what they call "manufactured articles"?—That is the favoured remedy of farmers. That is the first thing I heard in the market place of the towns that I went to.

46,508. What do they include in their manufactured articles?—It is rather difficult to get them to define that exactly, but flour is one.

46,509. They are all pretty unanimous there, about flour, are they not?—On flour they are unanimous. Then they think also that imported meat should be included. In Bristol, however, I could not quite make them define whether they merely meant frozen meat, or cattle that were brought over and killed as they are at Avonmouth, but I think most of them would say it is only frozen meat that they would have included.

Digitized by Google

Mr. A. Spencer. 26 Apr. 1895.

46,510. When they spoke of manufactured articles did they mean by that, articles of food only?—No, "We will have it all round" they said.

46,511. All manufactured articles?—Yes.

46,512. Including such food as is manufactured?—Yes, quite so.

Bounty on home-grown corn.

46,513. In paragraph 95 you say, "A bounty on home-grown corn also found supporters"?—Yes.

46,514. There is a scheme in relation to that given in your appendix?—That was one suggestion, that was made occasionally.

Malt tax.

46,515. But not strongly supported?—No, it was thought to be difficult to carry out.

46,516. What are their views with regard to the malt tax?—There is a very general feeling that the abolition of the malt tax was a mistake.

46,517. And they would like to see it restored?—To see that restored, or something equivalent to it.

Duty on foreign barley

46,518. Do they propose a duty upon foreign barley?—That is sometimes suggested, but on the cheaper sorts of barley I do not think they would be in favour of it, because those sorts come in useful for feeding.

46,519. Providing a distinction was made between malt-barley and feeding barley, if that was found practicable they would be unanimous?—Yes.

46,520. (*Chairman.*) Did they say whether it would be possible to make a distinction?—I did not go as far as that.

46,521. (*Mr. Chaplin.*) You say they did not suggest any material alterations in the law as to the relations between landlord and tenants?—No; except that they thought the Agricultural Holdings Act required some amendment.

Agricultural Holdings Act.

46,522. Then the Agricultural Holdings Act was often complained of?—They generally said We do not care about it at all—it is of no use to us.

46,523. You tell us that you found out that that was very often from ignorance of the Act?—Very often the people who complained of it were not aware what the Act contained, and amendments were suggested that were already part of the Act.

46,524. That is to say, they actually suggested amendments which are already in existence, and are already part of the Act?—Yes. For instance, this was mentioned as a hardship to me. Some particular man would say, "By "my agreement the Act is excluded." He was not aware that the present Act could not be excluded by law, probably he held under an old agreement which purported to exclude the Act of 1875.

46,525. (*Mr. Lambert.*) It may be excluded if an agreement is come to giving substituted compensation?—It was not that they had in mind; they meant excluding the Act altogether, not merely excluding the compensation clauses.

46,526. (*Mr. Chaplin.*) The compensation clauses, I understand, cannot be excluded unless equivalent compensation is given in any other way?—Quite so; it is only the procedure for assessing compensation that you could exclude.

Rates.

46,527. (*Mr. Dalton.*) I think you say in paragraph 60 that "the amount paid in rates has, with some exceptions, "not increased very materially; in some places the amount "paid in rates has actually decreased"?—Yes.

46,528. But taking the cases you have given in the appendix of the Northleach Union, the Chippenham Union, and Wootton Bassett Union the amount raised has decreased very considerably in each case I think. Those are the only cases that you give. In the Northleach Union the amount raised has decreased from 8,697*l.* to 7,067*l.*; in the Chippenham Union it has decreased from 17,382*l.* to 16,125*l.*; and in the Wootton Bassett Union it has decreased from 11,411*l.* to 9,783*l.*; so that in the cases which you have given it has decreased in each case—the amount of the rates I am speaking of now, not the rate in the £?—That is so, I think.

46,529. Did you have any cases in which the amount of the rates raised had increased?—In the body of the report, at pages 22 and 23, I give some cases.

46,530. I will come to those, if I may, directly; those are not the amounts of the rates raised, I think?—No; the amounts paid by a farmer annually.

46,531. In the Wheatenhurst Union, that is?—Yes; but I do not think I gave the Wheatenhurst Union in the appendix.

46,532. You have not given the Wheatenhurst Union in the appendix?—I did not get that information.

Mr. A. Spencer. 26 Apr. 1895.

46,533. You also give the amounts paid by a farmer in the Wootton Bassett Union, and you find that on that particular farm a larger amount was paid for rates, but on looking to the union itself we find that a very considerably smaller amount was raised taking the whole union?—Yes, his assessment may have been raised.

46,534. I was going to say there must have been something wrong in his assessment comparing one period with the other, because the rateable value of the Wootton Bassett Union went up during that period, and the rates raised went down, and therefore as his rent, instead of going up, went down, he ought certainly to have paid less in the pound, unless there was something at one period or the other wrong in his assessment?—I see the Chipping Norton Union has gone up a little, it is given on page 57.

46,535. Those are not totalled I think there—that is the rate in the pound?—Yes, I beg your pardon.

46,536. The amount of the rates is not given?—No, I did not get that out, in some of the parishes they had not got that.

46,537. Then in the case of the farm in the Headington Union the rates have fallen to a considerably greater extent than the rent has fallen?—Yes.

46,538. But in paragraph 62 you say "Even where there "has been a decrease in the rates they have not generally "fallen in the same proportion that rent has done," but in this case they have fallen in a greater proportion?—They have in that case certainly.

46,539. Did you have any cases in which they had not fallen in as great a proportion as the rent?—It would be so in the Chipping Norton Union. The rents have certainly gone down, and the rate in the £ is more.

46,540. The rate in the £ in the Chipping Norton Union in 1893 was 1*s.* 9*d.*, in 1888 it was 2*s.* 2*d.*, before the passing of the Local Government Act, but in the year 1882 it was 1*s.* 7*d.*, so it has gone up as compared with 1882, but down as compared with 1888?—Yes, slightly up as compared with 1882.

46,541. There was a general complaint that rates had risen and "it was stated at the meeting held at Gloucester "that local rates had considerably increased, and that the "increase was due to the county rates"?—Yes.

46,542. But it was pointed out by Sir John Dorrington, who was the chairman of the County Council, that that was not so, I think?—Yes it was. He gave me a table showing the amounts in the £ of county rates for a series of years, and they are less now than they were 10 years ago.

46,543. No doubt these representations that the rates had been raised were made *bonâ fide*?—Yes.

46,544. But it shows what very wrong impressions the agriculturists sometimes have with regard to the rise in rates?—Yes. One man in particular told me that his rates had more than doubled, but when I came to look at it I found it was anything but that. He asked me to come and look at his books, and he said, "I will show it you."

46,545. I think that is a very general impression which prevails in town and country very frequently; people have very vague ideas as to what they are paying in rates until they examine their accounts?—Yes, that is so.

46,546. (*Chairman.*) There are only about three cases in which you have given the detailed expenditure upon farms spread over a number of years showing the amount of rent, labour, and rates for each year?—Yes.

46,547. On page 71 in the appendix, in respect to a farm in Cirencester which was originally of 329 acres, that acreage seems to have been reduced to 279?—Yes.

46,548. Now turning to page 73, there is a case given there in great detail of a large farm in the Wallingford district of Berkshire, and there the rent and rates per acre are given for each year?—Yes.

46,549. Apparently the rates fell from 7*s.* per acre in 1873 to 5*s.* 9*d.* in 1874, and then by a gradual reduction to 3*s.* 3*d.* in 1893?—Yes.

46,550. Then there is another farm near Wallingford of from 648 to 736 acres where the actual payments fell from 122*l.* in 1881 to so low as 33*l.* in 1893?—Yes.

46,551. Which seems to indicate, as Mr. Dalton was saying, that many farmers seem hardly to be aware what the reduction has been, due partly to reduced expenditure and partly to reduced assessment?—Yes, no doubt that is so. There is a great deal of misapprehension as to what the exact position is.

Digitized by Google

Mr. A. Spencer. 26 Apr. 1895.

46,552. On pages 58 and 59 you give several cases of unions which you visited and the amount of rates actually raised in 1881 and 1891; and in each of the cases there has been a considerable reduction in the actual amount of the rates raised?—Yes.

46,553. May we presume that in all those unions there has been a large reduction in the assessment of land?—No doubt.

46,554. Then the farmers have benefited in all probability, or in all certainty, not merely from the reduction in the assessments, but also from the still further reduction of the rate in the £?—Yes.

Report on the Vale of Aylesbury and Hertfordshire. Immigrant farmers.

46,555. Now we will go on to the other district that you reported upon, namely, the vale of Aylesbury and the county of Hertford; there you state that in the case of Hertfordshire there has been a considerable and remarkable immigration of Scotch and Cornish farmers?—Yes.

46,556. Did you visit many of these people?—Yes; I visited several of them.

46,557. Are they doing fairly well?—I should say certainly as compared with other farmers.

46,558. What is the cause of the difference?—I think they are extremely thrifty, and they are hardworking. To a certain extent they have changed the system.

46,559. In what respect have they changed?—They grow potatoes a good deal; they grow oats more and they grow artificial grasses.

46,560. Have they taken, in many cases, the poorer lands?—They have taken the ordinary class of Hertfordshire land. It is not good land, any of it.

46,561. It is a very depressed district?—It is not so depressed as the Essex district. Still it is a depressed district; but being near London and there being plenty of railway accommodation, I think it has kept up rather better than other districts of a similar character of soil.

46,562. Have these farmers continued to remain there?—Many of them have. I visited one or two who have been there 10 years, and who seemed to be doing very fairly well.

46,563. Did they make any complaints?—No; some of them have introduced dairy farming on arable land where they are near a railway. Where they are near a railway they have almost always, if they can, gone in for milk selling.

46,564. Have the neighbouring farmers learnt anything from them?—I think there is a tendency to change their course something in the same direction. I think they have learnt something.

46,565. Have you found Cornish farmers there too?—Yes. There are more Scotch than Cornish, but there are Cornishmen as well. I think some of them employ rather less labour, both the Scotch and Cornish farmers. That is in a great measure because they and their families work very hard. The female members of their families sometimes work.

46,566. I see you quote one land agent as saying: "Scotchmen seem to do very well. They employ plenty "of labour and work very hard themselves." And you quote another one as saying: "Scotchmen never go "back to their own country from here. I do not think "they run farms out. They farm very highly and use a "great deal of manure"?—I asked those questions specifically because a statement to the contrary effect had been made to me by some people I had met in the market.

46,567. Did you get statements as to their farming accounts from any of those Scotch farmers?—No, I did not.

46,568. Is it difficult to get them?—There is considerable difficulty in getting anything of that sort. I was asking one Scotch farmer how he had been doing and he said, "I should not stay here unless I could make some per-centage on my capital."

46,569. Have they got leases?—No, they have not got leases.

46,570. They have not brought the Scotch system of leases then with them?—No.

46,571. Would the landowners be prepared to give them leases, do you imagine?—It would depend upon the rent. If it was a very greatly reduced rent I doubt whether they would. They always told me that nobody asked for a lease now.

Farms in the Aylesbury district.

46,572. The Aylesbury district is rather a different locality, is it not?—Very different.

46,573. Are the farms there large or small?—They are medium sized farms, about 200 acres; they are not what you call large farms.

46,574. I suppose the rent has not been so much reduced?—Not nearly so much.

Mr. A. Spencer. 26 Apr. 1895.

46,575. Is it mostly grass?—Yes, but each farm would have a certain amount of arable with it for the purpose of growing straw.

46,576. But they do not depend at all upon their corn?—No, they do not depend upon their corn.

46,577. Do they generally consume their own corn or do they sell it?—I think they consume it now.

46,578. At present prices, I suppose, they would?—Yes. The great value of arable land there is for the straw. They must have straw for their cattle, and they grow wheat because it produces the best straw for their purposes.

46,579. Then growing wheat for straw will keep up the cultivation of wheat in districts where otherwise it could not be carried on?—In that sort of district it certainly would because wheat straw would be necessary for them there, at least I suppose they would say it was.

Dairy produce in the Aylesbury district.

46,580. How do they make their money in the Aylesbury district mainly—is it by selling milk?—Either by milk or by fattening cattle; it used to be by making butter.

46,581. Has butter-making been given up?—That has been given up to a great extent.

46,582. Do you think it has been given up too much, and that they have gone too much into milk?—They say that the prices for butter are so bad, and I suppose they know their business best. I met one farmer last summer who said, "I made butter hitherto, but I am going "to take to milk after Michaelmas." He said, "I cannot "make butter do."

46,583. Has the price of really the best butter gone down?—I do not expect it has. I think the farmers who make butter now successfully are those who have got private customers and who do not sell through a dealer. There is one farmer near Aylesbury whom I met who has a large number of customers in London; he sends up to private families who know him.

46,584. And he gets a good price?—He gets a good price; he gets the retail price.

46,585. Does the same remark apply to that district as you have made with reference to districts further west, namely, that the price of butter has depreciated by the quantity of bad butter?—I think so, certainly.

46,586. So that it tells against a farmer who makes good butter, and unless he has private customers he cannot get a good price?—Yes. In the case of one or two farmers where I went, where they still make butter, the butter is evidently not of the best quality.

46,587. All this tends to show the extreme importance of having a general uniform level of quality?—Yes. One farmer told me, "Our butter does not keep so well." I said, "Why does the foreign butter sell better than "yours"? He said, "Because ours does not keep so well." I believe it is simply a question of the making; if the English butter is made properly it will keep just as well as any foreign butter.

46,588. Have you found much increase in the cultivation of fruit in the district?—Not in that district. There is to a certain extent near to the Chilterns, but that is rather out of the Vale of Aylesbury. There are a good many plums and cherries grown there, but not in the Vale of Aylesbury itself.

Aylesbury duck industry.

46,589. Has there been much increase in poultry?—There is the duck-breeding industry near Aylesbury.

46,590. Has that increased considerably?—That has increased to a certain extent, I think, but it is very difficult to say how far it has increased or not. As a rule, people who rear ducks told me that they think it has increased, and they say it has increased for this reason, that a good many farmers, owing to these bad times, have taken to doing a little ducking, as it is called, in addition to actual farming. The regular duck rearers are generally people of small means, such as labourers or men of the small tradesmen class.

46,591. Are there any lands unlet in the Aylesbury district?—Not in the Aylesbury district.

Demand farms.

46,592. Is there a demand for farms there?—There is a certain demand for farms there.

46,593. Is there any difficulty in getting a tenant?—I do not think there is much difficulty in getting a tenant there.

Digitized by Google

Mr. A. Spencer.
26 Apr. 1895.

46,594. In the Hertford district, I suppose, there is some difficulty?—Yes, and there is land unlet in Hertfordshire, more especially as you get further from London.

46,595. To some extent, I suppose, the difficulty has been removed by this inroad of Scotch and Cornish farmers?—Yes.

Judicial rents.

46,596. Did you find any demand in either of those districts for judicial rents?—No.

46,597. Was the question mooted?—I do not think it was mooted in the Aylesbury or Hertfordshire district; I did hear it mooted in my other district, as I have said.

46,598. At meetings of farmers which were held was the question discussed at all?—There was an opportunity for discussing it, but they did not give any attention to it.

46,599. Would you say, then, that there is no general demand for it?—In neither of those districts, I should say—certainly it is so.

Scotch farmers in Hertfordshire.

46,600. (*Mr. Gilmour.*) Are these Scotch settlers chiefly young men, or are they married people?—I think when they come there they are young men, but some of them have been there some little time and have grown older.

46,601. Ten years I think you said?—There was one man in particular that I am thinking of who was quite a middle-aged man, who has been there 10 years; I should think he is a man of 50 or so.

46,602. Did you find that their families really worked with them pretty regularly?—In many cases, yes, especially on the smaller class of farms.

46,603. That accounted for their wage bills showing that they employed less labour?—Yes. They do the labourers' work themselves, which the old-fashioned English farmer would not do.

46,604. (*Chairman.*) Do they bring a certain amount of capital with them?—Some do, I expect, but I daresay some do not. I do not expect that they would bring so much capital as was formerly considered necessary for an English farm, but they have got enough to get on with somehow or other.

46,605. I notice that one of them objected very much to the manner in which we let farms in Scotland, that is, by advertising them?—Yes, by tender, as they called it.

46,606. Did he say in what way he proposed that proprietors were to let the public know that their farms were to let if they were not to be advertised?—No; I did not question him as to the system there, but he was comparing it rather with the English system, and he said in Scotland they are let by tender, and that keeps the price up.

46,607. How do they get their tenants there; do they not compete against each other in England?—In many places there is no competition, or very little competition. I expect the real thing is that in Scotland there is more competition.

46,608. Is not the price the public will give for an article the proper price to get for it?—I should think so.

46,609. Did that gentleman explain in any way how it is that last year there was a better demand in Scotland for farms than there had been for a good many years previously?—No.

46,610. He did not mention that?—No. I did not question him very much about the Scotch system; I was asking him more particularly how he was getting on in England. He was a man who had come from Scotland some time; he had been in Hertfordshire for some years.

Depression in Hertfordshire.

46,611. (*Mr. Chaplin.*) Do you find depression in Hertfordshire generally as bad as in the other districts?—As in the district I visited first?

46,612. Yes?—Yes, except that Hertfordshire is rather preserved from extreme depression by the nearness to London, and by the railways, and by the possibility of selling hay and straw and getting manure down by railway. Getting the manure down seems to be a very great benefit to the farmers there; many of them get manure from London.

46,613. Being so near to a market is, of course, a great advantage to him?—Yes, and they are also able to sell their meat well. At the surburban towns north of London they can sell their cattle and sheep well; the butchers there buy them.

46,614. But in spite of all that the depression there is severe, I suppose?—Certainly, and especially in the further parts of Hertfordshire, where the land is less good.

46,615. The land has fallen enormously in value for selling purposes according to the instances you have given us?—Yes, it has.

46,616. I suppose you have given us some of the lowest?—I have given what were given me as low ones by a firm of auctioneers. I have no doubt my informants took out those that were rather low instances.

46,617. For instance, one case is given where the land went for 10*l.* 15*s.* per acre; what fall in the selling value of the land would that represent as compared with the better times?—I should think that land would have been worth 20*l.* or 30*l.* an acre. Since 1889 there has been a considerable fall.

46,618. This they attribute again, I suppose, to the fall in prices?—Certainly.

Low prices of dairy produce.

46,619. Could you tell us whether the prices of milk have fallen, too, recently?—Yes.

46,620. What do they attribute that to?—To foreign competition, and also to the increase in the quantity produced in this country. No doubt there are a great many more farmers who produce it than used to.

46,621. They are now turning their attention to the production of milk?—Because they have found that other things have not paid.

46,622. Did they complain of the foreign importation of milk?—No, I did not hear much of that.

46,623. They are not aware at present of how rapidly that is increasing?—No.

46,624. Then with regard to the butter—butter has fallen 30 per cent., you say?—Yes.

46,625. Did they make great complaints of that?—They complain of foreign importation there with regard to butter.

46,626. Did they attribute the fall in the case of the butter to the foreigner?—To foreign butter, certainly.

Uncultivated land.

46,627. With regard to the land itself, is any of the land in Hertfordshire out of cultivation?—I did not hear of any actually out of cultivation, but there was some that seemed to be on the border and very near it, and some that they thought would go very shortly. I did not find a case where land had actually gone out of cultivation at present.

46,628. They were apprehensive, were they, that if there was any further fall in prices that land in Hertfordshire would go out of cultivation?—Yes; and in some parts there is a considerable quantity on the landlords' hands.

46,629. They had not much to say about the Agricultural Holdings Act, I understand?—No, they say there again that they do not think it is much use.

Hertfordshire custom.

46,630. They prefer the custom in Hertfordshire, do they?—I do not think they get much out of the custom in Hertfordshire by itself.

46,631. It is not a good custom there?—I do not think the custom gives them compensation for improvements there; it only gives them tillages, I think.

46,632. Under what conditions usually do they hold their farms, do they hold them by agreement?—A good many farmers in Hertfordshire have no written agreements.

46,633. Then they are under the Agricultural Holdings Act whether they like it or not?—Whether they like it or not, certainly.

46,634. So that for whatever the Agricultural Holdings Act is worth, they get the full benefit of it?—Certainly.

Rateable values in Aylesbury and Hertfordshire.

46,635. (*Mr. Dalton.*) I see you give some particulars as to the rateable values in the appendix to this report too?—Yes.

46,636. You take three unions, the Aylesbury Union, the Hitchin Union, and the Buntingford Union?—Yes.

46,637. In the Aylesbury Union the rateable value has gone up, I think?—Yes.

46,638. And you say that where tenants were formerly rated upon their rentals the assessments have now in all cases been reduced to the amounts of the rents less 20 per cent.?—Yes.

46,639. I suppose they are satisfied with that?—I think they are satisfied with that as the assessment.

46,640. But in that union you give us no particulars as to the amounts of the rates?—I was not able to get them there.

46,641. In the Hitchin Union I see the rateable value has slightly fallen, but very slightly, namely, from 168,000*l.* to 162,000*l.*?—Yes.

46,642. And the amount of common charges has fallen to a far greater extent than that, namely, from 4,128*l.* to 3,294*l.*?—Yes.

Digitized by Google

Mr. A. Spencer. 26 Apr. 1895.

46,643. Therefore the rate in the £ there must have fallen considerably?—Yes.

46,644. In the Buntingford Union although there has been a decrease of 20 per cent. in the rateable value from 41,000*l.* to 32,000*l.*, there has been a somewhat larger fall in the expenditure; taking the whole expenditure for the year 1880–81 it comes to 4,473*l.*, and for the year 1893–94 it is 3,095*l.*?—Yes.

46,645. Therefore there must have been a fall in the rate in the £ there too?—Yes.

46,646. That hardly bears out by itself the impression that the rates in 1894 have gone up so much?—Is that stated?

46,647. It is stated in one of the reports, but I do not know that it is stated in this particular one. On page 19 you give a very interesting statement of one farm, comparing the actual amount paid for rates with the gross returns; that is the only case I think in which, in your reports, you give that comparison?—Yes, that is so.

46,648. In this particular instance the rates seem to have fallen in a larger proportion than, or, at any rate, in very much the same proportion as, the returns, for they were 50*l.* in 1885, and the average for the four years 1890–93 was 44*l.*, whereas the returns fell from 2,074*l.* to 1,691*l.*?—Yes.

46,649. That does not bear out what comes later on in the report "additional force is lent to them at the present "time when the value of the produce of the land has fallen "in, generally speaking, a considerably greater ratio than "the local burdens it has to bear even where those burdens "have fallen"; in this instance that you give us, the rates have certainly fallen to the full extent of the fall in the returns?—Yes. That case you have referred to is the case of a dairy farm; it is a case where the returns would not have fallen so much as if it had been an arable farm.

46,650. You did not get any precise figures in any of the other cases showing what the returns were and what the rates were?—I did not work it out in that form in any other case.

Mr. A. Spencer. 26 Apr. 1895.

46,651. In some cases where the fall in rates has been very considerable, as it was, I think, according to your former report, in which figures were quoted which showed that the rates had enormously decreased, I should have thought that they must have fallen to a greater extent than the returns?—The returns have probably fallen about 50 per cent.

46,652. Yes, but the rates paid by particular farms have fallen to a much greater extent than that I think. In your other report that we had I think there were cases where they had fallen more than that. In the Headington Farm, for instance, the rates had fallen from 97*l.* to 44*l.*; that is more than 50 per cent.?—Yes. I think the rates have fallen more in the Headington Union than in any I came across. I think that is rather an extreme case of the fall in rates.

46,653. At any rate, if the assessment has fallen to the same extent as the rent, and the rate in the £ has also fallen, and if it is the case that the returns have fallen to a greater extent than the rates, it must also be the case that the rent has not fallen to the same extent as the returns?—For the purposes of assessment the temporary abatements of rent are not taken into account.

46,654. I mean in a case where you get no temporary abatements?—Yes, it must be so if that is so.

46,655. Do you think, as a rule, the rents have not fallen in proportion to the returns?—I should think as a rule they have fallen in proportion to the returns.

46,656. Consequently it would follow that if the rates had fallen in the £ and the assessments have been corrected, the rates would have fallen in the same proportion as the returns?—If they get the rent reduced permanently and not by a mere temporary abatement.

46,657. In such a case as we have in the Aylesbury Union, where the rents were taken as the basis of the assessment less 20 per cent.—in that case if the rates in the £ have fallen, should you say the rates have fallen in proportion to the returns?—Yes, I suppose they would have done so.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

Eighty-ninth Day.

Thursday, 2nd May 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

The Rt. Hon. BARON RENDEL.
The Rt. Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. JOHN SPEIR called and examined.

Mr. J. Speir. 2 May 1895.

46,658. (*Sir Nigel Kingscote.*) You are, as we know, an Assistant Commissioner appointed to examine into the present condition of agriculture in the counties of Ayr, Wigtown, Kirkcudbright, and Dumfries?—Yes.

46,659. And you have taken the best means that were open to you of obtaining all the information you could obtain from those counties?—Yes.

Tuberculosis.

46,660. We have your report before us, and also a memorandum which deals in the first place with bovine tuberculosis. I do not know whether you would like to take the subject of tuberculosis first, and give us your opinion upon that?—If it suits you I would, because, as far as my district is concerned, it is certainly the most important point in the whole.

Mr. J. Speir. 2 May 1895.

46,661. What do you wish to communicate to us as regards this disease of tuberculosis, which we know is common to both men and animals, or is supposed to be so?—In the counties on which I have reported, I find that the disease is even much more prevalent than the farmers themselves or the general public are inclined to believe. While making inquiries on the subject, one county especially strongly reported to me that there was no disease of any importance; I refer to Dumfries. Now I have occasion to purchase cows all the year over, and

Digitized by Google

Mr. J. Speir. 2 May 1895.

since then I have bought somewhere between 60 and 70. Each of these cows I have tested with tuberculin; I bought almost an equal number from each of three counties, and I find that there is just about as much disease in the one county as in the other.

46,662. How many counties do you speak of now?—I have had no opportunity on my own initiative, if I might so express it, of testing the cows from Wigtownshire and Kirkcudbrightshire.

46,663. But have you tested them from the other two counties on which you have reported?—I have tested them from three other counties, and can speak with authority with regard to them. You will be able to have witnesses who can speak more authoritatively than I can with regard to Wigtownshire. I have some information which has been furnished to me in a private manner, from which I am almost prepared to say that there are at least 75 per cent. of all the cows of Wigtownshire that might react under the tuberculin test.

46,664. Therefore it is your opinion that considerable risk of infection is run by human beings through the consumption of the milk or of the meat of these infected animals?—Most decidedly so; more especially the milk.

46,665. Have you any special case or cases that prove your belief in the infectiousness of the disease?—I have one or two which I spoke of before the Commission on Tuberculosis some years ago, but it is scarcely worth while going into the matter just now.

Tuberculin test.

46,666. Have you had experience with Koch's tuberculin, which has been claimed to be a never-failing test for this disease?—I have tested more animals with it than probably any other man in Scotland, and I have been in communication with nearly all the gentlemen in the south-west of Scotland who have been making tests, and I know their results as compared with my own.

46,667. Could you tell us the results?—My own results give in cows from five to seven years old an average of nearly 50 per cent. as reacting. These reacting cows may under ordinary circumstances be always considered to be more or less affected with the disease.

46,668. Have you carried out these experiments yourself, if I may use the word experiments?—I have done all the work myself with the exception of killing a few of the animals, which have been slaughtered for the purpose of proving the test.

46,669. (*Mr. Chaplin.*) Are those experiments in injecting tuberculin that you are referring to?—Yes.

46,670. (*Sir Nigel Kingscote.*) Perhaps you would tell us shortly, if you can, the actual process; it might be as well to have it recorded, I think?—It is a very simple matter. The tuberculin is injected into the animal usually in the afternoon or late in the evening. The temperature is taken then, so that an animal which is probably high in temperature from some other cause may not be put under test. Within, say, from five to ten hours, that animal's temperature will rise from three degrees up to five degrees if there is anything wrong; if there is nothing wrong, and the proper quantity has been used, the temperature will remain normal. If a larger quantity has been used than is absolutely necessary, the temperature may rise one or two degrees. I have never found it rise any higher without something being wrong. Then the following morning from, say, any time after four, five, or six o'clock, the temperature is usually taken every two or three hours; there is then no difficulty in finding what animals are up in temperature and what are down, because they usually remain up from at least three to five or six hours.

46,671. And there is no difficulty in taking that temperature?—No, anyone can do that. It is a simple matter of taking a clinical thermometer and inserting it in the anus and keeping it there for two minutes, then reading it after it is taken out.

46,672. What is the cost of the operation?—Just now tuberculin can be bought in fairly large quantities at a cost of about sevenpence per animal; in larger quantities it may be bought at very much less. What I have been using has cost me that. Then there is the attendance of either a farmer or of a veterinary surgeon to carry out the test afterwards.

46,673. From a practical point of view should the veterinary surgeon be called in, or can the farmer or the owner of the stock do it himself according to his experience?—I have done it myself, and what one man has done surely another man can do also if he takes the same opportunities of learning.

46,674. What would you say about the veterinary surgeon, when would you call him in, at no time at all?—If the farmer was not thoroughly acquainted with the work, by all means have a veterinary surgeon to do it; but if the farmer had been taught how to do it, he could do the whole work quite easily himself.

46,675. (*Mr. Dalton.*) Without any risk to the animal?—There is no harm to the animal at all, unless in a few cases where the animal appears to be badly affected, or where probably rather a heavy dose has been given. Then the animal may be off its feed for it may be an hour, or it may be three or four hours, or it may be a whole day; but the following day it is back to its normal temperature. In the 60 animals or so which I have done in my own stock, I have had only two cases of that kind, but I know that there are some others who have done less than the half of that number, who have had a very large proportion of such cases. So that it is uncertain how many may turn out in that way.

46,676. (*Sir Nigel Kingscote.*) How many cows or heifers do you think one man could manage to apply this test to?—It depends altogether how much time you mean him to devote to it. He can do quite easily from 10 to 20 in an hour, and a sharp man can do even more than that.

46,677. What I am rather pointing out is this: taking one of these counties and the great number of cows and heifers in it, do you think it would be possible or practicable to put the test properly to all these animals?—Yes, I suggest that it should be put into the hands of the veterinary surgeons, and I say that if each man devoted one hour on two or three days a week——

46,678. Each veterinary surgeon?—Each veterinary surgeon—then that he can get over at the very least from two to three thousand cows in a year.

46,679. You would have to remunerate him for this?—Most decidedly so; and I suggest that as it is a matter which concerns the general community, as well as those engaged in farming, the Treasury should provide tuberculin, and that the counties should be at the expense of providing the veterinary attendance for making the test. Then the farmer, as he is the most immediately concerned, might be at the expense of taking the temperatures.

46,680. Taking the four counties you have named, do you think there are a sufficient number of veterinary surgeons in those counties who could carry out this work, and therefore effectually go through all the cows and heifers in 12 months?—Quite easily, without interfering with their ordinary work, or the work they have already in hand.

46,681. By doing it systematically?—By doing it systematically, and devoting from one to three hours per week to it.

46,682. Your idea is that the Government should find the necessary tuberculin, and that the county council, out of the general county rate, should pay the veterinary surgeons?—Yes. The probability is that if the system had a few years' trial, every farmer might do it himself if he thought fit; or some other course might be adopted.

Loss by tuberculosis.

46,683. Have you any means of informing us as to the loss by tuberculosis at the present moment—can you put it at so much per cent.?—The loss cannot be less than five per cent. for the whole district.

46,684. Five per cent in these four counties?—Yes, and it might be very much more. It is almost impossible to get at the actual figures, I can only get at them from particular stocks, where the results have been kept. Then, again, the losses are very much greater than the absolute deaths. There is a great indirect loss in animals that are sold, which have become affected by the disease, and have been put out of the way at a very small price.

46,685. Therefore your calculation or idea would be that the expense of putting your system into operation would be far less than the present loss?—It is just about a tenth of what the actual loss really is just now.

46,686. Besides taking away the fear of infection?—And the risk to the general community, and the risk to animals cohabiting with those that are affected, because if we go on as we are just now we can never hope to get any better, but may even get worse.

Spread of tuberculosis.

46,687. Do you think it is increasing now, or what?—It evidently is increasing. I have no hesitation in saying that I am inclined to believe that it has been a great deal caused within the last 20 years, owing to the winter production of dairy products, milk especially. The houses are kept warm; the ventilation is not so good as it might be, and better houses in one sense have been put up. That is,

Digitized by Google

Mr. J. Speir.
2 May 1895.

they have been put up with better roofs, and the buildings themselves are tighter all round. Consequently ventilation is worse; the air is more contaminated, and when one diseased animal has been put in contact with others, the disease is very readily communicated to all.

46,688. In fact, the manner in which a larger number of cows are now kept is more conducive to the disease being spread than it was formerly, when they were allowed to go out?—Yes. Then there is another matter which I believe has a very strong influence upon it. That is the system of in-breeding which has been followed in many stocks.

46,689. Are you talking of pedigree stock now, or of a common stock, or of both?—Of pedigree stock especially. Some particular breeders have bred very closely, and in that way they have lowered the stamina of the animals. Of course, under similar circumstances, they would fall more readily under the disease.

Tuberculin test.

46,690. (*Mr. Gilmour.*) Does this testing of the cows with tuberculin affect them at the time in regard to their milk supply?—Occasionally, if they go off their food the milk supply drops off also for that particular day; but the following day they are usually back to their normal again. But it is only the ones as a rule which go off their food. If the animal is affected, the milk supply will very likely be lowered.

46,691. What part of the animal do you inject this into?—Almost anywhere. The usual place where I have done it is behind the shoulder blade, more because of the convenience of doing it there than for any other reason. Some people do it in the neck, the skin being a little thinner in the neck, and the syringe being easier to insert there; others do it in the dewlap.

46,692. I suppose this question really, as far as your report goes, is, in your opinion, about the most important question in those counties at the present time?—It is the most important question for the south-west of Scotland, if not an important question for the whole country; which I am inclined to believe it is.

Scheduling of tuberculosis.

46,693. I gather that this disease, in the opinion of those whom you have examined, should be scheduled and treated in the same way that pleuro would be?—No, I cannot suggest that we should do such things; I cannot go so far as that. If we were to attempt to do so, it is too big a question, I believe, for any Government to take up.

Cause of tuberculosis.

46,694. (*Mr. Clay.*) I suppose the principal cause of tuberculosis that you know of is the close in-breeding?—No, I am inclined to believe that it is caused more by infection than in-breeding. Infection I put as the primary cause, in-breeding as the secondary one, and probably close confinement as the third cause.

46,695. You spoke of the want of sufficient air in the byres?—Yes, I put the want of ventilation as being about the third cause.

46,696. Where does the infection come from?—From any animal that they may come in contact with. It may even come from man. Provided that you have one animal infected, there is very little difficulty with animals that are housed in close buildings, especially, of the contamination going very quickly from one to the other.

46,697. But it is the same as with shorthorn breeding, in which they say by close breeding you weaken the constitution of the animal?—Yes.

46,698. Therefore that animal would be more liable to this disease than a stronger animal?—Most decidedly. That is why I put it as being the second cause.

Compulsory slaughter.

46,699. (*Mr. Gilmour.*) What I referred to was this. On page 13 of your Report, in which you give the evidence which you received of tuberculosis, you say, "Certainly, "there never was the same unanimity among ordinary "stockholders in favour of compulsory slaughter of "animals affected with pleuro-pneumonia that there is "among the farmers of Ayrshire and Wigtownshire, in "favour of slaughtering those affected by tuberculosis"?—That is the farmers' opinions, not exactly mine. I have given these views as their opinions. They are quite unanimous that something should be done, and I believe that they would agree to almost anything.

46,700. So as to practically try to eradicate it?—Yes, that is what is wanted.

Prevalence of tuberculosis.

46,701. (*Mr. Chaplin.*) You say it is enormously prevalent?—I have done for my own satisfaction a good many stocks over Ayrshire and Lanarkshire, more for information and to satisfy the people, who own the stocks than anything else, and I find you will get one farm with, in some cases, three-fourths and, in others, nine-tenths of the cows wrong. In only one case have I found every animal free.

Mr. J. Speir.
2 May 1895.

46,702. In some cases you find nine-tenths of the stock affected?—Yes.

46,703. What is the proportion, are there many deaths from the disease among the cattle?—It depends altogether upon the class of farm you take. If it is a rearing-farm they might have considerable loss in the year-olds; after that they have, comparatively speaking, little, because those that are strong enough to withstand the disease to a great extent are passed on to users of stock at four and five and six years old, and it is there that the loss falls.

46,704. Where those stock are very much affected what proportions would they lose of year-olds?—It is so irregular that it would be utterly impossible for me to put a figure on it.

46,705. The deaths occur later in life?—Yes, at least the losses are principally later in life.

Compulsory slaughter.

46,706. Do I understand that you recommend the process of stamping out?—No, because I say it is too great a work—it is too big a work. I do not think you can at any rate adopt it at once. By adopting something of the system that I have suggested you can limit it within three or four years; because the ordinary life of a cow is so short that if all affected animals were prevented from coming in contact with the bull, they would immediately naturally be killed off.

46,707. Let us take the question of stamping-out first, because I understand that in your district into which you have examined, it is the universal view almost of the farmers that the stamping-out proceedings should be adopted; is that not so?—Yes, they would be quite agreeable to that.

46,708. It would not be possible to stamp it out, would it?—It is possible; but I say there is no Government that I know of prepared, I think, to undertake it.

46,709. Is it not the case that this disease is communicable and, as a matter of fact, sometimes is communicated by mankind to the animal?—I believe so.

46,710. Of course, if that is so, it would be impossible to stamp it out unless you proceed to slaughter the human beings too?—Well, the communication only is supposed to exist where you get into very close contact. It is much closer among animals themselves than what it is between men and animals.

46,711. At all events, you look upon the practical difficulties of stamping it out as so great and involving such large operations that you do not recommend it?—I do not recommend it in the usual acceptation of the term.

Tuberculin test for tuberculosis.

46,712. Now your proposal is to limit this disease by the use of tuberculin?—Yes.

46,713. Have you read the report that is just issued by the Tuberculosis Commission?—No, I have not had an opportunity of doing so.

46,714. Because there I find that in experiments that have been made by Professor McFadyean, he records as the total outcome of his experiments that he received wrong indications from tuberculin about the presence or absence of tubercle in cattle in the case of 24 animals out of 75. Now that is not borne out by your experience?—He used a larger number of animals than it has been possible for me to test myself. As to what has been done by others within the last two months, I have a return of the results obtained by Professor Bang in Copenhagen during 1892, 1893, and 1894, during which years he has tested 16,676 animals; and it is only a very small percentage that turned out different from what the test has indicated that it should have been.

46,715. Now when this test is applied, or when this test would be applied in your plan if it were adopted, and you find the animal to be diseased, what is the next step?—I am prepared to suggest that you should allow it to go into commerce the same as it is just now. If the local authorities think that the animal is so bad that it is not suitable for human food, by all means put it aside; if it has only a very small proportion of the disease on, say, the lungs, the liver, or the kidneys, or some of the glands, then it may go into consumption presently.

46,716. Supposing you had detected disease by the application of this tuberculin, you cannot tell, I suppose, until the animal is killed what parts of it are actually affected with tuberculous matter?—No.

Disposal of tuberculous animals.

46,717. Having detected the fact of the disease, what do you propose to do with the animal then?—Put it out of the dairy especially, and stop it on the spot for that purpose.

Digitized by Google

Mr. J. Speir.

2 May 1895.

46,718. Put it out of the dairy?—Yes; that is the great point that is necessary.

46,719. Then, what is the next point?—Feed it, if you can, or at least kill it within a reasonable time.

46,720. That is to say, if its health admits of it you would prepare it for the butcher?—Yes.

46,721. And then sell it?—And then sell it.

46,722. And then leave it to the local authorities to decide whether it is fit to be sold for food or not?—Yes.

Tuberculin test.

46,723. At all events, by this process of applying tuberculin you think that the disease in course of time can be immensely limited?—I think it could be limited to very small proportions in from three up to five years, provided that you do one thing which has not yet been touched upon—that the affected animals or reacting animals be separated from the others. That is a *sine quâ non* of the success of the test.

46,724. In these cases that you speak of, some of which you have referred to, the great majority of the animals are infected, are they not?—Yes.

Disposal of tuberculous animals.

46,725. Where you find a dairy which practically contains five-sixths of diseased animals do you propose to get rid of them altogether?—Yes.

46,726. Get them out of the dairy?—Out of the dairy as far as these five-sixths are concerned. There is no difficulty in doing that, because these animals do not exist in the dairy above four or five years at the longest.

46,727. At the outside?—In some cases not so long. There is almost a sufficiency of animals, young ones, coming in to take the place of those that go out.

Compulsory slaughter.

46,728. You do not recommend slaughter in any case?—In no case just now. I might recommend slaughter two years or three years hence; presently I am not prepared to do so.

Action by Board of Agriculture.

46,729. Do you recommend any legislative action at all?—Yes, I suggest that the Board of Agriculture should take in hand the testing of all these animals, and do this at least once every year.

46,730. Are they to exclude them from the dairies?—Yes.

46,731. They have not power to do that at present, I suppose?—The local authorities have power; if they consider an animal is affected with any disease likely to be detrimental to the health of the public they may do so.

46,732. The local authorities have power to do it on the ground of the health of human beings?—Yes.

46,733. But their powers are limited to that?—Yes.

46,734. When you say the Board of Agriculture should be called upon to act, is it not the case that it would require further legislative powers?—It would; to do it effectively, at any rate.

46,735. At all events you ground your faith in your hopes of remedial action in regard to this matter mainly upon the use of tuberculin and upon proper steps being taken after the disease has been detected?—Yes; tuberculin itself, without the proper steps being taken, would serve no good purpose at all.

Effect of tuberculin test.

46,736. The effect of tuberculin, I understand you, is to enable you to detect the disease?—That is all.

46,737. And then it must be for the authorities to act afterwards in the most effective manner they can, so as to limit it to the degree that you think is possible?—Yes, that is it.

Sale of milk from tuberculous cows.

46,738. (*Mr. Dalton.*) Would you make the sale of milk knowingly by a dairyman from a tuberculous cow liable to penalty?—Not presently, but within a very limited time I certainly would.

46,739. That has been done, I think, in one or two places by means of local Acts; sooner or later you would do that generally?—I would do that as soon as the public and the farmers become thoroughly alive to the risk they are running by the use of this milk. Presently, I may say, they are not—neither the one nor the other.

46,740. But at present no local authority, even if it was aware that milk came from a tuberculous cow in the greater part of the country, would have the power to prohibit the same?—I think they have.

46,741. I think not?—They have been attempting it occasionally, I think, in one or two cases.

46,742. In what part of the country would that be?—I think Paisley attempted it a year ago.

46,743. Do you know whether they have a local Act there?—I cannot say for that.

Mr. J. Speir.

2 May 1895.

Disposal of tuberculous animals.

46,744. In any of these cases that you have mentioned where a very large quantity of the cows are infected, it would mean, I suppose, a very heavy loss to the dairyman if he were to fatten them up on the chance of selling them?—No, the loss is not so much as you would at first expect. These animals would go out in the usual way, and the moment we put such a system as this into operation, there would very likely be a rise in the price of cows coming to calving for at least one year—it would, probably, to a certain extent even to the second year; after that I think it would be about normal.

46,745. You propose that these cows should be branded, I understand?—Yes.

46,746. Will the butchers be very willing to pay a good price for a cow branded as suffering from tuberculosis?—I do not think it will make so very much difference.

46,747. Not although they run the risk when it is dead of finding it condemned by the medical officer?—It depends altogether upon what they have been accustomed to in the district just now.

46,748. (*Sir Nigel Kingscote.*) Is it not the case that some cows suffering from tuberculosis can be fattened up and the meat is good, but that others become what we call wasters almost?—Yes. They would all become wasters provided you keep them long enough, but if animals show under the test just now that they have the disease, and yet to all appearances seem quite healthy, in, probably, 9 cases out of 10, these animals might be fattened in the usual course, and it might turn out when they were slaughtered that you would even have a difficulty in finding where the disease was located.

46,749. (*Mr. Dalton.*) We had some evidence from one part of the country that a man did not know when he sent his cow to the market that it was infected; he thought it was a very good cow; then, when it was killed it was condemned, and he got nothing for it. Do you know of any such cases?—Yes, that is quite a common thing.

46,750. Under those circumstances will people be willing to buy cows that are branded as suffering from tuberculosis when they know that when the animal is killed, it may be condemned—that they run that risk?—They will have a certain amount of risk to run, and the owner will run the risk of getting a little less price for it; but in districts where cows are sold butchers are meeting with this class of animal every day, and those animals are passing through every market in the country without a single word being said about them.

46,751. You do not think that the loss will be so great that you will have to compensate the owners of cows if you adopt this system?—No, I do not think so.

Tuberculin test.

46,752. Can you tell at all from your tests whether the animal is suffering severely or only suffering slightly from tuberculosis?—I have been able to draw no conclusion from my own tests; some few people think they can, but, as far as my experience goes, I cannot.

Disposal of tuberculous animals.

46,753. I am not sure, but I rather think that the recent report on tuberculosis seems to imply that the meat of a tuberculous cow is dangerous for consumption?—I believe it would be dangerous for consumption providing the cooking is not thorough. If the cooking is anything like sufficient I think there would be almost no danger, but a large joint will most decidedly, under ordinary circumstances of cooking, not in any way have the germs of disease killed in the centre of it.

46,754. Under those circumstances it is rather difficult to advocate the wholesale sale of the meat of tuberculous animals?—If you want to get clear of that and be thoroughly safe, you can adopt the system which, I understand, has been tried in Berlin. There, all carcases which show symptoms of the disease are taken possession of and subjected to extreme heat so as to kill the disease throughout the whole extent of the carcase. In that way the owner might receive a, comparatively speaking, small price for his animal, and the authorities would get for it what they could by selling it at a cheaper rate.

Veterinary treatment of tuberculous animals.

46,755. (*Mr. Clay.*) Is there any medical relief that you have found of advantage?—As far as my information goes, there is nothing in that way. There appear to be a few animals which do recover from tuberculosis after they have been infected, but the number is, comparatively speaking, small. I might refer again to the tests which have been made in Denmark. There they have found that about 5 per cent. of the animals which showed no reaction were seen, on being slaughtered, to have had the disease. But it was in something of the style which we talk about

Digitized by Google

Mr. J. Speir. 2 May 1895.

in connexion with pleuro-pneumonia; it was in an encysted form, and to all appearance it was an old sore, and dead, pointing apparently to the fact that these animals had had a slight touch of the disease at one time, but had been able to localise or throw it off.

Disposal of tuberculous animals.

46,756. So, when the disease is comparatively in its infancy, as regards the animal, the best cure is to put him into the feeding-box and sell him for beef?—If we were to adopt a scheme something of the style suggested by me, we would have a lot of very old animals the first year. They would be thrown aside, and might not feed well; but the second year, when we started with our three-year-olds, and in all other years, we would be able to pick up every animal at two or three years old, and there would then be no difficulty in feeding at least nine out of every 10 of the animals that reacted.

46,757. I think you said that you would have to clear a byre out of, perhaps, half the cows that are giving milk?—Only in particular instances. I have no hesitation in saying that there will be any number of byres that will show no trace of it. You will find others in which you will have very few sound animals.

46,758. And you would bring the young stock in to take their place, would you?—Decidedly so.

Transmission of tuberculosis to calves.

46,759. Would the young stock not be infected by the same disease from their mothers?—Yes, if the calves were fed with the milk of the infected animals there is, assuredly, a very great risk of communicating it. That is one point on which Denmark again has given us a very good lesson. In 1892 they took a stock of 200 cows, and in testing these there were, I think, the half, or rather more than the half, which reacted. They then kept the calves of all the stock, from both infected and healthy animals, and they boiled the milk for a few moments before giving it to the calves. It now turns out that very few of them have ever taken the disease, and they have never been near their mothers from the beginning up to the present time.

46,760. So that, in that way, the young stock might either go to healthy byres, or to places where they have been reared by the boiling of the milk in order to prevent the spread of the disease by infection?—The easiest way in the ordinary farm would be to only give to the calves the milk of the healthy animals, and to put the unhealthy animals into some separate building, or, as was done in this farm that I referred to, near Copenhagen, to make a division in the byre with boards and tar-cloth, which would be quite sufficient in most ordinary cases, and might be done at a very small cost.

46,761. Do you think by that means you would bring the minimum of disease to a very small ratio?—Yes, I think that in a very few years we could considerably reduce it; but it would altogether depend on the accuracy with which the restrictions were carried out afterwards how far it was limited.

46,762. (*Sir Nigel Kingscote.*) Now we will turn to the other parts of your report which, I think, you sent in last November, or some time like that; is there anything which you wish to say first of all specially with reference to them?—After tuberculosis, or the most important point that was brought prominently before me, was some alterations that were necessary in the Agricultural Holdings Act.

Evidence of agricultural depression.

46,763. Taking your report generally, I gather from it that there is evidence of agricultural depression in all the districts you have visited?—Yes, more or less.

46,764. But nothing at all like a collapse of cultivation?—No, nothing of that kind at all.

46,765. And that no farms are lying on the landlord's hands, and no land is idle?—There is no land idle, and no farm is on the hands of those landowners who wish to get clear of it.

46,766. At the same time land has fallen considerably in value?—Yes, and I have given instances of that in my report.

46,767. But there are, in many cases, arrears of rent except where reductions have been made, or abatements given?—Yes, and the arrears are now on the increase.

Reduction of rent.

46,768. Taking it generally, do the people in the districts you have visited say that the rents have not fallen sufficiently?—That is the general impression. Farmers apparently have a difficulty in reconciling themselves to the prices that presently exist. They are of a very hopeful temperament, and they always think they will get back to the old prices within the next year or two.

Bad seasons.

46,769. I suppose they also regard the bad seasons as having affected the situation?—To some extent.

46,770. And I conclude that the distress has been felt by landlords as well as by tenants?—Equally as much.

Mr. J. Speir. 2 May 1895.

46,771. As regards the sheep-farming districts, have there been very heavy falls of rent there?—The falls have been much more heavy there than in any of the other districts.

Reduction of rent on sheep-farms district.

46,772. As the price of sheep and mutton has rather kept up, I should like to know why that has been the case; I notice that you do express an opinion that the distress has been felt more in the sheep-farming districts than in most places?—The principal cause of that has been the great fall in the price of wool, which bulks pretty largely in a sheep-farmer's income.

46,773. Not from losses through bad seasons?—Not so generally. Seasons have also had an effect here; but wool, probably more than anything else, has done the mischief.

46,774. How does that affect the landlord almost worse than depression on other lands—than lands devoted to sheep farming; is there a difficulty in letting those farms when one becomes empty?—There never have been the same number of competitors for sheep farms that there have been for others, owing to the heavy capital that is requisite in proportion to the rent. Then another cause has been that the sheep stocks are usually carried over from the one tenant to the other, and a sort of tenant-right has gradually crept in in connexion with that. While commercial stock might, say, realise 2*l.* apiece, these stocks, when handed over from the one tenant to the other, are probably put up 10, 20, or even 30 per cent. above the commercial value, because they remain healthier while kept in that particular district than if they were turned off and a new stock brought on.

46,775. That is what you may call an increasing tenant right?—I say it has assumed almost, as it were, a sort of phase of tenant right.

Outlay by landlords.

46,776. I think I learnt from your report that, although there has been a very great reduction of rent and abatements, still that the landlords have spent large sums of money in keeping up their estates?—In the south-western counties the landlords have spent a very large proportion of their income in many cases, and I have no hesitation in saying that it is in great part owing to that that the land in the south-west of Scotland has kept up its rent when compared with the rest of the country.

Demand for farms.

46,777. But, at the same time, if there are any vacant farms, you seem to intimate that there are always plenty of tenants bidding for them?—There is more than sufficient. I have occasion to know the number of offers that were in for one the week before last, and there were 21.

46,778. Probably that farm was on exceptionally good land, and well situated?—It was well situated, although not on exceptionally good land.

Deteriorated cultivation.

46,779. Has the cultivation of the land deteriorated at all; do you think as much money is put into it as used to be?—I think there is nothing less, but rather more one way and another. There are districts where the cultivation is supposed to be getting slightly worse, but there are also new systems of farming getting up in some of the districts, which is causing a greater outlay.

Consumption of home grown corn.

46,780. I suppose a much larger quantity of home-grown grain is used upon the farm instead of purchasing?—Yes. Where 15 or 20 years ago there was almost no home-grown grain used they are now using a very large proportion, and also buying a greater proportion of imported feeding stuffs.

Deteriorated pastures.

46,781. In the dairy districts—and I think you tell us in your report that dairying has very much increased—do you find that there is any deterioration of the pastures?—The Kirkcudbrightshire people are of opinion that there has been a deterioration of pastures, and to some extent the same is said to apply to Dumfries, but I cannot say that it is very marked. If it does exist it would be more because of the individual farming than because of the system of farming, because there are some districts where dairying is more prevalent than even in these two counties where the pastures have most decidedly improved instead of going the other way.

Co-operative factories.

46,782. Has co-operation in dairying increased at all or taken any root in either of those counties?—Very little. There are somewhere about four or five dairies or creameries of one kind or another; but there is only one, as far as I remember just now, which is co-operative.

46,783. Those that are not co-operative but which are speculations, are they answering?—They are serving, at least, a purpose.

Digitized by Google

Mr. J. Speir.
2 May 1895.

46,784. And a valuable purpose, do you think, to the farmers in the neighbourhood?—They are consuming a quantity which would be otherwise thrown on the market, and probably not in such good condition; but at the present time there are more complaints than there ever have been with regard to prices.

Milking machines.

46,785. For dairy products?—Yes. I am almost looking forward to this, that if we have the milking machine in proper use, we might have about as big a drop in dairy prices as we have had in grain prices, if you compare the prices of 10 or 20 years ago with what they may be later on.

46,786. Do you mean to say that the trade will be overdone; is that your impression?—It will be overdone to such an extent that the prices will become very much less than what they are just now.

46,787. That is, the trade will be overdone by the farmers in Scotland and in England—we will say Great Britain—putting aside foreign competition?—No, it is quite the reverse of that. I say it will be overdone through the milking machine being adopted in foreign countries. They will be able to get over the scarcity of labour for milking, through this machine, in a way which they cannot do just now. The supply of labour we have here fences us round, and prevents the outsiders from adopting dairying to anything like the extent that they otherwise would if they were able to get over that difficulty. When they have got over that difficulty they will then give us a proportion of dairy products which will be, I am sure, very much greater than ever they have done in the past.

46,788. (*Mr. Clay.*) Is it your idea that the milking machine, if it is properly developed in foreign countries, will play the very same game as the self-binder has done?—It is almost identical. I am prepared to say that the self-binder, along with big steamships, has done more to reduce the price of grain than all other causes put together.

46,789. That is, owing to its introduction in grain growing countries?—Yes; and with the proper introduction of the milking machine something very similar will be sure to happen.

Co-operative dairying.

46,790. (*Sir Nigel Kingscote.*) As regards the co-operative system, I think you said there is only one instance of that?—Just one, as far as I remember.

46,791. From what you learn concerning it, what would your own opinion be as to a co-operative system for cheese and butter, say?—If these are to be adopted at all in our districts where they are suitable, by all means I consider this the best system that can be followed. If the product is to be made into butter I would then suggest that every farmer provide himself with a centrifugal machine equal to the size of the stock that he keeps, and only send away the cream. He can then keep the skim milk, and he can make more of it on the farm than it is possible for any public or private company to make of it anywhere else.

46,792. You think it would be a very valuable part of the system for the farmer to be able to keep the skim milk?—Yes. He can then use it fresh, whereas if it is hauled from two to five miles, and re-hauled back again, it is, to a great extent, deteriorated; besides, there is the extra cost of taking such a large quantity away, and bringing it back.

State loans.

46,793. Had you any complaints of the want of money for building and drainage, and general improvements?—I had a good many complaints of that kind.

46,794. From the tenant farmers?—From the tenant farmers on estates which were heavily mortgaged.

46,795. On which the landlord could not lay out money?—On which he did not lay out money.

46,796. He had not got the money to lay out?—No, he had not.

46,797. Was there any expression of opinion as to whether money for that purpose should be lent by the Government by loans at certain rates, or what?—Yes, there was a strong expression of opinion that money, under a somewhat similar scheme to what was done under the Drainage Acts, might be provided for that purpose.

46,798. That the money might be lent by Government, and not by special companies?—No, by the Government, at a, comparatively speaking, small rate, spread over, probably, 30, 40, or 50 years.

Agricultural Holdings Act. Official valuers.

46,799. As regards the Agricultural Holdings Act, which you think was the next important subject on which suggestions were made, what was the general feeling about that?—The general feeling was that the procedure under which claims were insisted upon must be made very much simpler than it is just now. Then, in order to carry that out, almost everyone was of opinion that you must have an official valuator, no direct suggestions were given to me in connexion with it, but that was insisted upon.

Mr. J. Speir.
2 May 1895.

46,800. You mean, I presume, that the state of the farm at the time of taking it should be put on record?—Not necessarily, though I believe it will follow as a secondary effect. What was wanted was that the procedure should be cheapened that you might have a public official or officials to whom both landlord and tenant might apply for the purpose of getting a valuation of what might be considered the tenant's improvements, if he had improvements.

46,801. Who would appoint those valuers or assessors?—There were not any very decided opinions amongst the farmers themselves as to how that should be done. My own idea is that it should be left ultimately with the Board of Agriculture with the names to be suggested, say, by the County Council or something like that.

46,802. In each county?—In each county, or it may be, groups of counties, it does not necessarily mean by one county or even by two, you may have it in one, or, if it is thought fit, it might be spread over three or four or five.

Security for tenants' improvements.

46,803. Was there a strong feeling for a greater security for tenants' improvements?—A very strong feeling, but the great difficulty appeared to be as to how to divide these improvements between landlord and tenant.

46,804. Was there a great diversity of opinion upon that?—Yes.

Freedom of cropping and sale.

46,805. Was there any expression of opinion in favour of a greater freedom in cropping and selling what was produced upon a farm?—Yes, they almost invariably asked that.

46,806. With no restrictions as to cropping?—The farmers were not so decided upon that. Some of them said, "We do not require any restrictions," but the landlords said, "We would decidedly object to being "obliged to take every man and to give him that "permission."

46,807. They consider at the end of the lease, or at the end of the tenancy certain restrictions of cropping should be kept to?—Yes, that was more the general feeling, let them have as much freedom as they desire during the currency of the lease, but when the tenancy comes to an end the farm should be left in a certain rotation previously agreed upon.

Tenure.

46,808. Are most of the farms let on lease or by yearly tenure?—Nearly all are let on lease.

46,809. For 19 years?—For 19 years generally, occasionally for 15 years. On one or two estates they have no leases at all.

Damage by game.

46,810. I see you make some remarks upon game, and especially upon rabbits on hill land, did you hear general complaints as to that?—In the districts where there is hill land, or where plantations joined hill land, or where the hill districts came down to the arable land, there was almost a general complaint of that—principally of rabbits.

46,811. That is, I suppose, because although they could kill the rabbits in their own land, the rabbits came down in such numbers from the waste ground or from the wild ground, that they affected the crops—was that it?—No, not exactly that, but the farmers are not allowed to kill the rabbits on the hill land during the time of the year when they do most damage. There is a close season from December to March, and by that time the keepers and the shooting tenant have very often so thinned them down that the tenant farmer could not recoup himself the expense of killing them.

46,812. What was suggested generally?—It was suggested that the farmer should have the power of killing them, under certain restrictions, during the whole year; it was suggested, in fact, to kill them without the use of a gun.

46,813. Trapping by wires?—Trapping by any means that may be thought fit, but so that he would not interfere with the shooting tenant's right.

46,814. Are there any complaints as regards pheasants or other game?—There were a good many complaints with regard to pheasants, but they were principally on arable land adjoining plantations. One or two shooting tenants have been in the habit of importing a very large number of pheasant's eggs, and as soon as the pheasants were able to thoroughly take care of themselves, they were carried out to the nearest arable land and put down on any plantation quite close at hand. The consequence was they were fed for the months of July and August, usually on the farmers' crops, and not only consumed a very large

Digitized by Google

Mr. J. Speir. 2 May 1895.

proportion of them, but in many cases destroyed probably the double or the triple of what was actually consumed, and the occupants of these farms were quite powerless in the matter. They could do nothing to help themselves.

46,815. Was that general, or only in a few cases?—It was not general, it was only in an isolated case here and there.

Heather burning.

46,816. You also make some observations on heather burning; is that a source of dispute between tenants and shooting tenants?—That is a continual source of dispute on almost all the hill farms.

46,817. On account of the sheep?—The shooting tenants have the idea, rightly or wrongly, I am not exactly in a position to say, that the longer the heather the better the grouse. The hill tenants—that is, the sheep farmers—say that the shooting tenants are under a mistake with regard to that, and that a fair proportion of both old and young heather will certainly give the best class of birds; they insist upon burning a little piece, more than the shooting tenant is agreeable to, and owing to that there are a good many cases of ill-feeling arising now and again.

46,818. I should like to ask you a few questions as regards taxation. Is there a strong expression of feeling that the land is overtaxed?—There was a general feeling to that extent, not only with the landlords but also with the tenants, both were of that opinion.

Nationalisation of poor rate.

46,819. Was there an expression of opinion that the poor-rate should be a national or a county tax?—There was a general opinion that it should be spread over a greater area than it is just now. It might be made either a county or national tax if thought fit.

46,820. Was that expression pretty general in the four counties?—It was general all over the counties.

46,821. Did you find there was a great irregularity in the poor-rate in these counties?—It was most irregular. You would find adjoining parishes double and triple what other ones were; in fact, in some parishes there is no poor-rate at all, and probably in one within half-a-dozen miles you will find the poor-rate up to 6*d*. and 1*s*. or something of that kind.

Railway rates.

46,822. As regards railway rates, were there also complaints of the inequality of the rates charged?—Yes, that was not very general, but still there were considerable complaints of that. There is an inequality of rates of which everybody knows at the present time.

46,823. Especially, I think you say, in your report as regards small consignments?—More particularly with regard to the small consignments.

Condition of sheep farmers.

46,824. (*Mr. Clay.*) In one part of your evidence, referring to sheep farming in Dumfriesshire and other places, you say that the sheep farmer has been more severely hit than the arable or dairy farmer?—Yes. That applies not only to the sheep farmer of Dumfries, but to the sheep farmer all over as compared with the arable farmer.

46,825. You have also said that it takes more capital to enter into a sheep farm than an arable farm?—In proportion to the rent, I mean.

46,826. Do you know that the reason the sheep are often tied upon a farm is that stock which is hired on a farm is more valuable than new and unaccustomed stock brought on to the farm?—Yes. It is generally considered that it would have been more profitable for new tenants to take these old stocks over at the high valuations which are usually put on them, rather than to take in a new stock on the basis of a commercial valuation. On some of the estates there are very serious complaints just now, that, with a lease drawn out exactly similar to what was done, say 20 years ago, when the tenants were compelled to take over the stocks, now when they want to hand them over to the landlord for a new tenant the landlord refuses to do it.

46,827. (*Mr. Little.*) You mean, to give the extra price?—Yes, presuming there were 10 per cent. put on, the outgoing tenant loses that 10 per cent. on his stock. In order to combat that, or, at least, to remunerate the tenant to a considerable extent, two very strong associations have existed for a good number of years in the south-west of Scotland which bind all the members to take over the stocks of every tenant whose landlord refuses to take them at the usual valuation, and then they divide that stock amongst the members in proportion to the rents that they are presently paying,

46,828. (*Mr. Clay.*) If you were to enter a hill farm would you not rather pay 10 per cent. or 15 per cent. more for the stock that is bred upon the farm than have it scattered and buy in a new stock?—My own personal experience does not warrant me in giving an opinion upon that, but if I am to be led by those who have had more experience in hill farming than I have had. I certainly would agree to it at once.

Mr. J. Speir. 2 May 1895.

46,829. I believe there is a great deal more of home-grown corn now used upon the farm than there was 20 or 30 years ago?—It must be double or treble; in some cases very much more.

Consumption of home-grown corn.

46,830. So there are more cases in which home-grown corn should be taken into account when a tenant leaves a farm?—Most decidedly so.

46,831. In the sheep department, regarding the heather burning, I think you have given it as your opinion that gamekeepers and game tenants are rather inclined to keep the old heather rough for the sake of game?—Yes.

Heather burning.

46,832. Do you think that is not a very great disadvantage for the game as well as for the sheep?—I have hesitation in saying that it is, because the young heather which will probably be the best food for the sheep might not be the best for aught I know for the grouse, while the old heather may be food for the grouse, but it is certainly not very good for the sheep. It is there where the difference of opinion comes in.

46,833. Did not the game tenants and gamekeepers make a great mistake in not having a certain rotation of young heather for the grouse the same as for the sheep?—Yes, I think they should have it.

46,834. (*Mr. Gilmour.*) May I be allowed to interpose for a moment, as I know a great deal about this question. I think the general feeling both of sporting tenants and of game tenants is, that a proper proportion of both is the best arrangement. The chief difficulty which has always been found is this, that fires are set a going without proper attention, and the result is that whole hill-sides are simply swept of heather by these fires, and, therefore, the sporting tenant loses really the benefit of that country for, perhaps, half of his lease. That is a thing which has caused a great deal of difficulty. Heather burning ought to be conducted as it is on some estates under proper care, and with squads of men to see to it, where both tenant and landlord or sporting tenant and tenant, can agree to do that; and it should be burnt either in circles or in strips. But too often fires are set, sometimes with the connivance, very probably sometimes without the knowledge, of the tenant and the whole hill-side, thousands of acres, perhaps, are swept away, and that part of the country is entirely lost. Is that not what sometimes occurs?—Yes, I admit so. The difficulty appears to be to have an arrangement between the sporting and the agricultural tenant as to what is the proper proportion which should be burned every year, and then to carry that out under the supervision of those responsible for both parties.

46,835. Of course, as regards the food of the grouse, the old heather is no use in the world for that, but it is for shelter and also for the carrying on of the sport; the food is entirely the young heather. Is it not a fact that a certain amount of that old heather is also in hard winters most valuable for the sheep farmer, because at the root of the old heather you will find in hard winters in the shelter of it a great deal of herbage which you will not find in the exposed young heather?—It will all depend upon whether the old heather is growing close or not. If it is growing comparatively speaking thin you will find a considerable amount of herbage at the bottom, but if it is growing close, as you often find it, there will be nothing there at all.

46,836. (*Mr. Clay.*) I am very glad Mr. Gilmour has asked you these questions about the heather, knowing that it is a burning question. I speak from experience of hill farming, where there is a good deal of heather which we are actually prohibited from burning at all. The experience I have had—and I do not know whether you can corroborate me—is that since the heather has been prevented from being burnt, there has been a gradual decrease of grouse upon the land?—I have not the persona experience which would enable me to give an opinion upon that; I can only repeat what has been told me.

Agricultural Holdings Act.

46,837. Regarding the Agricultural Holdings Act, you have paid considerable attention to that in your report, I think?—Yes. The report in great part gives the opinions that were expressed to me—not exactly my own opinions. I may say that they differ slightly in several particulars.

46,838. Regarding the opinions which you have stated in paragraph 56, we all know that the Act of 1883 has not wrought well, and I think that view has been corroborated by the evidence you produce?—Yes.

Digitized by Google

Mr. J. Speir. May 1895.

46,839. The farmers in your districts do not object to the principle of the Act, do they?—Everybody, both landlord, factor, and tenant, agree that the principle of the Act is quite just.

46,840. But they object to the procedure and expense of working the Act?—Principally to the procedure and the expense, with the addition of a few other items which might be shifted from one schedule into another.

46,841. And perhaps that very important point which you have just mentioned that home-grown corn which is used upon the farm should be taken in as developing the fertility of the land?—Yes. Also another point which is not mentioned in the present Act at all is that accumulated fertility and cleanliness of cultivation should be taken particular note of.

46,842. Over and above the opinions that have been expressed to you, what is your own opinion about the amendments which have been proposed in order to put the Act into proper working order?—I would suggest that, as a beginning, Scotland be divided into three districts; if you like you may have more, but at the very least three. If it is wanted to be done at the cheapest rate, you might appoint a single valuator for each of these districts, or you might have a number of gentlemen on a list in these same districts, and let the whole work in connexion with the working of this Act be referred either to the gentlemen whose names are on the list or to the particular one who might be appointed for any district.

46,843. Would you read paragraph 56 of your report, so that we might get it on the notes?—Yes. "The "principal amendments suggested are, a reduction of the "cost of procedure under the Act"; that would get clear of a great many of the difficulties which presently exist. "The date of sending in notice of claim to be the same for "landlord and tenant; one or more valuators or assessors "for each district, county, or block of counties; freedom "to manure, clean, and seed down as may be thought fit; "more liberty to crop and dispose of the produce if the "grower should find it advantageous; compensation for "the consumption of home-grown foods; more liberty to "drain and build; penal clauses to be entirely done away "with; and contracting out of the Act to be rendered "impossible."

Contracting out of Act.

46,844. Did you find that some of the people were very apt to contract out of the Act by putting, as you say in paragraph 63 of your report, a clause into the lease which contained an obligation which they could not carry out in any part of the country, to use 70 yards of manure per acre?—Yes. That clause exists on one very large estate in every lease, and on several other estates, to a small extent, there is a clause resembling this in some way.

46,845. Do you consider that that is an infringement of the Act?—I consider that it is a most iniquitous thing altogether, because the tenant, if he agrees to it, binds himself to do what is an utter impossibility if he is removed from a large town; he might do it if close to a large town and if a large supply of manure was available, but it is an utter impossibility under any system of farming adopted either in this country or anywhere else.

46,846. So you may say that is unfair?—Most decidedly it is unfair.

46,847. Should you look upon it as a grave infringement of the principle of the Act?—It is put in simply because it was known by the drafter of the clause that it could not be carried out, so that he might have an excessive counter claim against the tenant.

Agricultural Holdings Act.

46,848. And to kill out the benefits from the Agricultural Holdings Act?—Most decidedly so.

Suggested amendments.

46,849. You have read out paragraph 56 to us; what is your opinion upon it; do you coincide with that paragraph, or do you go further or stop short of it in regard to the remedies there suggested for the improvement of the Agricultural Holdings Act?—I coincide with it very closely.

46,850. (*Sir Nigel Kingscote.*) Does that paragraph represent the general feeling of the district and your own opinion as well?—It represents the general feeling of the district. I have thought out the details a little more than ever was given to me or than any one was prepared to give them to me. They only suggested general principles.

46,851. (*Mr. Clay.*) Could you give us your own opinion upon that paragraph?—My own opinion is that you might have for Scotland a list, say, for each of the three or four districts, or you might have, say, a single person for each of the districts. The former plan has a good deal to recommend it, but against it there is this, that if you have a great many people doing the work, you are sure to get a great many carrying it out that are not properly suited for it, and then you will have a decision to-day which may be probably quite contrary to some other decision given to-morrow. You never will have any continuity or uniformity of opinions or courses to be followed. Whereas if you appointed one single man in a certain district, approaching in some respects, say, to a sheriff in a county, or to what would be a sheriff, say, 200 years ago, you would then have one decision bearing a certain resemblance to every one else, and we would get into more uniform working.

Mr. J. Speir. 2 May 1895.

Official valuers.

46,852. Is that the reason why you would like to have official referees appointed—that is, men that were experts and that were acquainted with the work—so that there would be not very much difference of opinion in dealing with the Act?—Decidedly so.

46,853. These men would, in consequence of their appointments, study the question, and there would be a sort of regular mode of dealing with the Act?—They might be applied to by either landlord or tenant in connection with any dispute which might arise, or which was likely to arise. A new tenant going into a farm might say, I wish to put on record the condition in which this farm is, or he proposes to do something, and the landlord considers that it is injudicious, the parties might then apply, say, to these gentlemen, or to the particular gentleman, and bind themselves either to agree to his decision or anything else that they may arrange upon.

46,854. It may come to be, and it looks as if it is coming to be, that, as in the labour question, there will be conciliation boards or arbitration boards, so in connection with agriculture there may be, I do not say a land court, but might not these men form some sort of court, which would decide any difference between, say, an old tenant and a landlord about the rent?—They might, but only in this way, if the gentlemen you had on the list were entirely independent of either landlord or tenant. There is a difficulty, with a large list, of getting gentlemen who would have the requisite experience, and be independent of either the one party or the other. With one gentleman there would be a greater chance of getting that if he had an appointment which would keep him entirely independent; you would then, I think, have very little cause to complain of partiality towards the one or the other. In connection with our ordinary courts, it is a thing almost unheard of in this country to have, say, a sheriff who is considered to be biassed in favour of either litigant, and I think the same thing might happen with the official assessor in this case, if you made him independent. If you give him a position and allow him to draw for work upon either the one or the other class, you will most decidedly have people who will be biassed.

46,855. But would not men of that kind, who are unbiassed, be very suitable as a consulting board, to which both landlord and tenant could apply to settle any difference? Do not many tenants lose a good landlord, and many landlords lose a good tenant because of the want of a sort of medium person to come in between them to settle differences, and say who is right and who is wrong?—That is happening, I think, almost every day. I know of a good many cases myself, where had both parties only known where they could have got an unbiassed opinion they would have gone and asked it, and abided by it. Several landlords and factors during my enquiries said, "If you could only get a person in whom we had confidence "we would be only too glad in case of little differences to "apply to him and be guided by his advice."

46,856. A third person coming in would save a good deal of heart-burning and the losing of a good landlord on the one hand, and of a good tenant on the other?—Precisely so.

46,857. If the principle is adopted of a conciliation board as we have in the country just now in the matter of wages, there would be no great difficulty in applying it to the settlement of disputes between landlord and tenant; I do not say compulsorily, but that it might form a good basis for settling many burning disputes?—I think it could be done, but I am decidedly against giving any special legislation or special favour, to either tenant or landlord in connexion with this. If it is to be done it must be done at their own expense. I say, if you appoint one official to do this work the cost of that gentleman's salary must come out of the work which is being done, in something the same way as the registration of deeds just now; let a stamp duty be paid on all the work which he does, and then it might pay for itself.

46,858. The gentleman who does that is to be paid by results, is that it?—No, not exactly that; he will be paid

Digitized by Google

Mr. J. Speir.

2 May 1895.

from results; he will be independent of the work which he does.

46,859. Would he have a fixed salary from Government, the same as you pay the men who conduct the Board of Agriculture and the Commissioners of Drainage and all these other things?—Something like that. All his work would be charged to the parties who employed him, and it would then go into some general fund which would pay the cost of keeping up either the one or the dozen or 20 who might be employed.

46,860. But if such a board could be properly constituted of unbiassed people, do you not think it would be a great advantage to keep landlord and tenant together?—I am quite convinced of that. It would not be only that, but it would form, you might say, a court which might be applied to in appeal cases. For instance, if you have gentlemen in this position in several parts of the country there might be a decision given in one district which was considered wrong in principle; you might then summons all the gentlemen holding a similar position in the different districts, lay the matter before them, and let their decision be final. I think you might simplify matters in that way.

Scheduling condition of farms.

46,861. In regard to the compensation question, in order to help tenants and landlords, do you think it would be a good system, as has been advocated sometimes here, to have, when the incoming tenant comes in, the farm looked over and to schedule the different fields and the different conditions of the fields, such schedule to be placed at the end of the lease so that when the incoming tenant becomes the outgoing tenant the arbiter would have a good line to go upon in judging whether the farm has been improved in condition or whether it has gone back?—Decidedly so, but you must always keep in view that it is very difficult to put in writing the state of a farm from one man's point of view in such a way that another one, 20 years afterwards it may be, will interpret it in exactly the same light as the first man did. You can approximate pretty closely to what has been the state, but you must always allow a considerable variation for difference of opinion.

46,862. But a plan like that would give you some sort of idea?—It would give you a very good idea.

46,863. (*Mr. Gilmour.*) In this paragraph 56, which has been talked about by Mr. Clay so much, I see that you put first the cost of procedure as being the great complaint?—That is the great complaint.

Contracting out of Agricultural Holdings Act.

46,864. I see that you are dead against the landlord and tenant being able to contract themselves out of the Act; do you know some of the schedules for compensation on some of the large estates?—Yes.

46,865. Do you think they are fair?—On estates where schedules have been generally adopted they are usually pretty fair. Some of them are quite ample as far as they go.

46,866. Then if tenants and landlords have acted in that way and thereby contracted themselves out, as you may call it, have the tenants not in the end been very much better off than tenants claiming under the Act?—Yes, a good deal better, but principally owing to the cost of procedure.

46,867. Does that not point to the fact that if a fair scale of compensation is laid down between man and man that is quite sufficient?—Yes, if you could compel it to be put into operation, but I think you cannot do that. That is left to the individual temperament of both parties—principally of the landlord.

Freedom of cropping and sale.

46,868. Then, with regard to this question of giving them freedom, I suppose you admit that it would be impossible with many men for the future well-being of the land that the landlord should give them freedom of cropping without restrictions, to bring on a certain amount to make up for what they were taking off the land?—It would be with a very small percentage. In most of the cases the land of the country would be farmed very much as it has been, and even a tenant would be doing himself an injury if he attempted to do very great injury to the land by selling too much off. But what I put more stress on is this, that if you adopt, say, the first suggestion I have made, of an official valuator, the landlord might then, in the case to which you refer, have the power of asking that the tenant be stopped from such a procedure, and there could be an appeal then to the independent official to say whether he should or whether he should not.

46,869. In that part of the country on which you have reported, a good many own their farms I fancy—I mean throughout Ayrshire?—Only in a few districts.

Mr. J. Speir.

2 May 1895.

46,870. In those districts do these men that have an entirely free hand to do as they like, deal with their land in any way differently from their neighbours who are under lease?—There is not very much difference, they are very much the same unless it comes to an occasion when they want to sell any particular crop off when prices happen to be high. They then do it, whereas a tenant may have first to go and ask permission from his landlord, and, according to circumstances, he may get it or he may not.

46,871. But as a rule, in cases like that, I suppose he does get it?—He generally gets it, at any rate I will not say he always does.

Compensation for consumption of home-grown corn.

46,872. Now, with reference to the home-grown produce, about which so much has been said; I want to know if you had thought out for yourself, after all you have heard and all your experience, any practical way in which this could be carried out in fairness to both parties?—I am quite convinced that it can be carried out in fairness to both parties, but you must put the whole responsibility upon the tenant of proving that he has first grown this food and has then used it.

46,873. What is the procedure that you propose to bring that to a point?—If a tenant approaching the end of his lease has, say, a certain quantity of food on hand, grain of any particular kind, let him send notice to the proprietor or his agent that he means to use this at home in the state in which it presently is. The agent might then satisfy himself that that quantity existed and was not likely to be tampered with later on; or the tenant might send it to the nearest grist mill and have it ground, if it was necessary to do so, and keep the receipt for that as a proof that the material had gone through, and he would then have to rely on either the miller's servants or his own servants to see that the material was brought home and used at home.

Claims and counter-claims.

46,874. You agree, I think, in saying that the notices of claim for compensation should be sent in simultaneously?—Yes.

46,875. Would that not be likely to tend to an extravagant claim on perhaps the landlord's part, owing to a want of knowledge as to what the tenant was claiming?—No, I think it would tend in quite the reverse way. Both parties just now are inclined to put in extravagant claims, and I think that if neither knew what the other was doing they would be likely to keep more to the medium. I certainly would give the one who is further off the actual facts of the case the largest proportion of the expenses to bear, whatever these were. That would help to keep things nearer the mark.

Improvements by landlords and tenants.

46,876. You also say in your report—I do not know whether it is your own statement, I think it is though—that in Scotland the idea is that most of the improvements have been done by the landlords, but that that is not really so; do you refer to the whole of Scotland in saying that?—What I referred to were the improvements on the land, not the buildings. The buildings, exclusive of cartages, with few exceptions, have all been done by the landlords.

State loans.

46,877. Then, also, there is a proposal in regard to this loan of money by the Government both to landlords and to tenants, of which you, I think, have indicated your approval; what security upon these estates, that really require it most, would you have for the Government?—I am not in favour of giving the tenant any money. You would interfere too much with the property of the proprietor if you did it. You would need to have a security over his property to which he might not altogether agree, and it would be better that the money should be given to him in the first place.

Agricultural Holdings Act. Amendments to schedules.

46,878. Then you have referred to the schedules of the Act; what changes in these schedules do you propose?—The improving of roads, the laying down of permanent pasture, the making of irrigation meadows, water-courses, fences, and the reclamation of waste land especially, might all be put into part 2, under the same conditions as drainage is at present, which I consider are very good.

46,879. (*Mr. Channing.*) Including permanent pasture?—Including the laying down to permanent pasture.

46,880. You would not put that into part 3?—It is one of those disputed points you might have in part 3 quite easily if thought fit.

Maintenance of land in clean condition.

46,881. (*Mr. Gilmour.*) You lay a great deal of stress upon cleaning the land; does not good husbandry entail keeping the land clean?—It does, you can scarcely have good husbandry without keeping the land clean.

Digitized by Google

Mr. J. Speir 2 May 1896.

46,882. So that really is part of a farmer's business in carrying on the land?—It is; but presently no acknowledgment is taken of it at all. The same claims might quite justly be put on two similar farms, the one as dirty as possible, and the other as clean as you can possibly have it.

Milking machines.

46,883. You referred to these milking machines just now; are they likely to be successful in your part of the country?—I have no hesitation in saying that they are pretty nearly successful already. Where there is a difficulty in obtaining labour they can be utilised quite easily and quite freely.

46,884. Then one of the great expenses which the dairy people are put to in those parts of the country is the difficulty, of course, and the expense of dairymaids at the present time; it is difficult to get milkers, is it not?—Yes.

46,885. I think you said that with the extension of these milking machines the competition from abroad would increase immensely?—I expect so.

Wages of dairy maids.

46,886. Are the wages abroad just now not very much lower than the wages here for these women?—No, they are usually higher, but it is not so much a matter of wage, it is simply that they cannot be got.

46,887. Abroad?—Yes.

46,888. What countries do you refer to?—Australia, Canada, and the United States.

46,889. Are the milking machines getting introduced there, do you know?—There are a few in Australia, and at least one has been sent to Canada.

Agricultural education.

46,890. In regard to the most practical way of extending technical education to the agricultural community generally, have the ordinary agricultural classes under the County Councils been with you successful or failures?—They have not been as successful as it was presumed they would have been. The difficulty is to suggest what should be the way that should be adopted. In the south-western counties there was, however, with me a general opinion that a little more of general agriculture should be taught to the boys in the rural districts.

46,891. You mean in the elementary schools?—Yes.

Experimental stations.

46,892. And perhaps added to that might be experimental stations, I notice you say?—Yes, it was thought, and I am inclined to believe that experimental stations would interest the farmers of every district more than almost anything that has hitherto been done in connexion with technical education, from the farmer's point of view.

46,893. I suppose, at present, there is a considerable difficulty in getting practical men that you can rely on as being really very sensible, and able to come and hold their own in the different districts?—It is very difficult to get the ordinary farmer to carry out even a comparatively simple experiment accurately, and it is, of course, much more difficult if you go to an intricate experiment; in fact, I think experiments cannot be well carried out unless under the supervision of a proper staff.

Infringement of Agricultural Holdings Act.

46,894. (*Mr. Chaplin.*) In paragraph 47 you say that there are great complaints of the want of security under the Agricultural Holdings Act, and that farmers complain that "factors in too many instances have done everything "in their power to break this Act, and to render its "working null and void." How can they break the Act?—By the insertion of these clauses.

46,895. But if the clauses that they insert are contrary to the Act, they are null and void?—The difficulty then comes in that you have to put a private agreement as against an Act of Parliament, and it is a legal point which has to be upheld. It is difficult to know what to do, if the two parties make a private arrangement between themselves contrary to what is in an Act of Parliament.

46,896. Is it not the case that the Act is quite clear upon this, that it can only be set aside by an instrument giving equivalent compensation?—Then if it is disputed whether it is an equivalent or not you get into a very intricate question. It may be nearly an equivalent and just as much as keeps clear of dispute and yet may not really be so.

46,897. But under those circumstances supposing that it was not equivalent, would the tenant be so foolish as to sign it, whereas if he did not sign it he would hold the farm under the Act; does that not rest with him?—You would think so, but if you have a district where you have from 5 to 10 or 20 competitors for every farm a great deal is sacrificed that would not happen where there are only two or three.

46,898. Is this what I understand from you now that the farmers mean; that where there is great competition, and a number of men trying to get the same farm they are willing to take it under an agreement, although in their view that agreement does not give the same compensation as the Act?—They have done so at any rate.

Mr. J. Speir. 2 May 1896.

46,899. And done so willingly?—No, not willingly. They all sign these clauses to a certain extent, it might be called, under protest; I know of any number of cases.

46,900. But they have done it with their eyes open?—They have done it certainly with their eyes open.

46,901. That is what I want—with their eyes open?—That is a fact.

46,902. Can you give us any instances of the clauses to which you refer which set aside the Act, or are they clauses dealing with matters which are not specified in the Act?—If you refer to page 33 of my report you will find several there. The very first one is a common one in a very great number of leases, purposely saying that the Act is set aside altogether.

46,903. Can you tell me with regard to that clause which you have called my attention to, and which I understand is sometimes inserted in leases, whether the legality of that clause has ever been tested; it appears to me to be a perfectly plain breach of the law?—My business is that of a farmer, not of a lawyer. I am not prepared to express an opinion upon it here. That is a point for a lawyer.

46,904. As a matter of fact has it ever been tried?—I cannot say that it has.

46,905. Then, probably, if it had been tried it would have been found that the Act would have given perfect protection, and that this clause was illegal. You never put that question when these complaints were made to you?—The same question was put, not exactly with regard to this clause, but with regard to some of the others, and it was usually considered that it was illegal. Then the difficulty came to be that the tenants said: we prefer in most cases to suffer rather than to go to the Court of Session and fight it, because supposing we gained our case we would lose far more than we are losing just now.

46,906. Yes; I understand that. I am asking you some of these questions rather with a view of ascertaining whether, perhaps, some of the numerous complaints that have been made to you about the working of the Agricultural Holdings Act are not, as we have found in the case of a good many others, really founded upon ignorance of the Act itself?—In some cases they are.

46,907. We have had cases frequently put before us of amendments which have been recommended in the Act which it has been found that the Act itself already contains?—I could believe so.

46,908. You could believe that from your own experience as a sub-commissioner?—Yes.

Fall in price of dairy produce.

46,909. You tell us that you have had a great many more complaints recently of the fall in prices of dairying?—Yes, the fall in dairy products has been more within the last two years than it has been, probably, in the ten before that—five at any rate.

46,910. In the last two years?—Yes.

46,911. Are those complaints very general?—The prices are pretty uniform all over the south-west of Scotland, taking distance into account.

46,912. That, I suppose, is regarded as a very serious matter?—It is serious for both landlord and tenant in that district.

46,913. That is one of the great causes of depression, then?—Yes.

Readjustment of rent.

46,914. Now, in paragraph 53, I see you say there is a great desire for readjustment of rents?—That only exists in cases where landlords have not already given a readjustment. I am pleased to say that the most of the landlords, at least nine-tenths of them all over these counties when they were satisfied that prices had got below the paying point, made a readjustment of the rent. That is one very strong reason why the Act has not been put into force as much as it might have been, because when the rearrangement of rent was arrived at the landlord in nearly every case said: You agree to make no claim on consideration that I change your rent from, say, 1,000*l.* down to, it may be, 800*l.*, or something of that kind.

46,915. (*Mr. Channing.*) Those readjustments were during the course of a lease?—Yes; they were voluntary.

46,916. (*Mr. Chaplin.*) When you say, then, in this paragraph that "Everybody is of opinion that nothing can

Digitized by Google

Mr. J. Speir. 2 May 1895.

" rid agriculture of the millstone which hangs about its " neck, so much as a readjustment of rents in accordance " with present prices " that applies, I understand, to those cases where no readjustments have been made?—Where no readjustment has been made, or where the readjustment is not equivalent to the present values.

46,917. Then you, I am afraid, if I heard you correctly, anticipate a very considerable further fall in prices?—I anticipate, or rather, have anticipated it, for it has already arrived. There, at least in dairy products, has been a fall of 10 per cent within the last six months—since this report has been written.

46,918. Then where it has not been done already even if a proper readjustment of rents was made, I suppose, if this fall which you anticipate occurs, the difficulty would arise again?—It depends altogether how far the fall goes.

Agricultural Holdings Act. Suggested amendments.

46,919. Now, with regard to the suggested amendments to the Act, there was one thing I did not quite understand in paragraph 56. You speak of " Freedom to Manure." Surely there is no restriction upon manuring is there, I thought that liberal manuring was a thing which every landlord would desire to encourage?—One or two of the restrictive clauses to which I have referred you already on page 33 limit the compensation to particular classes of manures.

46,920. (*Mr. Channing.*) Are the quantities limited too?—I think so in some cases. The quantities given are in one particular lease.

46,921. (*Mr. Chaplin.*) Which is the clause that you refer to?—On page 33 you will find it, it is the one where reference is made to the 70 yards of manure per acre. Then there is also the clause referring to the nitrate of soda, but I am not prepared to say there is much in that.

46,922. The first section of the clause, as I read it, provides that there shall be a certain quantity of manure of a certain description used, but it does not in the least preclude compensation for all other manures used in accordance with the terms of the Act?—No, but then if that quantity of manure was not used what is likely to happen with regard to the tenant's claim? Would it not give the landlord a counterclaim of a very enormous size because it had not been used. Seventy yards are mentioned here; presuming only that 30 had been used, which is a pretty big quantity, the landlord would say, my land would have been better to the extent of 40 yards per acre or so many years had you kept up to your bargain.

46,923. Then I observe it goes on to say in the following clause " and no payment shall be made for any grass seeds, " nor for any unexhausted manures excepting any such as " should have been applied in excess of what is stipulated " above." Upon that clause again, as a matter of fact, are you aware whether it has ever been tried in a Court of Law?—It has not been tried.

46,924. Then I suppose it is quite possible we might expect a similar result and that that is also contrary to law?—My own opinion with regard to that is, that it would; but, as I said before, I am not a lawyer and do not desire to give my opinion on it.

46,925. Did you point that out to any of your informants?—I did, and the tenants pointed it out to me also; but, as I said before, they said to me, we are not going to settle the point for the general community.

46,926. When these extracts from current leases are given do I understand from you that these are exceptional cases or that they are common?—There is any number of them.

46,927. Do you mean to say that it is the ordinary lease?—Not the ordinary lease. You do not get all these clauses in every lease, but in the most of leases you will get one or probably, in some cases, more. You have no idea of the number. At the time this enquiry was going on I had a great pile of leases sent in to me without any enquiry, most of which contained objectionable clauses.

46,928. And there is so much competition for the farms that, whether they are willing or unwilling, they do, as a matter of fact, take the farms upon these leases, with their eyes open?—They take them on the footing that we are on good terms just now and we will be able to carry on on good terms, and if prices, as they probably will, get better, nothing will arise, but when anything does go wrong, then the row kicks up.

46,929. They ask for more liberty to drain, you say, and more liberty to build; what is the liberty that they require with regard to drainage—that it should be without notice?—No, I am not inclined to believe that they should be allowed to do it without notice. I think the liberty they have for draining just now is quite sufficient under ordinary purposes.

Mr. J. Speir. 2 May 1895.

46,930. That is your opinion?—That is my own opinion.

46,931. Their opinion is that they ask for more liberty to drain?—They want money to do it; that is principally what is asked for there, and power to carry it out just as they thought fit by giving notice—not that the landlord should step in and do it after they give notice. The complaints in connection with that are more, that the landlord does it in too thorough a way. He does it in such a way that the estate would benefit as a whole; whereas they would only do it, if they did it themselves, to benefit, say, their own time.

46,932. The complaint then, I understand to be this, that when the landlord does it, he does it thoroughly well?—Yes.

46,933. And they would like to do it themselves not quite so well?—Yes.

46,934. I mean at not so much cost?—At less cost.

46,935. More liberty to drain then, according to your interpretation, means more liberty to drain in rather an inferior way?—It might be sufficient for the present purposes but it would not guarantee the work being done thoroughly. I am not prepared to give the liberty that the tenants ask for in these cases.

46,936. You disapprove of that?—Yes.

46,937. Then with regard to building, they require more liberty to build: does that mean to build without the consent of the landlord?—Yes. Now I am very much of the same opinion with regard to that as I was with regard to the drainage, that if you had an official valuator to whom you could apply, both landlord and tenant, I think, would be quite agreeable either to do the work or not do it, if such an independent gentleman expressed the opinion that it was necessary or that it was not necessary.

46,938. (*Mr. Channing.*) And as to the way in which it might be best done?—And also as to the way in which it might be best done.

Land courts.

46,939. (*Mr. Chaplin.*) As regards a Land Court for the purpose of deciding rents, there you find the number in favor of that comparatively small?—It is, comparatively speaking, small, but I may say that it is very much on the increase. I happened to be through that same district ten years ago, making an independent inquiry for another purpose, and while I came across very few people who held these ideas then, it came more prominently before me on the last occasion.

46,940. Since the depression has been so much worse, I think?—Yes, I expect that has been the cause of it.

Demand for farms.

46,941. (*Chairman.*) You have stated in your evidence that you find that in most parts of the districts that you have visited there is no great difficulty in letting farms?—No difficulty at all.

46,942. Is that the case in all the counties you have visited?—They are not all alike but nearly alike.

46,943. In some cases there is a greater demand or farms than in others?—Yes.

46,944. I think you said that is the case in Ayrshire?—More especially in Ayrshire.

Farmers in Ayrshire.

46,945. I think you state in one part of your report that Ayrshire seems to be rather a congested district as regards farmers; that they have more young men of that character than the county can provide for, and that those young men are spread over into other districts?—Yes.

46,946. And that they largely add to the demand for farms in other counties that you have visited?—Yes.

46,947. Do these farmers from Ayrshire bring capital with them?—A moderate amount of capital.

46,948. A sufficiency?—A sufficiency for the farms that they are on. Some of them occasionally have been taking larger farms than they ought.

46,949. Larger farms than they have been accustomed to, and more than they have been educated to?—Yes.

46,950. For if I understood you rightly the farms in Ayrshire are small ones?—Yes, mostly.

46,951. Of from 50 acres up to 200 or 300?—Yes.

46,952. You call these small ones?—There is only a comparatively small number with over 300 acres of arable land.

46,953. The farmers that you speak of who go into the other districts are mainly small farmers then?—Mainly.

Digitized by Google

Mr. J. Speir.
2 May 1895.

46,954. Who either farmed themselves farms of from 50 to 200 acres, or who are the sons of farmers?—Yes.

46,955. And they generally bring with them capital sufficient for farms of that size?—Yes.

46,956. I suppose that money has been made upon farming, then?—In most of the cases there has been no other way of making it.

46,957. Therefore that would rather indicate that among the farming class in Ayrshire there is a considerable body of people who have got a fair amount of means?—There is not the least doubt about that. They have not probably been making much in the last year or two, but they have all been in a fairly good way.

46,958. They have not made much in the last year or two, but in best times they must have done fairly well?—They have done well; that is, previous to ten years ago.

46,959. And they have laid by money?—A great many of them.

46,960. Enough to furnish their younger sons with money to go and take farms elsewhere?—In many cases.

46,961. That is the way you account for this?—I cannot account for it in any other other way.

Scotch farmers in England.

46,962. Apparently in some districts, farmers have already spread over into England?—Decidedly so.

46,963. And have gone down to Hereford and Essex?—Yes, these west countrymen.

46,964. The number of these men rather tend to keep up the rents?—Most decidedly so.

Reduction of rent.

46,965. Then you have said, in the districts that you have been in, that the rents have not been seriously reduced as compared with other parts of Scotland?—No, much less.

46,966. If I recollect aright, in North Ayrshire you have said that the rents were reduced from 5 per cent. to 10 per cent., and in South Ayrshire from 10 per cent. to 15 or 20 per cent.?—Yes, about that.

46,967. In Wigtonshire and Kirkcudbrightshire the reductions in rent have not been more than 10 per cent.?—In Wigtonshire, I think it is a little more—15 or 20 per cent.

46,968. In Kirkcudbrightshire, how much would you say; rather less than in Wigtonshire?—Yes, it is less than in Wigtonshire. In fact, I might say that in Kirkcudbrightshire, there is almost a tendency to rise in some cases.

46,969. Owing to the change in the farming?—It is getting more into dairying, whereas previously it was altogether rearing and feeding.

46,970. The effect of the conversion of the cultivation from arable into dairying in that part of the country has rather tended to raise rents then?—It is probably too strong to say it has been to raise rent, it certainly has prevented the rent from going down.

46,971. It has prevented a fall?—Yes, or at least it has lessened the fall.

46,972. When you speak of the reduction of rents do you speak of the reduction as compared with 10 or 12 years ago?—I mean with regard to 1880, I think that is the year I have taken.

46,973. In the few years previous to that there had been a considerable rise of rent?—There had been almost as quick a rise as there has been a fall.

46,974. Then the fall of rents now has not been more than sufficient to bring things back to what they were 6 or 8 or 10 years before 1880?—You need to go a little further back than that; you need to go about 30 years back to get to equal what farms are letting at just now. There are many farms where temporary reductions have been given during the currency of the lease and these are being held on. The tenant can get on as matters are. He may probably be doing no good, but his landlord does not feel justified in letting him go off and taking the chance of re-letting.

46,975. Throughout the whole of that district are the leases of 14 years or 19 years?—15 years' or 19 years' leases are the usual length—generally 19 years.

46,976. Have the landlords as a rule made these reductions of rent in the case of leases?—Mostly voluntarily, during the currency of the lease.

46,977. They were not under any obligation to do so, but they made these reductions in spite of the fact that there were leases?—Yes.

46,978. Where the leases have fallen in have the reductions in rent been much arger, or about the same as those which the landlords had voluntarily conceded?—It depends altogether on how much had been previously conceded.

Mr. J. Speir.
2 May 1895.

46,979. I mean taking the average of cases, should you say that the reductions when the farms have been let again under lease have been much more?—They were generally a little more.

46,980. What should you say the difference is?—Probably from 5 to 10 per cent.; some few estates have given none.

46,981. That would probably indicate that the landlords have not reduced the rents pending the leases quite so much as they might have done, because on re-letting the land again they have had to concede a further reduction?—Yes, that has nearly always been the case.

Dairying in Ayrshire.

46,982. What is the character of the Ayrshire farms, are they mainly dairy farms?—Unless along the coast they are entirely so.

46,983. The dairy farms are increasing in number all through the district I understand?—They have increased for the last 40 years. Fifty years ago there were scarcely any in the other counties.

46,984. For the last five or six years have they increased?—Yes; the tables given show this.

46,985. Has there been a great deal of conversion of arable farms into dairying?—No. The increase has been no greater within the last five years than what it had been for probably 20 years previous to that.

46,986. I suppose in Ayrshire, on these small farms, the number of labourers employed is not large?—Generally about two or three or four on each farm.

Wages.

46,987. What has been the course of wages in that district?—They are nearly the highest in the west of Scotland, but that is regulated by the nearness to the manufacturing district.

46,988. What has been the rate of wages?—About 1*l.* a week and a free house for the married men.

46,989. Has that wage been maintained all through the period of depression?—There is very little difference.

46,990. Very little difference?—A little, but very little.

46,991. What should you say has been the difference?—About 1*s.* out of 20*s.*

46,992. Five per cent.?—Yes.

46,993. Then the labourers have had the enormous advantage of the reduction in prices?—Most decidedly so.

46,994. Then they are very much better off?—Yes.

46,995. The tenants have got the advantage of some reduction of rent of from 10 to 15 per cent.?—Yes.

46,996. And also they save a little upon the wages—5 per cent.?—The saving on the wages is infinitesimal.

46,997. Still you have stated that the reduction is 5 per cent.?—Yes, it will amount to at least 5 per cent.

Economy in labour employment.

46,998. Have the farmers economised labour at all?—Yes, as far as they reasonably could, in the way of employing labour-saving machines.

46,999. Do they employ less labour at present than they did?—There is no difference in that, unless where it can be done by machinery instead of hand-labour.

47,000. Taking a broad view, should you say as many labourers are employed as there were?—There would not be any more; it must if anything be a trifle less owing to a more efficient class of machinery being used.

Farmers in Ayrshire.

47,001. I suppose the farmers there are a very frugal, thrifty lot of people?—Yes, every family or most of them, and in fact they are by far too hard working.

47,002. There is very little saving to be made in reducing their personal expenditure then?—The expenditure of nearly all is reduced to about the lowest limit, in fact lower in my opinion than it should be. The farmers in most of the cases do a great proportion of the work; even the wives in many cases do the bulk of the cheese-making.

47,003. They work themselves?—They work, and work very hard.

47,004. Do you not think that is the explanation of the fact that the Ayrshire farmers have been able to lay by money, and to send their families into other districts?—That is the principal explanation.

47,005. I suppose they carry with them these habits of working themselves, and these very thrifty habits and they

Digitized by Google

Mr. J. Speir. 2 May 1895.

are likely to do better than other people—is that so?—If they carry the habits to the same extent in a new district, they certainly will.

47,006. Apparently under those conditions they are able to compete with other people, and somewhat keep up the rents, or even to increase the rents in some districts owing to this competition?—They have certainly helped to keep up the rents in any district where they have gone.

Depression in the west of Scotland.

47,007-8. Then, taking a broad view of the district you have been in, it has not suffered very severely from agricultural depression?—Nothing to the extent of the grain growing districts, but that has been brought about by the lower price of feeding stuffs.

Fall in price of feeding stuffs.

47,009. Part of the adjustment they have been able to make has been in the lower price they have paid for feeding stuffs—they have gained in that direction?—They have gained in that, and in the lower price of manures also.

47,010. And I suppose in the lower price of all other things that they buy, machinery and everything, whatever it may be?—Yes.

47,011. Therefore they have had a good deal of adjustment to make up for the fall of prices?—Yes, but the fall of prices in dairy products up to two years ago, unless just an odd year now and then, has been small in proportion to any other farm produce.

Fall in price of dairy produce.

47,012. What should you say, taking it broadly—taking all the products of dairy farming—has been the reduction? Has it been 20 per cent.?—No, it has not been half that.

47,013. Not more than 10 per cent.?—There has been a fall of 10 per cent. in the last six months.

47,014. That may be temporary, I suppose?—I am rather inclined to think it will go further instead of being temporary, as far as I can see.

47,015. Of course we must take the evidence of the time you were making your inquiry; at that time the average reduction of dairy produce had not been much more than 10 per cent.?—If you were to take the average of 10 or 15 years ago.

47,016. Against that they have had about the same reduction of rent on the average, or perhaps rather more?—Yes.

47,017. And they have had the benefit of the reduced price for manures and for feeding stuffs?—Yes. I would direct your attention to page 23 of my report. I have given there for 30 years the average prices at which cheese was sold at Baldoon—that is the original farm of Sir James Caird after he left it—and you will see there that the difference is, comparatively speaking, trifling, with the exception of the 10 years from 1872 to 1882.

Effect of low prices.

47,018. Taking the whole population of the district, I suppose a very large proportion of it are labouring men; would you say the larger proportion?—In the northern half of Ayr they are.

47,019. Looking at the fact that wages have been maintained, or very slightly reduced, and that all the articles which they buy—food and what not—have been greatly reduced in value, should you not say that the country, as a whole, has gained by these low prices?—I am prepared to say that the country, as a whole, has very much improved from what it was, even since I remember it. The status of the population has considerably risen, not only from the agricultural labourer's point of view but even from the farmer's point of view.

47,020. Even from the farmer's point of view?—Yes.

47,021. How do you explain that?—I expect it is due to the general progression of the country—they are following others outside to a certain extent.

47,022. Even the farmers have raised their standard?—Their standard has also been raised and it might even go a little further.

47,023. In spite of the fact that they are complaining of depression?—Yes.

Scotch farmers in Essex.

47,024. (*Mr. Channing.*) Have you any experience of the class of Scotchmen who go into Essex, a good many of them have come from Ayrshire, I believe? The question I want to ask you about them is, whether they are as a rule successful men or unsuccessful men in Ayrshire?—The first few who came were quite successful men in their own district, but after that most of them were pretty nearly unsuccessful men, who were not succeeding at all.

47,025. Who were not succeeding in Scotland?—They were quite the reverse in fact.

47,026. They are all leaseholders I suppose; are they not practically?—Yes, in Ayrshire.

47,027. Have many of them been broken up and give up their leases in the last 10 or 12 years?—Yes.

Mr. J Speir. May 1895.

47,028. Many of those who came to England?—Off a few estates, where the farms are considered to be much higher rented than others, they have nearly all gone. One estate has sent 20 per cent., probably, of all those who have gone to Essex from Ayrshire.

Temporary reductions of rent.

47,029. Temporary reductions, you find, have had a demoralising effect?—I believe they have.

47,030. They raise rents artificially, do they not?—Not so much that, as that a tenant has not the inducement to make the most out of his farm. He rather looks upon it in this way: that provided he grumbles plenty, he will get the rent reduced without making an effort himself to make the most out of his holding.

Judicial rents and fixity of tenure.

47,031. Are you in favour of having any statutory revision of rents of land held on lease?—Not personally.

47,032. Do you find a certain number of farmers in favour of that?—There are a few.

47,033. What protection to the leasehold tenant would you give with regard to obtaining an adequate reduction of rent; would you give him any protection at all?—If he wishes to have a lease of 19 years, there is no necessity why he should have any protection. If he wants to have a lease of his holding he may arrange in his bargain to have a break every three or five years, as he thinks fit.

47,034. In the case of the holders of leases which have been entered into for 19 years, say eight or nine years before the serious fall in prices, would you give those men any remedy?—I do not see that it is possible to do it without breaking a contract. Personally I may say I am against a lease at all, if you ask me that question.

47,035. You prefer a yearly tenancy?—I prefer to be clear of a lease altogether, and to have full compensation for anything that might be done to add to the value of the farm.

47,036. Is that opinion growing in Scotland?—It is growing, but very slowly.

47,037. Are the number of cases increasing where men in taking leases insist on having breaks?—Most of the leases that have been taken within the last five years have breaks of either three or five years.

47,038. That would rather point to the disapproval of the idea of fixity of tenure in Scotland?—Decidedly so.

47,039. They would sooner remain free?—They want to remain free. There is not the least doubt about that.

Produce rents.

47,040. Is that associated with a desire to have something like produce rents?—No, they are not much in favour of produce rents. Since I can remember, I could name 50 produce rents for one that I could do at the present time.

47,041. I see you refer to produce rents in a part of your report; on the Eglinton Estate has the plan been at all successful?—It has scarcely been a success. The tenants have taken it where it has been almost forced upon them, but in most cases they prefer to have a little gamble and to have the chance of prices probably getting better, and relying upon the landlord to reduce their rents if prices do not get better.

47,042. But they have not found it a favourable plan?—The tenants certainly do not look upon it very favourably. I may say the system only exists to the extent of half the rent. The one half is a produce rent, the other half is a money rent.

47,043. Is that in the dairy district, the grazing district entirely, or is it partly in the arable district?—It is principally in the dairy district.

Fall in price of dairy produce.

47,044. Now about this 10 per cent. fall in dairy products during the last six months; to what cause do you attribute that? Do you attribute it partly to increasing adulteration or to any causes of that kind, or to a general fall in prices?—It is almost entirely caused by the increased production or importation, if I might rather say so, of butter from Australia and from Canada.

47,045. That is responsible for the whole of it, you think, or the greater part of it?—Butter in most cases regulates the prices of both cheese and milk.

47,046. Speaking of the carrying out of improvements like drainage and things of that kind, you said that tenants would prefer to carry them out in their own way and in a way suitable rather to their own special holding than perhaps to the general convenience of the estate?—Yes.

Tenants' improvements.

47,047. Do you give that opinion because the interest charged on improvements by landlords and their agents is

Digitized by Google

Mr. J. Speir. 2 May 1895.

too high in Scotland, or what?—There are two reasons—the one is that the interest charged was certainly too high, and another is that the tenants think that if they were allowed to carry them out on their own responsibility they would only do the drainage on land where it was absolutely needed. The complaint in regard to the previous system was that a great deal of land was drained that might quite as well have been left alone, and what was done was done in too expensive a manner.

47,048. Is there a complaint that the drainage has been carried out, and other improvements have been carried out on some system which was rather too costly, and probably rather an engineering system than a farmer's system?—That was exactly it. The line was too hard and fast. The drains were all made of one width and one depth, irrespective of the strata.

47,049. In some cases too deep?—In nearly every case they were too deep.

47,050. The point was rather, not as Mr. Chaplin put it, that the farmers want to do it in an inferior way, but that they want to do it in a way more practically useful for the operations of their holding?—It might occasionally be done in a rather inferior way, but they desire it given such a manner that they certainly might limit the expense to what they consider purely and simply at least would pay and nothing more.

47,051. I understood you to be perfectly willing to have that referred to arbitration to see that it was done in a proper way?—If we had an official such as we have been talking about, matters of that kind I am quite convinced would be referred by both landlord and tenant. From what I could hear through conversation with both parties they would take quite kindly to it where they have disputes of that kind to settle.

47,052. With regard to this question of improvements, I understand your position to be, that you want about the amount of freedom to improve and to carry out improvements by the tenant that was demanded by the Scotch Chamber of Agriculture in their draft Bill, that is, that the tenants should give notice of improvements, and that they should practically be in the same position as on drainage?—Much the same position.

47,053. Is that generally demanded in Scotland?—That is about the general demand.

Compensation for improvements.

47,054. About compensation for improvements generally, do you take the same view that a good many English witnesses have, that the principle of the Agricultural Holdings Act, that is, that the outgoing tenant should get the full value of what he has done for the farm is sound, and that the practice of the valuers has rather over-ridden it; or what view do you take of the situation?—We nearly all take the view that the principle is quite sound. Personally I do take the view that the details are quite sound.

47,055. And that the practice of the valuers rather upsets it?—The valuers' practice has been so varied that that they have never got into one steady groove at all.

47,056. Is it the case in Scotland, as it is said to be very largely in England, that the compensation is given almost entirely for what is done at the last moment, and in the last year or two, and that the general high cultivation of the farm for a long number of years is not sufficiently attended to?—General high cultivation is scarcely ever taken any notice of.

47,057. You think it ought to be?—I think it should. That is a point that I would lay full stress on.

47,058. Do you not think that a point of that kind, namely, that the increased fertility is due to really good, continuous farming, is about the most important point you could reward the farmer for?—Most decidedly so.

47,059. If you did reward him for it you would give the greatest encouragement to farmers to do their duty by the land?—Certainly.

47,060. I have only one more question to ask you, and you can answer it or not, just as you like. I think I had the advantage of your opinion on a Bill which I had drawn, and I should like to know whether, leaving out compensation for disturbance, which I think you dissented from, the general effect of that Bill met your views?—As a whole I am thoroughly pleased with the different clauses of the Bill, with the exception of the one referring to disturbance. I mean to say that I have no sympathy with it at all. The remainder of the Bill requires a little alteration to suit it to the requirements of Scotland; but, with that exception, I quite agree with it.

47,061. You would approve of the general principle of freedom to improve, subject to reference, compensation for continuous high cultivation, the appointment of official valuers, and so on?—Exactly. *Mr. J. Speir.* 2 May 1895.

47,062. You think that would be a practical Bill for farmers?—I am quite convinced that it would.

Condition of farmers.

47,063. (*Mr. Little.*) The effect of your answers to the Chairman's later questions seemed almost to suggest that the farmers in the counties you visited were in a prosperous condition; that was not your intention, was it?—Certainly not. I say they have been saving a little money in many cases up till a year or two, but they have done that out of what might and should have been their own personal expenses.

47,064. The questions of the Chairman and your answers almost seem to imply that they had got a reduction of rent, and a reduction in the cost of production, which put them on pretty much the same footing as they were before?—No; it has not put them on the same footing.

47,065. You do not mean that?—No, it has not put them on the same footing. It has only limited what has been a loss very materially.

47,066. Then you would say that farmers are nothing like as prosperous as they were in past years?—Most decidedly not.

Farm accounts.

47,067. You have shown some farm accounts in your report which bears that out, I think. On page 24 there is an account which shows the balance in favour of the farmer for two years—1880–81 and 1882–83. Then that account is continued for 1887–88, 1888–89, 1889–90, 1890–91, 1891–92, and 1892–93. Comparing these balances we find for the first two years there was an average profit of 140*l.* to the tenant, but for the last six years there has only been an average profit of 41*l.*?—That is right.

47,068. So that there has been a reduction of profit for the farmer from 140*l.* to 40*l.* a year?—I may say that I had an opportunity of verifying the whole of those figures from the gentleman's books. It is an average sized farm.

47,069. In the last year 1892-93 I might have stated that there was a positive loss of 18*l.* An average profit of 40*l.* is not a very satisfactory condition for a hard-working farmer is it?—With many of them the profits may be no greater.

47,070. Then there is this note to these accounts. "No "produce that is consumed on the farm appears in the "sales. The above detailed statements refer strictly to the "farm as distinguished from any domestic or household "expenses; the latter are kept entirely separate." Therefore that 40*l.* a year is a tenant's profit, and as a payment for his labour it is very poor remuneration. Do you suppose he charges for his own labour?—There is no charge, I think, for his own labour—it is the outside labour which appears in the accounts.

47,071. Then he is really getting less than the labourer?—Yes, and I may say that nine out of every ten of Ayrshire farmers are working for less than labourer's wage.

47,072. (*Mr. Dalton.*) What is the exact meaning of the note "No produce that is consumed on the farm appears in the sales"; does it mean that the farmer takes the produce himself?—What was used for his own household was not entered there.

47,073. (*Mr. Gilmour.*) Should the farm not be credited with that?—It should.

47,074. (*Mr. Dalton.*) I suppose in those accounts he has the produce over and above the profit that is stated here?—Are you not looking at separate balance-sheets; there are two accounts on page 25.

47,075. (*Mr. Gilmour.*) In neither is there anything credited to the farm for potatoes used in his house and milk, but these people live to a great extent you know upon that, they get their living out of the farm besides?—In the account on the top of page 25 those were all credited the same as if they had been sold; in the one at the bottom of page 25 no notice has been taken at all of anything used in the house.

47,076. Then why should that note appear at the bottom saying that "No produce that is consumed on the farm appears in the sales"? Everything that a man takes off the farm in the way of feeding his family ought to be credited to the farm?—This might be put in a slightly different way. That note refers to the produce consumed by the farm stock, not to what has been consumed by the farmer and his family. That is where the difference lies.

47,077. (*Mr. Little.*) If it did refer to what was consumed in the house it would be inconsistent with Note 4

Digitized by Google

Mr. J. Speir. 2 May 1895.

which is to this effect. "The above detailed statements "refer strictly to the farm as distinguished from my "domestic or household expenses—the latter are kept "entirely separate"?—Yes.

47,078. The chairman asked you about those who took up the farms to be let, and you give us, on page 9, some particulars of the classes of persons who have taken farms in Nithsdale, from which I find that a very considerable proportion were those who had no connection with agriculture, and that 19 out of 172 were dairymen, ploughmen, shepherds, or other farm labourers, and only 90 out of 172, or a little more than half, were actual farmers?—Yes.

47,079. That modifies a little the idea that the farmers have been making fortunes which have enabled them to put out their sons and that that has caused the competition for farms?—You can scarcely get over the fact that even dairymen, ploughmen, and shepherds, are all more or less belonging to the same class.

47,080. To the labouring classes who, by general consent, have prospered?—Yes.

Reduction of rent.

47,081. Then with regard to the reductions of rent, the Chairman asked you if the present state of things was not something like that of 1872?—Excuse me, I think that question was not asked with regard to 1872.

47,082. I think it was put in this way, that you had taken the fall since 1880, and the chairman asked you about the rise in the 10 years before?—I said they went back to about the figures of 30 years before.

47,083. I know you said so. I was going to refer to your own figures on page 4, paragraph 14. There you say, "One of the largest estates, the rental of which for "1880–81–82, was only 5 per cent. over that of 1872–73, "but which in 1891–92 is 15·8 less than in 1880–81–82, "although having only 4 per cent. of arrears of rent in "1880–81–82 had, in 1891–92, an average of 15 per cent. "On another small estate, having a rental of from 2,500*l.* "to 3,000*l.* the rents of 1872 were 16·4 per cent. under "those of 1880, while those of 1892 were 27·3 per cent. "under those of the same year, yet there were no arrears "in 1880, and in 1892 they amounted to 10·5 per cent." Therefore you must go further back than 1872 to bring the rental to the same point at which it is now?—In 1872 the rentals were pretty nearly at the highest; 1872 was about the turning point.

Official valuers.

47,084. You complain of the procedure under the Agricultural Holdings Act being expensive?—Yes.

47,085. What is the principal cause of expense?—It is rather difficult to say what is the principal cause; there are a great many causes.

47,086. What are the causes of expense which would be avoided by the appointment of an official valuer?—He could limit the amount of evidence that is likely to be brought before him.

47,087. In what way would he limit it?—He would have more power of saying whether or not a whole string of witnesses were to be examined either on one side or the other.

47,088. You think he would be more likely than an ordinary umpire to exercise the power of cutting short evidence and the employment of skilled witnesses?—Yes, in fact the skilled witness, or the apparent skilled witnesses, in many cases has nearly killed the Act altogether.

47,089. Of course, expensive procedure is not a necessary consequence of the Act; you can proceed in a very inexpensive way if your Act is similar to ours?—The Act is in many cases similar.

47,090. The landlord and tenant can agree without the intervention of any third party?—The one can compel the other to agree even to a single arbiter.

47,091. The fact that either party can compel the reference to be to a single arbitrator is an advantage which you have over us?—Yes.

47,092. There is no such power in England. The landlord and tenant therefore without any valuer can agree; if they cannot agree the matter can be referred to one arbitrator at the option of either party?—Yes, but as a rule they have scarcely ever done so. With ideal landlords and ideal tenants you could probably work an ideal Act, but till you get that length it is, I believe, an utter impossibility to do it.

47,093. With an official valuator do you suppose men would be content to represent their own causes; that the landlord would appear personally or by his factor and without employing an advocate or a valuer?—I think both parties would confine themselves more to producing such evidence as the official valuator demanded.

47,094. Then, for the practical working, do you think the one valuator could do a whole county or a batch of counties?—He might do even several counties for some years.

Mr. J Speir 2 May 1895.

47,095. Then you would not propose to refer all cases to him, but only those where an agreement could not be arrived at?—I would propose to refer no cases at all. I would allow the people who are interested to refer the cases to him—if they wanted his experience good and well.

47,096. How are they to settle it? I do not quite understand. Are they first of all to see if they can agree?—Decidedly so.

47,097. Without an arbitrator at all?—Without an arbitrator at all.

47,098. I thought you said that was the case of an ideal tenant and an ideal landlord?—Well, we do have ideal tenants, and we do have ideal landlords also.

47,099. What percentage of them would agree without going to a referee?—It is utterly impossible at the present time to say.

47,100. Do you think there would be a large proportion?—I am quite convinced that, after a certain number of years, a very large proportion would.

47,101. You mean that when a number of official decisions had been given which settled the principles, then a landlord and tenant would agree without going into court?—They would drift gradually into seeing where the advantage of it lay. Several of the very largest land agents have said to me repeatedly, "there are often little differences "between our tenants and ourselves which we would like "very well for a thoroughly independent man just to say "what is to be done and what is not to be done."

47,102. I see that you have about 2,000 holdings in Ayrshire and the statements that you have given as to the changes of tenancy show from 4 to 5 per cent of the whole number changing per annum; that would give you at least a hundred cases which might require settlement in one county alone?—Yes, if they were all referred to this one gentleman.

47,103. That would take a considerable time, for they all occur at the same season of the year, do they not?—Mostly.

47,104. And most of them would necessitate a view of the farm?—They would all be the better for it whether he was asked in afterwards or not, both in the interest of the landlord and in the interest of the tenant.

47,105. I think Mr. Channing asked you one or two questions that I had intended to put; you are aware that the Act imposes no limitation as to the time during which compensation shall be given for accumulated fertility?—I am quite aware that it does.

47,106. But in practice the time is limited?—Various gentlemen who have been employed as valuators have occasionally given it; but in most of the other cases no notice has been taken of it at all, it has been shunted aside.

Compensation for cleanliness of farms.

47,107. I think you said that cleanliness has not been taken into account, and you admitted, in answer to Mr. Gilmour, that it was the duty of the farmer to observe the rules of good husbandry?—Yes.

47,108. Still you think he should be compensated if he leaves his farm clean?—Yes, he should.

47,109. Because another man is not fined, or because he has done something more than his duty, or because he has done his duty?—It is not so much in the pure and simple meaning of the word duty.

47,110. When a man is under an obligation—an implied obligation always, and generally an obligation by contract, to farm in a good and husbandlike manner—— ?—I will take it exactly on that footing—presuming now that good husbandry is the average of the district you will grant me that much?

47,111. You mean that you will put it at anything over the average of the district?—I would put it that he is entitled to everything over the average.

47,112. Would you fine him if he was below the average?—I would not be inclined to fine him, as you express it. I would rather refer the matter to an official arbiter.

47,113. Would you allow a counter-claim to stand on account of the farm being less cleanly than the average of the district?—Decidedly so.

47,114. That would be a fair counter-claim, fair, that is, to both parties?—Yes

Digitized by Google

Mr J. Speir.
2 May 1895.

Official valuers.

47,115. I think you suggested that an appeal should be made to an official valuator where a tenant during the currency of his lease was selling off too much, or cropping too much?—Yes.

47,116. Do you not think that would create a good deal of irritation between landlord and tenant?—No; I think it would cause less irritation than at present, when a little matter is probably allowed to go on for a year or two, and then, when it has accumulated to a considerable extent, it is summed up against the tenant and that causes a great deal of ill-feeling.

47,117. Would you observe any difference in the case of a tenant continuing? A tenant who is continuing may amend his acts, he may take a crop this year, postpone the fallow, but make the fallow next year, in which case nobody is injured; the quitting tenant has lost his chance of improving or putting the land back into its proper state, and there is a difference between the two, is there not?—There is a little.

47,118. Sometimes it might be difficult for the landlord or the factor to say when the time had come to intervene?—I think it should be his duty to intervene.

47,119. When?—When the tenant is breaking through what is his contract.

47,120. But I thought he was to be allowed to farm as he pleased?—Yes; but if he is doing what is considered bad husbandry as you express it——

47,121. The view of the factor and of the farmer might differ very considerably on that point; the farmer might say I have got this liberty, and I am only exercising it, I have done no harm; next year I shall fallow this land, and I shall put it all right. Do you not think he would feel annoyed if the case was referred to an official to decide whether he was farming badly or not?—I cannot say that he would; it might happen, I will not say would not happen.

Farm accounts.

47,122. (*Mr. Dalton.*) Coming back to the accounts of this Ayrshire farm on pages 24 and 25, do you feel quite sure that the produce consumed by the tenant is shown in those accounts?—It is in the ordinary sales, he kept a separate account.

47,123. Does not the note require some alteration then. "The above detailed statements refer strictly to the farm, "as distinguished from my domestic or household "expenses—the latter are kept entirely separate;" then there is the other note: "No produce that is consumed "on the farm appears in the sales." Taking these two statements together, if they are accurate, surely the produce consumed by the farmer is not entered in these accounts?—I am quite positive with regard to that because I made special inquiry. The gentleman is unmarried; his housekeeper is strictly methodical, much more so than ninety-nine out of a hundred; and those accounts can be produced if wanted.

47,124. I only ask the question because I think the notes upon the subject are at any rate not very clear?—I am responsible for the notes; if they want alteration I can manage to do that.

47,125. I notice that on this farm, on which the profits have been diminishing, the rent and rates have not diminished; apparently the rent and rates charged in the first year 1880–81, are 362*l.*, and they are 357*l.* 11 years afterwards?—He is still running the one lease.

47,126. At the same rent?—I think so.

47,127. Then there being no reduction in the rent in that case accounts or the fact that he is not making the same profit that he did at the commencement. I see that in the first year he had an excess of revenue over expenditure of 123*l.*, and that that has gradually dwindled down to 18*l.* on the other side of the account, but in the meanwhile you say the rent had stood quite still?—Yes; that is the principal reason of it.

Reduction of rent.

47,128. I think you said that generally speaking the rents have been reduced?—Very often; "generally" in fact expresses it more accurately than any other word can.

47,129. If this is a good sample of the ordinary farm in your district profits would not have diminished here if the rents had been reduced?—It depends altogether how much the reduction would have been.

47,130. In the year 1891–2, there was a profit of 69*l.*, as compared with a profit of 123*l.* in 1880–1; that is after 10 years it had fallen to the extent of 54*l.*, and therefore a reduction of 54*l.* in the rental would have made the thing good?—But on a farm of that size the probability is that he would have great difficulty, even supposing the lease goes out this year or the next year, in getting that amount of reduction. The farm is not a very large one and 54*l.* means a very big reduction on the whole.

Mr. J. Speir.
2 May 1895.

47,131. What is his rent?—The rent is about 300*l.*, or 320*l.*, or something like that.

47,132. A reduction of 50*l.* on 320*l.* is about 15 per cent is it not?—There is a difficulty in getting 15 per cent in his district, I may tell you that the farm is in the district where I have said that the average fall in rents is from 5 to 10 per cent.

Infringement of the Agricultural Holdings Act.

47,133. Now, going to the restrictive clauses from current leases, which you give on page 33, I see you say after the first three paragraphs "duplicates from the book "of C. M. Johnstone, M.A., Advocate, showing how to "evade the Act"; does that apply to the subsequent clauses, or to the clauses in front of it, or to the whole of them?—I forget exactly at the present time which it applies to; that is the fact of the matter.

47,134. Are these clauses taken from the book, or are they taken from leases?—They were taken from leases and compared with the book.

47,135. Does the book purport to be a book to enable men to evade the Act?—It does not state that on the outside of it. It is a book on the Agricultural Holdings Act; but each section is taken up, and it is specially said that this section may be evaded by putting such and such a clause in the lease.

Parochial rates.

47,136. Then you give, on page 34 in Appendix XIII., very valuable tables as to the rate in the pound on all the parochial rates levied in the four counties to which your report relates; these parochial rates do not cover the whole of the local rates do they; what do they exclude? Do they include the county rate?—Not the county rate.

47,137. What other rate do they exclude besides the county rate?—The local rate for public health and often the rate for cemeteries and registration, but those are small things, and are all included in the column marked "Other Local Rates."

47,138. But the county rate is not a small thing, is it?—No.

47,139. (*Mr. Little.*) Is it included in "other rates"?—No, it is not included in those. The county rates are pretty near equal all over the district.

47,140. (*Mr. Dalton.*) What do they come to, do you know at all?—I think it is about 6*d.* or 7*d.*

47,141. That would make a considerable difference because here, in one parish, these rates together only come to 3½*d.* in the pound, in the lowest rated parish in Ayrshire; but would you add to that 6*d.* for the county rate?—There will be that.

47,142. Is the county rate shared between the owner and the occupier in the same way?—The same amount of money is raised from both parties.

47,143. For the county rate as well as for the parochial rates?—Yes. It is occasionally slightly different by the pound, but the same sum must be raised from the landlord as from the tenant.

47,144. Where did you get these four tables from, were they furnished by the local authorities?—I think Mr. Giffen put them out.

47,145. Have you taken them from any book of reference? Yes, they are published already; was it not Skelton who did it?

47,146. Are you referring to the Scotch Local Taxation Return?—I think so. There was a return published. This return was prepared for the Secretary for Scotland by Colin Scott-Moncrieff, and presented to the House of Commons on May 4th, 1894.

47,147. A return giving the rates in every parish in Scotland?—Yes.

47,148. These rates seem by themselves to be exceedingly low; the maximum rate I think here in any of these 130 odd parishes is 2*s.*, and you would add to that a 6*d.* county rate; that is the maximum rate, but in another one I have referred to the rate is 3½*d.* and there are several 4*d.*, 5*d.*, 6*d.*, and so on in the pound, which seem to be very low rates in the pound?—You can see how much the other rates are. The poor law and education rates are given separate, and then the whole of the other rates for registration and sanitation, which are given in many cases, are frequently a halfpenny and one-eighth of a penny.

47,149. Lower than they are in England?—I am not prepared to say how you stand.

Digitized by Google

Mr. J. Speir. 2 May 1895.

47,150. What is the reason why the rates for the poor law purposes vary so very much? Do you think you should have larger areas for your poor law administration than the parish?—Decidedly so. One reason for the variation is the nearness to probably a mining district, or the fact that a public work is being started. I can give one notable example. You may remember that a harbour was built by Government money at Portpatrick; that parish previous to the building of the harbour was very low rated for the poor rate, since then it has been one of the highest in the whole of the country owing to the number of births that were there during the time the harbour was being made. These people were traced back to Portpatrick always since that. Nearly every other parish which has a high rate is accounted for in something the same way.

47,151. What is the reason why you should not throw your parishes into unions as they do in England?—I see no reason why it should not be done, but as the working man moves so quickly from one district to another now, I almost think it should be made a national tax rather than even a union one.

47,152. Supposing it remains a local charge would you agree that you should throw some of these parishes together, and not have these 134 parishes in the different counties each separately maintaining their own poor?—The wider the area can be made, I think, it would be the more just for all.

47,153. So long as you can have good administration?—Yes.

47,154. But what is the size of these parishes as a rule; are they very much larger than English parishes?—I do not know what is the size of English parishes.

47,155. What would be the length of the ordinary parish; how many miles long would it be?—The parishes would run in population probably from 1,000 up to 10,000, and they may run over an area of from probably 5 square miles to 10 square miles.

47,156. Would 10 square miles be the largest?—In some of the hill districts, of course, they might be much larger, but the population there would be very small.

Mr. J. Speir. 2 May 1895

47,157. (*Mr. Gilmour.*) On this question of increasing the areas, do you approve of continuing the classification whereby land and other properties are placed in certain classes for the purpose of assessment?—Yes, I should like that it should even be made more general than it is. A great many of the districts in Scotland have not adopted it, and the farmer paying, say a thousand a year in rent, pays on his full 1,000*l.* the same as if he was occupying a factory which might be rated at 1,000*l.*, whereas the income of a farmer paying 1,000*l.* rent would be very much different from that of the occupier of a factory rated at 1,000*l.*

47,158. Would you be opposed to putting all properties upon the same basis, although you are in favour of increasing the area for public health and for poor law purposes?—Most decidedly so. I would only take the rent which appeared in the valuation roll as a basis upon which the person should be assessed.

47,159. (*Mr. Dalton.*) Where you have classification, what proportion do you allow off the land?—Generally the farmer will be assessed on from 25*l.* per cent., which is the lowest, I think, up to even 97*l.* or 100*l.*

47,160. Does it give satisfaction?—It certainly gives satisfaction, more especially in the mixed districts. If you have an entirely rural district it makes no difference whether you have classification or not.

47,161. I want to be clear as to what is done; where you get a mixed district and you have the 25*l.* per cent., a farmer paying 400*l.* a year for his rent would pay the same rates as an occupier of a house paying a rent of 100*l.*?—Where we have classification, he would.

47,162. But the owner of each would pay the same?—He would pay the same.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Ninetieth Day.

Friday, 3rd May 1895.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Rendel.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., Alan Mackinnon, Esq., } *Assistant Secretaries.*

Mr. George Frederick Baker called and examined.

Mr. G. F. Baker. 3 May 1895.

Mr. G. Baker. 3 May 1895

47,163. (*Chairman.*) I understand that you are a tenant farmer and a miller, holding under the Duke of Buccleuch and Mr. Deacon, in Northamptonshire?—Yes.

Particulars of witness' holding.

47,164. What is the extent of your holding?—The Barnwell Mill Farm is 327 acres, and the Oundle Lodge Farm is about 230.

47,165. Have you held that land for some time?—I have held the Barnwell Mill Farm since 1859, and the Oundle Lodge Farm only for four years next Michaelmas; I have held it from 1891.

47,166. What was your original rent?—In 1880 the Barnwell Mill Farm was 732*l.*

47,167. Has the rent been considerably reduced?—It was reduced last year to 450*l.* I wished a roller plant to be erected in the mill, and the Duke agreed to spend the requisite amount, and I then agreed to pay 50*l.* more; the rent would have been reduced to 400*l.* if he had not put that in.

47,168. (*Mr. Lambert.*) Are you speaking of a farm or of a mill?—The reason the rent was raised was on account of the outlay on the mill; the mill and the farm go together.

47,169. What is the value of the mill, and what is the value of the farm?—You must take the mill at 100*l.* a year.

47,170. (*Mr. Everett.*) What power is it driven by?—Water power.

System of cultivation.

47,171. (*Chairman.*) What is the general system of cultivation in your district; is it an arable district or a pasture district?—Both; it is mixed.

Reduction of rent.

47,172. What should you say has been the reduction per pound in the rent?—In the neighbourhood it has been from 20 per cent. to 60 per cent.

Digitized by Google

Mr. G. F. Baker.

3 May 1895.

47,173. Varying according to the condition of the soil?—Yes.

47,174. On grass land much less, I suppose, than on arable land?—Some of it.

47,175. With those reductions have the landlords been able to keep their tenants?—There were several changes before the deductions were made.

47,176. But at present, as now reduced, have the landlords been able to let their land?—At the present time some of the tenants are still wanting further reductions—even at the present time

Uncultivated land.

47,177. Has any land gone out of cultivation?—Very little in our neighbourhood.

47,178. I suppose a good deal has been laid down to grass?—In certain districts, but not so much as in some districts.

Demand for farms.

47,179. When farms become vacant can they be let or not?—Yes, they can at the present reduced rents if they are in anything like a fair condition.

47,180. Is there a fair demand for farms in the neighbourhood?—Yes, a useful farm can be let.

47,181. If the farm is vacant is there more than one applicant for it?—Of course it depends a good deal on what it is. If it is a useful farm it can be let now at the reduced rent, or rather, I should say, at a rent.

Tenants' capital.

47,182. Are there men with capital ready to take the farms?—You would hardly call them men of capital, perhaps.

47,183. But men with a sufficiency?—With sufficient capital, yes.

47,184. I suppose it requires much less capital than it used to to go into a farm in consequence of the fall in prices; is that so?—No, I do not think that there is much difference now.

47,185. Not much?—Not much.

Effect of depression on landlords.

47,186. Have the landlords in the neighbourhood suffered a good deal from the depression?—Yes, no doubt about it.

47,187. Are they mostly large owners in your neighbourhood?—Yes.

47,188. With other means, I suppose?—Most of them.

47,189. Those who have not other means have been in great difficulty, have they not?—Very much so.

Reduction of rent.

47,190. You say in your notes that tenants can easily be found for farms in a good condition—more so than a few years ago?—Yes; I mean by that before the rents were reduced.

47,191. When did the reduction begin?—They have been reduced, I should say, within the last 10 years; the reductions began 10 to 12 years ago; of course there have been several reductions.

Land in hand.

47,192. Is much land in the hands of the owners or not?—Not so much as there was three or four or five years ago.

47,193. Have they gradually let their land?—They seem more inclined to let the land.

47,194. I suppose they took the land in hand very often because they did not wish to lower the rent?—That is so.

47,195. Then they have bided their time and let the farms again?—They have tried it and they have found it does not answer even to have it in their own hands.

47,196. They found it was worse than letting at a low rent?—Yes, that has been the case.

47,197. And consequently they have been obliged to reduce the rents all round and now they can let their land?—Just so.

Position of tenants.

47,198. What is the condition of the tenant farmers?—I am afraid I cannot give a very good report of them; they have certainly been losing money for some years.

Bad seasons.

47,199. Have they suffered much from the bad seasons?—They suffered in the year before last from the dry season, but I do not know that it was any worse than the last season; I believe last season was the worst we have experienced on the whole.

47,200. You have had two very bad seasons then?—We have had two bad seasons; one was too dry and the other was too showery.

47,201. In one there was an excess of drought and in the other a deficiency of heat?—Yes.

47,202. I suppose there was good grass last year?—The grass was better, but the stock paid but very little for grazing; they paid worse almost last year than they did in 1893, as far as my experience went.

Mr. G. F. Baker.

3 May 1895.

47,203. Then the corn crops were very deficient?—Yes, the barley especially.

47,204. The year 1892 was a bad year also, was it not—that was a wet year, was it not?—We had rather more sun, I think, in 1892; it was the continual showery weather in 1894 that hurt us.

47,205. At all events the farmers in the district have suffered heavily from the seasons as well as from the low prices?—Yes, no doubt they have.

47,206–7. Then last year the rains damaged the corn and you got a very low price in consequence?—A very low price.

47,208. (*Mr. Channing.*) Do you sell or do you buy mostly?—I buy as a miller and sell as a farmer.

47,209. (*Chairman.*) From the combined operation of the bad seasons and low prices the tenants have been losing money?—Yes.

Demand for farms.

47,210. How do you account for it that the land will let at the present reductions of rent if the tenants have been losing so much?—There are people willing to try. Of course they change from one farm to another and they change into another district sometimes. We have one farm in our neighbourhood let now to a tenant from Devonshire.

47,211. Have there been any tenants coming in from Cornwall and Devonshire?—This is the first we have in our neighbourhood. We have had two or three from the North Country.

Condition of the labourers.

47,212. Then with regard to the agricultural labourers, how are they off in your district?—They are well off I consider—better off than they have been for some time.

Wages.

47,213. Have wages been maintained or have they fallen?—They have been reduced by a shilling a week during the past winter.

47,214. Is that a permanent reduction?—No, it is put on again now. We had been paying 11*s.* now we are paying 12*s.*

47,215. The wages have gone up again then?—Yes.

47,216. But for the winter the wages were lowered?—Yes.

47,217. I suppose that 12*s.* a week does not indicate what they get spread over the year?—No, that is the regular wages.

47,218. Is piece-work often given?—Yes.

47,219. What is it reckoned that the labourers can earn at piece-work in the week?—They can earn from 2*s.* 9*d.* a day; it ranges from 15*s.* to 17*s.* or 18*s.* a week; it just depends how they work.

47,220. I suppose they have gained by the low prices?—Yes.

Unemployed labourers.

47,221. During the late severe weather were there more of them out of employment than usual?—There were a few more.

47,222. Was that due to the exceptional weather?—That was due to the exceptionally cold weather this winter.

47,223. Not so much to the difficulties of the farmers?—No, I do not think it was.

47,224. Do you rather fear that the labourers will suffer if things go on as they do now?—Yes, I fancy they will in a great many districts, if prices do not alter.

Pauperism.

47,225. The want of employment this last winter resulted, I suppose, in an increase in the out-door relief?—Yes. That was the first for three years. I have a statement here from the Oundle Union, showing the amount of out-door relief that has been given for the last 15 years. You will see there is a very great reduction in the amount of out-door relief in the 15 years, and not much increase in the amount of the indoor relief (*handing in statement*).

47,226. I see that the number of out-door paupers relieved has gone down from 871 in 1871 to 127 in 1894, and that the indoor pauperism has somewhat diminished also, having gone down from 90 in 1871 to 77 in 1894, although it rose to 130 in 1880, and 124 in 1881; I see, also, that the totals have been reduced from 961 in 1871, and 829 in 1872, to 230 in 1893, and 204 in 1894, showing a very considerable reduction of expenditure on

Digitized by Google

Mr. G. F. Baker. 3 May 1895.

the poor. The total expenditure upon the Poor Law appears to have gone from 7,701*l.* in 1871, and 7,875*l.* in 1872, to 3,360*l.* and 3,323*l.* in the last two years, so that there has been a considerable reduction?—Yes.

47,227. Then the average price of the 4 lb. loaf appears to gone down from 7*d.* in 1874, to 3½*d.* in 1894?—That is it; it is still lower this season.

47,228. Then I see that the rate in the £ for Poor Law expenditure has gone down from 1*s.* 5½*d.* in 1871, and 1*s.* 6*d.* in 1872, to 9*d.* in 1893, and 9½*d.* in 1894—about one-half?—Yes.

Assessment to rates.

47,229. Have the assessments of the land in the union been reduced in proportion to the reduction of rent?—Yes.

47,230. Just in proportion?—Yes, they take the rent as the basis.

Rates.

47,231. What you have now told us has reference to the Poor Law rating; taking all the rates, has the rate in the £ been reduced?—No, the rate in the £ has not been reduced, because the amount of the assessment has been so much reduced. I have a statement here showing the amount required for four parishes. In 1880, in one parish, it was 319*l.*, and in 1894 it was 241*l.* In another parish it was 500*l.* in 1880, and 378*l.* in 1894.

47,232. That shows a considerable reduction?—Yes.

47,233. Now tell us the rate in the £?—I have not the rate for the poor in those parishes. The highway rate and poor rate, and the county rate are all collected together now.

47,234. Have you not got the rate in the £ for the whole of them?—The amount in 1880 was 2*s.* 4½*d.*

47,235. What was it last year?—About 1*s.* 6*d.*

47,236. Then there has been a considerable reduction in the rate in the £, namely, a reduction of 8½*d.*?—That would be without the county rate.

47,237. Apart from the county rate there has been a reduction of 8½*d* in the £?—Yes.

47,238. Therefore there has also been a considerable reduction in the assessments, and the farmers have got the benefit of that too; is not that so?—Yes.

47,239. Perhaps you can supply that information later, and let us know what has been the difference in the rate in the £ for the whole of the rates in 1880 as compared with the present time?—Yes. The poor rate is about the same; there is a difference in the highway rate and the county rate.

47,240. According to the statement you have laid before me the rate in the £ on the poor rate has been reduced one half; however, perhaps you will supply these figures later?—Yes. *The witness subsequently furnished the following figures:—*

Parishes.	Rates in £ 1880.	Rates in £ 1894.	
	s. d.	*s. d.*	
Barnwell St. Andrew -	2 4½	2 1	These are the actual rates levied in the parishes for all purposes.
Fotheringhay - -	2 1	2 3	
Nassington - - -	2 3	2 6	
Wadenhoe - - -	2 5½	2 3	

	Lady Day 1880.		Lady Day 1894.	
	Rateable Value.	Amount raised from Poor Rate.	Rateable Value.	The Call and County Rate in the £.
	£	*s. d.* £	£	*s. d.* £
Barnwell St. Andrew - -	2,673	2 4½=319	2,292	1 5=241
Fotheringhay - - -	4,772	2 1 =500	2,935	1 5=378
Nassington - - -	3,884	2 3 =446	3,385	1 5=423
Wadenhoe - - -	1,453	2 5½=179	1,144	1 5=120

Foreign competition.

47,241. What do you consider to be the causes of the depression?—Foreign competition, I suppose, which affects prices.

47,242. Do you consider the cost of production is not less than it was?—Very little.

47,243. (*Mr. Channing.*) When you can purchase barley at 13*s.* and wheat at 16*s.*, the cost of feeding stuffs is less, is it not?—Yes, the cost of feeding stuffs is less, certainly; I was referring more to corn.

Mr. G. F. Baker. 3 May 1895.

Cost of productio .

47,244. (*Viscount Cobham.*) Surely the cost of production has diminished in pretty nearly every particular, has it not?—I do not think the labour is any less.

47,245. The labour is less than it was at one time, is it not?—It is less than it was in 1870.

47,246. As regards rates, taxes, and rent, you are no worse off but a great deal better off than you were, are you not?—Of course we have a reduction; it makes a difference in that way; but I am thinking of the incidental expenses on land.

47,247. You mean the actual expenses on the land?—Yes.

47,248. With regard to that, you would admit, of course, that feeding stuffs and manures are much cheaper than they were?—Feeding stuffs are a little cheaper.

Remedies for depression.

47,249. (*Chairman.*) What remedies do you suggest?—I hardly know. They will not have protection. As far as the tenants are concerned the only thing is to reduce the rents, and have some of the burdens taken off the land.

47,250. Then there are two things, the first, that the rent should be reduced, and then that the rates should be reduced?—If prices are not altered.

Reduction of rent.

47,251. (*Mr. Chaplin.*) The rents, you say, have already been reduced, in some cases 60 per cent.?—Yes.

47,252. So, I suppose, any further reduction of rent upon that would be a very trifling help to you; I mean, the rent where it has been reduced 60 per cent. bears only a very small proportion to the rest of your outgoings?—That is, perhaps, an exceptional case, but where you have been paying 500*l.* a year, and then you only have to pay 300*l.*, that makes a material reduction.

47,253. (*Chairman.*) Do the farmers in your district think that the rents have not been reduced enough?—Some of them are applying for a reduction of rents this year. I know of several on a neighbouring estate.

47,254. Apart from the difficulty of the present year do they consider that the rents in the past have not been reduced enough?—Some of them do.

47,255. Is that generally the opinion, or is it only the opinion of some?—The opinion generally is now, that they want a further reduction after the two bad seasons.

47,256. But apart from the specially bad seasons, do they think that the rents were not reduced enough before?—They seem to think that they cannot pay the expenses, and cultivate the land to a profit at the present rent.

Judicial rents.

47,257. Do the farmers of your district think that there should be any tribunal for settling rents?—No, I believe most of them are perfectly satisfied with the present state of things.

47,258. They are willing to leave it to agreement?—They are willing to leave it to the agents and their landlords, generally speaking.

47,259. Has the matter been discussed at the farmers' meetings, whether there should be arbitration rents or judicial rents?—No, not that I know of—not in our neighbourhood.

47,260. As far as you know, is the general view against the proposal?—I believe it is.

The Agricultural Holdings Act.

47,261. Have you anything to say about the Agricultural Holdings Act?—It is not popular—certainly not in our neighbourhood.

47,262. Why is that?—It does not seem to work well.

47,263. In what respect; is it costly? I only want to know your view. What do you think are the defects of the Act, and should it be remedied?—The tenants do not seem to derive the advantage under it that they expected they would do.

47,264. What do they think should be done?—That they should be paid for improvements.

47,265. What alteration do they suggest?—I suppose they would like the Act to be altered so that they can be paid.

47,266. (*Mr. Channing.*) Are you a member of the Northamptonshire Chamber of Agriculture?—No.

Digitized by Google

Mr. G. F. Baker.

3 May 1895.

47,267. You have not attended any of their meetings?—No, I have not.

47,268. (*Mr. Lambert.*) Do you represent any large body of agriculturalists; have you been nominated by any meeting to come here?—No, I think my name was sent up by the Duke of Buccleugh's agent.

47,269. Then you do not represent a large body of farmers in Northamptonshire—I mean officially?—No.

The season of 1894.

47,270. (*Viscount Cobham.*) I am rather surprised at your saying that last year was such a bad year with you. You are in the main a grass farmer, are you not?—Yes.

47,271. Did not grass farmers do fairly well in England generally, last year?—I believe not; in our district certainly not.

47,272. In what way?—Beasts paid very little for grazing.

Prices in 1894.

47,273. Prices got fairly satisfactory, did they not, as the year went on, especially after Christmas?—I know several that bought their beasts in the spring who did not make any more in the autumn when they had to sell them off fat.

47,274. Do they sell in the autumn?—Well, even when kept until Christmas.

47,275. Stock did very well, did it not, last year?—Yes, fairly well.

47,276. Is your land high and dry, or wet?—I have some which is a good deal subject to flood.

47,277. You had too much rain probably for that land?—It was not the great quantity of rain that we had, it was the continual showery weather. We had not too much for the grass, but there was an absence of sun.

47,278. You rely a good deal upon your stock for paying your rent, do you not?—Yes.

47,279. You were hit entirely by the bad prices in the autumn?—With me it was much worse last year than it was in the dry season. I had a much better season in the dry season than I had last year with the grazing.

47,280. Do you raise beef chiefly?—Both.

Cost of production.

47,281. With regard to the cost of production, on which I have already asked you some questions, I understand you admit that taking everything into consideration, rent, rates and taxes, cheaper machinery, cheaper manures, cheaper feeding stuffs, and so forth, the cost must have considerably decreased, though not in the same proportion, perhaps, as prices have?—It has decreased to a certain extent, there is no doubt, but nothing in proportion to the prices.

47,282. You have not calculated how much could be set against the fall in prices by the fall in the cost of production?—I am quite satisfied of one thing, that we cannot produce wheat at 3*l.* 10*s.* an acre.

47,283. Are you speaking of wheat more particularly?—Or barley; we cannot produce corn at 3*l.* 10*s* to 4*l.* an acre and make it pay, in fact not without a serious loss.

Reduction of rent.

47,284. (*Mr. Channing.*) What are the average rents for mixed farms, arable and pasture, about Oundle?—From 15*s.* to 25*s.*

47,285. Are those the present reduced rents?—Yes.

47,286. Are those rents subject to any abatements or are they practically paid as net rents now?—In certain cases a return is made.

47,287. The reductions you spoke of in the rents which have been asked for by farmers are permanent reductions, are they not, and not abatements?—Yes, but they want them to be permanent.

47,288. About what, on an average, would you say they are asking these rents to be reduced by?—In some instances 25 or 30 per cent.

47,289. In addition to the present reductions?—Yes.

47,290. I see you have read Mr. Pringle's report. Do you think that his report represents the general condition of the farmers in the county?—As far as the condition of the county goes, I think it is a very fair report.

47,291. I have not the report before me; do you think that what he says with regard to the rents not having been sufficiently reduced nor reduced in time in Northamptonshire is correct?—Yes.

Arbitration for rent.

47,292. Are you aware that he recommends that there should be an arbitration as to whether a rent is a fair rent or not?—Yes.

Mr. G. F. Baker.

3 May 1895.

47,293. Do you agree with that or not?—No, I cannot say that I do.

47,294. Do you think that that had better be left to agreement?—I think that had better be left to the landlord and the agent.

47,295. For agreement between the parties, you mean?—Yes.

Compensation for good farming.

47,296. Do you agree that the tenants should have a fuller compensation than they have now if they farm thoroughly well during their tenancy?—Yes.

47,297. And for continuous good farming?—Yes.

47,298. The custom of the country I see you mention is preferred; do you mean by that that the practice of the valuers in the Midland Valuers' Association is more satisfactory, or in what sense do you mean it?—I mean that the valuation by valuers is preferable to the Agricultural Holdings Act in a great measure.

Official arbitrators.

47,299. Do you agree in Mr. Pringle's suggestion, that there should be an official type of arbitrator or valuer to settle about compensation?—No, I do not think it is necessary.

47,300. (*Sir Nigel Kingscote.*) You live in the Oundle Union, I understand?—Yes.

47,301. Do you know all the country around there intimately—I suppose you do?—Quite well.

Depression in the Oundle Union.

47,302. We had it in evidence on the Duke of Richmind's Commission, the former Agricultural Commission, that the Union of Oundle suffered almost more than any other part of England; will you say that is the case now, or are things rather improved?—It is the case now; things cannot improve as long as prices are as they are, I think.

47,303. Do you think there is as much land on the landlords' hands now as there was, we will say, three or four years ago?—No. I have said that there is not so much, but that is owing to the rents having been reduced, and so the landlords have been able to let them. The income is very much reduced, there is no doubt.

Flour mills.

47,304. (*Mr. Whitehead.*) I think you are a miller as well as a farmer?—Yes.

47,305. Milling is not profitable?—I have two bad trades.

47,306. That is on account of the imported flour, is it not?—In a great measure.

Foreign flour.

47,307. Is that flour imported for mixing or for using in place of English flour?—It is generally mixed.

47,308. So that you still have some grinding to do?—Yes.

47,309. Has there not been great improvement in mills lately?—In the machinery, yes.

47,310. And the old-fashioned mills cannot compete with the modern mills with their modern machinery?—They are going out of date entirely.

47,311. Is the flour that is imported of good quality?—It varies; some is good and some very inferior. Some of the American flour is very good.

47,312. The Indian flour, is that good?—We do not get any.

47,313. No flour from India?—None at all, I think.

Price of bran.

47,314. Do not the farmers complain of the high price of bran in consequence of the imported flour; is that not a grievance?—They have certainly not had any occasion to complain of that this last year. Bran has been selling from 50*s.* to 3*l.* 10*s.* per ton, and that is very low.

47,315. So that there is nothing in that complaint that they cannot get bran now because of the imported flour?—No.

Demand for farms.

47,316. (*Mr. Chaplin.*) I think you told us that useful farms could still be let?—Yes.

47,317. But that there were not any men with a very great abundance of capital to take them?—No.

47,318. You also spoke of the farms that had been in the hands of the landlord and given up; can they always let these farms that they have had given up?—They have let a great many of them.

47,319. But at a very great reduction of rent, I suppose?—Yes.

47,320. Do they come under the designation of useful farms when they are given up like that?—Yes.

47,321. It is pretty good land, I suppose?—Some of it.

Digitized by Google

Mr. G. F. Baker. 3 May 1895.

47,322. You have read, I understand, and you generally agree, with Mr. Hunter Pringle's report?—Generally speaking.

Scarcity of labour.

47,323. Have you read what he said with regard to the employment of labourers in Northamptonshire. He says, in paragraph 120, "throughout the cold clay "districts there is a very great scarcity of employment "and less continuous service than formerly"—that is, for agricultural labourers; would you agree with that?—There is a great scarcity of good labour, certainly.

47,324. What he means in this report is that there is not so much employment for labourers as there used to be?—There is plenty of employment.

Unemployed labourers.

47,325. Then he quotes a village to the north-west of Northampton where he says that during last summer there were 12 or 14 men earning only occasional wages; are you acquainted with that?—What village would that be?

47,326. He says: "In a village to the north-west of "Northampton it was stated that even during last "summer there were 12 or 14 men earning only "occasional wages?"—It is an exceptional case for any man to be out of employment now with us; they are, generally speaking, well employed.

47,327. I suppose the main cause of the trouble you consider to be the fall in prices?—I do.

Effect of low prices on labourers.

47,328. Are you apprehensive that if that fall continues the labourers then will be in a position of difficulty with regard to employment?—I am inclined to think so.

47,329. I observe that Mr. Hunter Pringle makes a very strong statement on that subject. At page 55, paragraph 163, of his report, he says: "It is my plain "duty (and I do not shrink from it) to advise the Com- "missioners that if prices do not at once make a very "great improvement the country may be prepared to "see thousands of acres of good corn-growing land "thrown into grass, and thousands of farm labourers "cast into poverty and idleness." Should you agree with that statement?—No, I cannot say that I should. I do not see why it should be now any more than it would be four or five years ago.

47,330. In your part of the country that would not apply?—I do not think it would.

Reduction of rent.

47,331. Now you said that the relief for the depression from which Northamptonshire has been suffering could only be looked for in the first place in an improvement in prices?—Yes.

47,332. And failing that, if no improvement in prices could be obtained, then there must be a further reduction of rent?—Yes.

47,333. I think you said the reductions had already amounted to from 20 to 60 per cent.?—Yes.

47,334. On a farm where the rent is, say, 500*l.* a year—an ordinary farm let for 500*l.* a year—what would be the sum total of annual outgoings; what would the labour bill be?—My labour bill is 350*l.* a year.

47,335. Is that an arable farm you are speaking of?—It is not entirely arable.

47,336. It is half grass and half arable?—Yes.

47,337. Now what would be the outgoings of a purely arable farm; first, what would the labour bill amount to there?—It depends so much on how it is worked. Of course, the tendency is now to employ as little labour as you can.

47,338. But, of course, the outgoings on an arable farm would be much heavier than on a grass farm?—Yes.

47,339. Can you give me any idea of what the outgoings would be on an ordinary arable farm for which you paid 500*l.* a year?—It depends so much on the acreage.

47,340. We will say ordinary land, say land that would let for 15*s.* an acre now?—I should say it would be from 700*l.* to 800*l.* a year.

47,341. The labour bill?—Yes.

47,342. Then what would the other outgoings amount to?—There are the rent, the rates, taxes, manures, and feeding stuffs.

47,343. It would come to a very large sum, would it not?—It would.

47,344. What would it come to altogether?—I cannot say without going into it; I would not be prepared to say here.

47,345. At a rough guess?—It depends on the number of stock you keep. *Mr. G. F. Baker.* 3 May 1895.

47,346. Would it come to 2,000*l.*?—I should think it would come to nearly that.

47,347. It would come probably to about 2,000*l.*?—Nearly, I should think.

47,348. Then your rent would not represent more than a fourth of the outgoings?—No, not in that case.

47,349. Supposing it had been reduced to 50 per cent., which some farms I understand have been reduced already?—Yes.

47,350. Then your rent would represent one-eighth of your outgoings?—Yes.

47,351. Now you say that in addition to the reductions which have been made already there are further demands for reductions of from 25 to 30 per cent.?—Yes.

47,352. Supposing your rent was reduced another 25 per cent. that would make your rent only one-sixteenth of your outgoings, would not that be so, because your other outgoings would remain the same?—Yes.

47,353. If you kept on reducing it, first from 500*l.* to 250*l.* and then from 250*l.* again by 25 per cent. more, the proportion which your rent represented of your whole outgoings would be steadily reduced, do you follow that?—Yes.

47,354. Then it appears to me that the relief that you can get from reduction of rents would be very small indeed, would it not?—If I am paying 500*l.* a year, and I get say 25 per cent. reduction, that is a quarter, that is 125*l.*

47,355. I am assuming that you began with 500*l.* and that you have already had a reduction of 50 per cent.?—I took it at 732*l.*

47,356. I am not speaking of your farm in particular, but of an ordinary arable farm, and I am assuming that you have had a reduction of 50 per cent. already?—On the 500*l.*? No, I did not mean that.

47,357. Do I understand that farms have been reduced 50 or 60 per cent. in your neighbourhood?—Yes, in some instances.

47,358. And that there are now even in those cases demands for further reductions of 25 per cent. more?—Where they have not been reduced to that extent there have been, and they are asking for reductions of 30 per cent.

47,359. I do not quite follow you; I thought I gathered from you that there had been reductions of 50 or 60 per cent. already in some cases?—I say there have been reductions by different landowners of from 20 to 60 per cent.

47,360. And that even in those cases in consequence of the extreme bad season last year there are now demands for further reductions upon them?—Yes.

47,361. That might very possibly bring the reductions down to 75 per cent. altogether?—Yes.

47,362. Very well; then when you say that you look to reductions of rents as the remedy in the absence of any change in prices, is it not the fact that when your rent has got so low as it has done already, any further reduction only means a fraction of your necessary expenses and gives you very little relief?—If the land will only make a certain price, if you can only get a certain price out of the land, my argument is that if it is not worth any more to occupy, the rent must be reduced.

The Agricultural Holdings Act.

47,363. You say the Agricultural Holdings Act is not generally popular in Northamptonshire?—It is not.

47,364. What is it that is complained of?—They think that they do not get compensation for the improvements that they hoped they should do under it.

47,365. That the compensation is not sufficiently large?—That is it.

47,366. Is that the main point?—It is not an inducement to farm well.

Northamptonshire custom.

47,367. You have a custom in Northamptonshire, have you not?—Yes, as far as the cake and the artificial manures are concerned.

47,368. Are the farms in Northamptonshire, in your district, held under agreement, or under the custom, or under the Act?—Both.

47,369. Under the custom and under agreements, do you mean?—Yes.

47,370. You prefer those, as a rule, to the Act?—Yes.

Digitized by Google

Mr. G. F. Baker.
3 May 1895.

47,371. Are the custom and the agreements generally satisfactory?—I believe so.

47,372. As far as you are concerned are you fairly satisfied?—As far as I am concerned I am perfectly satisfied.

47,373. Is that one of the reasons why the Act is not used more?—I suppose it is, in a great measure.

Average rent and assessment to rates.

47,374. (*Chairman.*) What is about the average rent of land in your district at the present moment?—From 15*s.* to 25*s.* an acre, I should say.

47,375. Does it average about 1*l.* an acre?—Yes, I should think it would, just in this district.

Mr. G. F. Baker.
3 May 1895.

47,376. I see that in your union the reduction in the assessment has been very considerable; it has been reduced from 86,000*l.* a year to 59,000*l.* a year; just about 30 per cent.; should you say that represents about the average reduction of rates in your district?—Yes, I should say it would.

The witness withdrew.

Mr. L. L. Price.

Mr. Langford Lovell Price called and examined.

Mr. L. L. Price.

47,377. (*Chairman.*) You are Treasurer of Oriel College, I believe?—I am.

Effect of depression on college properties.

47,378. You have given a great deal of attention to the question of the depression of agriculture so far as it has affected the collegiate property of Oriel College, and also other property belonging to the other University Colleges?—Yes.

47,379. The result of those investigations you have embodied in a paper which you read at the Statistical Society in the course of last autumn?—It is embodied in two papers, I think I should say, one which I read in February 1892, which dealt with the accounts of a single college—my own College, Oriel College.

47,380. And the second one dealing with 19 colleges of Oxford?—Yes.

47,381. In the case of Oriel College the comparison is made for each of the last 15 years, is it not?—For the 15 years from 1876 to 1890 inclusive.

47,382. It does not go on till 1894?—No, but I have taken out the corresponding figures for 1894 which I could give to the Commission.

47,383. In the case of the 19 colleges the figures deal with the decade from 1883 to 1893, I see?—Yes.

Oriel College estates.

47,384. Can you shortly state to us the result as regards Oriel College only, of the comparsion between 1872 and 1890. I see that the acreage of the whole of the estates in 1872 was slightly in excess of the present acreage; it was 6,292 in 1872, and 6,142 in 1890?—And bringing that down to 1894 it would be 6,133.

47,385. The land in respect of which these rents were collected I see lies in several counties, Yorkshire, Lincolnshire, Oxfordshire, Berkshire, Somersetshire, Northamptonshire, Wiltshire, Buckinghamshire, and Kent?—Yes.

47,386. But mainly in Oxfordshire, Berkshire, and Somersetshire?—In those counties are the four large agricultural estates.

Reduction of rents.

47,387. What has been the aggregate reduction of rent?—The aggregate reduction of rent has been from 10,472*l.* in 1876 to 7,533*l.* in 1894, which represents a fall of 28 per cent. in rental.

47,388. Is that after taking into account any benefical leases that there were?—That would be without any respect to beneficial leases so far as they might be expected to lead to any increase of rental.

47,389. That may be taken as a fair estimate of the reduction at a rackrent?—Yes, but that would include other besides purely agricultural tenancies; it would include the rents of cottages, the rents of woodlands, and allotments.

47,390. But no house property, I suppose?—No house property except such as might be situated on the agricultural estates.

Expenditure on improvements.

47,391. During that time have the expenses of management increased, or has the outlay of the college upon its estates increased?—I should say that generally it had in consequence of the falling in of the beneficial leaseholds.

47,392. Has the college had to spend considerable sums upon new farm buildings, or drainage, and so forth?—Yes, I should say it had spent considerable sums.

47,393. (*Viscount Cobham.*) Are the buildings in a very dilapidated state, as a rule, when long leases fall in?—Yes.

47,394. Notwithstanding the covenants?—Yes. It was very difficult to enforce the claim for dilapidations, in fact it was almost impossible to do it.

47,395. Is much actual rebuilding required?—Yes.

47,396. (*Chairman.*) Do you consider that the outlay in that respect has increased during the interval, and that there are larger deductions from the gross rent?—I should say, taking the last 15 years, it certainly had increased.

Other college estates.

47,397. Now, coming to the 19 colleges, will you tell us what is the aggregate acreage belonging to them?—That is a little difficult to ascertain, because the colleges have made no return of their acreage since the Duke of Cleveland's Commission in 1871. At that time they made a return of the acreage, from which it would appear that the acreage of the corporate property, excluding the trust property, amounted to some 168,000 acres, I think, in round figures.

47,398. Are they spread about in a large number of counties in England?—I should say that they are. I did not go into the particulars in any great detail that were given before the Duke of Cleveland's Commission, because I did not know how far they corresponded with the actual figures at the present time; but going into the figures for about a third of the colleges included in the 19 I found that, roughly speaking, you might say that a fourth of the acreage was situated in the three counties of Oxfordshire, Berkshire, and Buckinghamshire, and that the rest was dispersed throughout the whole country, and that there were very few counties indeed in which there was not some property situated.

47,399. What proportion would you say was in those three counties?—I should say about a fourth.

47,400. Then a good deal of that was let on beneficial leases, which are gradually falling in?—Yes.

47,401. (*Mr. Giffen.*) Were those six colleges fairly representative of the whole 19, do you think?—I think so; there were some of the larger colleges amongst them.

Comparative rents 1883, 1893.

47,402. (*Chairman.*) Can you say what the comparative rents have been in the two periods?—The figures given in my paper before the Statistical Society do not represent the rental, because that is not published, but they represent cash receipts on account of rents. Taking the lands at a rackrent, including the University, the receipts in 1883 were 167,370*l.*, and in 1893 159,198*l.* The receipts from the lands let on beneficial lease were in 1883, 12,483*l.*, and in 1893, 2,259*l.*, making a total receipt from land in 1883 of 179,853*l.*, and in 1893 of 161,457*l.*

47,403. But those figures are rather disturbed by the fact that a good deal of land let on beneficial leases has since fallen in?—Yes.

47,404. And has been, therefore, relet at a greatly increased rental?—Yes.

47,405. Therefore it is very difficult to make in the case of these numerous colleges an accurate comparison of their actual rent?—Yes, it is.

47,406. I see the land let on beneficial lease has been reduced from 12,483*l.* to 2,259*l.*?—Yes.

47,407. None of that represents a lower rent due to agricultural depression, does it—it merely represents the land which has fallen in from beneficial leases, and the rent of which is added to the rental of the lands let at rackrent?—Quite so.

47,408. Therefore you would have to deduct at least 10,000*l.* from the 159,198*l.* the rent of the lands let at rackrent in 1893, and also to deduct a considerable amount more due to the increased rent, at which the land let on beneficial leases has been re-let?—Quite so.

47,409. Therefore it is rather difficult to make any comparison of any considerable value?—Quite so. Excluding the three colleges which represent the bulk of

Digitized by Google

Mr. L. L. Price. 3 May 1895.

the beneficial leaseholds, the reduction in the rent appears to be about 20 per cent., and I think that one might make a rough calculation for the falling in of the leases in the case of the other colleges, which also had beneficial leaseholds, but not in so large a quantity, and put it at five per cent. I should say that the reduction might fairly be considered to be from 20 to 25 per cent.

Reduction of rents.

47,410. I do not quite understand how you arrive at that?—By taking out three colleges which had the greater amount of the beneficial leases.

47,411. Taking them out of the account?—Taking them out of the calculation.

47,412. And leaving only those where the great bulk of the land is let at rackrent?—Yes.

47,413. Then you consider the fall in rent has been what?—About 20 per cent.

47,414. That has been the fall from 1883 to 1893?—Quite so.

47,415. It does not include any reduction of rent which occurred from 1879 to 1883?—No; that, I think, it is almost impossible to ascertain.

Oriel College estates. Reduction of rents.

47,416. In the case of Oriel College, you have been able to give us that, because your figures went further than 1879?—Yes. Taking out the purely agricultural tenancies in the case of Oriel College, I find that the reduction comes to 44 or 45 per cent., which, of course, is much larger.

47,417. That is in the case of Oriel?—Yes, taking out simply the farms.

47,418. Apart from other things, namely, cottage rents, woods, and so forth?—Yes, allotments, and so on.

Tithe property.

47,419. Does Oriel College own much tithe property?—It has not got a great amount of tithe, and I should say that, on the whole, it really pays out as much tithe as it receives. The tithe amounted to about 1,870*l.* in 1883, and 1,300*l.* in 1893.

47,420. (*Viscount Cobham.*) Have you included the tithe rentcharge in your calculation of the fall in rents?—Not for all the colleges; not generally.

47,421. In the case of Oriel?—No, I have not.

47,422. You pay now and you formerly did not?—In some cases we do certainly in consequence of the new Act.

47,423. And that should be added to the fall in rents should it not?—Yes, no doubt it should.

47,424. But you have not included that, have you?—I have taken that into consideration in calculating the fall in the farming rents.

Value of house property belonging to colleges.

47,425. (*Chairman.*) I see from the table on page 23 of your paper on the 19 colleges that besides the land let at rackrent and lands let on beneficial leases, there is a very large amount of house property owned by the colleges?—Yes, there is.

47,426. The rent of which has increased from 20,978*l.* in 1883 to 33,715*l.* in 1893?—Yes.

47,427. Then there are houses let on long leases which have risen from 12,299*l.* to 21,388*l.*; then there is an item of fines and fine loans which has gone down from 11,938*l.* in 1883 to 1,858*l.* in 1893; I suppose that was on land let on beneficial leases?—And partly on houses; the two would be together there; it would be impossible to distinguish them.

47,428. Then there is the tithe rentcharge, which has fallen from 49,426*l.* to 41,858*l.*; quit rents, which have fallen from 4,603*l.* to 2,319*l.*; timber and underwood, which has fallen from 4,400*l.* to 4,083*l.*; dividends, which have gone up from 19,504*l.* in 1883 to 20,322*l.* in 1893; and various other items of receipts showing altogether a fall from 301,115*l.* in 1883 to 289,158*l.* in 1893?—Yes.

47,429. So far as the colleges have been affected by agricultural depression (and the difference between these two sums is not very considerable) the effect would have been vastly greater if it had not been, first, for the falling in of the beneficial leases, and secondly, for the fact that house property is rising in value—probably due also to the expiration of leases?—Certainly.

47,430. And that has made up, to a large extent, the loss of the colleges from the fall in agricultural rents?—Yes.

47,431. Then I see on the other side of the account that the charges for estate loans have increased considerably, namely, from 14,182*l.* in 1883 to 18,371*l.* in 1893; the rates, taxes, and insurance have slightly increased from 15,790*l.* to 16,473*l.*; the agency and management remains about stationary, namely, 8,500*l.* in 1883 and 8,866*l.* in 1893, and the repairs and improvements have increased from 26,279*l.* to 34,975*l.*; but that may have been due considerably to the falling in of beneficial leases?—Yes, I should think it was, distinctly.

Mr. L. L. Price. 3 May 1895.

Increase in expenditure.

47,432. There are various other items making a total expenditure in 1893 of 108,983*l.*, which in 1893 had risen to 124,193*l.*, among them being an item "miscellaneous rents and rentcharges, wich has gone up from 2,452*l.* to 8,056*l.*?—I do not know what the explanation of that item is, but I think it must be partly due to the fact of the colleges paying tithe direct under the new Act.

Oxford and Cambridge College properties compared.

47,433. (*Viscount Cobham.*) I think Cambridge has suffered much more than Oxford—could you tell us anything about that?—I could not state the actual facts, I have only impressions; I mean that I have heard from people at Cambridge that they think they have suffered more, and no doubt there is the case of one college in Cambridge which in its accounts of last year does not carry any sum at all to the credit of the head of the college or of the fellows.

47,434. Which college is that?—Downing College.

Tenure.

47,435. (*Chairman.*) What is the usual system of tenancy in the properties held by these colleges?—Now, undoubtedly, I should think it is a yearly tenancy under agreement.

47,436. It was for the most part let on beneficial leases?—Yes.

47,437. Not actual leases in the usual sense of the term, but beneficial leases?—Yes.

47,438. With fines on renewal?—Yes.

47,439. That system has now been practically done away with, and the land is almost universally held so far as the leases have fallen out at a rackrent?—Yes, but there would be some cases of leases.

Sporting rights.

47,440. Do the colleges usually let the land with the right of sporting, or do they let the sporting rights separately?—I should think they usually let with the right of sporting. The practice, no doubt, would vary, but I should think that was the usual way.

Demand for farms owned by corporate and private owners.

47,441. Is there a demand to become tenants of the college property?—I saw the agent of our own college before I came up before the Commission, and he told me that he invariably found if there were two farms to let equally desirable in every respect, and one was held by a corporate owner and the other was held by a private owner, that he could let the farm held by the corporate owner much more easily than he could let the farm owned by a private owner.

47,442. There is greater stability of tenure, I suppose, on the whole?—On the whole there is, and the corporate owner, of course, is non-resident, and therefore is not likely to interfere very much.

47,443. (*Viscount Cobham.*) That is rather in favour of absentee landlords. I should think the sporting rights have a good deal to do with it?—I daresay they have.

47,444. (*Chairman.*) One would suppose a college would be rather less anxious to spend money upon the land than a private owner would be?—I think that probably it is the case that they do not see repairs the moment they are needed, and that there may be delay in executing repairs, but I should think, on the other hand, that when the question of repairs does come before them they are disposed to be liberal on the whole.

47,445. I suppose that the average condition of the property is, probably, rather better than that of other property, inasmuch as the colleges inherited a good deal from the monasteries, and they have probably got some of the best land in the districts in which their property is situated, is that so?—I do not know that I could speak as to that. I can only say that the agent, who is an agent not merely for Oriel College, but for three or four other colleges, and for some of the largest colleges, told me that at present they had only one farm (which was in Cambridgeshire) unlet, and that during the last 15 years he could say that at any particular time they had not had more than about 400 acres upon their hands.

Digitized by Google

Mr. L. L. Price.

3 May 1895.

Land in hand.

47,446. Then as a general rule you would say there is very little property in hand?—Very little.

47,447. They have been able to let their land?—Yes, I think so.

47,448. At a reduction of rent?—At a reduction.

47,449. Apparently not a very considerable reduction if we may take the case of Oriel College?—Well——

47,450. It is considerable, but it is not so great a reduction as we have heard of in other cases?—That may be so.

47,451. (*Viscount Cobham.*) I suppose a college would be even more reluctant to take a farm into its own hands than the private owner?—I think it probably would.

Management.

47,452. (*Chairman.*) Does the bursar of the college generally look after the estates himself, or is it all done through agents?—There is an agent employed, but the bursar would go round the property every year, and of course he would receive the rents, so he would be in direct personal relations with the tenants.

47,453. Who would the negotiations about the rent be made with?—They would be made primarily no doubt with the agent.

Beneficial leases.

47,454. (*Mr. Whitehead.*) Why have beneficial leaseholds been discontinued?—I think partly in consequence of the recommendation of the Royal Commission.

47,455. (*Viscount Cobham.*) Are they not under Acts of Parliament?—Yes. They cannot be renewed if they are once allowed to lapse, but I think they can be continued.

47,456. (*Chairman.*) I believe the land belonging to the colleges has not been dealt with in the same way as land belonging to episcopal bodies and chapters?—No.

47,457. There, I think, a certain right in the tenant to a renewal was recognised, and these beneficial leases were not allowed to fall in?—I do not know.

47,458. Colleges seem to have been treated in a somewhat different manner, and the leases have been allowed to fall in?—That is the case with colleges.

47,459. The colleges, therefore, have got the full rackrent value of the land?—Certainly.

47,460. Whereas in the case of the Church property there was conceded to the tenants of the property a certain right of renewal, and the Church body was given the option either of purchasing or selling, I think?—Yes.

47,461. The Church body has found itself eventually with something like half the original acreage, having bought some and sold the other; therefore the colleges have been treated by the law in a very much more favourable manner?—That would appear to be so.

Future prospects of value of college properties.

47,462. (*Mr. Giffen.*) You say in your proof that the most serious element in the situation as regards the effect of this fall of price on the equipment of the colleges is the uncertainty as to the future?—Yes.

47,463. Is there much apprehension of a further fall of rents?—I think during the last few years it has been the general practice of colleges to make remissions, and certainly in the case of my own college (and I believe in the case of other colleges) we are considering whether the time has not come when those remissions should be made into reductions.

47,464. Have you not taken account of the remissions in dealing with the question of the fall of rents in these figures?—They would be taken account of.

47,465. Is there any apprehension of a greater reduction of rent (including remissions) in future more than has been?—The position is really so uncertain that it is difficult to say.

47,466. You have not made any study yourself as to what the course of rents is likely to be in the next few years judging from the data in your possession?—I do not think I could say.

47,467. Have you taken into account whether the suffering of the colleges will be again modified, as it has been in the past, by the possession of property other than land?—I should think that they have reaped the greater amount, if not the full amount, of the benefit from that other property at present.

47,468. You see no prospect of a rise in the value of the property in the future to compensate any fall in the value of land, that seems to be apprehended, judging from the last sentence in your proof?—I do not see any. The only point on which one could have any definite information at all would be with respect to house property in Oxford. I imagine that the greater part of the house property of the colleges is in Oxford, and I do not see that the tendency at present in Oxford is for the rents of houses to go up.

Mr. L. L. Price.

3 May 1895.

Petitions for reduction of rent.

47,469. (*Mr. Gilmour.*) Is it the custom of these colleges, when there are petitions from their tenants for abatements, to send a practical man down to inspect and report?—In the case of an application for a reduction of rent it would certainly be done.

47,470. You get many of these petitions, I suppose, from your tenants?—During the last few years we have made remissions. We dealt with the cases generally, considering each special tenant, but still making a general remission. I do not know that the applications for reduction have increased during the last few years.

47,471. What do you mean by the last few years?—The last three I should say.

Tenure.

47,472. Those leases that you grant are only annual leases from year to year?—Yes.

47,473. You do not grant long leases?—Not long leases; in the case of my own college, I do not think we have one long lease now.

47,474. Is that because they do not desire it?—Certainly.

Oriel College.

47,475. (*Mr. Everett.*) You are able to present to us fuller details in regard to Oriel College than in regard to the group of colleges, I see?—Yes.

Reduction of rents.

47,476. You tell us that the fall of rents in regard to Oriel College is about 45 per cent.?—I should say that now.

47,477. That is a very considerable fall. In that fall, do you include the abatements?—No, I do not. In the case of Oriel College the figures simply refer to rental.

47,478. So that if the abatements granted in 1894 be added to that and become permanent the abatement of rent will probably exceed 50 per cent.?—Yes. I should say that we made abatements in 1894 amounting in the aggregate to 1,300*l.*

47,479. Is your knowledge of the figures enough to know within a little what that will add to the 45 per cent. if it becomes permanent?—I am afraid I have not worked that out.

47,480. It will add sensibly to it. I suppose you have have had many of these abatements of rents and reductions of rent owing to the fall in prices?—Undoubtedly, I should say.

Fall in prices and currency charges.

47,481. Have you formed any opinion as to the cause of this extraordinary fall in prices which has been going on now for several years past?—Perhaps I might merely say on that point that I am a member of the Bimetallic League, and that I think I am in general agreement with the evidence which was given by Professor Foxwell before this Commission.

47,482. In your view the fall in prices is largely attributable to currency changes during the last few years?—I should say so.

47,483. And to your college the fall in prices is a very great calamity?—It is, undoubtedly. It is a calamity, perhaps, especially in this way: that we are not able to carry out the recommendations which were made by the last Commission; we are not able, for instance, to carry up to its full amount the endowment of a professorship which has been charged upon us, and we have also had to apply to the Visitor (and I should think that has been the case with a great number of colleges), for the suspension of fellowships.

47,484. And the pinchings and reductions which you have put in force I suppose are equally punishing all receivers of rent and of tithe rentcharge all through the country?—I should say so.

47,485. The fall in rents if it gives temporary relief to agriculture is in itself an enormous disaster to a great many people?—Yes, I do not think that it is too strong to say that it is an enormous disaster.

47,486. Is it your view that the fall in prices will probably continue?—That is a very difficult matter to pronounce any opinion upon.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Ninety-first Day.

Thursday, 9th May 1895.

PRESENT:

The RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN Esq., C.B.
Captain OWEN THOMAS.

FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
JOHN GILMOUR, Esq.
GEORGE LAMBERT Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq. } *Assistant Secretaries.*
ALAN MACKINNON, Esq. }

Mr. R. H. Pringle.

Mr. ROBERT HUNTER PRINGLE re-called and further examined. (*For previous evidence, see Vol. I., page 246.*)

Mr. R. H. Pringle.

9 May 1895.

9 May 1895.

Report on counties of Bedford, Huntingdon, and Northampton.

47,487. (*Viscount Cobham.*) As a sub-Commissioner appointed by this Commission, you visited the counties of Bedford, Huntingdon, and Northampton between May 2nd and July 19th last year, I believe?—I did.

47,488. And you have presented a report to the Commission giving the results of your inquiries in those counties?—I have.

47,489. Were you able to make a pretty exhaustive investigation into the state of farming in those three counties?—Yes; I hand in maps of those counties on which I have marked every place that I visited.

47,490. I believe you did not hold formal meetings?—I did not hold any public meetings at all.

47,491. You found that you could get information more satisfactorily without public meetings?—Yes, I think the farmers speak more freely in private than in public.

47,492. I believe you found a very severe state of depression existing over the greater part of these three counties?—In all the heavier districts particularly.

Effect of depression compared with Essex.

47,493. Would the agricultural depression there compare with that which you found in Essex; is it as pronounced and severe?—It is not very easy to make comparisons, but I should say that all the very heavy clay land district in the north of Bedfordshire, and a large portion of Huntingdonshire and a good deal of the southern strip of Northamptonshire is pretty much similar to what it is in Essex.

47,494. But it is not so marked by the total abandonment of land?—No, that is not quite so distinctly marked. There is undoubtedly a wonderful similarity, but it does not strike the eye so much.

47,495. I suppose the conclusion would be that more capital both of landlords and of tenants has been lost in Essex than in Northamptonshire, or at all events that a more complete feeling of discouragement has set in?—Yes, but I do not think it is quite so bad in Bedfordshire, although it is tending that way.

Derelict land.

47,496. I think you say that no land is absolutely derelict in this district?—No land is absolutely abandoned to any person who likes to put stock in, but there is a great deal of land which is paying a nominal rent which formerly used to pay a good rent.

47,497. Perhaps the landowners in this district are men of more means than the owners in Essex, and they have more to fall back upon?—Yes, I think that is so; in the northern part of Bedford, which is very bad, a large portion of the land used to belong to his Grace the Duke of Bedford; that estate has been sold, and I do not exactly know whom it was purchased by.

47,498. Has it been broken up into small ownerships?—Yes, it has been broken up.

Characteristics of depression.

47,499. What are the main and special characteristics of the depression in this district?—Loss of capital and absence of capital, I think; and the fact that land is not being used to its best purposes, that is for the purposes that it might be used for in better times.

47,500. As to the causes of the depression, have they any special character; has it been more due to seasons than to the fall of prices, or what?—I do not think so; I think there have been bad seasons and good seasons, but I do not think the farmers themselves, as far as I could gather, attribute the depression to the seasons. Probably the effects of the bad seasons are worse felt when prices are so bad; in fact there is no doubt about it.

Causes of depression. Low prices.

47,501. (*Mr. Channing.*) The season of 1879 threw them back very much, did it not?—1879 appears to have been a shocking year there.

47,502. The grazing land fell off, did it not?—Fluke seems to have had an extraordinary effect in the low-lying meadow land.

Shee fluke in 1879.

47,503. (*Viscount Cobham.*) The ill-effects lasted longer there than in most parts of England?—There appears to have been in Northampton and Bedford, prior to 1879, a considerable number of farmers who kept breeding ewes; the fluke of 1879 and subsequent years practically cleared them out, and they have never recovered from that.

47,504. Should you say that that land is still infected?—It is not infected by fluke; that passes away; but there is no doubt that the effects of that wet term of years, culminating in 1879, deteriorated the quality of the pasture immensely. Now with the seasons they have had in the last three or four years, it appears to have been recovering again. All the grazing farmers were agreed upon that.

47,505. But the capital that was then lost has not been replaced?—It has not come back again.

47,506. And consequently the stock has not been replaced?—That is just it.

47,507. Was that specially the case upon the strong permanent pastures of Northamptonshire?—I think you might apply that generally to all the grazing low-lying lands.

Condition of strong clay lands

47,508. How have the strong thin clays of the district fared?—Very badly. Take the strong clay land in the north of Bedfordshire, indeed all over the county, for it is very difficult to define the localities where the strong clay lies; I find strong clay all over Bedfordshire and all over Huntingdonshire, and wherever you get on that strong clay there you get the same sort of desperate condition, for it is a desperate condition, of agriculture. The farmers do not know what to do with it. Some of them are endeavouring to farm it and not successfully; others again are laying it down to grass for longer or shorter terms; they seem at their wits' end to know what to do with it.

47,509. These clays will carry grass, will they not?—I think they will.

47,510. And to that extent they are superior to the poorer clays of Essex?—Yes, I think they are superior. I say so from what I saw; I am convinced in my own opinion that these clay lands if properly treated will

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

carry grass; I do not think that it will be good, but it will be grass.

47,511. Probably that will be the main explanation why the farms there have not been altogether given up?—Yes, I think, probably that is so. I saw land in Huntingdon, in a bad district too, near Somersham, which had absolutely gone down to grass, down of itself, and which is letting at 1*l.* an acre after lying from 12 to 14 years; it was letting at 1*l.* per acre per annum, and it is very stiff land.

47,512. Are the fences let down?—The fences were not good, certainly.

47,513. Just the boundary fences kept up?—Yes, and there were gaps in the minor fences filled up with hurdles and wattles, and other things.

47,514. Had the land been pretty well done in the matter of artificial foods?—No, these lands were let from year to year, and they were generally taken by Fen farmers, and I do not think there has been very much exhibition of artificial food on the land at all. It seems to have a power or an inclination to go to grass a bit.

47,515. It must be good pasture already—judging from the rental; is there a special demand for the grass?—There are undoubtedly accommodation rents. The Fens are all tillage land, all arable land, and consequently a field of grass within accessible distance, undoubtedly possesses a sort of excessive value, accommodation value.

47,516. There seems to be something rather exceptional with regard to that district?—Yes. The grass lands near the Fens, to which I am referring at present, appear to me to be rather outside the ordinary run of grass land.

47,517. Is not the soil somewhat better?—No, the soil is very stiff clay. All along the Fens, from Somersham right up to Yaxley, the upland is very stiff four-horse clay.

47,518. (*Mr. Channing.*) Is it deep clay?—No, it is what they call thin-skinned clay.

47,519. (*Viscount Cobham.*) It is what they call the uplands?—Yes; the uplands as contrasted with the lowlands, the Fens. It is all thin-skinned clay. To watch them ploughing, it seems well nigh impossible to bore the plough in more than 4 inches deep, and the steam-cultivator just goes stotting along the top in very dry weather.

Reduction of rents before 1879.

47,520. You express an opinion in your report that there should have been a reduction of rent before 1879?—The farmers expressed that opinion.

47,521. Do you suppose that the losses incurred by the farmers before 1879 were universal or only here and there, and due to special, and perhaps individual causes?—As far as I could gather between 1875 or 1876 and 1879 there was nothing made even on the best holdings, and undoubtedly there were severe losses on others, particularly on the land that is liable to suffer from wet weather. There was a run of wet seasons then.

47,522. But there was no falling off in the competition for farms, probably, at that time?—Land let then, but I think there appears to have been a sort of cooling down in the ardour of experienced farmers. Probably new men, anxious to get farms, were prepared to give almost the old rents for them.

Reduced cost of production.

47,523. Do you think that the farmers that you have consulted, have given full value to the fall in the cost of production?—As far as I could gather, there is rather a doubt in their minds as to whether there is any very great fall in the cost of production.

47,524. You give rather a striking instance in your report, on pages 46, 47, and 48, of a farm of 324 acres on which there has been a reduction in rent of 325*l.*, which is an immense reduction of rent?—Yes.

47,525. And a reduction of the cost of farming expenses of 270*l.* 6*s.* 0*d.*, or a total reduction of 595*l.* 6*s.* 0*d.*?—Yes.

47,526. And large though that sum is, you say there was still a difference or loss of 178*l.*, or 11*s.* per acre in 1893 as compared with 1877?—Yes. There has been an enormous reduction of rent in that case; I think one of the largest reductions of rent that I met with.

47,527. And a large reduction of working expenses too?—Yes, there has been a large reduction of working expenses, chiefly on account of the decrease in artificial manures and cakes.

47,528. Of course that applies to other farms?—Yes, quite so.

Mr. R. H. Pringle. 9 May 1895.

47,529. 1893 was a very specially bad year, was it not?—I fancy the figures for 1894 would have shown it worse.

47,530. You did not visit the district late enough in 1894 to ascertain the results for that year?—No, I did not.

47,531. We have had one or two witnesses from Northamptonshire who have spoken as to that year?—I was in the district in 1894, but I could only get 1893 accounts. I left Northamptonshire on the 19th July.

47,532. (*Mr. Dalton.*) In these figures you were contrasting 1893 with 1877?—Yes.

Farm accounts 1877 and 1893 compared.

47,533. Was 1877 a good year or a bad year?—Judging from the prices there, and contrasting them with some of the other accounts I got, 1877 does not appear to have been a very good year. I think it was an average year. I do not think I would have taken 1877 into account if I had thought it was a good year.

47,534. I thought you might have got only the figures for that year; I only wanted to get at whether it was an average year, or a bad year, or a good year?—I cannot say for certain, but I think, to the best of my recollection, we selected 1877 because it was not a particularly good year. It was an extremely good witness who gave all these accounts, and I went over them very carefully and I sent them back to him again and asked him to look through them again.

47,535. (*Viscount Cobham.*) In that case can you tell us what the rent of 1877 was?—The appendix C. 10, page 126, gives the accounts, but I am sorry to say they do not go further back than 1887.

47,536. At all events the rent has fallen 1*l.* an acre?—Yes.

47,537-8. (*Mr. Dalton.*) I see you have given the rent in a note to page 49?—Yes; in 1877 it was 584*l.* 4*s.* 0*d.* and it had fallen to 259*l.* 4*s.* 0*d.* in 1893.

47,539. Do you take that as a fairly representative instance? Do you think the farm had been managed with energy and ability?—Yes: I do not think I could have selected a better specimen because the tenant was an extremely moderate man, and a very expert man, and I went all over that farm.

47,540. Had he been there since 1877 himself?—Yes.

47,541. Had there been no change of tenancy?—There had been no change of tenancy, and he was a man with capital.

47,542. (*Mr. Dalton.*) Had he made any profit in 1877?—Yes.

47,543. Did he state what his profit was?—He said he was doing fairly well in 1877; he made no concealment that he was doing fairly well then; he was not doing anything very great, but he was doing well enough.

47,544. (*Viscount Cobham.*) It is a little unfortunate that 1893 was a very special year, of course, in the matter of weather?—With reference to that, the accounts for 1893 are not taken as to the yield which absolutely took place in 1893; but fair averages have been taken. I think you will observe that the returns for corn in 1893 are practically made to be the same as they were in 1877. It is only the different prices that he is applying: "In preparing this table, what were recog-"nised as fair average yields of corn crops and the "usual out-put of cattle and sheep and really well-"managed typical Northampton farm were charged "with the prices current in 1877 and 1893."

47,545. And you think that 1894 would probably have given a worse result?—Yes, I am sure of it.

47,546. (*Mr. Dalton.*) I understand that the difference between what he got in the two years was 178*l.* Then we heard that he was doing fairly well in 1877; had his profit entirely disappeared in 1893?—There was a profit of 49*l.* 16*s.* 6*d.* in 1893.

47,547. (*Viscount Cobham.*) When you used the words, "a loss of 11*s.* per acre," you meant compared with 1877?—I meant a difference of that amount.

Wages.

47,548. Then you say the wages of labour have not fallen; but I suppose a good deal less is paid in labour throughout the district, as there is less labour employed?—Yes; I think there is no doubt about that. Looking through the accounts, the labour bill shows a

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

slight decrease, but there has been a great deal of land put away to temporary pasture.

Reduced labour.

47,549. Do you think that on the arable land there has been a stinting of the labour employed?—I saw no general signs of anything of that kind; the land seemed to me to be on the whole well laboured. Occasionally you come on a farm where the tenant is apparently going down the hill, and there is deterioration.

47,550. I suppose the farmers can hardly afford to be as liberal as they were with their labourers?—No. On strong clay land, really so much depends upon the seasons. If the weather is dry the following the ploughing makes land look very well, no matter although there be no hand-picking of weeds or hoeing. 1893 was a splendid year for cleaning clay land.

Serious position of farmers.

47,551. You give a very melancholy description of the position of farmers during the last 14 years; I hardly think you mention a single exception to the general tale of ruin; did you come across no men that were quietly making profits?—I came across one man; and strange to say he was on very heavy land, who was not making a loss. I extracted his balance sheets from him with considerable difficulty, and they are here in the report. That was in Huntingdon. He is the only man that I really could say would admit to having made any profit.

Exception.

47,552. (*Mr. Channing.*) Are his accounts given in one of the appendices?—Yes. His balance sheets show a profit a little under 5 per cent. on capital.

47,553. (*Viscount Cobham.*) Was he a native?—He was a native; but he did a little jobbing.

47,554. (*Mr. Chaplin.*) What do you mean by a little jobbing?—He bought and sold cattle.

47,555. He was a cattle dealer, in fact?—He was, in a small way.

47,556. (*Mr. Dalton.*) I understood there was a profit on this farm, given on page 49, of 49*l.* 16*s.* 6*d.* as late as 1893?—Yes; this gentleman had a profit of 49*l.* 16*s.* 6*d.* in 1893, but it was not a living profit.

47,557. I am not saying that it was; but I understood you to say that no profits were made except on the other farm you mentioned?—In that I was mistaken; the gentleman, on page 49, had a very small profit in 1893, and I think he had a profit every year. His profits over seven years averaged 6 per cent. on capital.

47,558. (*Viscount Cobham.*) His farm was rather better than the average, was it not?—That man had got a very large reduction of rent. Of course I could not really say what were the causes for his apparent prosperity. He seemed to me to be a very smart man.

47,559. You would expect to find a greater reticence on the part of farmers who had been doing well than on the part of those who had been doing badly?—Yes.

47,560. (*Mr. Gilmour.*) The farmer whose accounts are given on page 123 seems to have made a profit; is he the one you refer to?—No, that is another man. His books show 1½ per cent. profit, but no interest is charged on capital in his balance sheets.

47,561. (*Viscount Cobham.*) Did that man do much jobbing, do you know?—The man whose accounts are given on pages 119–122 did some jobbing; but although he did jobbing the fact remains that his jobbing does not appear in the account.

47,562. His accounts show a profit every year?—Yes.

47,563. I see his profits range from 8*l.* in 1887 to 426*l.* in 1882, and that in 1893 he was able to make a profit of 232*l.*?—Yes, that was in about the strongest district that I visited.

47,564. What was the acreage of that farm?—462 acres. The farm is marked on one of the maps I have produced. Perhaps you know the district—it is one of the strongest districts in Huntingdonshire.

47,565. I see that his rent was very low, being only 262*l.* in 1893, for the 462 acres?—Yes, he had a very small rent.

47,566. Have you any reason to believe that there are numerous exceptions to the disasters that have overtaken the farmers in this district?—I think that there are very few exceptions so far as I was able to gather; very few.

47,567. You would except the Fen district, I think?—Yes, I except the Fen district as stated. They have undoubtedly had better times in the Fens, chiefly because the Fens are so easily cultivated, and because they can grow oats and potatoes.

Mr. R. H. Pringle. 9 May 1895.

The Fen district.

47,568. (*Mr. Channing.*) And you would except some of the stock-raising and dairy districts, surely?—Yes, taking the last 15 years into account; but they have had very bad times, until within the last three or four years in the grazing districts, though the losses on grazing have not been anything like so heavy as on corn growing.

Dairy and grazing districts.

47,569. (*Viscount Cobham.*) Do you believe that a considerable number of mere adventurers have come into the occupation of land in these counties?—Yes; I heard of them everywhere except on the grazing districts and on the Fen districts; wherever there was corn-growing land, I heard of these strangers who come and take farms, and do not appear to farm very well.

Adventurers.

47,570. Do they take advantage of the relaxation of covenants as to cropping and sale of hay and straw?—Yes, they do apparently; I heard a great deal of that.

47,571. Do you find that the better class of tenants are rather against such a relaxation?—Yes, the better class of tenants look very decidedly askance at that way of going on; they feel it intensely.

47,572. They naturally do not like that competition, which the influx of those men has caused for farms?—I think it is not so much, perhaps, the increased competition, but that they do not like to see strangers coming in and deliberately settling down to destroy a place, and then bolt as soon as it is destroyed.

47,573. So far as it has encouraged competition for farms of that sort, it is not a healthy competition?—No, I do not think it is, and I think they feel that.

47,574. (*Mr. Whitehead.*) May we have from what date these adventurers began to come?—I should say they date somewhere from 1880 to 1883. Disputes appear to have arisen about what was the rent of land then, and these men came in then and took land undoubtedly that there had been disputes about.

Freedom as to cropping and sale.

47,575. (*Viscount Cobham.*) Do you think that amongst farmers generally, there is an opinion in favour of maintaining some restriction as to cropping and the sale of hay?—Among the better class of farmers there is, undoubtedly, there were two or three farmers whose names were given to me—because all my witnesses were selected for me by the agricultural societies—who were of opinion that there ought to be a complete abolition of all restrictions, but the very great majority were the other way.

47,576. That is to say, they probably are in favour of the existing practice of having restrictive covenants worked in a liberal spirit?—Yes, quite so; but they think that if complete freedom were given and all restrictions abolished, the consequences might be very serious to the fertility of the soil, and that that would not be met by any really lasting and enduring advantage to the tenant.

Deteriorated cultivation

47,577. Did you find any widespread deterioration in the condition of the land?—I heard a good deal about deterioration. Of course I could not form an opinion; I saw the country under somewhat favourable circumstances after a dry year, 1893, and after a dry tract of weather in 1894. But to my own eye, certainly the medium-class soil appeared to be very well cultivated indeed; even some of the heavy land that was cultivated seemed to be in good order. On the other hand, I saw thousands of acres that were evidently very much neglected. The general opinion amongst farmers was that farming had certainly suffered from losses and want of capital and was not so well conducted as it used to be.

Farm accounts.

47,578. (*Mr. Channing.*) Referring to the table on page 31, is the profit there stated the profit over the number of years given in the third column, or is it over the same number of years for each farm?—The accounts on C. I. extends over eleven years, and the profit that has been made in various years during those eleven years amounts to 1,348*l.* 1*s.* 8*d.* The loss that has been incurred during that period amounts to 2,082*l.* 18*s.* 4*d.* You will see that the profits and the losses for each of the term of years have been taken out and put in different columns.

47,579. You give for each of the farms in the table variable periods of years?—Yes.

Digitized by Google

Mr. R. H. Pringle.

9 May 1895.

47,580. (*Viscount Cobham.*) Ranging from 4 to 13?—Yes.

47,581. Are those 11 farms all on one estate?—No, these are all through the three counties.

47,582. In the gross the table show a profit on the 11 farms of 14,000*l.* and a loss of 10,000*l.*?—Yes.

Demand for farms.

47,583. There is fair demand for good farms in this district you say in your report?—Yes, there is a fair demand for good farms on medium class land and not too big.

47,584. Is there a great difficulty in letting poor farms?—It almost amounts to an impossibility in several cases.

47,585. Would you say that large farms even of good quality are difficult to let?—Undoubtedly, when you get over a certain size I should think the difficulty in finding a tenant increases.

Cause of farmers' losses.

47,586. Do you consider that the losses have been considerably accentuated by the rashness of the farmers themselves?—I think so, I think they have gone on growing too much corn when it has not been profitable, and I think that a great many of these men have taken land without ever having sufficient capital to do it with.

47,587. Is that because they shrink from realizing as a loss and go on adding to their stock in the hopes of better prices?—It is partly because corn-farming can be carried on with very little capital. I gather from what was said to me, that a good many of the men undoubtedly went in thinking that corn would get up again and went in with too little capital; but corn did not get up again and they are rather sorry for themselves now.

47,588. Have not the stock farmers also been adding to their holdings in many instances?—Yes, some of them have.

Lord Spencer's co-operative farm.

47,589. Did you go over that co-operative farm of Lord Spencer's?—I went over a part of it.

47,590. Do you consider that the farm itself is well adapted for that description of enterprise?—It was a nice farm, a desirable farm, I cannot exactly say what nature of farm is desired to succeed under co-operative principles; but it was a nice farm, nice land, useful land and convenient to the station; there was nothing unfavourable to it in these respects.

47,591. It was started with ample capital by Lord Spencer himself—about 10*l.* an acre, I think you say?—I think that was the amount.

47,592. But it was in poor condition?—Yes.

47,593. Did the labourers get it into good condition at any time?—Yes; I have been informed by Canon Bury who had a good deal to do with it, that they improved the condition of the farm immensely; the first year the improvement was visible.

47,594. But the net result has been disastrous?—It has.

47,595. Did you get at the opinion of the men themselves with regard to it?—No, I did not.

47,596. Are you able to form an opinion what really were the causes of failure; were there independent causes of failure apart from the fall of prices and so forth?—I saw both Canon Bury and Mr. Morley, Lord Spencer's agent, and they were both of the same opinion, that it was bad prices that had caused the failure of the enterprise.

47,597. And not friction in working, or the employment of inefficient supervision?—There was a certain amount of friction in working, and I think one of the managers was not a very efficient person; but neither Canon Bury nor Mr. Morley attributed the failure to these causes.

47,598–9. Would you say that the farm did fully as badly as an ordinary farm held under a tenancy?—I think it did fully as badly or worse. It was in very nice condition; the turnip land was very clean and the crops nicely done.

47,600. I see the annual loss averaged 259*l.* 16*s.* 9*d.*?—Yes, I got the last published balance sheets for that co-operative farm, namely up to 1893.

47,601. Upon whom did the loss fall, upon the landlord?—The loss appears to have fallen upon the bank so far, because the bank's over-draft is getting bigger and bigger.

47,602. I suppose the amounts were guaranteed by somebody?—I should think so.

Mr. R. H. Pringle.

9 May 1895.

Immigrant farmers.

47,603. You believe the immigrant farmers failed as a rule, have there been many of them?—There are not very many of them there. I heard of six or seven and I saw three Scotchmen, and two or three Devonshire men. I would not like to say they have done any better than the others. I think, perhaps, they have done as well; it may be a wee bit better.

47,604. But there were hardly enough of them to enable you to form a judgment?—No, and as to those I saw, I went over two farms and they were farmed really on the Bedford system.

Fall in prices and "protection."

47,605. Now we come to the subjects of complaints and remedies suggested; you found a strong feeling in favour of protection, I see?—Yes, a very strong feeling.

47,606. And a universal opinion that the fall of prices was the main cause of the depression?—Yes.

Relation between landlords and tenants.

47,607. In addition to that you report that there was a strong feeling that the business relations between landlord and tenant, might be put upon a more satisfactory footing?—Yes, I heard a great deal on that subject, too.

47,608. Would you tell us what the nature of the evidence was that you have collected on that point—I mean what body of evidence you have collected?—I should think almost one out of every two tenant farmers that I saw, spoke on this subject. I think my note books show that.

Insecurity of tenure.

47,609. And expressed an opinion that under the present conditions there is an insecurity which should not exist?—Yes, that there was something not right.

47,610. How has this evidence been collected?—Altogether privately.

47,611. And through organisations?—I never held a public meeting. I got from the committees of the three agricultural societies the names of witnesses; these I visited on their own farms, I went over their land with them and spent generally half a day with each of them; that is the way I collected all my evidence.

47,612. Are you referring to the county agricultural associations?—Yes.

47,613. Not farmers' clubs?—The Bedford Agricultural Society, the Huntingdon Agricultural Society, and the Northampton Agricultural Society and Chamber of Agriculture selected all my witnesses for me.

47,614. Did they include landlords as well as tenants?—Yes. This, for instance, is a list of witnesses for Northampton (*handing in a printed list*). That was prepared for me by the joint committees.

47,615. (*Mr. Channing.*) There was a list sent here, dividing the four divisions into groups of witnesses, was that prepared by the Chamber of Agriculture or by the joint committee of the Agricultural Society and the Chamber of Agriculture?—By the joint committee; they combined for the purpose.

47,616. (*Viscount Cobham.*) You say these views were held by fully half the witnesses that you examined?—Yes, half the witnesses that I examined on this particular subject. In some cases my examination did not extend to this question.

47,617. What were their opinions as to the insecurity of tenure?—I tried to put them down in black and white. Their opinions were, I think, that the great majority of tenants are on an extremely pleasant and friendly footing with their landlords, but they have the feeling that providing the landlord were to die the tenant has no security whatsoever, and that he may be turned out if the landlord likes if any difference arises about rent or anything of that kind.

47,618. Have the heavy incumbrances on many estates intensified the insecurity?—Yes. On some of the larger estates, the better estates, I did not hear one single expression of unfriendliness at all—much to the contrary; but undoubtedly there appeared to be certain encumbered estates where the agent does not appear to have as free a hand as he otherwise would.

47,619. Did they maintain that agriculture has been much affected by the sense of insecurity and that men have farmed worse than they otherwise would have done?—No, they did not; it just was an element in their position.

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

47,620. Bearing more upon the future than upon the past?—Yes, I think so in most minds. Looking to the future they are afraid that if things mend a little bit people might come in behind them and bid bigger rents than they are prepared to give, and under those circumstances they feel that their position would not be secure.

47,621. Do you think that this feeling originated with the bad times?—I am sure of it and I am sure that if the good times were to come again it would disappear again.

47,622. (*Mr. Chaplin.*) Then all this feeling really is entirely due, you think, to the depression and the trouble they have gone through?—I think I state that that is so in this report.

47,623. It did not exist at all when times were prosperous before?—I am quite sure it did not.

47,624. They were then quite satisfied as to their security?—Yes, I think so. Might I refer you to paragraph 179. I say there:—"I have not the least "doubt that, save for the presence of this very agri-"cultural depression, the feeling of security and safety "under a yearly agreement for the sitting tenant "would never have been submitted to me as a doubtful "matter."

Illustrations of insecurity of tenure.

47,625. (*Viscount Cobham.*) Did you hear of many cases illustrating this insecurity of tenure?—Yes, I did, of a great many cases; in fact I would not take evidence of that character from any person unless he was able to substantiate it. Estates would be picked out for me, and cases would be given of where a good old tenant had to leave because he did not offer a sufficiently large rent, and the farm would be taken in hand for a year or two, and finally it would be let to some other person for a far lower rent. A great many cases were mentioned to me, and the farms were pointed out to me. I saw farms myself that had gone through this.

47,626. (*Mr. Channing.*) By "offering a sufficiently "high rent," do you mean to say asking for a reduction in the first instance?—Yes. Asking for a reduction, and asking for too large a reduction.

47,627. (*Viscount Cobham.*) Were there many instances of estates coming into the hands of trustees or mortgagees, and of being rack-rented in consequence?—I heard of several. These very estates which came into the hands of lawyers appear to me, from what I heard, to hold out extremely stiff in the beginning and to collapse more rapidly than any estates in the end. That is to say they are not so easily dealt with in the case of the sitting tenant, but then when the sitting tenant is got rid of, enormous reductions are made to new men far more so than on estates in the hands of country gentlemen.

47,628. That is very often a mere matter of miscalculation, is it not?—I am sure it is miscalculation from beginning to end. I do not think the tenants would wish me to understand that it was venom or spleen; it was misjudgment and difference of opinion.

47,629. In regard to these schemes which you have put before us, do you consider that they fairly embody what I may call the floating opinion of the body of farmers?—Yes, of those who discussed the subject with me. I have no hesitation in saying that 75 per cent. of the tenants who have mentioned that matter to me would adhere to some system of arbitration. My note-book is full of evidence of that; and I do not think the landlords would object so far as I questioned them.

Scheme of arbitration.

47,630. Then you refer to a system of arbitration. What would the duties of the arbitrator be? I do not think you have quite explained that. In paragraph 188 you say: "The propriety of arbitration has been ad-"mitted by some landlords"; and then you go into the question of who the arbitrator should be, but I do not think you say what his duties should be. Did you mention arbitration in connexion with these schemes that you go on to detail?—No. The system of arbitration suggested in paragraph 189 was not thought of until I had collected all my evidence and put it together. I submitted no scheme to any witnesses, nor did they submit one to me. The quotation you have made merely refers to the feeling that exists in certain quarters as to the advantages likely to accrue from arbitration.

47,631. Then you mean arbitration to carry out some such schemes as those that you have formulated?—Yes, where differences of opinion upon any point whatsoever arise between landlord and tenant. At present the tenants feel, and I do not think the landlords would deny, that there is no way of conciliation. I think I tried to explain that in this report. They feel that it would be well if there was some system by which these differences between two men who are well disposed towards one another, should be settled.

47,632. Of course the differences must be very clearly defined. You cannot give an arbitrator a roving commission to investigate all cases of dispute between a landlord and his tenant?—No; he would need to know what he was going to settle first.

47,633. Do you believe that farmers in this district would generally accept some such scheme as that you have set forth here?—I can only answer for those whose opinions I heard on this subject. With regard to them I am of opinion that some such scheme would meet with their approval. The leading features of that scheme I believe to be in accordance with their views so far as I have heard them.

47,634. And an arbitrator should settle all points of dispute under that scheme?—Yes. There should be some system of arbitration for settling all points of dispute whatever these points may be. Of course disputes invariably pertain to something connected with the value of the land, or the occupation of the holding.

47,635. These schemes, I presume, have been formulated by yourself as fairly embodying the opinions of the persons you met?—The principle of arbitration was in the minds of those men before I went near them at all, and they had also opinions upon what this arbitrator ought to deal with, and the qualifications that were necessary, and the various branches of duty that he would have to fulfil. These, as they came before me one by one, were all noted down in my books, and I tried to condense the thing and produce it to you in this form.

Fixing of rent according to revenue.

47,636. In relation to the rent you found that a leading principle in their minds was that the net revenue should be known before rent becomes payable?—The men who mentioned this question of the determination of the rent were chiefly those who kept books.

47,637. That is a very small proportion to allow; I think, you say 10 per cent., somewhere?—A good many more of them keep books, but they do not all keep their books in such a condition that I could accept their accounts. I should think there were about 15 per cent. or 16 per cent. of them that do. A great many of the other men knew perfectly well where the rent was coming from.

47,638. But the leading principle in their minds was that the net revenue should be known before any division of profits should be made?—The leading principle in their minds was that there was something very awkward in the paying of their rent year after year out of capital, and their getting worse and worse; and the question arose whether the principal of the thing was right, or whether it was not. I then submitted to them could they conceive of any other way, and the matter was very thoroughly discussed, and very carefully discussed, and their opinion seemed to be that if any other system could be discovered, it would be better and fairer.

47,639. Your first suggestion is that a tenant should be entitled to a fixed per-centage on his capital before anything accrues to the landlord?—That was one light in which it was discussed.

47,640. That is to say, take a farm of 300 acres, on which the capital is 3000*l.*; at the end of the year the books show an excess of receipts over expenses amounting to 420*l.*, and that has to be divided in this way:—10 per cent. on 3,000*l.* (300*l.*), and rent 120*l.*?—Yes.

47,641. Why did you not deduct from that 300*l.* as in the other cases, the rent of house and keep of horse and such things?—Immediately underneath the figures you refer to I add, "Under this system the tenant "would be charged with a fixed annual rent for his "house, garden, keep of horse, and such things, but "all taxes and rates would be paid by the landlord." This applies to each of the three specimen cases included in paragraph 192.

47,642. You take three years—one a moderate year, one a very good year, and one a very bad year; and in the very good year it seems to me that a tenant would get less than in the moderate year; how do you explain that?—Less?

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

47,643. The tenant's claim to 10 per cent. in a good year comes to 300*l.*; but the rent of house, keep of horse, and such things are deducted, so that his share is only 220*l.*, but in the first instance, where only 420*l.* profit is made, the tenant seems to get 300*l.*?—The explanation is simply that, although I stated that under the system the tenant would be charged with a fixed annual rental for his house and gardens, I have not deducted them in the first year.

47,644. Even if you had, there is this result, that the tenant does not get any more in a good year than he does in a moderate year?—No, he simply gets 10 per cent. on his capital.

47,645. He has just invested his capital at a fixed return?—Yes, I think that is the reason why I did not show the deduction of 80*l.* in the first instance.

47,646. You do in the very bad year, you see?—Yes.

47,647. And in the very good year?—Yes.

47,648. There seems to be no encouragement to a tenant to do more than get his fixed return?—No.

47,649. So long as he gets his fixed return he would be satisfied then?—In my report I say, "The above "would be merely a case of a landlord farming his own "land through the medium of a tenant's capital and "management, and it would be open to at least one "objection."

47,650. He would be farming through a bailiff, and that bailiff would be finding the capital?—That is exactly, I think, what I say. "Looked at from the "landlord's side, this arrangement would be infinitely "preferable to having land in hand and managed by a "paid bailiff with nothing to lose and everything to "gain."

47,651. Would there not be very great insecurity under this scheme in a bad year?—Take a landlord who has nothing but his rents to live upon, he would be totally unable to make up the loss upon his farms?—Yes, but if he was farming the land himself upon his own capital, his position would be no better.

47,652. But he would be the only loser in that case, in the case you suggest the tenants would participate in the losses of a bad year, because they would not get their 10 per cent. in a bad year. Supposing the landowner has nothing but his rents, obviously he could not make up in a bad year the deficit upon his farms?—That is quite true, but if the capital was his own on this farm, his position would be rather worse, because not only would he get no rent, but the capital would be wasting away.

47,653. I am speaking of it from the tenant's point of view?—The tenant would be getting 10 per cent. on his capital, good year or bad year.

47,654. If he can get it?—If he could get it.

47,655. The system would involve very complete book-keeping, would it not?—It would.

47,656. Do you find one man regard profits as one thing and another man as another?—It would require a system of auditing by the land agent or a regularly qualified auditor.

47,657. There would have, in fact, to be a uniform system of accounts, would there not?—Yes, there would, examined every week or every month.

47,658. You do not intend to commit the farmers of this district to the details of this or of any other scheme, do you?—By no means; certainly not; and particularly not with reference to this paragraph 192. I think, with reference to the scheme mentioned in paragraph 193, some tenants undoubtedly are of opinion that that might be workable and might succeed very well; but as to paragraph 192, that scheme was simply discussed because there were so many landlords farming their own land, and it was wondered whether that scheme might not be rather better for the landlords than farming their own land with their own capital.

The Agricultural Holdings Act.

47,659. There seems to be a strong feeling against the working of the Agricultural Holdings Act?—Yes, very much so.

47,660. Is it much used?—Very little used.

47,661. It is simply neglected?—Yes.

Valuers.

47,662. You say that one of the drawbacks to it is the class of valuer that is employed under it?—Yes, that was very frequently mentioned to me:

47,663. By whom, the farmers or the landowners?—Both.

Mr. R. H. Pringle. 9 May 1895.

47,664. Do the farmers complain of the landowners' valuers?—Yes. Both landlords and tenants were of opinion upon that point that the administration of the Act by the system of valuers now existing was not what it ought to be.

47,665. (*Chairman.*) Do you mean by that that the process was an expensive one, or that they had failed to carry out the intentions of the Act as regards compensation?—Both that the process was expensive, and that the results were not sufficiently clear to be satisfactory.

47,666. (*Viscount Cobham.*) Many of the valuers are, in fact, men whose decisions do not carry weight?—Many of the valuers were men who had not succeeded in farming, and who had simply taken it up as another resource.

Custom as between outgoing and incoming tenants.

47,667. (*Chairman.*) As as matter of fact, are those questions generally settled as between the incoming and the outgoing tenant, or as between the outgoing tenant and the landlord?—Between the outgoing tenant and the landlord chiefly.

47,668. Is that the usual course?—Yes, I think so.

47,669. Not between the incoming and the outgoing tenant?—No, I think not.

47,670. That is a very important point?—Yes.

47,671. (*Mr. Chaplin.*) Do you mean to say that there is nothing passed between the incoming tenant and the outgoing tenant on a farm, for instance, that is vacant, we will say in Northamptonshire—is there no such thing as a tenant-right passed between the two?—Yes; but I thought that was met in the matter of compensation.

47,672. It is all included in that?—Almost all those estates have customs and covenants.

47,673. Is there nothing passes between the outgoing and the incoming tenant under the custom?—Yes, but where there is compensation for unexhausted manures or unexhausted improvements under the Act, I think that the landlord settles up with the outgoing tenant, and the incoming tenant settles with the landlord.

47,674. You think so, but are you prepared to state that as the fact?—No, I am not.

47,675. (*Chairman.*) Did you make inquiry upon that point, because it is a matter of extreme importance as to what the custom is; you have not inquired as to how far these arrangements are made between the incoming tenant and the outgoing tenant, rather than between the outgoing tenant and the landlord as contemplated by the Act?—I think I have got a little evidence here on the point. I still think that the question of any disputed claim for manures or feeding things, is arranged between the landlord and the outgoing tenant, but on a matter of covenant in which there is no dispute, where it is simply a matter of valuation the claim is paid by the incoming tenant.

47,676. Surely if there is no dispute at law on the subject the settlement must almost necessarily be between the incoming and the outgoing tenant. Is that not so; there is not a double arrangement, one between the incoming and the outgoing tenant, and the other between the outgoing tenant and the landlord?—I think that there can be no doubt from the evidence that something passes between the outgoing tenant and the incoming tenant, because I see that one witness thinks the landlord should pay the claim of the outgoing tenant, not that the incoming tenant should pay for the improvements, which would imply that it is the custom that the incoming tenant should do it; but on the other hand, of course, when there is not an incoming tenant the landlord has to do it.

47,677. When a legal question arises it must be a matter of dispute between the landlord and the tenant?—Yes. I should imagine in the event of any dispute, so long as things move smoothly, there is no difficulty, and it is quite right that the incoming tenant should settle with the outgoing tenant, but if any dispute arises the landlord would at once be the contracting party.

47,678. Quite so; if a dispute arises which necessitates going to law, so to speak, then it must be between the outgoing tenant and the landlord?—Yes.

The Agricultural Holdings Act.

47,679. (*Viscount Cobham.*) As to the amendment of the Agricultural Holdings Act, you report that the farmers of the district are very much in favour of the scheme proposed by the Central Chamber of Agriculture?—The scheduling system is universally accepted by both landlord and tenant.

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

47,680–1. They are in favour of an arbitrator being appointed by some public authority, such as the Board of Agriculture and of the scheduling of farms on entry and on quitting?—Yes, exactly so; and that these schedules should form the basis for an award. So that the whole system should be very much simplified and made cheaper.

47,682. (*Sir Nigel Kingscote.*) You have just said that there is a very strong feeling as regards the Agricultural Holdings Act to the effect that it is of no use, and worse than useless almost, and you have also said that there are extremely few cases where it has come into operation; how would these gentlemen who gave you this evidence judge about it; were any instances given you where it had been put into operation and failed?—Yes, I have heard of numerous instances. I think it was the failure of the Act to do what was expected of it in these cases that, perhaps, explained the dissatisfaction that it caused, and the want of confidence in it.

Valuers.

47,683. Then you also think that all through Bedfordshire, Huntingdonshire, and Northamptonshire there was a very low value put upon the valuers, and that any one could be a valuer?—Yes.

47,684. I understand that what you gathered from those you consulted is, that any arbitrator in the future must be a servant of the State, employed and paid by and accountable to the Government, in the interests of justice and equity; now what sort of person are you going to find qualified for that if you cannot take the valuers in the country?—I think that such men could be found.

47,685. I want to get the impression of the farmers?—The same class of man that would please the farmers would please the landlords, and the same class of man that would please the landlords would please the farmers—an upright man of experience who is calculated to give a right and proper decision between man and man—without showing favour to either party.

47,686. This low estimate put upon the valuers is, I think, very contrary to any evidence we have had from elsewhere. We have had a good deal of evidence that valuers should be to a certain extent local men, so that they might know the country, the surroundings of the farm and all that. This is a very strong expression of opinion, and I want to know who had given it you?—I think I state in this report that the valuers should be local men.

47,687. (*Mr. Channing.*) I think you say, that they must be thoroughly familiar with the value of the land and the custom of the farming in the district?—That is what I mean by being local men.

47,688. All I want to get at is, whether the suggestion as regards valuers being so under the mark as to their work was a general impression, or whether it was the impression of a few?—It is the general impression.

47,689. Throughout those three counties?—Yes. They are not satisfied with the present system, and there are very great objections made to the class of valuers, and the general opinion is, that the class of man that should be appointed, and that would give satisfaction is the person that I have endeavoured to describe. I do not see it put in the report, but at the same time, if I have not stated it, I certainly should have done so, because it was the one point of all others that this person, whoever he is, should undoubtedly have knowledge of the value of land in the district.

47,690. (*Sir Nigel Kingscote.*) You say in paragraph 199, which I had not read before, "Let one arbitrator "be appointed for each county or district by the Board "of Agriculture," which points to the men belonging to the county or district?—Yes. Would you please also refer to paragraph 189, where I say that this district arbitrator "must be a person thoroughly familiar "with the value of land and customs of farming in the "district to which he is appointed."

Land courts.

47,691. But you do not ever mention in actual words that he must be a local man. Was there any expression of a wish that there should be a land court?—There was a very decided wish that there should not be a land court.

47,692. The work should be done through this board of assessors, or this representative appointed by the Board of Agriculture?—That was the general feeling.

47,693. (*Chairman.*) Was the wish that there should not be a land court general throughout the district you visited?—Yes, the idea of a court does not meet with their favour at all.

Mr. R. H. Pringle. 9 May 1895.

47,694. You mean for the decision of rents?—Yes, I think they do not like the idea of a land court.

47,695. To determine rents?—To settle any matter of dispute.

47,696. Including rents?—Including rents.

47,697. (*Mr. Channing.*) But as I understand you, the arbitration by this official is according to these people to include the question of rent, is it not?—Yes, any matter in dispute.

Tenure.

47,698. (*Sir Nigel Kingscote.*) You told us that there is a very strong feeling as to the insecurity of tenure; did you learn that in the past or at the present time there were tenancies taken under leases?—There were hardly any leases—I think I only discovered one or two.

47,699. Existing?—Existing.

Milk trade.

47,700. Did they exist before the bad times?—I do not think leases were ever common in any of thes counties.

47,701. You heard no wish expressed for leases?—No, none.

47,702. (*Mr. Whitehead.*) You say in paragraph 249, "Four classes of farmers have weathered the storm in "so far that an outward appearance of prosperity is "kept up," and you go on to say that one of those four classes is "those who occupy land near towns, and "take advantage of their position by selling milk, "potatoes, vegetables, hay, and straw;" have milk dealers done well?—The farmers themselves told me that there was no doubt that the milk business had done almost better than anything else, but they complained of the fall in the price of milk lately.

47,703. Would that be generally throughout the counties, or only near a town where there were special advantages for railway traffic?—Generally throughout the county. I certainly was told that all through the county. I visited dairy farms four and five miles from a railway station, and there the farmers stated without any hesitation, that dairying was the best business they had.

47,704. That is not likely to increase on account of the low price which is now ruling, I think you said?—Yes, but on the other hand, if land goes out of arable cultivation, and more to grass, there is a sort of natural tendency to keep more cows.

47,705. Is there room for more milk business throughout the counties?—There may be room for the milk business, but the more you increase the milk business, the more you will bring down the price of milk.

Market gardening.

47,706. Would those remarks apply to vegetables equally?—In Bedford, Northampton, and Huntingdon, the area of land suitable for vegetable cultivation is very limited. There are a good many instances where I found that vegetables had been tried upon strong land and had not succeeded.

47,707. Is not the market gardening done by small men generally, and not by farmers?—It is almost entirely done by small men in the Biggleswade district.

47,708. Who would be near towns?—Yes.

47,709. Is that likely to increase, do you think?—No; I think almost the whole of the area of available soil for that sort of market-garden farming is taken up.

47,710. Did you find that the farmers were growing vegetables at all, such as potatoes, greens and cabbages?—All round Sandy Potton and Biggleswade there is a very large industry. On the sandy land the farmers grow potatoes and greens between them, but I do not think it is capable of further extension, because the class of land suitable for it is limited.

47,711. Limited by question of soil?—Yes; you have strong clay lying cheek by jowl with light sand.

47,712. That would not apply to potatoes I take it?—I would not like to attempt potato culture upon very strong clay-land; it has been tried there, and it has not succeeded; I do not think it has succeeded anywhere.

Fruit growing.

47,713. I think you say that fruit-growing is not at all adopted in the counties?—No, it is not, except near Somersham.

47,714. It has not been profitable?—Except in the Somersham district, and there it seems to be rather overdone.

Digitized by Google

Mr. R. H. Pringle.
9 May 1895.
"Protection."

47,715. It is not extending then?—It is not.

47,716. What form of protection do you say that the farmers ask for—you said it was general?—I should answer to that—the biggest you can give them.

47,717. Duties upon corn and so on?—Yes; but certainly some of the farmers confine themselves, as I thiuk I stated in the report, to protection upon the manufactured article.

47,718. But others went in for the whole thing?—Yes, wholesale, the majority of them.

Effect of rise in prices.

47,719. (*Mr. Giffen.*) Towards the close of your report, in paragraph 252, page 86, you state "If I dare "offer an opinion from what I saw and heard, I would "say that unless some way of raising prices can be "discovered, the tenant farmer of our corn-growing "counties, can only be preserved at the expense of the "landlord, the labourer, and the nation at large"; would a rise of prices necessarily preserve the tenant farmer any better than he is now?—I think it would.

47,720. Is he not an intermediary altogether?—No, I do not think he is an intermediary—I think he is a grower.

47,721. It is a question between him and the landlord as to what the rent is?—Yes.

47,722. And between him and the labourer as to what wages he pays?—Yes.

47,723. And he does not need to go on unless he finds that he can make a profit?—He might wind up, certainly.

47,724. And if prices were to rise, competition might come in and make the particular tenant farmer no better off than he was before?—Yes, but it is almost impossible to imagine that the prices even of labour and of rent would rise to such an enormous extent as to do away with an increase, because supposing there was a rise of 5*s*. a quarter of wheat, as every acre produces 4 quarters, that would be 20*s*. on the acre.

47,725. That brings me to the next question that I was going to put; supposing a rise of prices took place in corn produce coincident with a proportionate rise of prices in everything else including wages, would that be of any benefit to the tenant farmer or help him to preserve his existence in the slightest degree?—Of course not. If the cost of production from these various things, rent, labour, and all these things were to rise in equal proportion to the price of stuff a tenant farmer would not benefit at all.

47,726. So that any general cause of the rise of prices which would affect everything equally would not be of any benefit to the tenant farmer for this purpose?—Presuming that it affected everything equally, and to the same extent it would not be.

47,727. What you mean then by a rise in price is, a rise of price in this particular article or group of articles, and not a rise in anything else at the same time?—No.

47,728. That is the condition?—Not quite that, but the rise in price of the produce must be sufficient to allow a margin after allowing also a fair increase other things.

47,729. It must be more in that than in the other things?—By all means or else the position would be as it was.

Duty on foreign flour.

47,730. (*Mr. Clay.*) I see your report gives opinions with regard to the abolition of the malt tax and regarding the duty on foreign barley?—Yes, those are exact quotations with reference to the malt tax from reports that I had sent in to me.

47,731. Have you had any question raised—I do not say that it is in accordance with Free Trade, which I believe in—about charging a duty upon imported manufactured flour?—Yes, I heard a good deal about that.

47,732. What was the general opinion of the farmers you met on that point?—A great many of the farmers think that manufactured flour should be subjected to a duty or a tax, and that that would encourage the growing of wheat, and lead to the opening up again of mills which are standing idle, and would thus give employment to the millers.

47,733. Has the quantity of flour that is being manufactured in foreign parts deprived the farmers of the very valuable article of bran and other raw materials?—Yes; there is no doubt that the farmers feel that the price of offals is excessive at present. They also think that if flour were manufactured in this country they would get offals at from 1*l*. to 30*s*. a ton cheaper.

Mr. R. H. Pringle.
9 May 1895.

47,734. In your opinion, do you not think it is a little infringement upon principles of Free Trade?—I think probably it is—I would say decidedly it is.

47,735. But the feeling of the farmers is that they would like to have some increase of duty put upon the manufactured article?—Yes, the feeling of the farmers is that their trade is not a thriving one just now, and that they would like to see it made better by hook or by crook.

The Agricultural Holdings Act.

47,736. Regarding the Agricultural Holdings Act, you have it now in your own mind, and you think in the tenant farmer's mind, that the outgoing tenant and the landlord are the only two contracting parties?—Mr. Chaplin corrected me in that, and I looked my notes up.

47,737. What is your own opinion?—My own opinion is that the landlord and the outgoing tenant are the two contracting parties, and that the incoming tenant if he takes over and pays to the outgoing tenant, does it simply as an arrangement of convenience.

47,738. I know you are acquainted with the custom of Scotland; there, if the landlord has to take a way-going crop, as he generally has, from an outgoing tenant, he has no right to devolve that way-going crop upon the incoming tenant?—I think the landlord should be the responsible party.

47,739. He is the most substantial party, is he not, to meet the engagement?—That depends upon his banking account.

Demand for farms.

47,740. You talk about farmers being much handicapped by fresh men coming in to take the business off their hands, and we had evidence given by one of the sub-commissioners, Mr. Speir, from the South of Scotland, that there were 175 farms let lately, and only 90 tenant farmers took them, so 85 men outside came in; that was a hard business, was it not?—Yes.

47,741. Did you find anything of that kind in your report?—I found that there was a fair demand for useful land in good condition if the farm was not too large, but that for heavy land farms, where the buildings were in bad condition, where the land was wet, it was very difficult to find tenants.

47,742. Were practical men taking them or were they taken by outsiders?—A great many were outsiders. The land agents themselves told me that very largely. I am thinking just now of the evidence of Mr. Trethewy, Lord Cowper's agent. He distinctly told me that in the heavy land which he had to manage, it was almost impossible to get tenants for farms there, and that you had to knuckle under to them in ways which were perfectly new to the land agent business.

47,743–4. (*Chairman.*) What district was that in?—The district to which Mr. Trethewy was referring was the Harrold district; that is all strong land.

47,745. Should you say that those remarks applied generally to the very heavy land?—Yes, they do.

47,746. It is difficult to get a tenant?—Yes, very difficult, all the land agents told me that.

47,747. But not, I suppose, for the good turnip farms that you speak of?—No, there is a good demand at reduced rates for useful land.

47,748. And I suppose also for the fen land?—Yes, there do not appear to have been many changes in the fen land of late.

47,749. But where the farm is vacant, it is not difficult to get a tenant?—No.

47,750. Do you say that with regard to all the land in the district you have named, except where it is very heavy, or where it is exceptionally light?—Yes. There is not a very large area of very light land there, but the two extremes of very light and very heavy are difficult to let; therefore, land that may be turned and farmed on a convertible system is lettable to a fair class of tenants.

47,751. The light land, which you said just now is suitable for market gardens, I suppose is let easily?—That is easily let.

Official referees.

47,752. (*Mr. Clay.*) I gather from you, referring to the official referee, that the tenant farmers you have been visiting are very much of the opinion that you should have substantial practical men, devoted to that purpose, to award compensation under the Act?—Yes, there is a very strong opinion that the time has come

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

when there is some system wanted for amicably and quietly settling disputes between landlord and tenan upon all points.

Advisory boards and land courts.

47,753. Is it their opinion that these official referees might not be put into a land court, but might be put on a board for advising on any difference of opinion between the landlord and the tenant about the rent of the land?—Yes, that they might constitute in themselves, not a court, but something which would do what falls to the lot of a land court elsewhere, without what is undoubtedly an objectionable characteristic of courts to farmers.

47,754. What you would call an advisory board?—Yes, you could call them that; they would act as conciliators. But the advice of persons other than the official referee would only be within the reach of the referee himself. When in doubt or difficulty he could seek their assistance in private.

47,755. (*Chairman.*) Are they to have the power of determining absolutely, against the will of the landlord and the tenant, what should be the rent between them?—If a landlord and tenant cannot agree between themselves, certainly the decision of the official referee would bind both parties.

47,756. Where they do not agree, is this officer to have the power of determining absolutely what the one shall pay, and what the other shall receive?—Yes.

47,757. Then in what respect does that differ from a court?—Not very much, except in the name, and in the appearance of the thing.

47,758. You call it an advisory board, but in point of fact it is a court, is it not?—It is a court, and does not spell "c-o-u-r-t"; I think that is all about it.

47,759. That is all the difference?—I think it is. I I think it is a matter of sentiment.

47,760. I only want to arrive at what the thing is. You speak of it as an advisory board, and you say the farmers have an objection to a court, but they would like an advisory board, and then you say that this advisory board would differ from a court only in respect of the name?—Unless I have misinterpreted the language of my witnesses, it appeared to me that their wishes were that so far as possible nothing calculated to disturb the friendly relations between landlord and tenant should be set in motion. For this reason, if official arbitration could not be carried out without the publicity that is inseparable from a court and the friction caused by landlord and tenant appearing in person before a court, I am sure the great majority of those who mentioned the matter to me would prefer to go on as they are.

47,761. (*Mr. Clay.*) Have you heard any people express any opinion in favour of the farmer being entitled to have some body to fix rents, on the same principle as conciliation boards have been formed to fix wages in the mining and other industries?—Yes, of course I have; there is nothing in this report except what I have heard, and I have no opinion with respect to Bedford county except what opinion was given to me. I am a total stranger to the counties of Bedford, Northampton, and Huntingdon, and it would be presumption on my part to have an opinion.

The Agricultural Holdings Act.

47,762. The Agricultural Holdings Act has not, you say, wrought well and satisfactorily?—Apparently it has not.

47,763. Do you think it should have a wider extension, so as to apply to general cultivation, and increased fertility?—That is certainly one point upon which farmers feel very keenly.

47,764. Should not the next Act, if it is framed, give the official referee or valuator a little more sea-room to go further back than one, two, or three years in regard to improvements?—The opinion of the farmers and landlords too, in Bedfordshire, is, that anything which will encourage good farming, and deter bad farming, will be an advantage. For instance, if the Agricultural Holdings Act is so amended that it will entitle a tenant to compensation for continuous good farming, it would be a right and proper thing; on the other hand, if it will give the landlord a check upon deteriorative farming, that will be right and fair.

47,765. The great question before us now, is to bring capital back to the land, instead of driving it away?—Yes.

Urban rates.

47,766. (*Mr. Dalton.*) Will you refer to page 82, where you have a paragraph headed, "Farms subject to urban rates;" there you make certain recommendations with regard to urban rates on agricultural land, what do you consider urban rates?—These complaints were made to me by persons farming land close by villages or towns which had the power of making rates, and levying rates, and these farms are subject to those rates.

Mr. R. H. Pringle. 9 May 1895.

47,767. But these two places that you name, Potton and Bozeat, are not urban districts; one is in the rural sanitary district of Biggleswade, and the other in another rural sanitary district; they are practically villages, and not towns, I think?—Bozeat is a village.

47,768. And Potton is not a large place?—No, it is a small place.

47,769. They are a considerable distance from any large town, I think, both of them?—Yes, they are.

47,770. The two unions in which they are situated, are Biggleswade and Wellingborough, one in Northamptonshire, and the other in Bedfordshire?—Yes.

47,771. You have kindly let me have the demand notes in these cases, and I find that the reason the rates are so high in those two parishes is, that each has a school board, one of them has a burial board, and both of them have rather high special sanitary rates, levied by the rural sanitary authority. But you would not take either of these cases as typical cases of farms, in what would usually be called urban districts, would you? They are both of them rather large villages, but not large urban centres of any kind?—No, the fact remains that they exist.

47,772. No doubt; but you take in your report the rates in these two villages as an argument for altering the whole law of the urban rating of the country. Of course where you have a farm near a large town, it is benefitted by that large town, and is in a totally different position from the agricultural land that is close to a village of this kind, which is not rising in value, and is not going to be building land, or anything of that kind. Neither of these villages is rapidly developing. The population of Bozeat has increased from 1,187 in 1881, to 1,273 in 1891, but I think Potton had a smaller population at the last census than it had at the preceding census. Bozeat is not a town in any sense of the word, is it?—It is a big village; I remember about Bozeat.

47,773. How would your proposal as to urban rates work in these places: you would propose, you say, that the land should in no way contribute to these rates, practically?—Not in the same proportion that it does at present.

47,774. Towards the sanitary rate it contributes a fourth annually?—I question whether it should contribute any to the sanitary rate.

47,775. Then, you would leave the expense entirely on the small cottages in these villages?—I would make a cordon round the town of a certain distance out.

47,776. The result would be that you would undoubtedly place an enormously heavy rate on these small houses, in these two particular cases that you mention?—Probably.

47,777. I think the average rateable value of a house in each district is very low; it is 6*l.* in one parish, and 4*l.* or 5*l.* in the other; would you throw the whole of the expenses of the school board and the sanitary expenses on the inhabitants of those small houses?—Not of the school board.

47,778. You do not consider the school board rate is an urban rate, then?—No.

47,779. The school board rate is the main rate in both of them, which has made them so high?—No, I think not. I may be wrong.

47,780. It is 2*s.*, I think, in one, and 1*s.* 6*d.* in the other case?—I do not think that the question of the school rate appears at all in Bozeat.

47,781. (*Mr. Channing.*) Is it not covered by the term: "Ordinary rates for the year, 4*s.*"?—The gentleman that I got these rates from in Bozeat, could neither read nor write.

47,782. (*Mr. Dalton.*) In Bozeat there is a one and tenpenny school board rate, according to the local taxation returns, and it is included in the poor rate in the demand note, but in the Potton demand note the school board rate is stated, and it comes for about a year and a half to 2*s.* 10*d.*; you would not propose to throw the school board rate entirely upon these houses?—No,

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

it is more with reference to lighting rates. That is the point which is felt by the farmers. I walked over this gentleman's farm at Bozeat, and at the very end of the farm—it was about 2½ miles from the town of Bozeat—there he began objecting to these rates; he said, "here "am I paying these urban rates for this piece of land "right away out here. I get no benefit from the drains, "and the burying places, and the lighting."

47,783. Is there any lighting rate at Bozeat, because I do not find it?—I do not know whether there is any lighting rate, but I know that there is a special sanitary rate.

47,784. Yes, but that is for the drainage of the houses; a farmer would prefer to live in a healthy village rather than an unhealthy one, I presume. But the land pays very little for the sanitary rate there; it pays 2½*d.* I think in that case; it is the school board rate, which is the high rate on the land in each parish?—It may be so; it may be that the rates are very low; but there is always a danger of some other terrible one coming on, you never can tell; some special rate comes on, and there they are liable to it. I think it is more the principle of the thing.

47,785. You propose to exempt the land altogether outside a certain cordon?—From what I gathered from the farmers there, I believe that is their feeling.

47,786. With regard to the sanitary rates?—With regard to these rates which undoubtedly benefit towns and places where people congregate to live together, and which do not benefit the land lying, as it were, outside a certain distance from it.

47,787. Would you include the school board rate?—I do not think that the farmers would object to the school board rate being a rate levied upon land provided that other parties were equally taxed for it.

Effect of depression on the labourers.

47,788. (*Mr. Chaplin.*) In paragraph 120, page 38, you express some views and observe about the future of labour if the present depression continues in the counties you visited, and you say: "Throughout the "cold clay district there is a very great scarcity of "employment, and less continuous service than "formerly." Then you go on to tell us of villages in Northamptonshire and in Huntingdonshire, where there has been loss of labour, and a great reduction in the population of agricultural labourers. Is the state of things that you describe there to be taken as at all indicating what is occurring in other parts of the corn-growing districts?—Yes; I should say that the state of affairs described there is universal throughout all the strong land districts in these three countries.

47,789. Some of the labourers have rather strong views upon this subject themselves I understand?—They have.

47,790. Is it the case that they are beginning to think that if prices do not improve their position will be very injuriously affected?—Yes; that was stated to me by a party of several labourers whom I interviewed myself near Yaxley, just on the borders of the Fens; also by some labourers I saw in Bedfordshire.

47,791. I think it is the case that you anticipate (you say so in paragraph 122), within the next few years a steady decrease in the labour employed in farming?—Yes; I consider that inevitable, unless a very great change takes place in prices.

47,792. What sort of change in prices, for instance in wheat, would put the land back again in arable cultivation?—Double it in price.

47,793. That is to say from whatever it is now to ——?—40*s.*

47,794. If wheat was to go up to 40*s.* again, that would remove all difficulties as far as labour is concerned in the corn-growing districts?—I think if wheat went up to 40*s.*, and rents did not rise you might say in proportion, that undoubtedly wheat would be cultivated again, and I think the land could be cultivated to a profit.

47,795. (*Chairman.*) You make the important destinction "if rents do not rise?"—If rents do not rise too high.

47,796. (*Mr. Chaplin.*) You do not mean to say if rents do not rise at all; but if rents do not rise beyond the level, I suppose, or the proportion that they were at formerly in comparison with prices?—Yes; that is what I meant.

Effect of a rise in prices.

47,797. You were asked a good many questions by Mr. Giffen upon that particular point; is not the answer to those questions this: that although in theory the suggestions he made to you may be perfectly right, yet as a matter of practice they never did occur, and that when prices were high formerly there was great prosperity to the farmer?—I am quite sure of this from everything I heard,—that in past times when prices were fair, and land could be worked to a reasonable profit, paying a respectable rent, there was no suspicion whatsoever between landlord and tenant; and I am quite sure of this too—that if the old times were to come back, you would have a recurrence to those very pleasant times that were.

Mr. R. H. Pringle. 9 May 1895.

47,798. From all that you have seen, you have formed the opinion that whereas under higher prices in former days, there was great prosperity among the farmers, and the labourers were all well employed, the same thing would in all probability happen again if there was a return of better prices, and that all the fears suggested to you by Mr. Giffen would not take effect?—Yes, that is the impression that was made upon my mind by what I heard.

Effect of present prices.

47,799. And I observe that in paragraph 140, you make a statement with regard to the opinion of the farmers in these counties on this particular point, and you say that "The verdict of the arable farmers of these "counties cannot be misconstrued. A large proportion "of the land can no longer be cultivated to a profit, "and whatever be the consequences to the labourer, "the manure merchant, the blacksmith, the carpenter, "the engineer, or the kingdom at large, it must go to "grass." I understand you that is the view in those arable districts, put before you by a great number of practical farmers themselves?—Yes, of practical farmers, land agents, and landlords, every person connected with this industry.

47,800. That the only remedy at present prices is, that the land should no longer be cultivated and go back to grass?—That is so. My books are full of that evidence.

47,801. Then, as far as labour in those districts is concerned, I apprehend that the remedy would be worse than the disease; does it not come to this from what you heard in those districts, that the situation can only be saved by a wholesale displacement of labour?—Yes. The land will no longer support three classes, and one of them must disappear.

47,802. (*Mr. Channing.*) The arable land, you mean?—Yes, the stronger class of arable land.

47,803. (*Mr. Chaplin.*) I suppose the arable lands in the districts you visited, are a very large proportion of the whole?—In Bedfordshire, I think, there is about one-third pasture, from one-third to one-fourth.

47,804. So that it affects a great area of land, and a very large population?—Yes, but the north part of Bedfordshire is very sparsely populated now, judging from what I saw.

Immigrant farmers.

47,805. In one part of your report you refer to the immigrant farmers, that is to say, Scotchmen and men from Devonshire who have come into Northamptonshire and Bedfordshire, but they do not appear to have done any better than the locals, am I correct in that?—Yes, I could not find out exactly how they had done, whether they had done better. I was of opinion, and I heard it supported on various occasions, that the two Scotchmen that I saw, had really done wonderfully well considering the times. But if you take the opinion of the Englishmen, they say that the Devonshire men have certainly not done a bit better than themselves. I do not think there is enough evidence to entitle me to say that the immigrants had done any better whatsoever.

47,806. (*Chairman.*) The two cases you examined, you say had done well?—No, I do not go so far as to say they had done well. I quote the language of a Scotchman.

47,807. Where is that?—In paragraph 142, page 44. He says: "I had a lot to do to this farm at first, improving it, otherwise I could have saved money. Then the bad years set in, when there has been nothing on the right side. I cannot say I have lost. I have got through, and I rather congratulate myself."

47,808. Is that not a good deal better than the record of a good many?—It is on that that I was basing my answer to Mr. Chaplin.

47,809. (*Mr. Chaplin.*) It is very cold comfort under any circumstances?—Yes, it is.

47,810. (*Chairman.*) Men do not usually confess that they have made a profit; so when a man congratulates

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

himself, that means, probably, that he has done fairly well?—Yes.

47,811. Your Scotch friend congratulates himself on the fact that he got through without loss?—Yes.

Cheap loans.

47,812. But that is the most he can say. You advocate some new system of obtaining cheaper money for agricultural works as a necessity if any improvement is to be made; what system do you point to by that?—I hope I do not put it that I advocate it. What is the paragraph?

47,813. Paragraph 146, it is in reference to the division of farms?—All the landlords agree upon this point that there is an advantage to be gained by the sub-division of farms, but they say—I am thinking particularly of one landlord, a large landlord, just now—that at the present rate of money it cannot be carried out, because the interest that is to be paid upon money would not be met by the increased rents that would be thereby obtained.

47,814. All the witnesses that you saw and all the evidence that you have gathered point to the cause which lies at the bottom of all the trouble, I understand, as being the fall in prices?—Yes, I think that is the opinion of every person.

"Protection."

47,815. And they advocate protection, I understand, so far as this: that while they would leave wheat without a duty they would tax flour and all other cereals?—Some of them say that, others say tax everything hip and thigh.

47,816. That seems to be the general impression?—Yes, I should say that certainly 75 per cent. of the tenant farmers that I saw are protectionists more or less.

The currency.

47,817. Then, I understand, you find also that there is a growing feeling in favour of some reforms of currency, although they do not profess, themselves, to understand very much about it?—Yes, there is decidedly, I think that farmers are looking into this question more. I am not sure that they see as far into it as they might, but they seem to think there is something in it. I could hardly express it in any other language.

47,818. You find that it is beginning to be considered a great deal?—No doubt about that.

47,819. And discussed?—Yes.

Farm accounts.

47,820. In paragraph 152 you give us a very interesting comparison of the profits on a farm of 600 acres between the years 1853 and 1872 on the one hand, and the years 1886 to 1893 on the other hand. In the first period (the period being for 19 years) there has been a profit of 2,881*l.*, and in the second period (being for seven years) there has been a loss of 4,319*l.*?—That is so.

47,821. Would that represent at all an average of the state of things in that district on similar farms?—That farm is in the landlord's hands, and it is well farmed. It lies within a mile and a half of Northampton town. There is some of it excellent old pasture; the rest of it is stiffish soil, and I should think it is a very good example.

47,822. It is a good example of what would attend, no doubt, a farm held by a landlord, but would it be a good example of farms held by tenants?—Yes, because there is a fair time rent charged against the place.

47,823. You charge a high rate—at the rate of 1*l.* 12*s.*?—That is so. The rent charged for the first term of 19 years is 1*l.* 12*s.* 9½*d.* per acre and the rent charged against the farm for the second period of seven years is 19*s.* 7½*d.* per acre. It shows that there has been a very substantial reduction of rent charged.

47,824. I think you said in cross-examination you had not come across one instance of a man who admitted he had made a profit in recent years?—Not a working profit.

47,825. Even in that case the major part of his profits, I understand, were probably due to the fact that he had been dealing in cattle?—That is one particular instance, but on looking through the figures I see there are more men who have made profits.

47,826. (*Viscount Cobham.*) His cattle dealing does not come into the accounts?—No.

47,827. (*Mr. Gilmour.*) In reference to that, can you explain how it is that there is such an enormous return from stock sold on that farm as against any stock bought?—Yes; I did not like to mention that point, but I am glad it has been mentioned. I am perfectly sure that that man, from his dealing facilities and his connexions, probably bought beasts in to-day and kept them for a fortnight and sold them again, taking a profit out of the transaction.

Mr. R. H. Pringle. 9 May 1895.

47,828. (*Mr. Chaplin.*) Now, I wanted to ask your attention to some very striking statements that you make. In paragraph 163 you say "there is one thing "absolutely certain, serious loss, if not ruin, threatens "everybody whose capital is represented by or invested "in land. I much doubt whether half of the arable "farmers of Bedford, Huntingdon, and Northampton "could pay 20*s.* in the pound. Were I to accept the "evidence given to me without qualification, I would "be compelled to report that over a large portion of "the district farming had assumed all the features of a "bankrupt industry." Well, of course, that is a very grave and a very serious statement, and I want to ask exactly how much is imported by your saying, "Were "I to accept the evidence given to me without qualifi-"cation?"—The evidence that was given to me was this, that in certain districts it was not a question of half of them at all, but that the farmers there were just stone-broke, and were only existing. I really toned it down.

Serious position of farmers.

47,829. Then you go on to say, "There are gentlemen "located in this part of England who bring to bear on "farming everything necessary for its successful pro-"secution—unusual intelligence, long experience, "extreme caution, sound judgment. They farm land "of excellent quality, they have a suitable proportion "of sound, useful old pasture, their farm buildings are "commodious, convenient, and in good repair. They "possess abundant capital, and frequently have private "means which they do not hesitate to apply to their "farming business. They have cut down their house-"hold expenses to the finest margin. In fact, they "have done everything that could be thought of to "make ends meet, and in spite of all they have failed "to make farming pay its own way." Now are we, as the Commission, to understand that that is your deliberate expression of opinion with regard to a great number of farmers in these important districts, after having made the most full and thorough investigation in your power?—It is undoubtedly, and some men whose names are well known to you all, are those that have perhaps suffered most, and take the most gloomy view of it. There were some witnesses that I visited, because I thought it was my duty to do so—who absolutely asked me not to ask them upon that question of the profits and losses, because it was too painful to look back.

47,830. Then, I take it, that you have nothing to withdraw or modify in regard to those statements?—Nothing to withdraw at all.

Prospects of the labourers.

47,831. Then you proceed to point out what this state of things must lead to, and I shall ask you the same question in regard to this paragraph—"It is my plain "duty (and I do not shrink from it) to advise the "Commissioners that if prices do not at once make a "very great improvement, the country may be pre-"pared to see thousands of acres of good corn-growing "land thrown into grass, and thousands of farm "labourers cast into poverty and idleness." Is that your deliberate opinion?—It is not my opinion; it is exactly what was told me by the farmers and what I could see going on around me as I drove from place to place.

47,832. As far as you can judge, you have no reason to doubt the accuracy of the forecast made by the farmers?—None; on the contrary, it was supported by ocular demonstration.

47,833. Then you put it before the Commission as a very serious matter, that if the low prices continue we must be prepared for a state of things under which we are to see thousands of labourers out of work?—I am quite sure of that.

47,834. Under those circumstances, could you form any opinion as to what must happen to the labourers and where they are to go?—No. I can form this opinion, that they must go out of where they are, but where they are to go to is quite another story.

47,835. You also quote as the opinion of the people amongst whom you have been "that although the con-"sequences of this long continued depression, clinched "as they have been by the drought of 1893 and the "disastrous prices of 1894, must tell severely on the "rent rolls and complete the ruination of scores of "tenants, it is upon the employment of labour the

Digitized by Google

Mr. R. H. Pringle.
9 May 1895.

"deepest impression will presently be made?"—Yes. What I mean by that is that the land will go down to grass, that it will pay a certain rent in grass but that the farming of the land in grass will not bring any employment to the labouring classes.

47,836. Where the labourers have been in employment up till now and where they are still in employment their position on the whole I suppose is somewhat better than it used to be in former days?—It is and it is not. It is in so far that the money that they receive buys more, but there is more intermittent employment, there is less steady employment.

47,837. Have wages fallen in those districts recently?—I think they have fallen since I was there; I think they have fallen about a shilling a week. They go up again in busy times.

47,838. Then with regard to the future if the present state of things continues you have the greatest possible apprehensions with regard to the condition of the labourers?—Yes, with regard to the immediate future.

Relations between landlords and tenants.

47,839. Now you have said a good deal upon the position of the landlords and tenants, and I understand that, generally speaking, you would say that the relations between them as a rule are excellent?—Yes, I think they are very friendly.

47,840. Especially on the larger estates?—Yes, a great many witnesses' evidence in my books are full of testifications to the gratitude which tenants express towards the landlords for what they have done for them. A great many witnesses said to me "We are very sorry "for our landlords."

Insecurity of tenure.

47,841. On the other hand there is a very general impression, I gather from you, that where a tenant has farmed well through these bad times he feels himself to be in a position that he has no security at all?—Yes.

47,842. I do not quite understand what is the meaning of that expression—no security for what? For compensation for his improvements or security in what other respect?—Of course his security for compensation for improvements comes under the Agricultural Holdings Act; and any feeling with reference to that comes under the head of the Act. It is the security for continuance. I take it that these tenants who have long interests in holdings do not want to leave their holdings, and would like to remain in them paying what is a reasonable and a fair rent. Their position seems to be that they fear, and judge from what has gone on around them, that in the event of any difference of opinion arising they can be moved, so to speak, simply because there is a difference of opinion.

47,843. It comes to this, I rather gather from you that in the case of a man who has got a useful farm which at the present moment is in really good condition, either he finds great difficulty in getting his rent lowered or he is afraid of its being let to somebody else at an increasing rent; is that it?—Yes, if a man has farmed his place well. A well-farmed place is lettable still, and it is even perhaps more lettable because of the large number that are not well farmed.

47,844. They have no feeling of insecurity, I suppose, on the ground that they are going to be turned out if they continue to pay their present rents?—I think that with the times getting worse a great many of the sitting tenants naturally think that they should not be paying such big rents.

47,845. And so there is where the feeling of insecurity comes in?—Yes.

47,846. They think the time has come when they should ask for a reduction of rent, and they feel they are entitled to it; then they are afraid that if they do that, the landlord, pressed by this cause, or that, or the other, will not agree, and in preference will let it to some new man who will give the same rent, because the farm is in very good condition?—Yes.

47,847. That is the exact position?—Yes, that the landlord thinks that because the farm is in good condition he can get it let.

47,848. Are we to understand from you that in these counties, that has been a common state of things?—Yes, far more so than I think almost anyone would believe.

47,849. Do you know instances of it?—Yes, plenty of them; I would not take such evidence without it.

47,850. You could give the Commission such instances?—I could, I believe, from my books here. I do not like taking names down, but there were very few estates there but what there were some instances of farms in which there was treatment of this character.

Mr. R. H. Pringle.
9 May 1895.

47,851. (*Chairman.*) It is a very important statement, and I am inclined to think we ought to have the evidence verified by names. Were these statements made to you confidentially?—Yes, they were made confidentially.

47,852. Would they object to their names being brought forward?—I do not believe that such evidence would have been given to me in a public meeting.

Tenure.

47,853 (*Mr. Chaplin.*) In those cases, under what agreements, or under what security, do they hold their farms in these counties—under written agreements, as a rule, or under the customs of the counties, or under the Agricultural Holdings Act itself?—There are some cases where there are no written agreements whatsoever.

47,854. Then, *ipso facto*, they hold under the Agricultural Holdings Act?—Yes, I believe they hold under the Act.

47,855. Is it common to have no written agreements?—No, but there are two or three large estates—the Duke of Grafton's for instance; I believe Lord de Ramsay's is another—which I discovered had no written agreements whatsoever.

47,856. Was that done intentionally, or in order that they might be under the Act?—I do not know. I do not think there ever were any agreements. This is an old standing custom.

47,857. But that is not common, I suppose?—It is not general, but there are a good many instances.

47,858. Is there an effective custom in these counties?—Yes, there is a custom.

47,859. In each of them?—Yes.

47,860. Then, if there is no written agreement, they would hold either under the custom, or under the Act?—Yes, under the Act. There are more estates where they have regular written agreements, and customs under the agreements—covenants under the agreements; and, consequently, there are more farms held in this way.

47,861. There is a great number of farms, I suppose, in these counties; have you any idea at all what the population of farmers is?—No, I have no idea at all.

47,862. You saw a great many, I suppose?—Yes. I believe I give the numbers in the very first paragraph. I saw about a hundred, I think, altogether.

47,863. (*Mr. Channing.*) If you deduct allotment holders and small holders, the number of tenant farmers has diminished in these counties, has it not?—That I could not say.

47,864. (*Mr. Chaplin.*) Did you see 100 tenant farmers?—Tenants, landlords, and land-agents.

47,865. You saw about 100 witnesses altogether from these three counties?—Yes.

47,866. From whom all these facts, and these views that we have now before us have been gathered and collected?—Yes. I saw a person on every one of the dots on my maps. I tried to divide the country up as well as I could.

47,867. Did you attend some meetings besides?—No meetings besides; I had not a public meeting.

47,868. All your evidence has been collected from these 100 different witnesses—from what you heard and gathered from them, and also from what you saw?—Yes. I went over a large number of these farms, and I devoted about half a day to each witness—all private.

The Agricultural Holdings Act.

47,869. Now, when you tell us that the Agricultural Holdings Act is so very commonly condemned, may it not be the case that that is to some extent from ignorance as to its provisions on the part of those who condemn it? We have had a great many instances in evidence before us here of where, for instance, amendments have been proposed to the Act which have already been contained in the Act itself?—I do not think that it is so much on account of ignorance. The class of witnesses that I saw were not ignorant men. I grant there were two men that could neither read nor write, but they were taken as specimens of this uneducated class especially for me to see, but the general run of witnesses were good, clever men, practical men, who knew all about these things. Therefore I would not like to say, in fact it is not my opinion that the reason that the Act is thought little of is because they do not understand it.

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

47,870. As far as you could gather, the men with whom you have discussed matters thoroughly understood the provisions of the Agricultural Holdings Act?—I would not like to say that they thoroughly understood them, but I think that they had a very good general knowledge of them, and they certainly had a keen appreciation of their experiences under the Act previously.

47,871. It was the administration of the Act, I think, that was chiefly complained of?—That was very much complained of.

Suggested amendments.

47,872. With regard to the amendment of it, I understand you to say that, generally speaking, they were satisfied with the proposals contained in the report of the Committee of the Central Chamber of Agriculture?—Yes, I might say that they go entirely upon those lines.

47,873. What was proposed by that committee, generally speaking, would be accepted by them?—I think so. I think the scheduling system, the reporting system, seems to have been a very strong point with them.

47,874. (*Mr. Channing.*) A record of the condition of the field you mean?—Yes; they think that the adoption of schedules would meet a great many of the deficiencies.

Insecurity of tenure.

47,875. (*Mr. Chaplin.*) In spite of all that has been said upon this subject by them, they admitted, I think, to you that after all in the present condition of depression this security, or want of security, was, comparatively speaking, an insignificant matter?—That is so.

47,876. They are looking forward to the future?—Yes.

47,877. What they think is that if times became prosperous again, then security would become of more importance?—Yes, they do, because the demand would come for land again.

47,878. I want to know if I understood you rightly, if this was the drift of the opinion you had formed from what you heard, that although they have these views now and put them before you, both with regard to the arbitrators and the decisions as to rent, and the various other matters you have spoken of, that if these good times did recur, all these things probably would be forgotten again as they were before?—I do not know that they would be forgotten again, but I do not think they would be pushed so much.

47,879. They would not be pressed?—Yes.

47,880. They would become again of less significance?—Yes.

Appointment of valuers.

47,881. These valuers were to be appointed by the Board of Agriculture, I understand?—Yes.

47,882. Would they wish to retain the liberty to appoint valuers of their own if they desired to do so?—No, I do not think so. I think that the feeling among the farmers—and I must say that the landlords' and the farmers' opinions on these matters struck me as being somewhat similar—is that they are perfectly prepared to accept and abide by a person appointed by the Board of Agriculture, or some qualified, fair-minded, disinterested party.

47,883. They would like all the valuations to be conducted under the superintendence of the gentlemen so appointed?—Yes, I think both parties would leave themselves in his hands.

47,884. I suppose you found, in the course of your investigations, some of the tenants who were not in accordance with these views?—Doubtless, there are various opinions on this subject, and it is right to say that in many of the written reports sent in to me, no remarks whatsoever were made with reference to "land courts, fair rents fixed, fixity of tenure at fair "rents, free sale of tenant's interest." I am pretty sure that if the persons who filled up these reports had felt keenly on such subjects they would have expressed their opinions in writing, especially seeing that each report was marked "strictly private and confidential."

Arbitration as to fair rent.

47,885. We were examining a gentleman from Northamptonshire the other day, and I see he was asked this question by Mr. Channing: "I have not Mr. Pringle's "report before me; do you think that what he says with "regard to the rents not having been sufficiently re "duced in time in Northamptonshire is correct," and the answer is, "Yes." Then he is asked this question, "Are "you aware that he recommends that there shall be an "arbitration as to whether a rent is a fair rent or not?" (*A.*) "Yes." (*Q.*) "Do you agree with that or not?" (*A.*) "No, I cannot say I do." (*Q.*) "Do you think "that that had better be left to agreement?" (*A.*) "I "think that had better be left to the landlord and the "agent." (*Q.*) "For agreement between the parties, "you mean?" (*A.*) "Yes." If that is the evidence of one witness out of Northamptonshire that has been called before us, do you not think it is quite possible or probable that if you pushed your investigations a little further you could have found a good many more of the same views?—Possibly I might. I pushed my investigations pretty far; I was from the 1st May to the 19th July there.

Mr. R. H. Pringle 9 May 1895.

47,886. You have learnt nothing by your inquiries to make you very confident that there may not be a considerable proportion who take the view of this gentleman?—I would certainly say this, that it is not, so far as I was able to ascertain it, the feeling of the tenant farmers even the tenant farmers in the counties of Northampton, Bedford, and Huntingdon, that there should be what you might call avoidable interference between landlord and tenant. They have a kindly feeling towards their landlords, but they have also a feeling that it would be a right and proper thing for the good of both parties that there should be some system of settling disputes. I do not think that the tenant farmers—and far be it from me to suggest it—speak unkindly of the landlords or of their treatment, but then the difficulties of the position, and of the times, are such that there ought to be some way of amicably settling disputes.

47,887. The general drift of it all, I think is this, that the great preponderance of opinion is, that the real cause of the whole thing is the fall in prices?—I think it is. Then there is the fact that certain landlords, on account of the fall in prices and the demands that are made upon them, are naturally trying to fight their own battle to the best of their ability, and a man who is in that position is not just as capable of making a very liberal concession as another person would be.

47,888. And it is also the opinion, I gather, that no substantial improvement can be looked for unless there is some change in prices?—I think every person looks at the bad prices as being at the root and at the bottom of the depression.

Condition of the agricultural industry.

47,889. (*Mr. Channing.*) I want to ask you one or two questions as to paragraph 163, which was referred to by Mr. Chaplin. Do I understand you to say that that paragraph applies equally to Northamptonshire as to the other counties, in regard to the position of the farmer?—Yes, but it does not apply in quite such strong language to the grazing districts, or to the fen districts—chiefly to that belt, that circle of strong land, which grips the low side of Northamptonshire and most of Huntingdonshire, and almost all the top of Bedfordshire.

47,890. Part of the land between Northampton and Wellingborough and Kettering?—Yes, all away from Yardley, Hastings, and right away up there till you get to Yaxley.

Labour.

47,891. On the question of labour, and the particular aspects of that question, I would like to ask you whether it was not your experience in Northamptonshire that on the whole the farmers had a fair supply of labour, and that the labour part of the farmers' duties was carried out well—in my experience certainly it was?—Yes, with medium class soil in Northamptonshire, particularly between Northampton and up the Nene Valley, the land was well farmed.

Effect of depression compared with Essex.

47,892. You did not see the same derelict condition and the same absence of agricultural labourers that you have in Essex?—No it is a different story. I think if you go over the Northampton district from there—that is the land all about Lord Wantage's place—and walk 10 miles to the right hand, to the east, you would get into a different country. You would get out of these nice lands and you would get into strong clay, and there the aspect of affairs is different.

Wages.

47,893. Are you aware that the wages paid in the parts of Northamptonshire that I know are fairly high?—Yes, I think they are about 15*s.* a week, if I recollect aright.

47,894. They range from 12*s.* to 15*s.* or 16*s.* a week?—Yes, 15*s.* is about the ordinary wage of a teamsman.

47,895. So, as far as you know, the farmers have, in the matter of labour, in the districts of Northamptonshire that you have visited, done the land well and seem to be continuing to do the land well as a matter of labour—that is certainly my experience?—Yes, the land is well done.

Digitized by Google

Mr. R. H. Pringle
May 1895.

Farm accounts.

47,896 Now I want to ask you with regard to the very interesting appendix on page 134 C. XII. The expenditure on the 1,500 acres referred to in labour seems to have been continually rising year by year from 735*l.* in 1886 to 1,513*l.* in 1892. I wanted to ask you how that was accounted for?—Quite easily. In 1887 there was a farm of 237 acres tacked on, and then in 1888 there was another farm of 291 acres tacked on, so that the holding was gradually increasing.

47,897. Still that would not be an increase sufficient to account for the relative increase of the labour bill?—I think it would, with great respect to you.

47,898. It does not double the size of the holding?—But it does not double the amount of the wages.

47,899. 735*l.* to 1,513*l.*—I think it is more than double?—I beg your pardon; I was looking on the top of the page.

47,900. Then I want to ask you with regard to paragraph 137, which refers to the same land, I believe, does it not?—Yes it does.

47,901. How do you connect the increase in the labour bill with the manner of cultivation adopted, which seems to have been the continuance of corn growing in the same manner as Mr. Prout of Sawbridgeworth adopted?—I do not think it can be connected exactly, because this continuous corn growing has been going on for a year or two. I cannot tell you how many years it has been going on. Certainly it has been going on since 1890.

47,902. Has that experiment been successful or unsuccessful?—It has been successful so far as the crops have been growing; the corn is splendid but financially it has not been a success. I never saw cleaner land or a better crop.

Prospects of the labourers.

47,903. I will just put to you this question with regard to what I have elicited as to the farming in Northamptonshire and the employment of labour and the figures which you have shown in this appendix: whether your forecast of the general throwing out of employment of the labourers is not a little exaggerated?—I do not think so at all. Of course as you say with respect to the land in the Central Vale, in the Nene Valley, that is so. I would not like to say that the land would go out of cultivation there but there is such a very large proportion of Bedfordshire particularly, and Huntingdonshire which is that strong land gradually going out of cultivation. Of course I have the three counties to deal with, and I know if you take out districts such as the grazing districts and the Nene Valley, it would not apply with equal force at all.

"Protection."

47,904. Now, about the expressions of opinion about protection, did you hear that opinion from those who are connected with grazing?—No.

47,905. They would be opposed to protection I should think?—Yes; they never mentioned it.

47,906. Are you aware that protection is not in favour at the Northampton Chamber of Agriculture?—I am quite sure of this, that if I had met farmers in bodies, probably they would never have said a word about it, but when you meet them privately, you hear a lot of things that they will not say when they are massed together.

47,907. Now, as to the more important point of your report on which you have been examined. In the first place, as to the witnesses from whom you obtained evidence, I have here a list of witnesses recommended by the Northampton Chamber of Agriculture to this Commission; does that correspond with your own list of witnesses, or is it a separate list?—It is precisely the list that was prepared for me, as you will see by comparing my list with yours.

47,908. Practically it is the list which you have visited?—That is the list, and every one of their farms is marked on the map you have got in front of you.

Freedom as to cropping and sale.

47,909. Now, you found a very strong expression of opinion from the practical farmers against the reckless giving of freedom of cultivation, and freedom of sale of produce, did you not?—Yes, among the better class farmers.

47,910. They would not object to freedom of cultivation, provided there was a guarantee given of the adequate manuring of the land, would they?—No, provided that the landlord had saving clauses. I think the feeling is that the tenant ought to have a fair and reasonable power given to him to exercise his judgment, and I think that most of the farmers are of opinion that they have got that now.

Mr. R. H. Pringle.
9 May 1895.

47,911. You have stated that the tenant's capital is very largely reduced everywhere?—Yes.

Reduction of rent.

47,912. Was it the general tenour of the evidence given to you, that the tenant's capital had been reduced owing to the reductions of rent not having been given promptly enough?—One of the causes was that the reductions were not given promptly enough, and that when they were given they were not given in sufficient volume, and were not sufficiently large, and that for the last considerable number of years, rent had been paid out of capital.

47,913. That is very largely owing on some estates to the landlord not being in a position to give the reduction, is it not?—I am sure of that, and the tenants feel that. For instance, on one large estate where the landlord is a very wealthy man, he has for the last three years given 50 per cent., and on the next estate, the tenants have got 30 per cent., but there is no visible reason why, if the one was entitled to 50 per cent., the other was not.

47,914. On some well-known estates there had been no raising of rent in the period of prosperity, and, therefore, the reductions have been comparatively small at the present time?—But equally valuable.

47,915. And you found the reductions in that case appreciated as useful to the tenant?—Yes, and the tenants said that although they had not got such a large reduction nominally, still, they considered that the reduction which had been given to them was as reasonable and fair as a larger reduction would have been on another place.

Expenditure of improvements.

47,916. There has also been in Northamptonshire especially a very large outlay in drainage and other matters of that kind on some estates, has there not?—Very large indeed.

47,917. In order to restore the condition of the land?—Yes.

47,918. So that to some extent the reductions have been carried out in that way?—Yes; and in some estates—I could very easily mention names if the Chairman asked me to do so—not only have very large reductions been given in money but money has been given in drainage and buildings over and above.

Fixity of tenure.

47,919. You speak about an insecurity of feeling of the tenants, did you find any desire for what is called fixity of tenure?—I do not remember any witness having mentioned the phrase fixity of tenure to me, and my note-books do not show the word at all.

47,920. And they did not have any desire to take leases did they?—No, none.

47,921. Was the desire of the tenants generally to have continuous occupation and enjoyment at a fair rent?—Yes, just to feel that so long as they were prepared to do their duty and to pay a fair rent for the use of the land they should not be disturbed.

Insecurity of tenure.

47,922. With regard to paragraph 177 in which you say "There have been many examples of cruel injustice "accidently inflicted upon men who bore all the "character and exhibited all the characteristics of "good hard-working conscientious tenants;" I understand you have facts in your notes which justify you in having inserted that in the report?—Yes, certainly; facts were mentioned and names were given to me although the men were total strangers to me; I could not trace them, they had gone and I could not find them, but all evidence of this kind was based upon names and farms which were mentioned.

47,923. Then the sense of insecurity is rather this, that the tenant is unable to have any confidence that he can obtain a reduction which would really give him the enjoyment of his own improvements, is that it?—Yes.

47,924. And then there is also the fear of competition?—Yes, among men who farm their land well; but men who let their land down are in rather a strong position. This was frequently said to me. "If you "want to get a sufficient reduction you must let your "land down because then it is not lettable in the "market."

Adventurers.

47,925. I judge from the tenour of the evidence on which you base your report, that most of your witnesses condemn very strongly the class of bad servants who run farms, and spoil farms?—Yes.

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

47,926. They form a body of unfair competitors against the ordinary farmer?—Yes, that is the point. They come in behind the ordinary good farmer. Their interest is simply confined to the few years that they intend to remain there, and they will give rents which are, perhaps, not fair time rents, in order to occupy farms for a few years.

The law of distress.

47,927. Do you find any expression of opinion as to the abolition of the law of distress, in order to check competition?—No, there was not much said about the law of distress. There have been very few cases of distress; but it was very frequently stated that, if this law of distress enabled the landlord to take in men of straw, it was putting an artificial value on land. I have mentioned that in the report.

47,928. But the general expression of opinion was that a fair reduction was not easily obtained; and that was the basis on which the demand for arbitration was based?—That it was not easily obtained, and very difficult to ascertain.

Valuers.

47,929. As to your condemnation of the present type of valuers, do we understand that that is general, or that there are valuers and valuers?—There are valuers and valuers. There were names mentioned to me of men who were held in high esteem, but, on the other hand, the door is open to parties who have been described in this report as they were described to me, and there is no reason why these men could not come in, and do come in.

Rules of valuation.

47,930. My experience once was to meet a valuer who snapped his fingers at the Agricultural Holdings Act, and said, "We never regard it in any way." Is that the type of valuer which is condemned by your witnesses?—I believe there is nothing to prevent a man saying that, because it appears that their awards are given in a very concealed way, in a secret sort of manner; they can do what they like. They are stated to meet together, and make certain arrangements which the tenant farmers and, I believe, the landlords think ought not to be.

47,931. As a matter of fact, the Midland Valuers' Association keep to themselves the rule under which they value?—As a matter of fact, I was not able to obtain them.

Arbitration as to fair rent.

47,932. Now, as to this principle of arbitration which has been referred to, does it amount to more than this: that where a landlord and his agent wish to re-value their farms they employ a valuer, and, in certain cases, the tenants would approve the appointment of the valuer, but that having regard to the difficulty of obtaining a fair rent, the suggestion of these farmers is that this form of re-valuation should be done, not by a man selected by the landlord, but by an official?—Yes, quite so.

47,933. It is not so much a land court as an official arbitration?—Conciliation, I think, it ought to be called rather.

47,934. (*Viscount Cobham.*) Only brought in in case of any alteration of the rent or re-valuation; or would the arbitrator be called in at the entry of a tenant?—No, only in the case where a matter of difference arose between a landlord and a sitting tenant upon which they could not agree, and which had a good deal to do with the occupation of the holding. In a case like that, where they could not agree, there is an arbitrator appointed by the Government, and they both refer the matter to him.

47,935. But if the tenant claimed a reduction of an existing rent, and they could not agree, then the arbitrator would be brought in?—Yes, or if the landlord wanted to raise the rent, and the tenant would not give it.

47,936. A man might take a farm on an agreed rent one year, and the next year he might take his landlord before an arbitrator?—Yes, and provided the landlord and he could agree then that is all right, but in the event of their not being able to agree one party must be wrong, and the official would decide who is wrong and to what extent.

47,937. (*Mr. Channing.*) Did the suggestions that were made to you go so far as to say, that when this matter of rent had been referred to this official arbitrator, that that rent should be fixed for any given period?—There was no period mentioned, it was simply the principle. Here the difficulty arises, and has arisen in a very great many cases, and exists at this present moment largely throughout these three counties. Tenants think that the rents are too big, and the landlords think that they are not.

Mr. R. H. Pringle. 9 May 1895.

47,938. (*Viscount Cobham.*) Surely that is tantamount to the arbitrator fixing the rents?—So be it.

47,939. (*Mr. Channing.*) Did the witnesses you saw on this matter express an opinion that the work of the arbitrator should be to mark off what portion of the annual value of the land belonged to the tenant in respect of his improvements, so as to secure that they should be excluded from the rent; or what was their idea?—The idea was—and I would ask you to look at this in connexion with their opinions upon the Agricultural Holdings Act—that if you could introduce this scheduling system it would settle the whole matter.

47,940. How would they deal with the record of condition, would they interpret that into money, do you mean, by taking the record of the condition of a farm at one time, and then again later on?—Yes, all improvement or deterioration would have a money value attached to it.

47,941. Practically, does the suggestion amount to more than the old suggestion, which has often been made, of allowing a sitting tenant to have his improvements considered and estimated for whenever the rent had to be re-settled: does it amount to more than that?—I think that the introduction of the schedule in the Agricultural Holdings Act amounts to that, but I think that the question of arbitration when disputes arise amounts to rather more, because questions may arise as to the value of land irrespective of improvements altogether. The tenant may say this land is worth 10*s.* an acre, and the landlord or the agent may say "No, I think it is worth 12*s.* 6*d.*," irrespective of whether there have been any improvements at all. That is a question of the value of land and of a difference of opinion upon it.

47,942. Then it comes to this, that they do want arbitration as to the value of the land and as to a fair rent for it?—I have no right to say all tenants, but many tenants, and they appeared to be good tenants, feel that in these present times there has a new aspect appeared upon the scene, and that is that there is far more liability to differences and disputes than there used to be, and that there ought to be some way of protecting the sitting tenant from the consequences of differences of opinion.

Fixing of rent according to revenue.

47,943. Now, about these claims mentioned in your report for fixing the rent, my experience of the farmers I have had to do with in Northamptonshire has been that they have objected to the idea of produce rents of any kind?—Yes, that is so.

47,944. With regard to the second scheme, at any rate, the half-profit system of determining rent, do you think that a scheme of that kind is generally supported?—I would not say that at all, because I perfectly readily admit that this half-profit system was submitted by myself to the tenants in order to see whether it would be a workable thing. I simply introduced that as being possibly of some value to you. I believe I stated in the report that such an idea had not occurred to them. In paragraph 193 I say "no "examples of landlord and tenant in this district "having tested the working of either of the above "systems were quoted by me." I heard of one farm in Bedford taken lately on something like the half-profit system. The landlord supplies the capital, the tenant pays 4 per cent. upon it, and the profits are equally divided.

47,945. You mentioned one farm which is working with a sliding scale system?—Yes, in paragraph 194, and a very extraordinary scale it is.

47,946. Did you find any other farm worked on a scale?—No, none now; but I found a lot of farms which had once adopted a corn rent, but which had been altered.

Arbitration as to fair rent.

47,947. Irrespective of the special way in which it is worked out, you found a very general demand for a reduction to a fair rent and for arbitration to determine what is a fair rent?—Yes. I occasionally mentioned this matter to landlords, and the landlords said: "We "have no objection in the world to some system of "arbitration, provided that you appoint a right and "reasonable man; we are just as willing to submit "our matters and our dealings to arbitration as "tenants are." I am sure landlords have expressed themselves to me in that way. A great deal depends upon the man. (*See* Question 47,950.)

Digitized by Google

Mr. R. H Pringle. May 1895.

47,948. (*Mr. Gilmour.*) May I ask, did you specially put before them the main question upon which Mr. Channing is dwelling, namely, the fixing of the rent; arbitration upon other matters of course is easily understood; many would like that well in order to have done with a difficulty that ought not to exist, but there is one main question which I think Mr. Channing has put in about this fixing of the rent, and I do not think you have given a very clear answer to that?—I see your point. I do not know that I absolutely put the question of arbitration in regard to the matter of fair rent before any landlord, but I put the question of arbitration for the purpose of dealing with all matters that arise.

47,949. All questions that arise after the rent is fixed between the landlord and the tenant though, and after the man has become a tenant?—I put it all matters of dispute concerning anything which might arise between landlord and tenant.

47,950. (*Sir Nigel Kingscote.*) This is a very important question?—Of course it is; I quite see it, and would accordingly ask permission to withdraw my reply to Mr. Channing's question in so far as it refers to the fixing of rent.

Scheduling the condition of farms.

47,951. Do the tenants want a fixture of rent between landlord and tenant, and do the landlords want that? What I want to get at is whether there was an expression of opinion that you must have an official man who would settle the rent as between landlord and tenant, or whether that was to be left to the landlord and tenant?—I will be very glad to read you my notes as I took them down at the time. One landlord's agent says that he "entirely approves of any Act which will "encourage good farming, while providing ample pro- "tection and compensation to the landlord for bad "farming, and so far as he can at present judge the "scheme which has been suggested to him appears to "be in the highest degree suitable and is calculated to "be a wise substitution for the present unsatisfactory "Agricultural Holdings Act."

47,952. (*Viscount Cobham.*) What scheme is that?—That is the scheduling system.

47,953. The scheduling at entry and on quitting?—Yes.

47,954. (*Mr. Gilmour.*) But that has nothing to do with rent?—No; I just happened to come across that. Here is another landlord not very far from the other: "So far as Mr —— understands it the substitution of "the report system for Agricultural Holdings Act is "good and just; feels that the security of the good "tenant is very bad, and thinks that the report "system would settle question; good land has suffered "least."

47,955. (*Mr. Channing.*) Perhaps the Chairman had better examine you on this point?—Yes, it is a long story.

47,956. And it might take some time?—It would.

Reduction of rents.

47,957. With regard to the reductions of rent, I see in paragraph 76 you put down a complaint in one case of there being a certain amount of partiality in the reductions of rent?—Yes, I have a case in point which shows there are some cases where for some reason or other one tenant is better treated than another. I think it appears in an appendix. At page 108 in the answer to my queries, paragraph 26, you will see, "This "tenant has been in the occupation of this farm for "more than 50 years. He is a good farmer. In the "early 80's he had great losses from floods and sheep- "rot. Possibly he was treated a little more liberally "on account of his long tenure and also on account of "his leases. It is now not a dear farm." I think there are a good few instances of that about.

47,958. (*Viscount Cobham.*) Would you object to that?—No.

47,959. (*Mr. Channing.*) No one would object to it at all?—No, particularly the farmer himself.

47,960. Was it the drift of the evidence given you, that the farmers who had farmed well on the whole, did not get as much reduction as the farmers who had let their land run down?—Yes, that was very distinctly said, too.

47,961. Was that a very general statement?—It was a very general statement that if you wanted to get your rent permanently reduced, the best way to do it was to let your farm down.

47,962. Was there a recognition at the same time, that all rents must be fixed according to the real value of the fields composing the holding, in other words, that the rent should correspond to the proportionate value of the fields composing the farm. I mean to say that the principle of the record of the condition was recognised fully by all the tenants?—Yes, that suggestion was very warmly supported. I think it originated with the Chamber of Agriculture.

Mr. R. H. Pringle. 9 May 1895. Principle of fixing rents.

47,963. I will only ask you one more question, which I omitted to ask you just now, as to the official arbitrators. I suppose what was contemplated, was that the best local man should be appointed by the Board of Agriculture, not strangers?—Certainly. I did mention it. It is a *sine quâ non* that this person should be capable, and have local knowledge and experience.

Appointment of valuers.

47,964. And, at the same time, not to be selected, I think you say, by the county council, or by any local body which might act in a prejudiced way, or be open to influence?—Yes, the opinion was that although county councils were very good things, still they undoubtedly had preferences, and it was best to have the appointment made by a totally impartial party.

47,965. I have only one more question to ask you. I see that you say that the men who have taken to horse-breeding, have done better; is that so?—Yes; I think that wherever any little speciality has come in like that, that it has been attended with good results.

Special branches of agriculture.

47,966. One injury due to the loss of tenants' capital, is just the difficulty of starting new and more lucrative branches of agriculture, is it not?—Yes, because it takes more capital to carry on a farm with stock, than it does to till the land and grow corn, consequently, when the capital is lost, you are more or less penned up in a corner.

47,967. Has the diminution of tenants' capital been one of the important contributing causes of the depression?—Yes, it has; it has originated from it, and, of course, it has been intensifying the depression as time has passed.

Tenants' capital.

47,968. In one passage of your report I think you say that a great many of the good farmers could not have got on unless they had private means of their own?—A great many of them could not.

47,969. They have been paying to keep their farms in fairly good condition?—Yes. I could read you any amount of evidence to that effect. It is only those who have private means who have been able to get along at all without suffering almost fatal loss.

47,970. (*Lord Rendel.*) I take it that the general result of your very extensive inquiry is that, in the main, the cause of the depression—and I mean by "main" the cause in an overwhelming degree—is simply the fall in prices?—That is it.

Low prices

47,971. But you have illustrated the fact that there are certain ancillary causes which you have thought it worth while to bring into prominence?—Yes, I have done so.

47,972. One of those has been this, that the yearly system of tenure, which has worked extremely well in good times, has proved rather a fair-weather system?—Yes, I think the farmers feel that there are causes undermining the old satisfactory results which used to follow from this yearly system of tenancy.

Tenure.

47,973. In short that that yearly system, though very general, has broken down comparatively under the stress of bad times?—Yes, especially and particularly upon certain estates which are unfortunately circumstanced.

47,974. Another ancillary cause which has been mentioned by you has been the rashness of corn farmers in going on growing corn at prices which could not possibly pay?—Yes, that naturally is, more or less, my own opinion.

Cause of farmers' losses.

47,975. Did you learn whether the farmers who had so suffered ascribed their confidence in any measure to the hopes held out to them of a recurrence to protection?—No, I do not think that any farmers really have what you might call well-founded hopes of protection—much the contrary.

"Protection."

47,976. You do not think that it is necessary to suppose that the farmers had been in truth misled by promises or anticipations which could not be realised?—No, I do not think so. A great many farmers said to me that there was no good in talking of protection,

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

that protection ought to be, but that there was no good in talking about it.

47,977. But at the same time, I think you mentioned that they now talk of bi-metallism?—Yes, that is an increasing idea. The currency.

47,978. Then to that extent bi-metallism seems to have taken the place of protection?—I think it is running side by side with it; protection is a very easily understood thing, and bi-metallism is not.

47,979. You have learnt that they have some definite ideas with regard to bi-metallism?—Yes, they have.

47,980. Have they ever shown that they realised that bi-metallism, if good for farming, is good for every industry?—I do not think that the farmer in these times looks at the question of bi-metallism as it would affect other people, but he looks at it as how it would affect himself. I do believe that the farmers are beginning to realise that, in competition with such a country as the Argentine, the value of the sovereign is a very great deal more out there than it is here, and they are beginning to see that we are competing rather under disadvantages.

47,981. There is a great deal, that is to say, to be said both for protection and for bi-metallism?—Yes.

47,982. They, you think, are turning their minds to bi-metallism, and protection also, as giving some hope of a remedy?—Yes, they look at the cause as being low prices, and they say protection would raise the prices or bi-metallism would raise the prices; consequently they will go for one or both.

47,983. And to the extent on which their hopes and their anticipations may be well or ill founded, to that extent they may be misled or wisely led?—Yes, undoubtedly so.

Incompetent farmers.

47,984. Then with reference to one other point, is it the fact that in the industry of farming you have an inherent disadvantage in the difficulty of getting rid of incompetent farmers, as compared now with shopkeepers?—I do not think there is any inherent difficulty in getting rid of an incompetent farmer, because you have simply to act upon your power, and give him a year's notice. I think that landlords are very long-suffering, and in these times frequently do not take any action whatsoever to get rid of a farmer, even although he may be doing damage.

47,985. I think I have used a wrong expression in using the expression "getting rid of," but if I might direct your mind to the general operation in other industries, is it not the fact that incompetent men from various causes drop out of success and disappear?—Yes.

47,986. And may it be said of farming that men who are incompetent do not so easily drop out?—No, they linger on and linger on, and they do not collapse until they have brought down the land with them.

47,987. Then you would agree with me that an inherent disadvantage in farming, according to the information you have gathered with so much care is, that in farming there is a difficulty in shaking off the incompetent man?—It is very difficult once he gets a grip, as we say.

Tenants' capital.

47,988. Then may I pass on to what I understand you to say you find to be regarded as the worst features of the present condition. First of all I gather it is a very general depletion of farming capital?—Yes, a terrible loss of farming capital.

Serious position of farmers.

47,989. Then I gather that you consider from what you learned that there is very serious danger of a wholesale wiping out of the existing generation of farmers in extensive districts?—Yes, I believe that if all dues were called up at this present moment there would be an awful sweeping.

47,990. And an industry which is essentially dependent upon inherited habit and tradition like the industry of farming, is in great danger of permanent injury from the risk that a whole generation may at the present moment be seriously impaired in numbers?—I would not like to say that it would be a permanent difficulty, because, of course, when a man has disappeared; but another would rise in his place. I think the present generation of farmers are just on the brink of a precipice.

47,991. Farming is not a trade which would be easily or quickly learned?—No, it takes a man to be almost brought up between the ploughstilts to know his business.

47,992. Then I think a third instance you have brought into prominence showing the present condition of things is that land now for want of competent farmers and in consequence of the condition into which it has fallen is being wrecked by a class of adventurers?—Yes. Mr. R. H. Pringle. 9 May 1895. Adventurers.

47,993. That of course is a smaller matter but still you think it has substance?—I think it is a matter that ought not to be looked over because it is increasing.

47,994. Then I gather that you have learned that in the wide inquiry from the very competent men which you have met, their position is that the case is one for heroic remedy, for some exceptional remedy on the part of the State?—Yes, it will want to be a heroic one, I think, to meet the difficulties of the case so far as their views go. It must be a big remedy.

Agricultural credit.

47,995. May I ask this, finally, with regard to the remedies which have been glanced at; I understand that the farmers and others interested in the occupation of land, whom you have consulted, have spoken of State loans?—Yes, State loans for buildings; some of the buildings are very bad there.

47,996. Also, I think of agricultural banks?—Yes, I heard a great deal about agricultural credit.

47,997. May I ask whether you have gathered from them much on that very confidential point, how far the present action of the county bankers has been adverse to the interests of the farmer, or favourable?—Yes, I have not only gathered from the farmers, but I have gathered from the bankers what was going on. I stayed a night with a banker, and we threshed this point out very well, he gave me some excellent evidence; he admitted, himself, that he would not allow farmers to overdraw their bank accounts now, as he did 10 or 15 years ago.

47,998. During a long period the profits of the provincial bankers had been exceptionally high?—Yes.

47,999. Do you think they have been derived, judging from what you have learned, largely from the distress of the farmer?—I am not aware of that, but I think, probably, if they had not withdrawn the credit they formerly gave, the profits would not have been so high.

48,000. I suppose the bankers have largely assisted in the winding up of unsound farms?—Yes, they have sunk a great many of them.

48,001. They have taken the odium off the landlord, and have done that quietly, which otherwise might have created social agitation?—I think that the banks, in the first instance, have floated a great many men, and, consequently, having floated them, they were the chief creditors, and they sold them up.

48,002. To that extent the capitalist position was transferred from the landowner to the banker, that is, the capital invested in the farming; the floating capital was supplied by the banker and the capitalist in the joint concern, the farm was very often, I gather, the banker?—Very often.

48,003. And not the landlord?—And not the landlord.

48,004. I think you were not satisfied that you were in a position to say whether the provincial banks had made large profits?—No, I was not aware of it.

48,005. Nor whether if they had made large profits they had made large profits out of their farming clients?—I could not say that.

48,006. Assuming that were so, would that strengthen the case as you have gathered it for the creation of either agricultural banks or State loans or both?—The evidence I received from bankers themselves and from everybody connected with farming was that there was less credit given than ever, in fact that there was very little agricultural credit given by banks, and I do not know that the points you have mentioned could be answered by me.

48,007. Credit is being drawn in now in consequence perhaps of its having been rather freely given in the past?—Very likely.

48,008. In short the credit that was freely given in the past has had something to do with the depletion of capital now?—No doubt about that. There is more difficulty in obtaining credit, the credit that is obtainable is subject to a very high charge.

Digitized by Google

Mr. R. H. Pringle. 9 May 1895.

Advisory boards.

48,009. Then with regard to another remedy on which I wish to ask you one question, you found a concurrence of opinion in favour of the establishment of some kind of conciliation board?—Yes, I did among the tenants who referred to this matter. On the question of rent I do not include landlords.

48,010. And you are satisfied that the feeling is that a conciliation board under the present conditions of agriculture is imperatively required in order to give a greater security of tenure, to provide where necessary for the readjustment of rent and to settle minor differences?—I am forced to the opinion from what I heard in Bedfordshire, Huntingdonshire, and Northamptonshire, that if there was some system of conciliation it would be of immense advantage to both parties.

Fixing of rent according to revenue.

48,011. You have also glanced at a possibility of the solution of the present difficulty of the mode of occupying land by way of half profits?—Yes, I have brought that matter forward for the consideration of the Commissioners.

48,012. Have you found that amongst many witnesses the 73 farmers whom you have seen in these three counties, any of them have been disposed to take up the position that they are in truth the working partners in a joint business, and that the landlord is the sleeping partner?—I found a great many of the men who, although they may not have stated the case in your words, were becoming alive to the relations which they bore to the landlord—that their's was the capital in the land and that they were paying for the use of a thing which was no use. That has evidently set their minds astir, and that, I believe, is what is making them think of what is this thing called rent.

48,013. Then you think they are perhaps inclining now to viewing their relationship to the landlord as analogous to a partnership in any other industry?—Yes, I think they are, with regard to this question of rent.

Railway rates.

48,014. Then one last point, and I will not trouble you further; you have spoken of the strong opinion that prevails with reference to the cost of distributing produce by rail, and the fact that railway companies are not under any "most favoured nation clause" and that they regard themselves as entitled to settle rates with reference to the interests of their industry independently?—Yes, and with reference to the interests of their shareholders.

Mr. R. H. Pringle. 9 May 1895.

48,015. Within the parliamentary maxima?—Yes.

48,016. Has that been at all freely discussed in your presence; you must have had very highly intelligent witnesses in some of these counties; have they at all shown that they have entered upon the question of the present system under which railway companies make their charges?—I do not know that their arguments would exactly stand your examination, but they certainly do speak very decidedly about the treatment of the railways in regard to these preferential rates. The farmers know them all, and they have got figures; they produced all these figures to me. They cannot see why railways should not bear a little of the depression.

48,017. Are they disposed to look upon their industry in one light, and the industry of the railway company, enjoying a certain monopoly under an Act of Parliament, as in another light—did you find that at all—I do not want to put any leading questions, of course?—That is all right. They seemed to think there was a very serious depression affecting agriculture, and that there is no depression at all affecting railways.

48,018. They are aware, I suppose, that agricultural capital is greatly reduced?—They are.

48,019. They are aware that railway capital is not only reduced, but is extraordinarily high?—Yes.

48,020. And that the railway company capital of the country, is probably vastly in excess of the actual value of the railway material?—Yes, and at the same time they are also aware of the fact that shareholders are being paid dividends from 3 to 5 per cent., while they are getting nothing out of the land at all.

48,021-2. Three to 5 per cent. upon the capital stated?—Upon the shares, and that upon the capital represented in their farm holdings, they are getting no interest at all.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Ninety-second Day.

Friday, 10th May 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Rt. Hon. BARON RENDEL.
The Rt. Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.

CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant Secretaries.*
ALAN MACKINNON, Esq., }

Mr. ROBERT HUNTER PRINGLE recalled and further examined.

Mr. R. H. Pringle. 10 May 1895.

Bad seasons. 1892

48,023. (*Chairman.*) I gather from your report that the districts you visited in the counties of Northampton, Huntingdon, and Bedfordshire have suffered severely from three successive bad seasons; first, the season of 1892, which was a very bad one, I think?—Yes, it was.

48,024. With a very late frost which occurred so late as the 16th June?—Yes.

48,025. And then did great damage?—Great damage.

48,026. And generally was a very wet season?—It was a very bad harvest in 1892.

48,027. Then the next year there occurred the great drought?—Yes.

Mr. R. H. Pringle. 10 May 1895. 1893.

48,028. And that told in exactly the opposite direction?—Exactly.

48,029. But was equally disastrous?—It was.

48,030. Whereas, generally speaking, a dry season is favourable to heavy lands, the drought on this occasion was very disastrous?—It was excessive and disastrous.

Digitized by Google

Mr. R. H. Pringle. 10 May 1895.

48,031. And the injury done by a drought of that kind was almost unprecedented?—It was explained as being quite unprecedented in the memory of man in those counties.

48,032. Should you say that, generally speaking, a dry hot season is good for the heavy land in the centre of England?—Without a doubt it is for arable land.

48,033. There was the extraordinary exception, therefore, that a very prolonged drought in hot weather was injurious?—Yes, it was, because it began so early and continued so late.

48,034. And the produce was extraordinarily low for that year?—Very low.

1894.

48,035. Then, in 1894 the season again was unfavourable, was it not?—The season was good up till a certain date, up till about a fortnight before harvest, I think, and then it became very wet.

48,036. And that did great injury?—It did the more so on account of the very heavy crops. I never saw more beautiful corn crops in any county, and before I left Northampton I never saw as much lodged corn.

48,037. Then they had the misfortune of this bad harvest and of this extraordinarily bad weather, which laid the corn very much, and resulted in a very inferior product?—Yes; the barley was very highly coloured.

48,038. And the wheat was damaged?—Yes.

48,039. I suppose that accounted to some extent for the great fall in prices?—I am sure it did.

48,040. Because very inferior produce was sent to market?—I am quite sure it did; it explained it particularly in the case of the high coloured barley.

Expense of harvesting in 1894.

48,041. Therefore, this district suffered, as I have said, from three successive bad seasons?—Yes, and if you will allow me to state it also, the expenses of the harvest in 1894 were unusually and exceptionally heavy. I have a letter from a gentleman on the subject. I have no hesitation in naming him—Mr. Richard Britten, of Abington, quite close to Northampton, who has a splendid farm, and who is a good farmer. He wrote to me, and said every acre of corn had to be cut with the scythe and the sickle in 1894. That, of course, made a very heavy expense.

48,042. That was also a cause of loss to the farmers?—Undoubtedly.

48,043. The expense of harvesting was very great?—Yes, it was very great.

Effect of seasons in Durham and Yorkshire.

48,044. I suppose, comparing this district with the other districts that you visited, namely, that of Durham and Yorkshire, this district has suffered infinitely more from these three bad seasons than the district up in the north?—It did; 1893 was rather a good season in the north.

48,045. They did not suffer from the drought?—It was not so excessive; they had rain at the proper time, that is about May.

48,046. Then, probably in the north, the heavy lands rather gained by the dry weather?—In the north, in the district that I was in, there is not so much heavy land to be seen, particularly under the plough, so that the question of heavy land really did not come so much under my notice then.

48,047. But at all events those districts did not suffer in 1893 from the drought, and I think I am right in saying that they did not suffer to the same extent from the bad weather and the bad harvest in 1894?—No, it was a good harvest. I was there at harvest time and it was a very fair harvest in the north.

48,048. Then may we infer that a good deal of the present condition of the farmers in this central district has been due not merely to the low prices, but also to the fact of there being three successive bad years?—I would not like to say a good deal of it, but a certain portion of it, undoubtedly.

Effect of wet seasons on grass lands.

48,049. Then, I rather gather also that the grass districts had never quite recovered from the successive wet seasons which culminated in 1879?—I think the consequences of these wet seasons were undoubtedly visible, and felt until, perhaps, two or three years ago, and since then the dry seasons have rather improved things again.

48,050. But they suffered from a succession of bad seasons which deteriorated the quality of the grass?—Every person agreed in that. The better class of grasses, the finer variety of grasses died out, and aquatic grasses and coarser grasses came.

Mr. R. H. Pringle. 10 May 1895.

Comparative effect of the seasons

48,051. Comparing the two districts, would you say that the loss on the part of the farmers in this central district as compared with the other district is largely due to the bad seasons?—Yes, I certainly do say so. I think that the year 1893, which, perhaps, sealed the fate of many men in Northamptonshire, helped a great deal a lot of men in the north. In the north they all described 1893 as having been a good season and a profitable season.

Characteristics of district.

48,052. Now, I gather from you that there are three classes of land in this district. First, there is the fairly good land, which is called the good turnip land, and fairly light land, next there is the fen land, which is also good land, and then there is heavy land, which is the inferior?—Yes.

48,053. What proportion of the whole district would you say consists of the heavy land?—I looked into this and I absolutely scaled it on the map, so as to be able to give you, in this respect, an approximate figure as near as I could.

48,054. Of course I do not want it very accurately, it is not possible, I know, to do it very accurately; but what is the general average?—About one-fourth of Huntingdonshire is occupied by fen land; there is a little fen land in the top corner of Northamptonshire; but I do not think there is any fen land in Bedfordshire at all.

48,055. How much of the remaining three-fourths in Huntingdonshire is heavy clay?—I say in paragraph 3 "The clay belt which occupies the northern county "division"—of Bedfordshire—"may be said to begin "at Turvey and Stagsden on the west, and stretches to "the north-east across the Huntingdon boundary till the "Huntingdon and Ramsey fens are reached. Thus it "will be seen that at the lowest estimate about one-third "of the soil of these two counties" of Huntingdon and Bedford "is strong cold clay—essentially wheat, bean, "and bare fallow land."

48,056. And of Northamptonshire how much is heavy clay?—In Northamptonshire there is not so much. There is a narrow strip which runs all along the borders of the counties of Bedford and Huntingdon; I really could not say the width of it, but it is a narrow strip.

48,057. There is nothing like the same proportion that there is in Bedfordshire and Northamptonshire?—No. In the south of Northamptonshire, in the Towcester district, you come across clay districts here away and there away; but I could not form any idea.

48,058. Should you say one-sixth or one-tenth, or what?—I do not think it is as much as one-tenth.

48,059. Not as much as one-tenth?—No, I do not think it is. Northamptonshire is along thin narrow country.

Characteristics of cultivation.

48,060. In parts of Northamptonshire there is very good grass land, is there not?—Excellent grass land.

48,061. On which cattle may be fattened?—Without cake.

48,062. What extent of that should you say there is?—That is about the outlines of the grass district. I have made a blue line on the map, if you can trace it, beginning up near Rockingham on the north side, and then running away down Lord Spencer's property towards Northampton. That is all good fine grass land.

48,063. Is that about one-fourth part or one-third part of the county?—It is not one-fourth, because there is a great elbow down there (*pointing to map*).

48,064. I suppose that district is mainly a grass district?—Yes, perhaps a farm of 300 acres would have 60 or 70 acres under the plough.

48,065. They do not make that their main cause of profit?—No, that is auxiliary to pastoral farming.

48,066. They grow enough corn for the purpose, probably, of supplying themselves with straw?—That is what they do.

48,067. And they very likely now, considering the low price of wheat, feed their cattle upon that?—I think probably they do; in fact, I have no doubt they do.

48,068. That district, I presume, has not suffered to anything like the same extent that other districts have?—No, it has not.

Digitized by Google

Mr. R. H. Pringle.
10 May 1895.

48,069. I presume that what they do is that they buy in cattle at the beginning of the season and sell them?—Yes, they fatten them on the grass.

Cattle dealing.

48,070. Therefore what they make their profit on is the difference between the buying price and the selling price?—That is so.

48,071. And if they buy low they may, perhaps, sell low, but still the margin between the two may be enough to pay them?—It may be. They have very low working expenses, and it has become of late years a very common thing for these grazing farmers to buy cattle in the back end, that is in the autumn, and winter then in the fens or in arable countries practically almost for nothing, so that they get the winter growth of those cattle which are brought into good condition and fattened on the pastures.

48,072. They naturally do not suffer so much from low prices, because they buy their cattle low, and they sell them after having fattened them for an additional sum?—Their advantage is that they have a very low cost of production.

48,073. And they, I suppose, have gained from the low prices of feeding stuffs of all kinds?—No doubt of that. The only thing is, that I think the quality has not stood the test. I think the cakes and artificial foods, although they may be cheaper now, are not quite the quality of the old cakes that even I remember.

48,074. Then the remaining part of Northamptonshire consists of fairly good arable land, I suppose?—Yes, with a little touch on the strong side, but it is a good quality of land.

Demand for farms on grass and fen lands.

48,075. I think you said in respect of that land, and also still more in respect of this good grass land and the fen land, that there is a demand for farms when they are vacant?—There is a demand for a good quality of soil in good order and of reasonable size.

48,076. Subject to a reasonable reduction of rent?—Yes. The agents told me that they had no difficulty in letting useful places.

48,077. Do they find men of capital ready to come in and take these farms?—I cannot recollect any agent having said to me that men with capital were willing to go into the thing, because I think capital is fighting shy of it a little bit; but they are substantial men as farmers go.

48,078. There are substantial men as farmers go ready to take these farms?—Yes; and I know of instances. There were farms taken when I was there, particularly in this very district you are talking about, and they were taken by good men.

Rent.

48,079. What kind of rent was it reduced to—to 1*l.* per acre?—One farm that I am thinking of was taken at the rent that the old tenant paid, but he had got a very considerable reduction; he had got a reduction of 40 per cent.

48,080. What was it reduced to; had it come down to about a 1*l.* an acre?—Yes, I believe a 1*l.* an acre was the very figure.

48,081. Then that probably was reduced from 30*s.* or 35*s.*, which would be the rent in better times?—I believe I can identify that farm in one of the accounts given in the Appendix to the Report. It has been reduced from 32*s.* 6*d.* to 20*s.*

48,082. A 1*l.* an acre for the land of which you speak in Northamptonshire, this fairly good arable land, may now be considered as a fair rent?—It is the rent. I may mention that there is some meadow land on that land, good meadow land, Nene Valley land, which possibly enhances the value of the place.

48,083. Then the better grass land, which is suitable for feeding cattle, I suppose will carry a higher rent?—Yes, it does. I made out a table of these rents, and it appears on page 25, paragraph 87, of my report.

48,084. I had that in my mind; it is the fine feeding pasture land which is useful for feeding cattle without cake?—That is so.

48,085. And that, even now, lets for from 30*s.* to 55*s.* an acre?—Yes. That 55*s.* an acre farm I was all over. That is rather an exceptional case. It is quite close to Northampton town, and it is not only very fine grass land, but it is almost all accommodation land.

48,086. But apart from an exceptional case like that, I presume the ordinary rent rises from 35*s.* probably to 45*s.*?—Something like that, I should not think there is very much let at 45*s.*, unless you get somewhat near a town or a railway station.

Mr. R. H. Pringle.
10 May 1895.

48,087. Should you say that the land lets at from 30*s.* to 40*s.*?—That will do.

48,088. That seems a pretty fair rent?—Yes.

48,089. At that rent we are to take it that there is a demand for farms?—Yes, there is. These good grazing farms are not very easily got.

48,090. And there are people ready to come in and take them?—Yes.

48,091. I suppose in all that district there is no real difficulty practically, except that prices may be somewhat low, and that has caused a reduction of rent?—That is the impression that everything gives me in that district. There are not the same causes or elements of depression there as there are in the corn-growing district.

Demand for farms on arable land.

48,092. Then on the arable land, which is still good land—not the heavy land that you have spoken of—even there you say that there is a demand for farms?—Yes.

48,093. Even there, I presume that some alteration in the cultivation has taken place?—Undoubtedly.

48,094. And a larger amount is laid down to grass than there was?—Yes.

48,094*a*. But still a fair proportion of the land remains arable?—Yes.

Laying land down to grass.

48,095. I think your opinion is that the farmers there might sooner have directed their attention to the laying down of land for temporary grasses?—Yes. I would not like to base it on my opinion, because it is the men themselves who think this; they wish that they had begun this earlier, as then it would have saved them losses which undoubtedly they have sustained since.

48,096. This is what you say at paragraph 116; "Undoubtedly there have been losses, and taking the "past 14 years farming has not been conducted "to profit; but I believe that this is traceable to a very "large extent to the unwillingness to give up suddenly "the old rotation or introduce anything savouring of "listless agriculture, and not to any serious obstacles "in the way of farming to some profit on an altered "system"?—Yes, and I think that.

48,097. In your opinion they might have mitigated to some extent the losses and bad influences by somewhat earlier extending the period of their rotation and cultivating a certain portion of the land in temporary grasses?—Yes, I think so, and I do not think that it will be denied by almost any farmer that I saw there, that they feel that themselves.

48,098. Then probably it is due to the discovery that they can do better in this direction that there is now a demand for these farms, and that they are not cultivated so much exclusively as arable farms as they were?—I think that the good land, which is what we call convertible, possesses a very high value on that ground; I mean land that takes kindly to grass for two or three years.

Reduced labour.

48,099. Now on farms of that kind, I suppose that by adapting this process there would be some reduction of labour, but not a very great reduction?—Yes.

48,100. If you change the rotation and the cultivation by extending it from a four-years' system to a seven or eight-years' system, and have a larger proportion of the land in temporary grass, the farmer is able to do with a somewhat less amount of labour?—Yes.

48,101. But still no very considerable reduction of labour?—I was just trying to think if I could not give you a figure. I think that the conversion of a farm from the Norfolk four-course to the Scotch seven-course rotation would mean a reduction of wages to 65 per cent., that is a reduction of 35 per cent.. the wages would be 65 per cent. on the new system of what they were before.

48,102. That would be a reduction of one-third?—Yes, I think it would.

48,102*a*. Probably that has been already effected over a considerable district, and accounts for the reduction in the number of labourers that we perceive in the agricultural returns as compared with 10 or 15 years ago?—Yes, I have no doubt to a certain extent it does explain that. I have got some very interesting evidence on page 23 on that very point.

Digitized by Google

Mr. R. H. Pringle. 10 May 1895.

48,103. I suppose that on the farms on which the cultivation has been altered in this sense the returns are much more largely due to stock and to cattle and so forth, than they were?—Yes, that is so.

Dairying.

48,104. And I suppose, to some extent, to dairying too?—Yes, the dairying has increased. Wherever you get these temporary pastures, of course you have stock in some shape or form in an increased quantity.

48,105. And it is to that we may probably attribute the fact that in spite of all the difficulties of low prices the farms are still lettable?—Yes, I think it is a decided advantage to a farm, and it enhances its value in the eyes of a person looking for a farm if he knows that his place is not stiff to work as arable land, and can be used as temporary pasture.

Extension of temporary pastures.

48,106. Do you think that this process of altering the cultivation can be carried still further in many parts, and that they are still hanging on to the old system too much?—Yes, there are a large number of men who have not, I consider, adapted themselves to the times, and who very likely are, on account of the losses which they have sustained, not just in the position to change because they have not the capital to stock the land.

48,107. Still, the farms could be let if those men left, and others would come in?—Yes, they could be let, provided the tenant did not remain there until he had destroyed the place.

Assessment to local rates.

48,108. Now, turning to another subject, did you find that the assessments for the local rates had generally been reduced in proportion to the reduction of rents?—Where there have only been remissions the assessments have certainly not been reduced.

48,109. But where there have been permanent reductions?—There they were reduced.

48,110. Would you say, as a general rule, that the assessments have been reduced?—Yes. I say, as a general rule, wherever the rent has been permanently reduced the assessment has been reduced. I do not think I have met with any case where it has not been so.

Permanent reductions and temporary abatements of rent.

48,111. Have the permanent reductions been considerable all over the county?—No, they have not; a great many of the estates have made very few permanent reductions. They have given returns year after year, and year after year, varying in quantity. I was rather surprised to find that.

48,112. Is that really so?—It is so.

48,113. Not actual permanent reductions over a large extent of the county?—There were permanent reductions made between 1880 and 1883. That, I take it, was in consequence of the bad years following 1876; but since those permanent reductions have been given there have been a lot of remissions and returns. I think that within the last two or three years, perhaps, there has been a return to permanant reductions.

48,114. That is to say, temporary abatements have been converted into permanent reductions?—Yes, that is what has taken place. I could mention the names of some of the largest estates in these counties where there have been no permanent reductions made since 1882.

48,115. In what part of the county, in the best part of the county?—All over these parts. I am thinking of Bedfordshire just now. One of the largest estates in Bedfordshire have made no permanent reductions. I mention it in the report and I mention also the Duke of Bedford's name, because I do not think the Duke would have any objections to it.

48,116. I think we heard in evidence before, that on the Bedford estate, the reductions have been rather in the nature of abatements year by year, but not permanent reductions?—No.

48,117. (*Viscount Cobham.*) They have been very large in many cases?—Fifty per cent. for the last three years.

48,118. (*Chairman.*) They have been very large and generous?—Yes.

48,119. But they have been in the nature of temporary, year by year, abatements, and not permanent reductions of rent?—That is exactly the case.

48,120. But I think it has been generally the evidence elsewhere that the reductions have been permanent?—There are a large number or estates where the system of temporary reductions or abatements has been continued, and there it is that the tenants complain to me of the impossibility of getting their assessments reduced.

48,121. Wherever the reductions have taken the form of annual temporary abatements, though they may be year by year, the tenants have not had the advantage of the reduced assessments?—That is exactly so, and members of the Assessment Committees told me that they did not see why they should.

Mr. R. H. Pringle. 10 May 1895.

Assessment to rates.

48,122. In the Bedford Union I see the reduction in the assessment has been from 121,000*l.* to 74,000*l.* a reduction of 46,000*l.* upon 121,000*l.*, which is over 30 per cent.?—Yes.

48,123. That would indicate that in that union at all events the permanent reductions have been more than 30 per cent.?—Yes, I am sure you are right.

48,124. At all events you admit this, that wherever the reductions of rent have been permanent, the occupiers of the land have had the advantage of that in the reduction of their assessment?—They have, undoubtedly.

48,125. And there is reason to think, therefore, that they had a considerable advantage in that respect?—Yes, I am sure they have. I would like to refer you to Table A 4, which I produce almost at the beginning of the appendices.

48,126. I have been looking through those figures with the view of finding a case where the rates were shown independently of any other payment. In most of these tables, the rates are mixed up with other things, and it is difficult to make them out?—I know it is, and I am sorry for it.

48,127. There was one case I discovered where the rates appeared to be shown separately?—I think there are four cases where the rates are shown separately, Appendix A. IV. gives in the first table particulars of remissions of rent given to a tenant of a Bedford farm of 260 acres.

48,128. Turn to page 127 of your Appendix, there is a case there given where the rates are shown separately of a farm of 316 acres; it appears from that that the actual rate paid in 1885–86 was 42*l.*, which was about half-a-crown an acre, and in 1893 it was 27*l.*, which amounted to 1*s.* 6*d.* an acre?—Taxes, I am sure, should go along with rates, the farmers always keep rates and taxes together.

48,129. That is not stated here?—It is not, because, of course, I had simply to copy the things out as I got them.

48,130. It would seem as if it was only the rates here?—It appears so, but I am sure it includes the taxes.

48,131. The presumption is, looking at his profits, that the farmer of that 316 acres paid no income tax?—I am sure that in 1893 there were a great many farmers who appealed and got off the income tax. The fact of the tax not appearing there is simply due to the fact that I did not like to put anything into the accounts that were sent to me.

48,132. Assuming this was actual rates, the reduction was in actual payment from 42*l.* to 27*l.*, and from 2*s.* 6*d.* an acre to 1*s.* 6*d.*?—In that case, I should say on that assumption that I am perfectly sure there was a permanent reduction, and that the assessment was reduced. Might I refer you to Table 3 on page 92. This is a case, and I remember the estate well and the farm too, where there had been remissions year after year, but the assessment stands precisely the same.

48,133. Is that one on the Duke of Bedford's estate?—No; that is not the Duke of Bedford's.

48,134. The rent there has been reduced from 1,250*l.* a year to 940*l.*; that is, a yearly abatement has been made equal to that?—Yes.

48,135. Apparently every year there has been an abatement; but the result of its being given in that form and not made a permanent reduction has been that the assessment has been maintained?—It has.

48,136. Therefore, the tenant has been under the disadvantage of being assessed at his previous full rent, and he gets no benefit from the reduction of the rent?—That is so. I have got the balance sheets of that farm, and if you will please refer to page 112, Table C. III., you will see the rates paid in each case. The accounts begin in 1893.

48,137. Apparently there the rates and taxes, whatever that may mean, have continued very much the same; they were 161*l.* in 1882, and in 1891 they were 153*l.*?—Yes, that is so.

Digitized by Google

Mr. R. H. Pringle. 10 May 1895.

48,138. That is a very slight reduction; whereas, if the assessment had been reduced in proportion to the real admission of rent year by year—namely, by one-third—the farmer would have had the advantage probably of a reduction of 50*l.* a year?—A full 40*l.* at any rate.

48,139. What was the acreage of that farm?—922 acres.

Land courts.

48,140. Now, with regard to what you said about land courts, I think I understood you yesterday to say that the general feeling of the district in which you have been was against a land court?—Yes. I believe I did meet with two persons who were rather in favour of land courts, but the great majority were not.

48,141. The others were opposed to them?—Yes.

48,142. Did they give you their reasons for being opposed to land courts?—I think it was a sentimental objection to appearing in public and giving evidence of this kind.

48,143. Did they object to an independent person appointed by the State determining what shall be the rent for a given period?—No, on the contrary, I think they would be in favour of any quiet peaceable system by which disputes could be arranged or settled. They have a very kindly feeling towards their landlords.

Advisory board.

48,144. I think you gave expression to this: you said that what they wished for was an advisory board?—Yes, that is the nature of it.

48,145. But that did not, on the face of it, appear to indicate anything like compulsion?—No, I think compulsion is the last thing that the tenant would like.

48,146. By compulsion I mean an independent person who should say what the tenant should pay for a specific period. Let us suppose a dispute between landlord and tenant as to what the future rent should be, and that there should be a difference between them of 100*l.* a year. Do you think that those persons that you saw would agree to be bound by a person who might determine that the tenant should pay 50*l.* a year more than he is prepared to offer?—I am quite sure that they would accept the ruling, even in a matter of £ *s. d.*, of a person to whom both parties submitted a matter of this kind.

48,147. "Both parties submitted"—but that is a matter of agreement to submit; do you think that they would wish and desire that some person independent of agreement should determine the rent that should be paid?—Yes, I think that their opinion is that there ought to be some person to whom they can appeal, and in the event of their not agreeing with their landlord; that they should say: "Well, we will put the matter "in the hands of this person."

48,148. Is that by agreement, or is it by compulsion, so to speak? Could either party say: "Well, as you "do not agree, you must come before this independent "person"?—That is compulsion.

48,149. Is that what they desire?—Yes, because if it were not, I think they believe there would be no good in it at all.

48,150. One would be rather glad to hear what they actually think themselves upon such an important point. Could you refer us to any representative man who would give us the views of the farmers of the district, and state what they really mean, because the expression of an advisory board seems to me to be rather opposed to the principle of actual compulsion?—There were so many of them that spoke to me that it would be equally the same, I think, which gentlemen you selected. The feeling is very general.

48,151. It is rather desirable to have somebody before us who should express what they really mean by the proposal. Perhaps you would think over it, and suggest some representative man to give us an indication of their views?—I could do that very easily.

48,152. I do not think you had meetings of farmers?—None.

48,153. You only dealt with individuals?—Yes, and very privately.

48,154. You only saw about 100 out of five or six thousand farmers in the district?—Yes.

48,155. You did not meet them at any public meeting?—No, I did not.

Mr. R. H. Pringle. 10 May 1895.

Arbitration for fair rent.

48,156. Do you know whether this subject of the arbitration of rents or of land courts has been discussed by the farmers' clubs in the district?—No, I am not aware that it has; I do not think it has, and I do not think that farmers would speak upon that point, particularly the class of farmer that I had to do with, unless it was absolutely put to them on the question, what about security? I think that the farmers are rather afraid of talking of those matters; they are afraid that it might damage them in their position with respect to their landlords.

48,157. The subject has been very much discussed at other farmers' clubs in other parts of the country, and apparently the farmers have had no difficulty in expressing their opinions for and against it?—They have had no difficulty in expressing them to me.

48,158. Have you any reason to suppose they would not be equally ready as in other districts to express their views at public meetings?—If you will pardon me for saying it, I know that the position of a practical farmer—a man who is not very well up to giving evidence—is that he finds it rather terrifying to have to face so very many people.

48,159. I am not speaking of here, but I am speaking of their own clubs and meetings?—I do not know about that. There would be no difficulty whatsoever, if I had half-an-hour or an hour to look through the names, in my giving you the names of two or three witnesses whom I think you would find useful in that matter.

48,160. Is there an unwillingness on the part of farmers in the district to take leases?—Yes, there is. Leases have never been popular there, and they are more than ever unpopular now.

Yearly determination of rent.

48,161. Then they would not, I presume, like to be bound for any time, whether by agreement with their landlords or by the intervention of some other person for a specific rent for a definite period?—I think they are quite prepared to be bound to time subject to this power that they would like to have, of never paying what is an unfair rent. But this is only conjecture on my part, for fixity of tenure was not mentioned save by the few who desired the introduction of the Irish system pure and simple.

48,162. Just let us understand what that means. Is the decision of this independent gentleman to be merely for a year or for a term of years?—Until another dispute arises, I should take it.

48,163. That might arise the next year?—Then there would have to be another reference to him.

48,164. Another reference with all the difficulties of determining what the rent should be?—Yes, with all the difficulties, and very numerous difficulties they are.

48,165. Therefore it would practically involve this: that every year there might be a question what the rent should be, and that that should be determined by an independent arbitrator?—I think so. Of course you can strain it to that length quite easily, but on the other hand, what I think the feeling of farmers is that if this thing was in existence probably it might deter a great many of these disputes, and lead to agreement without the interference of anybody at all.

48,166. Might it not have possibly an opposite effect?—It might.

48,167. If there were an independent arbitrator either party might be inclined to go before him every year. A good harvest might come, and the landlord might say: You can pay a little more rent. A bad harvest might come and the tenant might say: I think I ought to pay rather less, and either party under either circumstances might be inclined to take the other before this independent arbitrator?—I think that, perhaps, the ruling of a person of that class would act as a guide pretty well all over the district in which he was employed. I think there would be both direct and indirect value from it.

48,168. At all events, you think there would be an unwillingness to accept any decision for a definite period, say for five years or for seven years, and that the same objections which they hold to making a lease for seven or nine years, or whatever the time may be, would hold to any determination of rent by an independent arbitrator for the same period?—Yes, I am sure of that. I am certain that no person mentioned to me the necessity of having a set figure put on for a term of years. It is just this: that they appear

Digitized by Google

Mr. R. B. Pringle. 10 May 1895.

to feel, even the best farmers, that there is a difficulty at present, and that when these differences of opinion arise some way or another there is something which has to be bridged over between landlord and tenant.

48,169. Precisely the same objection which they would now have to binding themselves for a lease of seven years or nine years or 14 years, they would have to a determination of the rent for the same period by an independent arbitrator?—Yes, I think they would; I think they would not like to be bound down.

48,170. It practically comes to this; that the rent would have to be subject to a determination by this independent arbitrator upon the complaint of either party year by year?—Whenever required.

48,171. (*Mr. Channing.*) They really had not thought out the details of these difficulties, had they?—I do not think, so far as I am aware, that these matters had been discussed in public by these farmers. It was just a very deep probing on my part that brought them out.

48,172. (*Chairman.*) Still, it is important to know what the actual suggestion is?—Yes.

48,173. And when you give the expression of opinion of such men it is advisable that we should know what is really meant?—Yes.

48,174. (*Mr. Elton.*) I thought from what you said before that the farmers were not thinking of rent specially, but all disputes in general?—Might I refer you to the paragraphs on this point. I think it is put as plainly there as I can possibly put it. I refer you to pages 58 and 59, beginning at paragraph 170. The chief element in the disputes, I think, is the question of rent.

Advisory board.

48,175. (*Chairman.*) Undoubtedly your report indicates that the question of rent is one of the matters of dispute which you think the farmers would desire should be submitted to an independent arbitration, but your language yesterday when you described the nature of the thing hardly seemed to come up to that point, and the very term that was used by you as representing the views of the tenants that you met,—namely, that they objected to a land court but that they wished to have an advisory board of conciliation—seems to indicate rather a body who should intervene on the invitation of both to advise as to what should be the rent, but not necessarily compelling either party?—I think that that would be conciliation which would hardly be worth anything. That is in existence at present; there is nothing to prevent landlord and tenant calling in a third party and asking him to value the land; if they do not like to consent to it they need not.

48,176. (*Mr. Channing.*) You point out in paragraph 189 that the court or board of assessors would have as their duty to advise and assist the arbitrator in difficult and doubtful cases?—When one person, this arbitrator, feels that he would like some advice and assistance upon a certain point, they seem to think there ought to be some person whose advice he ought to call in; those would be the duties of the board of assessors.

48,177. (*Mr. Clay.*) Your idea is that you would like to see these official referees made into an advisory board, to sit and take evidence. Is that it?—On the contrary, I think that a board which would sit and take evidence would be objected to. Any evidence would be taken by the official referee alone. Landlord and tenant would never come in contact with the persons whose advice the referee would seek. I am simply endeavouring to represent, as well as I can, the somewhat scattered and undefined ideas of a large body of tenant farmers.

48,178. (*Chairman.*) Of course it is very important that we should really know what is meant by it; at all events we know from you that they do not desire that the rents should be determined for any specific term of years?—I distinctly gather that.

Yearly determination of rent.

48,179. Therefore, it would practically mean that the rent should be determined for one year; and, therefore, it would be open to this advisory board or this independent arbitrator to decide the kind of questions that a landlord has now to decide—such as whether there should be an abatement of rent for a particular year in consequence of the bad harvest?—If appealed to, yes.

48,180. Therefore it would be practically performing all the functions of a landlord in respect of rent year by year, determining whether, as I have said, in consequence of the bad harvest there should be a remission of rent for that year?—It would be performing to a very large extent the functions of a landlord.

Mr. R. B. Pringle. 10 May 1895.

48,181. Taking, practically, every matter out of the hands of a landlord, and referring it to an independent arbitrator?—Yes.

48,182. Year by year, not the fixing of rent of a permanent character, but year by year determining what should be done as between landlord and tenant?—Yes, whenever a dispute arose.

48,183. Therefore, if the tenant was to come and say to his landlord "I think this has been a bad season, "and you ought to make an abatement of 20 per cent." If the landlord refused, that should go before this arbitrator, and he should determine whether the circumstances are such that an abatement should be made; I only want to ascertain what their view is. I do not want to lead you on if that is not their view.

48,183*a*. (*Mr. Elton.*) In paragraph 178 it appears, as the point stands, that the witness gives his own opinion and not the farmers'?—That very paragraph you mention, there is no doubt about it, does appear as if it came from me; but anything that I have said in this report with reference to this county, or any other county, is simply the gist of what was told to me.

48,184. (*Viscount Cobham.*) Do you suppose that all these consequences that have been put to you now were present to the minds of the farmers you consulted?—I am unable to say how far they had considered the consequences which might arise, but so far as I can remember the matter was not discussed with me in the light of the future.

48,185. The consequences that have been put to you by the Chairman, I mean, were they present to their minds?—No; I was going to say that I had considerable difficulty in answering some of the Chairman's questions, because there were a great many of these matters which naturally arise, and which the Chairman pointed out which were not mentioned to me; it was just the one question of how to get over this difficulty, and then as to what would follow was not mentioned to me, but of course the Chairman led me on very kindly.

48,186. (*Chairman.*) There is a great distinction between an ill-defined sentiment and a deliberate opinion of a class of people after full consideration of all the consequences which would follow?—Of course.

48,187. (*Mr. Elton.*) In this paragraph 178 you say, "Assuming both the landlord and the tenant to be "honest men, who is most likely to know the fair rent "that this farm can pay?" And then you give your own opinion, "I fancy most people will answer, the tenant"?—That was put to me in cases after cases.

48,188. But that is put in your own words?—It was, but I had very good grounds for that, because farms were shown to me, and cases of new agents coming into the country were mentioned where there was a difference of opinion, and the farmers said to me, "This old tenant has been there for years and years."

48,189. I was not testing the statement, I was merely correcting you, as I thought you said you had only put down what the farmers said?—I quite admit that this does appear as if it was my own opinion there, but anything that I said was based altogether and formed upon what was said to me.

48,190. (*Chairman.*) However, you very distinctly are of opinion that in the views that the farmers have expressed in favour of this independent arbitration, they do not contemplate the fixing of a rent for a term of years?—No, they do not.

48,191. They would have the same objection to a rent fixed for a term of years, even a short one, say five or seven or nine years, that they now have to taking leases?—Yes, I think they would; the question of the term of years was not brought before me; and might I add that when the question of the Agricultural Holdings Act was touched on in connexion with what they call security, I am quite sure, from what I heard, that the tenant farmers that I saw in Northamptonshire are of opinion, and will say so, that the whole of this security question would be settled by the introduction of that sort of scheduling system I have mentioned—I think I have stated that.

The Agricultural Holdings Act

48,192. In other words, if there was a good Agricultural Holdings Act, giving full security for improvements, much of this demand for revision of rents might

Digitized by Google

Mr. R. H. Pringle.

10 May 1895.

cease; do you mean that?—I think it would meet this very point.

48,193. It would meet it, but of course it would not meet the question of the actual quantum of rent?—It would in this way, provided that landlord and tenant did not agree about what was to be the rent.

Security for improvements and revision of rents.

48,194. I understood you just now to intimate that the view was that a good Agricultural Holdings Act would, to a large extent, supersede the necessity of this reference of the rent to an independent arbitrator?—Yes, quite so, in the case of tenancies arising after the passing of a new Act.

48,195. They thought that?—Yes, they did undoubtedly. When the question was threshed out I went into that.

48,196. May we come to this conclusion; that rather in consequence of the difficulties of the Agricultural Holdings Act and the want of security for improvements the idea has been suggested to their minds of referring the question of rent to an arbitrator?—Yes, on this point of settling this question of rent, where disputes arise, if any other way could be conceived of settling it, I am perfectly sure that the tenant farmers would rather that there was no disturbance of the old, or introduction of a new system. If it could be done by the Agricultural Holdings Act I am sure they would like it.

Wages.

48,197. But that is not quite the same thing, and I thought you were indicating that an amendment of the Agricultural Holdings Act, giving full security to the tenant's improvements, might supersede the necessity in their minds of referring the question of rent to arbitration?—Yes, and that is the feeling of a great many of them in the case of future tenancies. The landlords, too, said that they thought that would meet the whole of the difficulties of the question. If I did not put it in my report, I should have done so certainly.

48,198. Now, with regard to the labourers, are we to take it that through a great part of the district the wages have been maintained, and that it is only in the worse districts where there has been a fall of late?—I think even in the worst districts the fall in the wages paid has not been very marked, but there is a great decrease in the quantity.

48,199. But the wages have been maintained?—Yes.

48,200. Except possibly to the extent of one shilling a week in the worst districts?—Yes, I think that is about it at certain times.

48,201. And that on the worst land?—Yes.

48,202. Where the position of the farmers has been very much injured by their losses?—Yes.

48,203. But on all this better land I suppose the wages have been maintained?—I think the wages are in some places, perhaps, a little better.

48,204. Looking to the fact that the prices are so low, I presume the labourers have benefited very largely?—I should think so, I did not go into the labour question very much.

Market gardening.

48,205. Did you examine any of the farms in Bedfordshire, where they grow vegetables for pickling, and things of that kind?—Yes, in the Biggleswade district, I did.

48,206. Do you know how those farmers are doing?—Yes, I think that these men are doing fairly well.

48,207. Has there been an extension of farming of that kind?—I think it has just extended as far as it is possible to extend it, considering the area of land is limited.

48,208. Does it not depend very much upon the neighbourhood of railways as well as upon the quality of the land?—Railways are an immense advantage, but all the railways in the kingdom would not enable you to pursue profitably what you may call market garden farming unless you have the right class of soil.

48,209. Is it confined then to a particular quality of land?—Yes, it is.

48,210. How large in extent?—I could not tell the acreage, but all round about Biggleswade. The onion trade is a very important one there, and I am told that they are growing a white-skinned onion; these white skinned onions have been tried on other soils of comparatively the same texture, but they have not been anything like the Biggleswade onion.

48,211. There are fields of small cucumbers, are there not?—The cucumber trade is suffering a good deal there.

48,212. What from?—From the competition with glass.

48,213. But on the whole you think the farmers have done well in that business?—I think they have done better in that business than what you would call ordinary agriculture.

48,214. We failed to get a witness from among them; they did not seem inclined to come and state their actual condition?—I can tell you the name of one good man, if he will come.

48,215. I have heard the names of several good men if they will come, but they will not come, therefore we are in this position, that we hear the worst cases, but we do not hear the best, is that not so?—Yes.

48,216. There are persons who do well in this direction in the district which you have been in, and some apparently have made fortunes?—One gentleman, I believe, has done well. I got almost all my evidence of the Biggleswade district from another gentleman who is a native of these parts, and knows it very well.

48,217. Is there not the same kind of thing in some part of the fen district too?—Not that I saw.

48,218. I understood that in some parts of Cambridgeshire there is fen land which has been cultivated in the same way; but you did not see it?—Not in Huntingdonshire, and I went through the fens there.

48,219. Would you say there is any possibility of the extension of what one may call intense cultivation in the district?—I think there is not. I asked that question of several farmers that I saw on the fringe of this market gardening district. They have tried to extend it, and it has proved a failure in every case.

48,220. (*Mr. Elton.*) You have mentioned that the cucumber trade could not be developed very well; I suppose Jersey has always stood in the way, has it not?—Yes, and I think more than Jersey. They attribute their difficulties to the increase in glass near London.

48,221. I recollect going to a stall in Covent Garden Market, and being introduced to the gentleman selling cucumbers there, and he said he should be clear with his trade by 9 o'clock, by which time he would have sold 8,000 very fine selected ones, all of the same size. Of course they are not on a very big scale in the district you have been to?—No, I saw some in Biggleswade, but very few, and I was told by some market gardening men that 20 years ago it was a very important part of their industry.

48,222. In a great many parts of England they have had onion fairs, which have gradually been given up, or have become very small affairs now; I remember at Bristol there was one, and they said the onions were brought from Brittany, and that the Breton people could compete better than their people in that trade?—Yes, they are sent in thin sacks, transparent things; you can almost see through them; there are plenty of them about.

48,223. That stands again in support of what you were saying, that you cannot increase it very much with the continental supply so very near at hand?—Yes, it does.

Duck farms.

48,224. You mentioned that you were in the part of the country where they grow Aylesbury ducks—not the Aylesbury breed, but very near the same thing, I suppose?—I only saw one of these duck farms.

48,225. You saw one duck farm?—Yes, I did; I was on it.

48,226. That cannot be increased very much, can it?—You can increase it to any amount, but I am not sure that you can profitably increase it.

48,227. I mean to a profit?—I should think probably not. This duck farming is an expert business.

48,228. You say that yourself; you say the moment the French parcel comes over, the English parcel fetches an unprofitable sum?—That is what this duck farmer told me. The ducks he had early in the market paid well, but the moment the foreign trade began to compete with them down went the price of ducks 50 per cent.

48,229. You have not been to the Aylesbury district, have you?—No, I was not there. There was a lot of ducks on this farm, I believe, 6,000 or 7,000.

Digitized by Google

48,230. Which soil?—Clay land; strong clay.

48,231. Wheat and beans?—Yes.

48,232. That is the Aylesbury ground?—I think they were Aylesbury ducks; they were white.

48,233. You could not find out anything about the increase of the noxious weed of wild onions?—I saw them and smelt them. A considerable area was damaged by them.

48,234. Did they apply to the Board of Agriculture at all about it?—I do not think they did.

48,235. Do you know that it prevents barley being profitable?—I am sure it must; the smell from that garlic will taint anything.

Insecurity of tenure.

48,236. (*Captain Owen Thomas.*) As I understand it, the farmers in this district desire a better security for their improvements in view of the increased competition which will come about if things get better, as well as in view of obtaining adequate reductions now?—I think that the feeling of the tenants is in anticipation of some demand that is going to set in if times mend, rather than having reference to the necessity for something of the kind at present. It is more for the future, I think, that they want this security.

48,237. They are looking to the future?—Yes.

48,238. And they are really afraid of spending their money now?—Yes.

48,239. Because they have not got sufficient security?—Yes, they gave me that idea, that they were afraid. I do not think there is very much money to spend, but still I think they feel that if there was better security capital would be better worth laying out.

48,240. Of course, with more capital spent they would do better?—I would not like to say that, because a great many of the men that had the most money in the concern, I think, had perhaps lost as much as any. Still, it would be an object undoubtedly, and agriculture cannot go on without capital being put into it.

Scheme of arbitration.

48,241. (*Chairman.*) Before we go to your Durham report, I must ask you a few questions again about your report on Bedfordshire, paragraph 189, in which you propound a very definite scheme of arbitration on rent, and in which you say that the general belief among the witnesses selected by you is in the direction indicated in that paragraph. We shall be very glad if you can give us any extracts from your notes showing what these several tenant farmers actually said to you upon the subject, so that we may see how far they really bear out your statement that your witnesses were in favour of this definite scheme. It is not necessary that you should give the names, if you give the initials?—What the men said to me was more of a vague sort of indefinite thing. I do not think that any of these men could prepare a scheme, but they all had some ideas as to what ought to be, and it was by accumulating these ideas that I drew up this paragraph.

48,242. It is a very definite scheme of yours?—Yes.

48,243. And it is important we should know how far the mind of these witnesses that you examined upon the subject was really in that direction, whether, as you say, it was a mere indefinite and vague something, if so, we should like to know what were the terms in which they made their communication to you?—The two points of what you have termed the scheme appear to be arbitration first, and then this reference by the arbitrator to some people who were to assist him.

48,244. Would you have any objection to quote from your notes the passages on this point showing what the views of the particular witnesses were?—Looking through my notes I have copied out one or two, and I think you have them in your hand; that really is the character of my note right through my books. I have not gone through them all yet, but I think you may take that as a specimen of the notes in my book.

48,245. Would you mind reading them; you need not give the names if you think these gentlemen would object to their names being given?—I think they would.

48,246. Very well; perhaps you would read those without the names?—Of course I cannot write shorthand, and my notes are necessarily very curtailed. I have to try and keep pace with the men's thoughts as well as their words, and so my notes are very much curtailed compared with what they would be if I could write shorthand. The first gentlemen that I saw said that "he would approve of arbitration to protect the "sitting tenant in the case of dispute about a fair rent. "It would not affect good estates at all, but would be "fair in principle." I remember the gentleman; we talked over this question for about half-an-hour together in his own room, and his ideas were that there was arbitration wanted, and that there was somebody called an arbitrator to discharge the duties of an arbitrator wanted, but his ideas further than that were very shady. He did not know exactly how the thing was going to take place, but that is what his idea was.

48,247. Of course the very term of arbitrator is not a very clear one. To most minds an arbitrator would mean a man called in specially *ad hoc* by the consent of both parties, and not a person whom either could summon in to determine the question between them in a manner which would make the decision compulsory upon both. Of course the important question is to know what these men meant by the idea of arbitration?—Of course I had to determine that in my own mind. These men had very shady ideas; there was something lurking in their mind that there ought to be some way of settling these things, and possibly this word "arbitrator" that I have used may be an improper word.

48,248. (*Viscount Cobham.*) The word "arbitration," I think, implies consent, as a rule.

48,248*a*. (*Chairman.*) Of course one couples it with the statement you made that these men were, as a rule, against land courts?—Yes, distinctly.

48,249. Therefore there must have been some distinction in their mind between the land court and the arbitrator?—May I read some more.

48,250. Yes?—The next gentleman said he "would "approve of arbitration in cases of dispute. It would "not be required here at present, but we know it is "required in other parts." That was frequently said to me by the tenants: "We do not want it ourselves, "but we know that it is wanted some place else," and they gave me instances. The next gentleman said, "thinks there should be arbitration in cases of dispute "between landlord and tenant." The next gentleman says: "Does not want any interference between land-"lord and tenant, but he feels that at present it cannot "be denied that the occupying tenant's position is very "insecure. The tenant is at the mercy of the land-"lord." The next gentleman "feels that the security "of the good tenant is very bad, and thinks that the "report system would settle it"; that is the report system under the Agricultural Holdings Act.

48,251. That, of course, does not go to anything like the extent of arbitration on rents?—No; I brought that out because it explains what I say in my report, that there is an idea among certain parties that this amendment of the Agricultural Holdings Act would meet the difficulty. The next gentleman, who was a tenant farmer, said: "Some system of settling disputes with "respect to fair rents is surely required." The next gentleman says he "surely approves of a Government "referee in case of dispute about future rent in the in-"terests of the sitting tenant; would go so far as to say "that in a new letting the arbitrator might be called in." The next gentleman says "the good tenant requires "protection. There should be some sort of arbitration "for disputes"; and that is as far as I have got in my books. I have not got half through Bedford county. The idea as to how this thing is to take place I grant and admit is very ill-defined, but from what they said I prepared this paragraph and thought that these remarks that I respectively submitted in my report would represent them.

48,252. Now that these paragraphs in your notes have been referred to, I would ask you whether you think that paragraph 189 is quite justified as indicating a scheme put forward on behalf of a considerable number of men?—I certainly answer that in this way: if I had no other evidence than the notes in my book, I would certainly say I was not entitled to have put any such scheme into their mouths—certainly not. But the fact remains that these men had their ideas all running in the same way, and I did everything I possibly could to get out from them how was this thing going to run, what form was it going to take, and they were all agreed that there should be some arbitrator, some person, to meet this difficulty. When this was said to me over and over again, I sat rather thinking over it.

Digitized by Google

Mr. R. H. Pringle.
10 May 1895.

48,253. Of course, one is obliged to take it in connexion with the other statement you made, that they are all opposed to the land court?—Yes, that is so.

Advisory boards and land courts.

48,254. To all intents and purposes there is very little distinction, I think you have admitted, between the land court and the scheme of arbitration such as you have developed?—I did not think that you asked me the question in that way. I do not know—possibly I am wrong—but I do not remember your having instituted a comparison as between land courts and that to me.

48,255. I think yesterday, in some answers you made to me—I put some questions, interrupting some other member of the Commission—you stated that you saw very little distinction in principle between a land court and an arbitration with compulsory powers, such as was indicated in the scheme; it was really a question of words and of sentiment, rather than any real distinction between them?—You may be right; my memory may be at fault.

48,256. It is extremely important to ascertain what was really in the minds of these people, especially as they condemned the principle of the land court?—Yes, they condemned the principle of the land court, and I am sure, looking through the whole of my books, I will find that the evidence given to me on this point is all of this character; that there is something wanted, and that, although I have not defined it in my note books, never for a single instant thinking of this arising, it was a repetition of the same thing, and it took me all my time to be thinking, What are these men driving at? and trying to get the idea into my own head.

48,257. (*Viscount Cobham.*) Surely compulsory arbitration for the fixing of rent is a land court pure and simple?—I remember saying this: that the objections to a land court, I believe, is more or less sentimental. I think it is the name of the thing, and perhaps the functions of this arbitrator may be just the land court over again. That may be.

48,258. (*Chairman.*) The difficulty is whether they thoroughly understood that this arbitrator was really nothing more than a land court in another name, or whether there was in their minds the idea that these arbitrators would either be only appointed *ad hoc* by agreement, or whether their decisions would be absolutely binding upon both landlord and tenant; the effect being that the tenant might be compelled to give a rent which he was not otherwise prepared to do?—I am sure of this, that although those men's opinions are very badly defined, still at the back of it all there is the fact that if this person, this arbitrator, is to exist, he will have some power which is not possessed by a private individual, and I think that, as you say, amounts more or less to the force of a land court.

48,259. The question is, then, whether they thoroughly understood that?—Yes, I am sure they felt that this arbitrator must needs have some power not possessed by a private individual.

48,260. Would you recommend to us one of these gentlemen as a good witness, representative of the class, whom we might call, so as to ascertain from him himself what his views are?—I have not got through the whole of the evidence yet; I have only got eight names; I know that one or two of these men would be very unwilling to give evidence.

48,261. I do not want to call them all, but one would like to have some good representative man from the district, who would fairly state the views of others in their own words, so that we may gather from a fountain source what their real views are?—Would you mind letting me send a note in about this, because it will take me a bit of time to look through the whole of the evidence? I will do it to-night.

48,262. Certainly. Would you wish to retain the paragraph 189 in its present form or not?—The matter of that paragraph is in your own hands; do with it what you like.

48,263. I do not want to alter it; I only ask, in view of those entries, whether you think the paragraph itself is fully justified?—No; in view of those entries, and feeling that the consequences which might follow such a change from the old custom were not discussed and probably were not thought of, I would ask permission to withdraw it until considerably modified.

Report on Durham and Yorkshire.

48,264. Now we will go on to this other report. With regard to Durham and Yorkshire, you found the condition of things generally very much better there than in Northamptonshire and Bedfordshire?—Yes.

Mr. R. H. Pringle.
10 May 1895.

48,265. That partly has arisen, I presume, from the fact that they have not had the same bad seasons there?—Yes, partly.

Condition of agriculture.

48,266. And partly that they have better markets close by, I suppose?—Yes.

48,267. And partly that the farmers seem to have more readily adapted themselves to the changing circumstances?—I think so, and partly again that there is not such a large extent of strong clay.

Laying land down to grass.

48,268. But even on the strong clay land things do not seem to be so bad as they are either in Northamptonshire or in Essex?—I did not see very much clay land. Most of the strong clay land that I saw was near Darlington. Up in those parts I think that they have succeeded in getting those lands to grass better; altogether, even with the clay lands, they do not seem to be in such a bad plight.

48,269. Is that due to the fact that they have better understood how to farm this clay land, with temporary grasses or laying it down to permanent grass, than the farmers in Bedfordshire and in Essex?—Yes, I think that they are perhaps better grass farmers up there.

48,270. They better understand it?—I think they do.

Demand for farms.

48,271. I think you say that generally throughout this district there is a demand for farms?—Yes, the same thing holds good there. Certain farms are desirable, farms of a certain acreage, with good buildings and with a good class of land; there is a good demand for those farms.

48,272. In paragraph 27, you say: "There is at "present no difficulty in finding tenants for good "medium-sized farms"?—Yes, that is so.

48,273. "Indeed there is a very keen demand for "those favourably situated. This applies to the whole "of the district I travelled"?—It does.

48,274. "No sooner does a good farm come into the "market than there are bidders for it, and, in many "cases, near towns, old rents are obtained"?—That is so.

48,275. One would gather from that that there is a keen demand for very good farms, but there is a fair demand even for the average farms?—Yes, there is a fair demand, and in the district of Darlington, which I went into pretty closely, and round about Middlesbrough, where you get into almost what you would call suburban farms, where milk and hay are sold for town purposes, there is a very keen demand.

Rent.

48,276. You say that in the neighbourhood of towns the rent has not gone down?—I think that farms in the neighbourhood of towns are making the old rent in the case of new tenancies.

48,277. Do you mean the old rents before the reduction took place?—No; I mean the same rent that the outgoing tenant paid. There may be cases of exceptions, certainly.

Type of tenants.

48,278. From what class do these new tenants come; do they come from the farming class; are they the sons of other farmers?—This is a biggish district; do you mean in the Darlington District or down in Yorkshire?

48,279. All about that country?—They are hard-working men, and they are chiefly of the agricultural classes.

48,280. You say there is a demand for farms; are the persons who bid for these farms men of the farming class, sons of farmers, and so forth?—Yes.

Farming capital.

48,281. Do they generally have sufficient capital to manage the farms?—I think that the farmers in the North enter farms with larger capital than they appear to do in the corn-growing counties.

48,282. Then there seem to be a class of people who have a knowledge of farming, and who have capital in hand to devote to the employment?—Yes, I think they are eligible tenants.

48,283. That would seems to indicate that the business is not so bad as at first sight it might appear, and that there are a considerable number of persons who think that a profit is to be made out of it?—Taking Yorkshire and Durham as a whole, I do not think that any person would say that there was a profit to be made out of it; but it is not deplorably bad, as it is in the southern parts.

48,284. Still, apparently a considerable number of people are led to embark capital in it?—Yes, men will embark capital in it, but I think the capital has decreased per acre.

Digitized by Google

Mr. R. H. Pringle. 10 May 1895.

48,285. That naturally is the fact on account of the low prices?—Yes.

48,286. A farmer coming in now would not necessarily require so large a capital?—No.

48,287. Therefore the area of the class of persons who could compete for farms has somewhat increased on that account?—Yes.

48,288. A farmer coming into a farm under these conditions does so under a certain advantage?—Yes. I do not see that agricultural depression in that district has given people a distrust, or has prevented them from going into agriculture.

Wages.

48,289. Then, I suppose that, owing to competition with the mining and other industries, the wages of the farm labourers have been fully maintained there?—Yes, I think they have.

48,290. There has been no reduction lately in the labourers' wages?—No, I do not think there has.

48,291. Do the wages of labourers range rather high?—Yes, the wages are rather high; up to 17*s.* a week with some extras, such as a cottage. I think that the wages in these districts, particularly the nearer you get to the manufacturing towns, are very much the same as they are in my part of Scotland; that is to say, a ploughman is worth about 1*l.* a week all told.

Arbitration for fair rents.

48,292. Then I do not think that you report from this district to the same extent as you have in Bedfordshire and Huntingdonshire, as to the desire of the tenant farmers for any system of arbitration on rents; but there is a paragraph about it?—The same idea is mentioned to you in a sort of quiet form, and in certain quarters it is very pronounced. I met some men up there who have very decided ideas on those points.

48,293. Paragraph 74 runs, "Anything like compulsory interference between landlord and tenant is objected to"?—It is, indeed.

48,294. "And land courts, although recommended by a few, are not, generally speaking, desired. Tenants prefer to arrange rents, if possible, without the intervention of a third party; but failing a satisfactory arrangement, they feel that arbitration should be at hand"?—I think that is very fair. If I were to write that again, if you were to ask me to do it, I do not know how I would alter it.

48,295. Still I have got to make the same observation upon that as I had upon your report in the other district, namely, that it is not quite clear what the tenants mean by this arbitration, especially when taken in combination with an objection to compulsory interference between landlord and tenant by land courts. Did they clearly understand that this arbitration was to be of a compulsory nature, and binding as between landlord and tenant, even against their will?—I was just thinking over that point before I came in. I think that the feeling of the men is this: Sometimes at a fair you will see a man trying to sell cattle; he cannot do it; the person that is buying from him will not give him the price, or he will not come down enough. Somebody steps in and says, "Look here, you two men, both of you do not know the value of the beasts, but I will get the matter settled for you"; and before five minutes are over, the cattle are bought and sold. I think that is the idea.

48,296. That is a reference *ad hoc* to the particular man with the agreement of both parties, which is a very different thing to the appointment of a person by the State with the name of arbitrator, to whom this matter should be referred, and whose decision should be binding whether either of those parties objects or not. The illustration you give, if that illustrates what is in the minds of those people, would indicate a very different thing from a compulsory arbitration?—It would, I know. On the other hand, of course, this person, this middleman so to speak, must have some power. I am sure that the tenant farmers—I am perfectly sure upon the point—mean that he must have some power.

48,297. Yes, when they both agree to refer the matter to him?—Yes, when they both agree.

48,298. But then the essence of the thing turns upon whether they both agree to refer the matter to him. Of course it may be that what they think desirable is that there should be somebody nominated by the State with the name of "arbitrator," to whom landlords and tenants might, by agreement, refer these matters?—I say the same with regard to the north as the south. I think the feeling of the tenants is the same, that there ought to be some person to whom they could refer, and that if they could not agree there ought to be this person to whom they could refer.

Mr. R. H. Pringle. 10 May 1895.

48,299. Would you name some person in this district who would represent the opinions of the local men?—I think one of the best witnesses I had in these parts was a very well-known farmer, and I believe you had him here as a witness.

48,300. Who was that?—Mr. Hutchison, of Catterick. Mr. Hutchison spoke to me with reference to his own farm, which is a very beautiful farm, and is splendidly farmed. He said to me, "I am paying far more rent than I ought to pay for this place."

48,301. (*Viscount Cobham.*) He told us that, but I do not remember his going beyond that?—He did go beyond that with me. He said, "I know perfectly well that if I gave this place up, it would be snapped up at the old rent, and I feel the insecurity of the position." Mr. Hutchison is a very quiet man. If you ask the farmers, generally, the question, they do not know exactly how they are going to get out of the difficulty, but they say there ought to be something of this kind, and they think that the appointment of this Government arbitrator would be a useful sort of courseto pursue.

48,302. (*Chairman.*) That one can understand, but the question is, whether the arbitrator nominated by the Government is to be appealed to by either party in a dispute, and without the consent of the other, and to give a determination which would be binding upon both. Was that clearly what they understood, or was it merely a permissive system of a somewhat vague character, which both parties by agreement might refer to, that they had in their minds?—I have given you the extracts from my notes so far as they have gone. From these notes it would be impossible for me to answer that question, because I did not go into these questions of compulsion. There was a shady sort of idea in their heads, and I tried to make the best of it.

48,303. I am quite satisfied with that answer, that you did not go into the question of compulsion?—No, I did not, I tried to find out what they were wanting.

48,304. You did not go into the question of compulsion, and therefore it is not clear that they knew what it really meant?—I do not think I mentioned the word "compulsion" to any of them; I quite grant that.

48,305. (*Viscount Cobham.*) The owner of a very large estate said that he had no objection to arbitration I see?—Yes.

48,306. Do you know in what sense he understood the word?—Yes, I remember. It was in the matter of fair rent. He quoted two cases to me where he had settled this question of a fair rent. There was a difference of opinion, and an arbitrator was called in that they had agreed upon.

48,307. That was in the case of a sitting tenant, I suppose?—Yes.

48,308. And not at the entry of a new tenant?—No. Pardon me for interposing this, but I do not think I have met a single person who ever suggested the idea of a new tenancy being submitted to any such thing.

48,309. I asked you yesterday, supposing within six months of his taking the farm, he thought he was paying too much, he could then raise the question?—He is the sitting tenant then.

48,310. It comes to very much the same thing?—I grant you it does.

48,311. You say this gentleman had referred to arbitration an application from the tenant for a reduction of rent?—He quoted to me two cases.

48,312. Was his an estate upon which arbitration had been introduced as a principle. You go on to say, "On another large estate arbitration has already been called upon to settle disputes as to rent"?—That is the very estate you are referring to now.

48,313. (*Chairman.*) Both of those cases are consistent with the idea that the arbitrator is to be selected by agreement between the parties when a dispute arises; which is a totally different thing from an arbitrator nominated for the purpose by the State?—Yes, I quite see that.

48,314. (*Viscount Cobham.*) Is it in the agreements of these estates, that in every case of difference of opinion between landlord and tenant as to rents, an arbitrator

Digitized by Google

Mr. R. H. Pringle.
10 May 1895.

should come in whose decision should be binding as to rent?—I am sure it is not, because I had all the agreements before me. There was a difference of opinion; the landlord had a kindly feeling towards the tenant, and the tenant had a kindly feeling towards the landlord, but they could not settle it; and therefore they agreed that such and such a person should be called in.

48,315. In fact that the farm should be revalued?—That is what it amounted to. It was revalued, and they both abided by the decision of the person. I am sure if landlords or agents as a body would agree to do that sort of thing, there would be no further step necessary. I think you asked me about the other estate mentioned in paragraph 74 of my report. I remember right well the other estate. I saw the owner himself, and I have quoted what he said to me, namely, that he would not have any objection at all to some system of arbitration, provided the proper man could be found. These were his words, "Provided that an entirely im- "partial arbitrator could be found, arbitration would "not be objectionable to me."

48,316. But you cannot state whether they would be willing or not to introduce as a principle in their agreement that, in cases of difference of opinion as to rent, an arbitrator should be called in?—No, it would become more what you might call the custom of the country. I have no right to state that I met with any landlord who would like to introduce that into his agreement; I do not think I did.

Railway rates.

48,317. Did you find a strong feeling in favour of equal mileage railway rates?—Yes. I do not think there was any question that seems to excite more attention in the north than this railway rate question.

48,318. Do they send their produce away to London?—No, practically none.

48,319. They consume it in the district?—They have far better markets at hand, for instance, some of the dairy farmers within five miles of Darlington send their milk to Newcastle.

48,320. They have to pay high short distance rates?—Yes, there are a great many complaints on that question there, still it pays them.

48,321. They view the question as affecting their own interests, not as affecting other people's interests?—I think you may safely take it that a farmer generally speaks for number one.

Arbitration for fair rent.

48,322. (*Sir Nigel Kingscote.*) I should like to follow up what Lord Cobham was asking you just now. Lower down, in paragraph 74, you quote a tenant farmer who says," "As a general rule I think a landlord and "tenant should make their own bargain, but a land "court, or the appointment of Government arbitrators "would be a very great boon to the farmer to appeal to "in special cases such as I have related." You have had that expression of feeling from a tenant farmer?—That is an extract from a report that was sent to me.

48,323. Is that pretty much what you think is the general feeling?—I think that this gentleman, and I thought it at the time, goes a bit beyond the general feeling, or else expresses his ideas in stronger language.

48,324. Where was the strongest expression of opinion, do you think, as regards arbitration, or the appeal to arbitration—in the three southern counties we were asking you about this morning, or up in these northern counties?—The ideas of the farmers in both instances were very much similar. I think very few expressed themselves in such strong language as this gentleman, either written or spoken. It is very difficult to define between farmers when their ideas are not exactly carried out.

Mr. R. H. Pringle.
10 May 1895.
Importation of cattle disease.

48,325. To go to another subject you say, in paragraph 79, "With reference to the importation of Canadian "store cattle it is generally agreed that were this put "a stop to, encouragement would be given to home "breeding, but feeders argue that already lean stock are "too dear in proportion to beef." Did you find a great difference of opinion between people who breed and people who feed?—A great difference, they were exactly opposed to one another. The breeder wants the price of stores to rise, and consequently wants all importation of store stock to come to an end.

48,326. Was it for the sake of the rise in the price of store cattle, or for the sake of freedom from disease?—I think the price had more to do with it.

Arbitration for fair rent.

48,327. (*Mr. Dalton.*) In paragraph 74 you say, "Both in Durham and Yorkshire, I heard of numerous "cases where landlords had sent away good tenants "owing to disagreement upon the question of a fair "rent, and after a time had been forced to accept lower "offers from strangers." Did you get details in those cases, or were they general statements?—They were all examples of farms mentioned to me.

48,328. Details of rent, with names and so on?—I did not go into the details of the rents. I took the evidence as being *bonâ fide*, and I did not go into the details of the rents. I do not think details of the rents could have been given to me.

48,329. "Even on the largest and best estates such "occurrences have taken place but they are more fre- "quent upon small and poor properties"?—Yes, I recollect that is so.

48,330. You heard details, then, of the estates, I suppose?—Yes, I remember them distinctly at this present moment—I mean to say I remember the names of the estates.

48,331. But, as a general rule, I think, I rather understood you to say that the rents in many parts had been maintained in the neighbourhood of towns in Yorkshire?—Yes, that is to say, there were reductions given within the last 10 years, but I think the letting value of land between 1893 and 1894 has not fallen in districts near towns.

48,332. If the sitting tenant went out another tenant would be got at about the same price?—Yes, I think so.

48,333. In such a case as that do you want anybody to settle the rent? Is that not a proof that the present rent is the market rent?—Of course it is in these particular instances.

48,334. But you would not require in such a case as that to have arbitration?—No, certainly not, no dispute would arise. That is a new taking too.

48,335. Then, in the case that you give lower down, in the same paragraph, you say: "He has arrived at the "conclusion that if he had farmed less well and spent "less of his own upon another man's property, his "rent would have been lower than it now is. He "cannot leave, and he does not know how to farm "badly. His rent he feels is far too high, but were he "to quit, the landlord would take all the buildings, "pay him a small sum for manure and cakes, and get "the old rent from a new tenant"?—That is not near a town at all, that is right away in Swaledale.

48,336. In a case like that, where the farmer considers the rent is far too high, but, at the same time feels quite sure that the landlord would get the same rent from a new tenant, it rather shows that he is paying the market rent?—It is not a very good case, because this is an instance of a gentleman who really farmed the place as if it had been his own property. He has laid out an immense amount of money in building and he probably has very little claim, if any, and that has put an exceptional value on his place. It is a splendidly farmed place altogether, and a most desirable place.

The witness withdrew.

Mr. J. Hope.

Mr. James Hope re-called and further examined. (*For previous evidence, see Vol. I., page* 348.)

Mr. J. Hope.

Report on Scotch counties.

48,337. (*Chairman.*) As assistant commissioner to this Commission, you have reported to us upon the counties of Roxburgh, Berwick, Selkirk, Peebles, Linlithgow, Edinburgh, Haddington, Banff, Nairn, and Elgin?—Yes.

Tenure.

48,338. Do those counties use the system of 19 years' leases?—Yes, generally; I should say almost entirely.

48,339. Have the landlords in those cases where these leases existed made reductions of rent?—Yes, I think they have almost everywhere made reductions.

48,340. In spite of the fact that they are legally entitled to continue the leases?—To run out the lease.

Reduction of rents.

48,341. What should you say has been the average reduction of rents?—Perhaps 33 per cent.

Digitized by Google

Mr. J. Hope. 10 May 1895.

48,342. Over the whole district?—Yes.

48,343. From what year should you say this began?—It began about 1882, I think.

48,344. I suppose they did not make the full reductions at that time, but they have gradually made them?—They have been increasing onwards.

48,345. You found little complaint on that head?—No, not much complaint on that head.

48,346. Tenants were generally satisfied that the landlords had met them as far as they could?—They thought the landlords had fairly met the depression.

Tenure.

48,347. Then I think you say that the tendency has been lately to renew these leases but with a break?—Yes, with a break of five years.

48,348. Practically leaving it to the option of either party to make the break?—Yes.

48,349. Therefore it is no longer a lease in the sense of a letting for a fixed period?—It comes very much to a five years' lease.

48,350. I presume you would think that the shortening of the lease is rather a misfortune?—I think it is.

48,351. Because the farmer has not time to turn round and to make the best of his capital within five years?—No doubt they are not apt to make the same improvement that they would if they were sure of the longer term.

48,352. (*Viscount Cobham.*) Are the leases often broken?—I know of some that have been broken, some by landlord and some by tenant.

48,353. (*Chairman.*) Should you say that that unwillingness to continue to let farms on lease for the same length of time has come from the landlord or the tenant?—I think, perhaps, it is very much from the landlord; I would say more from the landlord than from the tenant.

48,354. The landlord has been unwilling to let for so long a period as 19 years at the low rents which have prevailed?—Yes; in the hope that things might mend.

48,355. I suppose his feeling might be that, whereas he found himself under a moral obligation to lower the rent during the leases in consequence of the bad times, he does not wish in the future to put it out of his power to raise the rent after a certain few years in the event of a change taking place?—Quite so.

48,356. But still it must be a misfortune to the country that the system of 19 years' lease has been broken in upon?—I think it is.

Judicial rents.

48,357. Have you found any desire among the farmers in any of those counties for a judicial determination of the rents?—Nowhere, except in the north, at Aberdeen, and perhaps at Banff and round some of those places.

48,358. Those, I suppose, would be quite small farms?—Yes, they are generally small farms up there.

48,359. And the holders are perhaps more nearly approaching the condition of crofters?—There was a number of them, and in my last report when I reported on Aberdeenshire, I had to state that they even went for the Ashbourne Act being extended to Scotland. That was brought up again, I think, at Banff. It was only in the north that it was ever mentioned.

48,360. The class of tenants would be somewhat different to what they are in the south?—I do not know; they are perhaps a little more radical up there than in the south.

48,361. Without entering into politics, I mean they are of a somewhat different class of farmers to the farmers of the south?—I do not know; they are a very shrewd class up there.

48,362. But, with that exception, you have not found any such desire among them?—No.

48,363. Has the subject been discussed at the meetings you have attended?—Yes, but there is no desire to bring the Government to interfere between landlord and tenant as to rent.

48,364. That, they think, should be a matter solely between the landlord and the tenant?—Quite so.

Demand for farms.

48,365. Then, I think you say that almost everywhere throughout this district there has of late grown up a demand for farms?—I would not say in every district; in certain districts there has been more demand for farms the last two years. We do not know what it is owing to; it is very difficult to say what it is owing to.

48,366. Which districts are they?—I should say chiefly in the Lothians, perhaps.

48,367. Are they generally large farms or small farms?—Well, some 200 to 300 acre farms, I think; those have been the ones that have let the best.

Farming capital.

48,368. Farms requiring a good amount of capital?—Yes.

48,369. What is the average amount of capital required in those districts?—I think about 10*l.* an acre.

48,370. As much as that?—Say 10*l.* to 15*l.* an acre.

48,371. Are there men of sufficient capital ready to take these farms?—There are not very many of them, but there are some.

Demand for farms.

48,372. Still, there is enough to make a demand?—Yes, there is enough to make a demand.

48,373. And that, I suppose, has had the effect of keeping up rents?—I would not say they have been taking them at increased rents, but they have been taking them at those reduced rents.

48,374. That has been a cause of keeping up the rents?—Quite so.

48,375. How do you account for the fact that there are these men ready with capital to come in to take these farms?—You may account for it in this way: that a man with a lot of sons, perhaps, a year or two ago was sending them out of the country, say to America and those places, but now he would not send them there; they would be worse there than they are at home; I think that is how it has thrown more people into it.

48,376. Are these applicants mostly the sons of farmers?—No, I would not say they are mostly that either, but a certain class of people think it is a fine life; and perhaps a young fellow marries a rich wife, and there is a good residence on this farm, and he comes and gives a bigger rent for it than a practical man would. I know of two or three cases of that sort that have occurred within my own personal observation.

48,377. As a general rule, do these men come from the farming class?—No; those have not come from the farmer class. Then, on the other hand, we have a great many butchers and stockmen; men who have raised themselves. We have a great many of those men coming into East Lothians at the present time and into Berwickshire—men that were not bred to farming; they have made money at their trade, and they are spending it on farms.

48,378. Are there not also the sons of farmers ready to come in?—There are a great many non-practical men who are taking farms in the last two or three years—what we would call an inferior class. The old class of the sort of yeoman farmers are almost all out of the trade.

48,379. What do they go into?—I do not know; they have got broke, I think; that is about it. Some of them go into the poor's-houses.

48,380. Still it seems to me a remarkable fact that there should be a demand for farms in face of the general complaint?—It is, I must say, a remarkable fact. It is thought that, with the low rents and the break of five years, many of them are going into it in the hope that things will turn better, and then in the hope that under the Agricultural Holdings Act they will be able to make up a good claim at the end of the five years; and, perhaps, if the farm has been in good order before that, they will take something out of it, by exhausting the improvements of their predecessors.

Changes in system of cultivation.

48,381. Has there been much change of system of cultivation, or has it been kept up?—Looking to those statistics that I have put before you, you will find in every county there are a great many thousands of acres more in grass now than there were 10 or 15 years ago.

48,382. A greater proportion?—Yes. They have been extending their rotation from four years to five, and in some cases six years.

Reduced cost of production.

48,383. And reducing the amount of plough land in each year?—Reducing the labour bill as much as possible; so that a farm that kept five or six pair of horses in most cases that will be reduced and they will have two pairs taken off.

48,384. Then the farmers have had the advantage of the reduction in the rent, and they have had the advantage of the reduced payment for all the purchases they may have?—Yes.

Digitized by Google

Mr. J. Hope. 10 May 1895.

40,385. Which apparently, in the case of feeding stuffs and manures, has been very great?—All of it has been cheaper.

48,386. From the figures you give they have been 45 per cent. cheaper?—Yes, they are very much cheaper.

48,387. I suppose the Scotch farmers pay a very large amount for them?—Yes, a large amount; it generally exceeds the rent in many cases.

Position of labourers.

48,388. On the other hand, they have not had any advantage in the reduction of wages?—No, wages have rather been increasing. The landlord is worse off and the tenant is worse off, and the labourer is better; he is improving his position every day.

48,389. The money wages are higher than they were?—Yes.

48,390. And, as he can get more for his wages, the labourer's position is still more improved?—Yes, he can buy everything cheaper and he has more money.

Reduced labour.

48,391. Should you say there is any reduction in the number of labourers employed?—Where they have been extending the rotations, of course, there has been a little saving in that respect, but I would not say much in Scotland.

48,392. Therefore, there has been very little economy for the farmer in that direction?—Quite so, not much.

48,393. He has employed, perhaps, a slightly less number of men, but not much, and he has had to pay them rather more wages?—He has had to pay more wages for women workers; these things have been increasing.

Position of labourers.

48,394. It is, then, a very important factor for all that part of Scotland that the bulk of the population who are labouring people have gained enormously by the low prices?—They have gained enormously.

48,395. That gain, apparently, has been at the expense largely of the landlords, who have had to reduce their rents?—Yes.

48,396. And to some extent, perhaps to a large extent, at the expense of the profits of the farmers?—Quite so.

48,397. Therefore there has been a fresh distribution of the produce of the land?—Yes.

48,398. And the labourers have got a great deal more in proportion than they did?—Yes, it has gone out of the landlord's pocket and the farmer's pocket, and it has gone into the labourer's.

48,399. Do you think that is on the whole regrettable or not?—I do not know; they have got the vote, you see.

48,400. I do not want to enter into that; but, looking broadly at the whole result in the district, do you think it is to be regretted or not?—I do not grudge the labourer his hire—by no means.

The Agricultural Holdings Act.

48,401. (*Viscount Cobham.*) Is the memorandum you have prepared with regard to the amendment of the Agricultural Holdings Act the result of conferences with farmers?—Yes. *See* Appendix A 1.

48,402. Does it embody very much their views?—Yes.

48,403. It has actually been laid before them and received formal sanction from meetings or bodies of farmers?—Quite so. It is just the gist of the meetings I held all over the country.

Appointment of valuators.

48,404. It is proposed that Scotland should be divided up into districts, and that a valuator should be appointed for each to adjudicate upon all claims and questions under the Agricultural Holdings Act?—Yes.

48,405. It is also proposed at the commencement of any tenancy that the district valuator should, if desired by either landlord or tenant, be called in to furnish a report upon the condition of a farm?—Quite so.

48,406. That is intended to be optional with either one or the other of the parties?—Of course.

48,407. It is not suggested that this should be imposed upon landlords and tenants?—I do not know. I think it would simplify matters very much in settling the claims that arise between landlord and tenant at the present time, if we had such a system adopted.

48,408. As it is given here in your memorandum, this bringing in of a valuator on the entry of a tenant is a provision which either landlord or tenant could contract himself out of?—Yes, I expect he could.

48,409. Then the court of appeal is to be the whole body of valuators for the country?—Yes, the whole body.

Mr. J. Hope. 10 May 1895.

48,410. There is no provision made for an appeal on points of law?—No.

48,411. None of these men would be lawyers?—No.

48,412. Would you give no appeal on questions of law; there have been a good many questions of law arising under this Act hitherto?—They could take the opinion of a lawyer if it was required; but, generally speaking, we have found it was better to steer clear of the law as much as possible.

48,413. (*Mr. Clay.*) Your idea in keeping clear of the law is not so much with reference to the lawyers, I presume, because you would take, as you generally do in Scotland, counsel's opinion?—Exactly. The object is to cheapen the whole process that we have just now.

48,414. Many important cases are settled upon the basis of counsel's opinion?—Quite so.

48,415. (*Viscount Cobham.*) The five laymen you would appoint valuators are quite likely to commit gross blunders in law occasionally; what would you provide in that case?—I do not think that there is very often much of a law question coming into a claim between landlord and tenant.

48,416. I am afraid we have found that to be so in England?—I do not see why there should.

48,417. (*Sir Nigel Kingscote.*) Do I understand that the idea is that these valuators are to settle the rent?—No, it is only in connection with references under the Agricultural Holdings Act. There is no wish for that in Scotland except, as I said to the Chairman, in the north of Scotland, and even there it is very partial.

Importation of Canadian cattle.

48,418. I should like to ask you a question or two as regards what you say in your report on the importation of Canadian store cattle. Is there a very strong feeling in some parts of Scotland that they should be let in?—Yes, there is a very strong feeling indeed.

48,419. Without quarantine?—That we should have Canadian stores admitted into the country. It is thought a very great grievance indeed all over the northern counties such as Fife, Forfar, and Perthshire, and the Lothians and Berwickshire as well.

48,420. What do those say who breed their own stock?—Of course a few that breed their own stocks do not want them in, but the great bulk of the farmers engaged in the feeding industry do want them in.

48,421. They have no fear of disease coming in?—No, they have no fear of disease with Canadian stock.

48,422. To the detriment of those who have to rear stock?—I do not know. I do not think we have got disease by Canadians before, and I do not see why we should get it now, although we got them in.

48,423. Would you confine the free importation without restriction to Canadian stock, or would you include any other stock?—I would have the same restrictions as we have always had; there always have been restrictions.

48,424. Would you allow Canadian cattle to come in and not allow American?—I would allow them to come from every country where the stock is reported to be free of disease; I would not admit diseased stock in by any means.

48,425. How are you to prove that they are not diseased?—We have never seen them diseased, the Canadians never have brought disease to us before, nor the Americans.

48,426. Only the other day it was proved that Canadian cattle which were landed in Germany had disease?—It is very much doubted—in this country at any rate.

48,427. However, I understand that the large bulk of farmers in Scotland would chance the disease being brought in?—Yes, they would.

48,428. So that they may get their produce a little bit cheaper?—The cure is worse than the disease.

48,429. Since the Canadian stock has been prohibited have there been no means taken to get stock, of which there is a great deal, over from Ireland and also from England?—We get stock from Ireland, but then you are paying two prices for it just now.

Digitized by Google

Mr. J. Hope. May 1895.

48,430. Paying too high a price you mean?—A tremendous price.

48,431. Your one object is to get store cattle as cheap as possible?—Yes, it is to cheapen the price of them that feeders want to get the Canadians.

48,432. What is to become of the poor English breeder?—I am speaking for the bulk of the men who pay by far the largest proportion of the rental of Scotland. I think the landlord who breeds his own cattle, chiefly, can look after himself.

48,433. And have disease brought in?—No, we never had it brought in before.

Fruit growing.

48,434. (*Mr. Whitehead.*) Fruit growing does not seem to increase at all in the counties you visited?—No. It has generally been a failure whenever it has been tried.

48,435. Even strawberry growing?—Yes. Mr. Gladstone sent them all to growing strawberries, and those who tried it lost money by it. They all did, and had to give it up. They began to boil it, make jam and what not with it.

Market gardening.

48,436. Has it decreased since 1892; I have the returns up to 1892?—I think fruit growing has; and vegetable-growing is decreasing very much too. The price vegetables come over from abroad now, is so low that it is decreasing very much the vegetable farming.

48,437. Except potatoes and small vegetables, I suppose?—Yes, but they are cultivated in the ordinary rotation of a farm.

State loans.

48,438. (*Mr. Clay.*) I see that on page 18, paragraph 16, you refer to State loans; what is the feeling in your district of giving cheap money to landlords, especially for improving their property and dwellings in cases where there is a heavy mortgage?—It always was represented to me, that if money was got at a cheaper rate it would assist in draining, and a great many of those things that simply are not done at all now. There is no draining going on in any part of the country, and it was thought that if cheaper money could be got it would assist very much to keep up the fertility of the soil.

48,439. Do you not think it would even do something more than keep up the fertility of the soil?—Yes.

48,440. It would give a stimulus and an increase to the amount of labour open to the labouring man?—Yes, and better crops would be grown.

48,441. All the money would go to the labouring man?—Yes.

48,442. That would be beneficial to all classes, would it not?—Some people say just now, you can borrow money at 3 per cent., but there are many estates which are so burdened that they cannot borrow the money. If the State were to come forward and lend money, say at 2½ per cent., it would come to be the first charge on the property; it would come in before all bonds. That is where the difficulty comes in; that many estates are so burdened at the present time that they could not raise the money to drain the land.

48,443. Do you consider still that a good deal of money should go in draining, and in making improvements in the buildings that are required in Scotland?—Yes.

Malt tax.

48,444. On page 32, paragraph 42, you deal with the Malt Tax; what was the expression of opinion that you got upon that point?—The feeling that has been expressed to me all over the country, is that the change of the duty from the malt to the beer reduced the price of Scotch barley, and I suppose English barley as well, from 5*s.* to 10*s.* a quarter. It enabled the brewers to use that light foreign barley. There are enormous quantities of foreign barleys, sometimes 30,000 quarters coming in one vessel, and it has opened up a great field for barley being grown abroad. The foreign barley is bought in preference to our fine heavy barleys.

48,445. What is the remedy for that?—I have been talking to some brewers on the subject, and I must say that I have changed my mind very much. At one time I thought it would be very difficult to go back to the old machinery, to put the clock back as they would call it, but in speaking to some brewers I find that it would not be very difficult to do at all, and that we might easily go back to the duty on the malt. Some suggest, on the other hand, a duty on foreign barley, and many people say that the teetotallers would all support it. I do not know whether they would or not.

Mr. J. Hope. 10 May 1895.

Tax on foreign barley.

48,446. (*Sir Nigel Kingscote.*) If you tax foreign barley, do you know whether the taxing of the cheap barley that comes into England, and is bought for fattening cattle, would be felt by those who feed beasts or sheep?—There is a little of it goes to fatten cattle, but I think if the landlord or the tenant got a benefit from going back, say, to the old malt tax, they would not mind, although they paid a little more for this light barley.

48,447. (*Mr. Clay.*) I gather from you that your idea, or the idea of the people that you have seen, is that they would only tax foreign barley used for malt, and not that used for cattle?—Exactly; you could give a drawback. It has always been represented to me that there might be a drawback given on the barley that went for food.

The Agricultural Holdings Act.

48,448. Regarding this memorandum that you have drawn up on the Agricultural Holdings Act (*see* Appendix A I), which you have paid great attention to, I know, you have had a good number of valuations through your hands, have you not?—Yes, I have.

Compensation for increased fertility.

48,449. In making these valuations, have you included something more than merely the last two or three years of the lease as regards compensation? Have you included something for the increased fertility?—It has been done in some cases; I had to do with a case some years ago, where a considerable sum was given for increased fertility.

48,450. I suppose the Corsehope case was a very remarkable case?—Yes, in that case a very considerable sum was given.

48,451. How was the point decided in the Winterfield case?—There was nothing given there; it has been thought a great hardship, although it was rather a small case, that the arbitrator did not take into account the great improvement that had been made on the farm.

48,452. Considering your own experience and knowledge, would you say that you might have given allowance for increased fertility?—I think I would.

Official referees.

48,453. Is it your idea of an official referee that experts might get into a better groove and give compensation in a more liberal form under an improved Act?—Yes, and that would cheapen the process very much; it would cheapen the process more than anything else I should say, if we could go into some such thing as I put before you.

48,454. As you have the idea of having five or six official referees in Scotland, if there was anything coming up in the shape of an advisory board, would you have any objection, without compulsory powers, to give them a sort of moral force between the landlord and tenant, and to enable the landlord and tenant to go to them to get a judicial decision?—I think that is quite possible.

48,455. You see no difficulty in working that, do you?—No.

48,456. Your whole object is to have the Agricultural Holdings Act remedied and cheapened? — And cheapened; bring it in so that the small farmer with his 30*l.* claim would get what he is entitled to the same as you and I who had a claim of, perhaps, a thousand of pounds.

48,457. And that would bring more capital into the land?—Yes, I think that is what is wanted at the present time.

48,458. Is it urgently required?—It is, urgently, all over the country where I have been.

48,459. You are satisfied that that report of yours, with regard to the Agricultural Holdings Act, is based upon the opinions of the great majority of farmers of Scotland?—Quite so; it is put forward as the opinions that I have collected.

Importation of Canadian cattle.

48,460. (*Mr. Gilmour.*) You said something with regard to the introduction of cattle; does that feeling not obtain only in a few of these counties—around the Aberdeen and Dundee districts?—I would say all over Scotland where the people buy store cattle to feed. In all the districts where stores are bought for feeding it is very much wished to get the Canadian cattle in.

48,461. In some of these districts that you visited, not only the landlords, but a great lot of small tenants, breed cattle?—They do a few, but I consider that all over the country they want it. You can take Fife, Perth, and Forfar, and you can also take in Ross-shire; there are no counties that are more crying out for

Digitized by Google

Mr. J. Hope. 10 May 1895.

Canadian cattle coming in than those counties, and the Lothians, and Berwickshire, and Roxburghshire.

48,462. You are referring to the purely feeding farmers?—Yes, these are the great bulk of the counties where the greater part of the rental of Scotland comes from. You may take it that the farmers who pay the greater part of the rental of Scotland are wanting Canadian cattle.

48,463. You will admit, I suppose, that there are other rent payers in Scotland, besides these big beef feeders?—There are, but still I am taking the great proportion. You may take it that the heavy bulk of farmers, where the rent comes from in Scotland, want Canadian cattle.

48,464. Is it not out of these cattle that they breed that most of these small farmers in the north have been able to make and pay their rent within the last few years?—I believe that is so with a few of them, but even if you go to Aberdeen they like to get the Canadian cattle at Aberdeen, where there are a lot of small farmers.

48,465. I mentioned Aberdeen and Dundee particularly. Then you spoke about introducing them from countries where there was no disease; until the cattle come to this country, how can you deal with that?—I suppose if it was reported that there was disease abroad this country would never think of allowing the cattle in.

48,466. If a country had been declared diseased, it would only be when the cattle arrived at our ports that we would have power to interfere with the introduction?—There might be something in that.

48,467. That is just what has occurred in connexion with Canadian cattle, is it not?—There is only one alleged case come into Germany, I believe; it is the only case that has ever been found certain.

48,468. But I say that is exactly the procedure that has been followed by this country in regard to the introduction of disease from Canada, namely, dealing with it at the port of debarkation?—Yes. I say that, if we are not to have Canadian stores in to feed in this country, they should not be allowed to come into this country to be slaughtered. I think it would assist us here if we are not to get Canadians to feed, that we should not have them alive. That is the evidence that I have got all over the country. Why should we have these cattle brought in here to be slaughtered, and you will not let us have them to feed? You are bringing in diseased cattle just now, you see, from your point of view; you say the Canadian cattle are diseased cattle, and they bring disease to this country, and you are bringing them in to slaughter; why bring them in at all?

48,469. I do not see that we are bringing in diseased cattle because we can check them now perfectly; these cattle do not leave the wharves, they are slaughtered at the wharves?—I know they do not leave the wharves.

48,470. Therefore we do not allow them to do any harm in this country?—I think if you give us proper free trade we should not have them in at all. If we are not to have them in for one thing I would not have them in for the other.

48,471. Then you believe in free trade for disease as well as everything else?—No, most certainly not.

State loans.

48,472. It is an extraordinary doctrine. However, you have mentioned about the Government advancing money, and you have pointed out in your report that it is upon the heavily burdened estates where this, of course, is most desirable?—Exactly.

48,473. What security will the Government be able to get in those cases?—It does not matter what bonds are on the estate; if the Government gives the money their claim comes in front of all bonds. That is the law, I understand; and that is how it would be very advantageous for the Government to come in and give the money. The Government would have the first charge.

Restrictions in leases.

48,474. You have said a good deal about these penal clauses in the Scotch leases, is it not the fact that they are only enforced in very glaring cases?—I think they are not often enforced.

48,475. If they are it is a very glaring case?—If so. I have known of them being enforced.

48,476. For that very reason is it not necessary to have some protection against a man who will mismanage land?—My own opinion is that, with all the restrictions you put on a tenant, you will never make a bad tenant into a good tenant. I think it goes all for nothing. That is my own opinion.

Mr. J. Hope. 10 May 1895.

48,477. Can you show from your practical experience how a landlord is to be protected at all if you do not keep in something of a money value against a tenant?—I think he should look to the tenant when he gets him, and trust him. If he cannot get a man he can trust I would not have him there at all.

48,478. You know that two strangers meeting may mistake each other very much?—They may sometimes, but I do not think often. Look at Edinburgh now; just take Midlothian round Edinburgh, where you see the best farming in Scotland or in any country, and take some of the East Lothians. They have no restrictions, or practically none. The tenant always binds himself to a proper course of farming.

48,479. But he is bound even by your own report to bring in a certain amount of manures?—That is done in a great many cases. If a man sells hay or straw, he binds himself to bring back some manure, and very likely, if he is a good farmer, he is bringing back three and four times the manure that he is bound to bring back.

48,480. I notice in your report that you mention that some of the people you examined stated that in their opinion the way the landlord could be protected is that the land should be left in a stipulated rotation at the end of the lease?—Yes, I think there should be some clause of that sort, that he is to leave it in a proper rotation, or in a certain rotation at the end of the lease. I think that would be necessary; otherwise some men might put it all down, say in wheat, or you might have some crochety man. I think you would be bound to have some restriction in the last four or five years.

48,481. You have told us that really leases now are not in vogue. How would you propose to work that rotation, unless a man is bound down to have a certain rotation during the whole five years?—There is some difficulty with a break of five years, I must say. I think the break of five years is a mistake, both as regards the landlord and as regards the tenant. That is my own opinion.

Advertising farms.

48,482. You also point out that the advertising of farms to let seems to be a grievance; how would you propose that the landlord is to obtain tenants for his land otherwise than by public advertisement?—If I have said that, it is not my own opinion. There are always plenty of men wanting farms.

48,483. You have said, in paragraph 22, that it seems to be a grievance with men that farms are advertised?—I know it has always been put forward as a grievance against the landlords who advertise their farms.

48,484. Did these gentlemen tell you how the landlord was to put the land into the public market otherwise?—You will generally find yourself as you are a good landlord.

48,485. That is a matter of opinion?—That you have far more men wanting your farms than you have farms to let.

48,486. (*Mr. Clay.*) The Duke of Richmond is a man, I believe, who never did advertise his farms, and such men have all the best tenants?—Yes. I do not know whether you are aware of it, but on the Duke of Richmond's land he has kept his farms at the same rent for the last 20 or 30 years.

48,487. (*Mr. Gilmour.*) There is another point which I think is very important, talking of the Duke of Richmond's case, namely, that he is a man with an enormous tenantry, and he knows that within his own bounds he can get good men; but an ordinary proprietor is not in that position?—But the Duke keeps his men at the same rent; he perhaps gives them 20 or 30 per cent. reduction, but the rent is always kept the same and appears in the Valuation Roll as never being changed.

Abatements of rent.

48,488. You also point out that the opinion of most of the tenants seemingly was that any men taking farms now should not get any reductions?—I think now when things are so cheap, to go on giving reductions is a mistake. They know what the thing is and those reductions that are being given now are doing a great deal of harm, I think.

48,489. (*Chairman.*) Do you mean by reductions, temporary abatements?—Yes. At the same time if it had not been done during some of the current leases it would have been a very serious matter; but I think

Digitized by Google

Mr. J. Hope. 10 May 1895.

now, when things are so cheap and times are at their worst, there should be no further abatements.

48,490. (*Mr. Gilmour.*) Does that point to their idea that things have reached the bottom?—I think you may take it so.

48,491. Because if matters fell substantially still, would not a landlord who refused an abatement be held up to reprobation by some people?—He might, but we have surely reached the bottom now.

Large and small farms compared.

48,492. I think in your report you seem to have some difficulty, at least it appears so from the evidence, in deciding whether large or small farms have done best?—I think it was generally brought out that if the small farmer had done better than the large one it was principally because he was not paying anything for his labour; he was getting the labour done by his family.

48,493. You also point out, I think, that beyond a certain number in certain localities there is no room for small farms?—There was no great demand for breaking up the large farms.

48,494. Therefore does it not prove really that the natural mode, that is to say, the way adopted in the country, is after all the best, namely, that a mixture of large and small is the best?—Quite so; that was my evidence.

A farm account.

48,495. In the note to a farm account on page 23, I notice that the quantities are exactly the same for an average of 10 years as you take for 1893?—Quite so.

48,496. Is that an actual return; it is a curious coincidence, is it not, that exactly the same quantities are grown in one year?—I expect that the party who furnished this was giving it in a rough way.

48,497. Then it is not much of a guide surely; I notice there is no stock at all?—He was principally showing the quantity of grain; he put the quantity of grain assuming it might be the same; he was showing more the difference in the price than anything else. Of course the return could not be the same, but the price, you know, has altered very much. I think that explains it.

Stock provided on credit.

48,498. About this system, which has given rise to complaint in Scotland, about auctioneers providing stock for a tenant on credit, does that largely prevail?—I think it does to a large extent.

48,499. Was there any suggestion that it ought to be put a stop to?—No, I do not think that there was.

48,500. To whom does the increased price of the stock go?—The increased price would go to the farmer, I take it, for his feed.

Railway rates.

48,501. In regard to the question of railway rates, did these gentlemen lead you to suppose that they considered that a railway company should be compelled to carry retail small quantities at the same rates as wholesale?—Yes, they all objected to what they had to pay for a small quantity, and also that foreign stuff coming from abroad and landed at Aberdeen could be carried very much cheaper to London than the home produce could.

Local rates.

48,502. About rates, I see you mention that they complain about new rates, and talk about the school rates, but surely, as the Education Act was passed in 1872, that is rather a mistake. It was passed 23 years ago, so that it is not a new rate now, at all, and there is no grievance of that kind?—It is not a new rate now, but the school rate was a great hardship at one time, when it was put first on.

Tuberculosis.

48,503. In regard to tuberculosis, which I see you mention, they have been trying experiments in the north, I think?—Yes.

48,504. Have you heard whether those experiments have really given practical results, something that you can go on?—I do not know; I have no statistics as to that.

Compensation for consumption of home-grown corn.

48,505. In regard to the question of the home grown produce, do most of the farmers in your district seem to think that they should be paid for corn consumed by horses?—Yes, it was very strongly complained that a man using his own crop got nothing for it, whereas if he bought his neighbour's he would be paid for it.

48,506. None of them proposed compensation for oatmeal consumed by ploughmen, did they?—No, but I think my own opinion would be that what was used in that way, and what was used for the feed of the farm horses should not be allowed for; I would be for excluding that.

Mr. J. Hope. 10 May 1895.

48,507. For farm horses?—What the farm horses consumed, because they are the working plant on the farm.

48,508. Was that the opinion of those who discussed this question with you?—I think it was, generally, that to the extent of what was required to feed the farm horses it should not be allowed for.

Claims and counter-claims.

48,509. About the notices of claim I see what you put here is that the claim should be put in simultaneously?—Yes.

48,510. Would that not lead to a landlord having to make a leap in the dark?—I put it there as it was put before me. My own opinion is that it should not be simultaneously, because, I think, if they have both to be made on the same day, the landlord is bound to make a claim, but if he had time to see the tenant's claim it is quite possible that he would not make one at all. That is my own opinion mind, but I am only giving you other people's in the report.

Local rates.

48,511. (*Mr. Dalton.*) You give a very curious case in the appendix to your Report, showing the anomalies that exist in the present mode of levying the poor rates in some parts of Scotland, according to established usage. It appears from it that by the present mode of assessment tenants of houses in a parish with a rateable value of 1,195*l.*, and minerals, harbours, railways, shooting, &c., amounting to 2,187*l.*, making altogether 3,383*l.*, escape rating?—Quite so.

48,512. Is that at all a common system?—No, it is not common; but of course you know with regard to the poor rate in Scotland that it is put on according to the rent, and we think that that is very unfair. You may be a proprietor, say, having a farm let at a thousand a year, and I may be your tenant. You pay on this 1,000*l.* a year, and so do I pay on it; we pay equally; but there may be a man living next door to you, who is perhaps paying 100*l.* for his house, and he may have five or six thousand a year, and he has only to pay on this 100*l.* house. We think it is not proper.

48,513. That is not the case I am speaking of here?—Of course it is not.

48,514. Is this system of rating according to established usage at all a common system in Scotland? Are there many such parishes?—There are not many parishes as bad as that. The tenant who brought up this grievance I may tell you came to a meeeing I had in Haddingtonshire, and he brought up this as a very serious grievance that he had himself. As it happened he had only been a year and a half on the farm, and after he had read off all the information I give in the Appendix about it, then I said, you have made a very good case out for your landlord, but none for yourself.

48,515. Have you got any information as to the system of classification for the poor rate in Scotland?—No, we think the poors rate should be levied on means and substance.

48,516. In the way that it was levied before the system of rating on means and substance was abandoned in Scotland?—They really had no poors rate at all at one time. It was merely a voluntary assessment.

48,517. Up to 1860 they did levy on means and substance in a good many places, but that was abolished in 1860?—That was abolished. I think we should go back to that. Let the wealth of the county pay for the poor. At present the land simply is paying for the poor; we are keeping the paupers from our own trade, and you may say from all trades.

Income tax

48,518. I do not quite understand the grievance of farmers against the income tax in Scotland. You say that most of the farmers objected to the system of income tax?—They object to it.

48,519. Do they pay any income tax at all now?—They pay largely. I know I pay largely myself.

48,520. But only the larger farmers I suppose would pay anything?—Of course, if you come down to a very small rent, they do not pay.

48,521. With a considerable rent they do not pay, do they?—We have a lot of large farms. I pay over 5,000*l.* a year myself in rent, and I grudge the income tax I can tell you, very much.

48,522. (*Chairman.*) But that, of course, is a very exceptional case. Take the farmer paying 500*l.* a year.

Digitized by Google

Mr. J. Hope. 10 May 1895.

Does he pay any income tax?—If he appeals he would not.

48,523. (*Mr. Dalton.*) You say in paragraph 89, "Many farmers on being reminded that if their incomes "were not such as to make them liable for income tax "a simple means was provided of obtaining relief, "replied to me that they were quite aware of this, "but that the trouble involved in obtaining exemp- "tion or abatement was so serious that in a great "many cases they were rather prepared to pay the tax "than to undertake the bother of going through the "forms which they would have to face in making an "appeal." Would farmers with rents of 500*l.* a year have to do anything more than show what their rent was, and that a third of it did not amount to the right sum that would make them liable to income tax?—They have to go and make a long mouth and practically almost hurt their credit, and many men would not do it.

48,524. How would it hurt their credit? They would only show that the rent they were paying was only so much, they would not have to show accounts or anything of that kind?—I expect they would have to show accounts, and it would be a good deal of trouble. They would go through a good deal of trouble rather than apply for it.

48,525. Any farmer who can show that his rent is 575*l.* or under would not have to pay income tax; what can be the hardship in showing that he pays a rental of 575*l.* or under, if that is all he has to do?—It is very much objected to in Scotland, I can assure you, very much.

State loans.

48,526. (*Mr. Elton.*) Did you say that in Scotland by the general law drainage charges came before bonds and family charges and mortgages?—I believe so. If the Government was to advance money, I believe it would not matter how the estate was burdened; they would have the first charge; I am told that is the law, because it would be considered in borrowing this money that this money went to improve the property, and they would say the property should be that much better. I suppose that is the way the Government would have a prior charge.

48,527. Do you not mean that they would probably take care, or that they might put into an Act of Parliament authorising them to advance money for this purpose, that their charges should have priority?—I do not know that they would need to do it; I think they have priority as the law is at present.

48,527*a*. Have you ever heard anything in support of your contention that there is priority, except under special Acts of Parliament?—I am told by the lawyers that that is the law in Scotland.

48,528. I do not presume to say anything about the Scotch law, but I will tell you what the English law is. The English law is that these charges are advanced under special Acts of Parliament which have special clauses giving this priority?—I am told the law in Scotland is the other way.

48,529. That there is a general rule to the contrary?—Yes.

48,530. That whenever Acts of Parliament are passed allowing Governments to give drainage moneys, they always have priority?—That is my information in Scotland.

48,531. That is what all the lawyers tell you?—Yes, that is it.

48,532. I was rather hoping that you would modify what you said. Of course you know best what happens in Scotland, but I was hoping that you would say that you thought drainage would probably have priority given to it, and that that would in your opinion be advantageous?—I think it would be very beneficial.

48,533. In the part of the country which you reported on, I do not think they do much dairying, do they?—There is not much dairying in the part that I have been reporting on.

48,534. Then you have not considered the subject of the oreign barley importation with regard to the dairy and baking business for which it is used so much in the south of England?—No, I have not.

Mr. J. Hope. 10 May 1895.

48,535. (*Chairman.*) How much land do you farm yourself?—I farm, I think, about 1,100 acres arable.

Acreage and rent of witness' farm.

48,536. Altogether?—Yes, and I pay about 5*l.* an acre for it on the average.

48,537. Five pound an acre?—Yes.

48,538. That is a very heavy rent?—I have paid it, I may tell you for 18 years, and I have never got a reduction; I never asked one, and never got it.

48,539. Are you paying the same rent now that you did?—Yes, I am.

Assessment to income tax.

48,540. What have you been assessed at to the income tax?—I pay on a third of my rental.

48,541. You have never claimed exemption?—No, I never claimed exemption. I have sometimes lost a lot of money, but I have never made a claim.

48,542. Of course you know you are entitled either to claim exemption, or to claim to be assessed on your actual income, I believe?—Now we can do so, I believe.

48,543. You have not thought it necessary to do that?—No, although I have lost money.

48,544. On the whole do you think you have gained rather than lost by the present system?—No, I have lost a great deal of money by not claiming exemption.

Results of farming.

48,545. Would you say that for 18 years you have gone on farming on this scale losing money?—Yes, I am the only man in East Lothian who has not got a reduction of rent who took a farm 18 years ago.

48,546. (*Viscount Cobham.*) Have you had any remissions?—No, never a farthing.

48,547. (*Chairman.*) And you are paying 5*l.* an acre?—Yes.

48,548. Is there a great deal of land in that district paying 5*l.* an acre?—No, there is not. I believe I farm it all myself.

48,549. (*Mr. Giffen.*) You told us a little time ago that you have been paying income tax?—Yes.

Assessment to income tax.

48,550. How does it happen that you have been paying income-tax if you have been losing money?—Because I had to pay on a third of my rental, of course. If I had appealed and made a long mouth, and gone through a lot of forms, I do not know but what I might have got something back.

48,551. (*Chairman.*) You would have got all back if you had been losing money?—There are many men such as I am who have been paying right through, rather than make any bother about it.

48,552. But the income-tax on 5,000*l.* is a very large item?—Yes, the Government has been a very great gainer, I can tell you.

48,553. (*Mr. Gilmour.*) Perhaps you thought they would come and look you up another year, and find things a little different?—Yes.

Railway rates.

48,554. (*Viscount Cobham.*) You say that the people who consign meat to London from Galashiels complain of the Aberdeen rate?—Yes, they complain bitterly, because they say they pay more from Galashiels and Hawick than they do from Aberdeen.

48,555. They say the meat ought to be carried on the equal mileage rate principle?—Yes; they say we are nearer London than Aberdeen; why should we pay more?

48,556. Do they hold the same views with regard to the Yorkshire or the Northampton consigners of meat to London?—I do not know what their views are.

48,557. I mean if their contention is right as between themselves and Aberdeen, of course it ought to apply equally as regards places nearer to London?—Of course it should; most certainly it should.

48,558. Have they thought of that?—They would only be looking to themselves, I think.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Ninety-third Day.

Thursday, 16th May 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. Baron RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., ALAN MACKINNON, Esq., *Assistant Secretaries.*

Mr. GEORGE EDWARD BRISCOE EYRE called and examined.

Mr. G. E. B. Eyre. 16 May 1895.

48,559. (*Chairman.*) I understand you are a landowner residing in the neighbourhood of the New Forest?—Yes. I was born and bred on its northern border, and I am lord of two manors having wastes connected with the Forest.

Common rights in the New Forest.

48,560. For many years past I believe you have given great attention to the condition of the people who live in that district, and the bearing upon them of a large amount of common rights which they enjoy over the Forest?—Yes, I have. In 1882 I read before the Economic Section of the British Association, which met at Southampton, a paper on "Cottagers and Open Wastes in the District of the New Forest," written by request of the President, the Right Hon. G. L. Sclater-Booth. It was published in the Report of the Association.

48,561. The Forest waste consists of about 63,000 acres?—Yes.

48,562. A very large portion of that is not forest in the ordinary sense of the term, but is common land with comparatively few trees upon it?—By nature the whole Forest was open heath, bearing little woodland. At the present time there are about 43,000 acres of open heath land which has never been touched in any way.

48,563. And over that land the commoners in the neighbourhood have the right of turning out cows, sheep, ponies, and pigs?—As you are probably aware, there is a body of commoners that were registered by Act of Parliament in 1854, and the register defined their rights so far as they needed defining. The rights consisted of a right of pasture for various animals, especially for cowkind and ponies; then there were the fuel and turbary rights, and there was also the right of pannage, that is the right of turning out pigs in the mast season. Sheep rights for about 9,000 acres of private property, and a few goat rights were registered.

48,564. Do they have to pay for each head of cattle they turn out, or is it absolutely free?—It was free until the year 1878; that is to say, until the New Forest Act of 1877 reconstituted the Verderers' Court, and empowered it to levy fees for the purpose of the administration of the business of the court. There was no head money until then. The head money, or, as we call it, "marking fees," is at present fixed at the Verderers' Court from time to time; I may say there are two ranges of payments, because there are two classes of people who pay; there are the commoners registered in 1854, and then there is a small body of persons who are admitted under the Supplementary Act of 1879, and they pay head-money, and for a licence in addition to the above marking fees.

48,565. What would the supplementary list be composed of? Are they persons who have not the same equality of right as the others?—In 1854 a commission came down into the Forest, and people were called upon to claim their rights, and to prove them; there was no general organisation for making these claims or defending them, and a great number of people did not know what they had to do. They had no legal advice, and a great many of them in consequence either did not make claims or failed to support them properly, but the Crown did not interfere with these people, who had become, so to speak, non-commoners.

48,566. And they continued to exercise the right though not registered under the Act?—Yes, they continued to go on as before. Then, in the year 1878, when the New Act came into operation, the Verderers found themselves in this difficulty: that these people were on the Forest, that they could not recognise them, and that they could not take any money from them or mark their cattle. After two years of considerable difficulty, a Bill was passed to enable the Verderers, for administrative purposes, to bring this body of people under the control of the court, and the Verderers levy head money and mark their cattle now in virtue of the Act of 1879, though these people are not, and cannot become, commoners.

48,567. In respect of what extent of land have the commoners these rights of common over the Forest?—The acreage registered in 1854 was about 65,000 acres.

48,568. And was there a still larger amount under the later Act?—There is no registration of that.

Number of New Forest commoners.

48,569. Then what is supposed to be the total number of commoners who now have the right of turning out on the Forest?—That is a very difficult question. The Verderers were empowered to make a register of commoners, but they have never had sufficient funds to incur the expense, and therefore we really do not know the number. We believe that the freeholders are now more numerous than in 1854, but as to the number of occupiers one can only form a general idea. We know that the electorate, which consists of the parliamentary electors within the perambulation and the commoners who choose to put themselves on the Verderers' register, amounts in all to about 6,000. I take 5,000 of these to be householders, and from that one can infer, by the ordinary rule, I suppose, that is multiplying by five, the number of people who are affected; but the right, of course, would only be exercised by the head of the family. But a deduction would have to be made for the freeholders, who amounted to 1,050 or 1,100 in 1854, to get a fair estimate of the number of occupiers.

48,570. How many freeholders have got rights of turning out?—There is no current record; but a statement has appeared once or twice in evidence which is approximately correct, namely, that the register of 1854 shows about 860 "claims," made, of course, by freeholders, as substantiated, and that 628 of these were for holdings under 30 acres each.

48,571. Are you yourself a Verderer of the Forest?—Yes; but I do not appear here as a Verderer.

Number of animals in the New Forest.

48,572. What is the number of animals of different kinds which are turned out?—There are about 5,500 animals turned out in the Forest that we know of, and of course there is a fringe of animals which are not brought to account. This is exclusive of pigs.

48,573. And of those, are about 2,000 cows?—That is about the proportion.

48,574. And 3,000 ponies?—Yes.

48,575. With a few donkeys?—The donkeys are really an unknown quantity, but we mark about 150.

48,576. Then I believe there are about 1,300 pigs?—That is in the pannage time. There was one year in which

Digitized by Google

Mr. G. E. B. Eyre. 16 May 1895.

there was a Swine Fever Order in the Forest, and in consequence we got a very accurate return of the number of pigs that were turned out then; the total was 3,069. The number turned out varies with the season, but in a series of years has averaged 1,300.

Turbary rights.

48,577. Are the turbary rights extensively used?—The turbary rights are used very largely where the cottages remain in their primitive condition. Where the open hearth remains the "turf" is used, but where the cottages are improved and the people have grates and ranges (which they are beginning to do now) of course the "turf" is not so much used. We find that as soon as the price of coal goes up the demand upon "turf" revives.

48,578. These rights are used more by the smaller occupiers, I presume, than by the larger ones?—Yes. The Forest or common is used in the inverse ratio to the size of the holding; the smaller the holding the more they use the rights in proportion to the acreage.

48,579. Do the cottagers exercise the right?—Everybody, nearly, who has got a right exercises it. The cottager class is a very large one.

Classes of commoners.

48,580. May you divide the persons using rights in the common into two classes, namely, cottagers and those holding little pieces of land up to 20 acres?—Those two classes would use the Forest and the adjacent commons most. The wastes are the cottager's farm; they are the source of his livelihood or of his comforts, and of his capital. He makes it his business to acquire the proper stock and to work his holding and the wastes to the best advantage. But from the larger holdings it is open to the farmers to turn out dry stock and ponies, both of which are very profitable, if they have enough capital, and their milch cows, if they live near enough.

48,581. Is there a large body of small occupiers having from 6 acres up to 15 who exercise their rights in the Forest?—The sub-division in the Forest runs rather threefold, namely: 6 acres, 12½ acres, and 20 acres. Those are about the three classes of smallest holdings. You may say that everybody who lives on the Forest or within reach of it turns out something. The ideal "little place" is about 12½ acres. Six acres is not a living, but is preferable to about 15 acres elsewhere at the same gross rent; 12½ acres in the Forest is a living, and some shrewd men decline to hold more.

48,582. Then beyond that you get to small farms of from 20 acres to 50 acres?—Yes.

48,583. Then large farms of from 50 to 100 acres?—Or, perhaps, to 120, but I think 100 is about the extreme size of what we call a large farm in the Forest district. Larger farms exist there, but they are unsuited to the locality: they are difficult to let, and are often badly farmed. The consolidated farms up to 500 acres cannot be let. The policy of consolidation has failed.

Effect of common rights on small holders.

48,584. Does the right of turning out on the Forest form a very important adjunct to their small holdings?—Yes, to the smallest holdings in particular; but as the farms get larger, and as they lie further from the Forest, the Forest is used less. Of course men cannot turn out their cowkind very far; if they are a mile or two from the Forest they cannot very well turn out their cowkind, and then they get another sort of cow, they go in for the more ordinary dairy stock. But I have known men earn the rent of their farm by the dry stock and ponies that they turn out, although they live two or three miles from the Forest.

48,585. Then do you consider that these rights of turning out in the Forest have largely conduced to enable these small occupiers to get through the bad times?—They could not live on the smallest holdings without either a common right or a forest right, but with it they make a very good living.

48,586. And have done so all through the last 15 years?—Yes; the only set-back that they have had was the failure of the hay crop in 1893.

48,587. Apart from that they have got through all the bad times during the last 15 years?—Yes; as far as I can judge they have steadily progressed; they have not gone back, but have progressed.

48,588. How do they make their money generally—is it by the sale of cattle and ponies?—First, they have got to make their living; then after that they accumulate stock, making sales from time to time; but they are always accumulating one way or the other, either in money or in stock.

Effect of common rights on labourers.

48,589. Do the labourers of the district turn out pigs and cattle?—Everybody turns out something. Many labourers double their wages by stock-keeping, and some have been known to save all their wages for a series of years, making their living by their rights. A labouring man will get hold of one animal somehow, either a cow, or a mare, or a heifer, and then that makes the foundation of his fortunes.

Mr. G. E. B. Eyre. 16 May 1895.

48,590. It is a great inducement to him to save money to exercise this right, I suppose?—The thriftiest will do almost anything to get hold of an animal, and they generally succeed. When once they have something like 5*l.* in value, either in stock or in money, they then steadily go up in the social scale.

"Pannage."

48,591. Is the right of turning out pigs for pannage considered a valuable one?—That is a very valuable right, but, of course, all seasons are not equally good.

48,592. (*Mr. Everett.*) What is the meaning of the word "pannage"?—That is a word derived from the Late Latin; it is said to be connected with *panis*, bread, food.

48,593. Does it mean the acorns and the beech-mast, and that kind of thing, is that the practical meaning of it?—It really means the picking-up of the mast and the acorns by pigs.

48,594. What drops off the trees?—Yes. They reckon that if a man turns out a lot of pigs of all sizes in a good mast season he can clear 10*s.* per pig; and if a man can only turn out one or two pigs he can sometimes make, directly or indirectly, as much as a couple of pounds on each.

48,595. (*Chairman.*) Do the labouring men save up their money to buy pigs in order to turn them out and avail themselves of this right?—Yes, they turn out their own, of course, to begin with, and then if they can afford to buy any they buy.

Cottages and the common rights.

48,596. Now take a cottager who can afford to buy a heifer; does he turn it out in the early summer?—Yes; he would turn it out in the early summer, and it would keep itself until the autumn; it would cost him nothing, except just keeping an eye on it from time to time, and the money that he paid to the Verderers' Court.

48,597. At the end of the summer does he sell?—He either sells it then, or else he keeps it through the winter and sells it at a much improved rate with a calf the next year.

48,598. If he paid 5*l.* for the heifer originally, he might sell it again at from 12*l.* to 14*l.*?—He would do that, but her keep through the winter would cost him about 50*s.* out of pocket.

New Forest ponies.

48,599. Then as to the ponies, is there a large number of ponies kept in the Forest in this way?—The pony business is a very large business. People begin in very early life. If a man can get hold of a mare, perhaps a broken-down mare, cheap, he will turn her out; and if she will live on the Forest at all, she will begin to pay him very shortly. Of course they do not sell their mares; they sell the yearling colts and accumulate the mares so to speak, and so it goes on. There is an immense deal of money made in the Forest by ponies. I do not know whether you would be interested to know anything about the efforts which have been made lately to improve the breed, but a good deal has been done, and even Her Majesty the Queen has taken an interest in it.

48,600. (*Mr. Chaplin.*) In this breed of ponies, do you mean?—Yes.

Effect of common rights on small occupiers.

48,601. (*Chairman.*) Do you consider that these rights of turning out in the Forest and the right of pannage, and so forth, have resulted in there being a large class of small occupiers?—The Forest is quite full of them.

48,602. In that respect it differs from the ordinary rural districts of England?—Yes.

48,603. Because there is this large body of small occupiers of from 1 to 2 acres up to 50?—Yes; but they are especially numerous in the lower grades in the first two classes. Under 12½ acres there is a very large number of holders.

48,604. And these various classes have been able to get through the last few years without suffering from the depression in the same way as agriculturists in other parts of the country have?—Yes.

Rent and value of land in the New Forest.

48,605. Has the value of land and the rent of land been maintained in the neighbourhood of the Forest?—Ordinary agricultural land has fallen, I find, about one-half at a little distance from the Forest since 1877; but the small holdings have not gone down at all in value.

48,606. When you say ordinary agricultural land, do you mean land for comparatively large farms?—Yes, and

Digitized by Google

Mr. G. E. B. Eyre. 16 May 1898.

land which is sufficiently far off from the Forest not to be much affected by its neighbourhood.

48,607. In the neighbourhood of the Forest have these small holdings and small farms that you speak of kept up their value?—They have up to the 20 acres limit.

48,608. Up to the 20 acres limit?—Yes, and even a little beyond the 20 acres limit.

48,609. Has rent been maintained?—Yes; and as far as I know from experience the rents are paid with absolute punctuality.

48,610. Has the selling value of land been maintained in the neighbourhood?—The selling value of small holdings is very high; it certainly has not gone down. I think it has, if anything, gone up.

48,611. What should you say is the selling value of land per acre?—Small holdings (up to 20 acres) even at a little distance from the Forest, fetch about 40*l.* an acre; the same land sold in larger holdings would not fetch ordinarily more than 20*l.* to 25*l.* an acre. I know two little holdings of about 12 acres each that have lately been sold. One was bought by a small holder himself for investment; he gave 450*l.* for 11½ acres.

48,612. With a house or without?—With a house and a little steading. He reckons to make 5 per cent. on his money. In the other case a little place of 12½ acres was sold for 480*l.*, and was thought to be remarkably cheap. That pays over 4 per cent. Small holders, who are really the sons of labourers of the past generation, are actually investing their savings in these little holdings if they can buy them to pay 4 or 5 per cent. Up to 500*l.* there seems to be money forthcoming for all these little holdings.

Subdivision of holdings.

48,613. Was there recently a sale of a small estate in the middle of the Forest, called Burley, which has been broken up into small holdings?—I advised the owner of Burley, when I heard that he was going to sell, to break up his property. The idea was a little novel, but he did break it up. When he put it up the first time the lots were too large, and very few sold; he then subdivided it again, and the bulk was sold within three months afterwards.

48,614. What size were the holdings?—At the second sale the largest were a farm of 118 acres and another of 100. I have not got the particulars by me unfortunately, but I know that many small lots were sold.

48,615. Did they realise good prices?—The all round price at the first sale was over 42*l.* per acre, and at the second nearly 32*l.* per acre; some of the smallest lots fetched 90*l.* and 100*l.* per acre; of the larger lots, those which were sold fetched from 20*l.* to 34*l.* per acre.

48,616. This was purely agricultural land, I suppose?—Yes.

48,617. And had no residential value?—Of course there was one lot containing the residence, but that I exclude because I believe it was not sold.

48,618. (*Sir Nigel Kingscote.*) Were there no buildings upon these plots?—The large farm which fetched the highest price, I believe, had exceptionally good buildings, and that accounted for the price it fetched. In the prices quoted, the buildings are included in each case.

48,619. (*Viscount Cobham.*) Is this estate near Ringwood?—It is about half way between Ringwood and Brockenhurst.

48,620. (*Chairman.*) It is a kind of island in the middle of the Forest, I think, of about 800 acres?—Yes, the whole parish is about 1,600 acres, and the property is about half the parish. There has been another sale on the adjacent commons as distinguished from the Forest, part of the Canterton Estate; I do not know whether you would like me to go into that whilst you are speaking of the price of small holdings. I could show you the particulars of the sale and the map, if you are curious to see it. A little plot there of 14½ acres had been granted out in 10 lifeholds within living memory; the reversion of this 14½ acres was sold, and it fetched 1,495*l.* The 11 lots were bought by the tenants All the buildings upon them, with the exception of about three cottages in brick, were of the order that you would expect in lifehold cottages on a common. It was a property which I, for one, would not have bought at any price; I could not have faced the liabilities; but the tenants bought the lots themselves, and in this particular plot the price works out at over 100*l.* an acre.

Value of small plots.

48,621. (*Sir Nigel Kingscote.*) In what year was this?—In 1887. I know another plot of the same size which is, perhaps, worth comparing with it. It is a place called Nomansland. It was a little bit of waste on the edge of the Forest which was not owned by the Crown or anybody, and it was settled by squatters. That 14½ acres now fetches, when there is a bit for sale, 200*l.* an acre for cottage and orchard.

Mr. G. E. B. Eyre. 16 May 1898.

48,622. (*Mr. Everett.*) Does it carry rights in the Forest; I suppose it does?—Yes, for the most part; and licences under the Act of 1879 can be obtained for the rest.

48,623. That is what really gives it its value?—I suppose so.

Subdivision of estates.

48,624. (*Chairman.*) Have you subdivided your own estate into small holdings for the purpose of meeting the requirements of these small people?—When I came into my property in 1887 I had had a certain amount of warning that I should have a difficulty in letting the farms, and I had already begun with some property of my own, which I had in the Forest, to subdivide just before. As soon as I let people know that I was willing to subdivide, people used to come to me, and I had at one time as many as 27 applications on my book for little places. So I sorted out the farms and the people, and eventually I cut up the whole place, until I have now got about 68 holdings, of which the largest is 83 acres, and the smallest is about one acre. As far as possible, I adapted the holdings to the requirements of the smaller local men who would use the Commons or the Forest or both.

48,625. What is the total acreage of your property?—Excluding common, about 2,700 acres.

48,626. So now these holdings average about 40 acres each?—I could give you them in classes. I have 18 holdings of 6 acres and under; 20 holdings of 12½ acres and under; 7 holdings of 20 acres and under; 14 holdings of 50 acres and under, and 9 holdings over 50 acres and under 84, making 68 in all.

48,627. Do all these tenants exercise the rights of turning out into the Forest?—They all have either a forest right or a common right of some kind, and all, almost without exception, use it in some way.

Effect of common rights on the condition of the population.

48,628. Do you consider that the effect of the attachment of these rights to these small holdings and the existence of these small holdings themselves have had an important effect upon the general population of the district, in the direction of stimulating thrift and industry?—The general effect is quite extraordinary to anyone who was not brought up in it. It is extraordinary to me; the more I look into it and the more I learn about the state of things in the New Forest, the more astonished I am. The way in which these people work, and the way in which they save, and the way in which they seem to have money whenever they want it for their own purposes, is sometimes quite a mystery to me—how they do it; I know they do do it.

48,629. Do you consider the system, by giving inducements to thrift, so that the smallest occupier might buy a cow or two or three pigs and hope to improve his position, results in forming habits of industry and thrift throughout the district, and provides stepping stones by which the people in the lowest position are continually bettering themselves?—Everybody in the New Forest may be said to have a chance; parishes without rights are described by the New Forest people as "parishes without chances." I could give numerous instances of how these chances are used. I have known a boy owning a mare whilst he was still living at home, and so laying the foundation of his rise. I have had young men of 25 come and ask for "a "little place," and I have said, "How can you take a "place"? "Oh, I have got a little stock, and I have got a "little money." "What sort of place can you take"? "So "many acres, sir." "Well, what have you got"? "Oh, "sir, I have got 65*l.* in stock and money." That has happened to me twice. Then I can give you another instance. The son of a labourer was dairy boy to my father; whilst he was about 17, he somehow or another scraped together enough money to get hold of a heifer; that was the foundation of his success. That man is now a dealer in the Forest, and he deals sometimes to the extent of 500*l.* in a week; he has bought sheep of me, 200*l.* worth at a time. This man had nothing but the chances of the district. That, of course, is rather an extreme case, but I could give you another one of the same sort. I know labourers, who worked at 10*s.* to 12*s.* a week, who are in holdings of 12½ acres; one, in fact, is in a holding of 50 acres.

48,630. Then you would say that there are numerous cases in which labourers rise from being merely day labourers into the position of being small occupiers?—Yes; and even freeholders. For instance, a day labourer bought his lifehold house, a little cabin he had built himself on an acre and a half of land, giving for the reversion

Digitized by Google

Mr G. E. B. Eyre. 16 May 1895.

200*l.*; and 400*l.* of money was found in the house when his widow died.

48,631. (*Sir Nigel Kingscote.*) In actual cash?—Yes.

Pauperism in the New Forest.

48,632. (*Chairman.*) Is one result of the better condition of things there, that there is no pauperism in the district?—I took out the statistics of parish relief in my own village in 1882, and I have taken it out again in 1894. The population is 823. In 1882 the Wiltshire parish had no indoor paupers, and only three outdoor paupers; the Hampshire parish had three indoor and eight outdoor. In 1894, in the Wiltshire parish, we had no outdoor pauper, and only four indoor paupers, and in the Hampshire parish we had one indoor and five outdoor paupers; and all this relief was given to cases of old age with infirmity, and to widows with families. That is a fair sample of a New Forest parish. Many instances could be given of widows, and of aged or infirm persons, who keep themselves independent of parish relief by a Forest or a Common right.

48,633. Has the population of the district been maintained or has it been reduced as in other parts of agricultural districts?—I am told that the young men are getting a little restless and going away, but I should think, on the whole, that the population remains very much what it was, because I find that if I try to induce the numerous sons of one family to separate and go away, they are very unwilling to go. They have learned that they cannot do better elsewhere, even in the Colonies.

48,634. What are the unions in which the Forest is situate?—They are the New Forest Union, the Fordingbridge Union, the Ringwood Union, and the Lymington Union.

Population of the New Forest Union.

48,635. I see that the population of the New Forest Union slightly increased between 1871 and 1891, namely, from 13,400 to 13,900, and that the value of land has been reduced only from 35,000*l.* to 33,000*l.* a year, according to the actual assessment. I think you told us that out of the Forest 43,000 acres are open and not enclosed for timber?—Yes.

48,636. I believe 30,000 acres consist of very poor land indeed—heath?—The Government surveyor, Mr. Clutton, gave in evidence, I think it was about the year 1849 or 1850, that those 30,000 acres in his opinion would starve Scotch fir. These are mainly the upland heaths, consisting of gravel on Barton clay, and the lowland heaths, namely, those about the 100 feet contour, consisting of Upper Bagshot sands.

48,637. The remaining 13,000 acres consist of somewhat better land, I suppose, where the cattle can get?—Yes, that is better land, that is mixed land. But there is no very good land in the Forest; the term locally applied to these middle lands between the upper and lower heaths is "patchy"; there may be three qualities or four qualities of land in a small field, because these lands are a mixture of clays and sands, with more sand than clay. There is some, however, of the poorest land, mixed in with these middle lands.

48,638. I suppose the ponies and rough cattle can pick up something on this very poor land?—They eat the rough herbage, furze, &c., but the heather is their staple food, in the same way as it was with the deer in former days, when the best venison in the Forest was called "heath-cropper venison." It is on working the Forest as a whole that these animals make a good living. If they were confined to one particular part they would not succeed, but they can change according to the season and the wind, and sometimes they are on the high ground and sometimes on the low. The ponies range the whole Forest. If one turns out a pony outside one's own door there is nothing to prevent his being 10 or 12 miles off in a day or two. They go to whichever place happens to suit them at the time of the year, more particularly when the fly is very strong; and also they go to where the water is. Water in the Forest is very scarce, and that governs very much the movements and haunts of the animals.

Effect of common rights on agricultural depression.

48,639. Then would you say generally, as the result of the condition of things in the Forest, that these forest rights under which the small occupiers of land have the power of turning out cattle, and so forth, as you have described, have enabled them to overcome the difficulties of the agricultural depression which has been felt so much in other parts of the country?—The Forest now contains an exceptional population, enjoying exceptional prosperity. It makes a very large annual income off even these "hungry" heaths" and "patchy" middle lands. Indeed, economically regarded, the soil is thus, probably, put to the best use. The lower strata of the agricultural population, in particular, are rising socially or in the scale of comfort, and are even accumulating what is to them wealth.

48,640. And they have not suffered so much from bad seasons?—No, they do not really suffer by bad seasons; one reason is that, generally speaking, the Forest goes the opposite way to the manors, so that if there is a bad time on the manors the Forest may be better than the average. This was notably the case in the great drought of 1893. It is a very curious thing that the animals generally do well in the Forest when they would be doing poorly on the manors; so that the two things work together and balance one another. Then these commoners, being very rarely in what you may call difficulties as to money, are not obliged to sell in a bad time, and if prices go down they wait till prices recover themselves. On the point of thrift, might I put in a return on the subject of the savings banks?

Mr. G. E. B. Eyre. 16 May 1895.

Bank savings.

48,641. Yes, if you please?—I have taken the last published return for 1889. Of course I estimate that the Forest people as a rule re-invest their money in stock because of the high interest that they get; but this abstract will also show that they do put their money away in cash as well. The table shows an average amount to each depositor's credit of 17*l.* 7*s.* 11*d.*, the average amount for the whole of England and Wales being 14*l.* 12*s.* 2*d.* (*See* Appendix A II.)

48,642. (*Sir Nigel Kingscote.*) Is that in the Post Office Savings Banks?—Yes, through the offices situate in the New Forest and its vicinity. The table shows the number of depositors, the amount to their credit on the 31st December 1889, and the proportion of depositors to the population, which is one in six.

48,643. (*Mr. Giffen.*) Are there any other savings banks in the district besides the Post Office Savings Banks?—I should hardly like to say; there used to be. The County Friendly Society and the Benefit Clubs operate in the same sort of way, and there were some savings banks in former days, but I really could not tell you whether they are maintained or not.

Subdivision of common rights.

48,644. (*Sir Nigel Kingscote.*) Do the number of people who are entitled to these rights increase; can they increase or does the number remain much the same?—The rights run either with the house or with the land; if the land is subdivided the number of people who can exercise the right increases.

48,645. Then on that estate which you mentioned being cut up into so many small holdings, so many more people were entitled to the rights of the Forest?—So many more families exercise the right; the right is not increased, it is subdivided.

48,646. (*Mr. Little.*) Is the right subdivided?—The right is subdivided, it is not increased.

48,647. Practically, the right of stocking remains the same?—Yes.

48,648. (*Sir Nigel Kingscote.*) Take a holding of 100 acres which has been cut up into six divisions; formerly the rights we will say were restricted to 100 animals; would those rights be divided by six when the holding was cut up?—The ultimate legal right, of course, would be levancy and couchancy, and if it became necessary to ascertain the proportion per acre, the number of animals that could be kept in winter on the land to which rights attach would be the measure of the right of turning out animals in summer.

"Levancy" and "couchancy."

48,649. (*Chairman.*) I suppose the principle of levancy and couchancy is not really practically observed, but every occupier turns out as many cows as he can maintain on his land?—The legal doctrine is in the background, but it is not brought to the front so long as there is a sufficiency for all the commoners who want to turn out. If there were more animals turned out than the Forest would carry then the doctrine of levancy and couchancy would be brought up, and no doubt would have to be enforced. But the custom of the country is for a man to turn out what he can, because if one man does not use his rights nobody is the worse off if his neighbour profits by this non-use. In fact, the commoners work the common in common, and this fact operates as an important stimulus to industry, thrift, and enterprise, especially amongst the smallest holders.

48,650. (*Sir Nigel Kingscote.*) Who checks the number of animals turned out? Do the Verderers do that?—There is no stint, but if any necessity for interference occurred, it would be the duty of the Verderers to interfere.

48,651. (*Mr. Little.*) There is no periodical drift of cattle in order to ascertain the number?—No, there is no stint, and therefore there is no drift.

48,652. (*Sir Nigel Kingscote.*) In your recollection has there been no taking of a census of the ponies or cattle or anything else by the Court of Verderers?—The Court of

Digitized by Google

Mr. G. E. B. Eyre. 16 May 1895.

Verderers mark every such animal that is turned out, and therefore they know more or less how many animals are turned out.

48,653. (*Chairman.*) Supposing a small occupier came to you with more cattle than seemed reasonable with reference to his holding, would you say he was turning out too many, and would you refuse to mark more than a certain number, or would you mark all the cattle that he brought before you?—Each individual case would be dealt with according to the circumstances.

48,654. Supposing a man with only three acres were to come to you with, say, 10 cows, would you say: "No, that "is too many for your holding, and we will only mark two "or three?"—A point of that kind would be referred to the Verderers.

48,655. (*Sir Nigel Kingscote.*) To whom?—It would be referred to the clerk in the first instance by the marksman.

48,656. (*Chairman.*) Has the case occurred?—I do not know that it has.

48,657. Then in practice, I suppose, the right is more favourable, so to speak, to the small occupiers than to the larger ones, because they can practically turn out more cattle in proportion to their holdings than the larger people can?—They cultivate their holdings to such a very high pitch that they are entitled to turn out more per acre than the larger farmers.

48,658. Even on the principles of levancy and couchancy?—Even on that principle. If a man works his place up to garden pitch of course he might keep a very large stock proportionately to its acreage on winter food grown upon it.

48,659. (*Sir Nigel Kingscote.*) Take an enterprising man—I will not use the word unscrupulous—supposing he has only a right to turn out three cows, we will say. Do any such individuals turn out six or five, and not get found out—I mean not get checked? Is there a good deal of that?—The custom goes for a great deal, and hitherto the custom has been from time immemorial that people should turn out what they can. Of course if a man did anything very unreasonable he would be given a gentle hint.

48,660. (*Mr. Chaplin.*) But at present the case has never arisen where there have been too many animals turned out?—The Court has not had occasion to interfere.

48,661. The difficulty has not occurred yet?—The difficulty has not occurred.

Subsidiary occupations of small holders.

48,662. (*Sir Nigel Kingscote.*) I suppose there are a great many of these small holders who gain a very good livelihood in other ways; I mean to say with their ponies and with carts?—They haul a certain amount; they cart timber, and so on.

48,663. They do a good deal of work like that do they not, and get paid for it?—They are very keen on getting a supplementary business, so to speak.

48,664. And there is a good deal of that done?—Yes. Of course ponies are very cheap, and men knock up a rough cart and they cart gravel for the highway board and fir poles for the Crown and so forth.

48,665. Hauling work in that neighbourhood is done very much by the piece, is it not?—Yes, it is 5*s.* a load. For that, they will fetch chalk from the Downs.

48,666. So that there is an outside element of gaining a livelihood besides what they actually get from the land?—Yes. A really active small holder will have three livings. He will have the land, he will have his common rights, and then he will have some small industry which he follows, whether it is hauling or whether it is dealing in small goods, what we call higgling, or dealing in stock. They are very ingenious at finding other employment, for which the peculiar rural economy of this self-contained district affords numerous opportunities.

Improvement of ponies and cattle.

48,657. You mentioned that efforts have been made to improve the breed of ponies; but are not the ponies kept out all the winter and thereby their growth very much checked, and what would be better animals are very often three parts starved?—The foresters have a very strong opinion that it is no use to have a large pony. They do not wish to see the size increased. They say directly of an "improved" entire pony, "he is too big for the Forest," and they maintain that the proper pony for the Forest is the small pony, 12½ hands pony.

48,668. Does that mean that he will not live in the Forest?—He will not thrive there. It is the same with the special breed of cattle. Heifers and cows brought from a distance would not live in the Forest, but the forest-bred cow lives and thrives. Highland cattle do well during the summer run. Even in winter, except in a heavy snowfall—snow is not very common in the Forest and does not lie long—the Court of Verderers has ascertained that the native ponies which do not leave the Forest do better there than those taken in upon the manors.

Mr. G. E. B. Eyre. 16 May 1895.

48,669. Then you think it is not much use trying to improve the breed either of the ponies or of the cattle in the Forest?—It is of use up to a certain degree; for instance, a better looking pony, a better class pony, can be sold as a yearling at a better price. But as regards the permanent stock, I do not think the commoners would care to see the mares very much altered. I think that these recent efforts to improve the breed have probably added about 20 per cent. to the quality of some yearlings.

48,670. And to the market value of them?—And to the market value if the market is the same one year with another, but prices are low just now, and it is a little difficult to estimate what the benefit has been. One can get certainly a 20 per cent. better pony than one could four or five years ago.

Freeholders in the New Forest.

48,671. (*Mr. Giffen.*) Are most of the 5,000 occupiers in the Forest that you speak of in your proof freeholders as well?—Many are, and an increasing number, because, as I was saying just now, as men save money they will very likely buy a small holding as an investment, or to make a home of their own.

48,672. But you would not say that most of them are freeholders?—Not most of them; there must be a much larger number of occupiers than of freeholders.

48,673. Then if they exercise rights in the Forest, I suppose it is not as occupiers, but as deriving the right from somebody else who is a freeholder, is that so?—Yes, they exercise the right of the freeholder.

48,674. Can you tell me what is the proportion of small freeholders to large freeholders? In your proof you state there were in 12 parishes on the east of the Forest 493 freeholders in 1854, I think, and out of those 493 only 142 have holdings above 20 acres?—That is so.

48,675. Is it not the case that the people under 20 acres, although they are so much larger in number, only have 10 per cent. of the land, or something like that?—I am afraid I do not quite follow you. You think that they hold 10 per cent. of the land?

48,676. That is about all that it comes to, if you work it out?—Most Forest estates contain holdings of different sizes, and I should think all contain some small holdings, the only exceptions would be where the farms have been consolidated, notably in the corner of the Forest next the Isle of Wight.

48,677. But can you tell us how much of the land is held in small holdings and how much in large holdings?—There is nothing to go upon but the register of 1854, and that is not a very orderly document, and it is a laborious task to make calculations from it.

48,678. But that is the effect of it, that, if these figures are general throughout the Forest, only 10 per cent. of the land is held by freeholders of under 20 acres, or something like that?—I am afraid I could not answer that question.

48,679. (*Chairman.*) Those 493 freeholds are apparently in a district where there are 17,800 acres of waste?—Yes, and 34,000 acres of property registered as having rights.

48,680. (*Mr. Giffen.*) Is it the 34,000 acres to which the 493 freeholders apply?—That is so.

48,681. If you work it out you will find that the number of acres held by people holding under 20 acres cannot very well amount to more than about 1,700 acres or something like that, it is a very simple calculation indeed; so that out of 34,000 acres you have only 1,700 acres held by people with holdings under 20 acres. I merely wish to have some idea of the extent of the small holdings as compared with the surface of land, not merely the numbers in proportion to the total number of occupiers, but the total extent of land held by the small occupiers?—I am afraid I cannot give you any fresh data. I have never had occasion to complete the detailed list to which you refer, and, unfortunately, I have not with me the acreages of the 493 freeholds.

Mode of living of small holders.

48,682. Can you tell us anything of the mode of living of those small occupiers; what food they live upon, and what crops they cultivate?—Of course all the smallest holdings are in pasture, with the exception of the little strip in the garden or orchard or field on which they grow roots, mangels, swedes, turnips, and cabbages.

48,683. Potatoes?—Yes, they crop their gardens thoroughly for all their wants.

Digitized by Google

Mr. G. E. B. Eyre. 13 May 1895.

48,684. Do they live very much upon potatoes, do you know?—They do, a great deal. The style of living is rising very fast. The consumption of butcher's meat is increasing very much.

48,685. If they consume butcher's meat I suppose that is an article which they purchase?—Yes. The shops also sell largely tinned meats and fruits.

48,686. But you cannot tell us much in detail as to the mode of living of the small occupiers?—Some years ago I should have said that they lived chiefly on bacon and potatoes and a little tea.

48,687. And milk?—Yes, and milk; they have got their own cows, but if I may descend to such particulars they do not generally drink their tea with milk. There has been a great rise lately in the style of living. Of course they benefit by the cheapness of food like everybody else; but I have noticed that some sit down to very comfortable teas, to cakes and things of that kind.

Improvement of ponies.

48,688. (*Mr. Gilmour.*) What class of stallion has been proved to be the most useful lately for crossing with these Forest mares?—The experiment is rather new, but the general impression is that an Exmoor would be the best. We have had Cumberland stallions, and we have had Dartmoor, and we have had Welsh.

48,689. (*Sir Nigel Kingscote.*) Have you had Arabs?—I was coming to that; we have had what the foresters do not care very much about, that is, we have had Arabs. The Arab strain is not liked until the third or fourth generation.

48,690. (*Mr. Chaplin.*) Have they tried Hackney stallions?—We have only had one that was on the book: FitzGeorge II., H. S. B., No. 4265.—Sire Sir George, No. 778.

Effect o common rights on small holders.

48,691. (*Mr. Gilmour.*) The gist of your evidence would point to the fact that it is the great privileges these people have of pasturing where no labour is required, and where consequently there is no labour bill at all, which enable them to do so well on a small holding of this size?—Yes; and there is also the stimulus that a man instead of having to put his money away at 2½ per cent. can turn it over in seven to nine months, and make 25 per cent. out of it, as, for instance, is constantly done by buying in heifers for the summer run.

48,692. With your knowledge of how it has worked and produced these advantages, have you taken any interest in studying the experience of holdings of similar size in other parts of the country where they have not such privileges?—I am afraid I have not had time to go into that. I have taken a great, but only a general interest in it, and I have no special knowledge on the point.

Rent and cultivation of small holdings.

48,693. (*Mr. Chaplin.*) I see that in your proof you classify the holdings under two heads; first, "Cottage "holdings with land up to five or six acres," and second, "Little places up to 20 acres," and these cottage holdings and little places let for about 2*l.* an acre you say?—About 2*l.* an acre all round tithe-free.

48,694. What sort of soil is it; is it pretty good?—It is a fair soil; you cannot say it is very good, and you cannot say it is very bad.

48,695. Then it is a highish rent for it?—It is a high rent; you could not get the rent anywhere else.

48,696. What do they cultivate on it; do they cultivate extremely highly?—Very highly; of course it varies with the man; one man will work his holding very much better than another.

48,697. But that is the general characteristic?—The general characteristic is that.

48,698. Is it done with spade labour as a rule?—Yes, you would not see a plough upon these little holdings, except perhaps on some of the comparatively larger ones.

48,699. How much of the holdings as a rule, taking the holdings of 20 acres say, would be cultivated; the greater part, you say, is in pasture?—Not more than a fourth.

48,700. Would they cultivate as much as a fourth?—They would cultivate about as much as a fourth or a fifth on holdings of from six acres up to 20 acres.

48,701. And that they would cultivate extremely highly?—Yes.

48,702. They grow vegetables, I suppose?—They grow winter food and things for the cows.

48,703. Not for the market?—No, for their own consumption.

48,704. Entirely for home consumption?—Yes.

Mr. G. E. B. Eyre. 16 May 1895.

48,705. They do not sell?—They sell fruit, apples, &c.

48,706. If they wanted to sell, is there a good market within reach?—Yes, the dealers come round and they sell over the gate.

48,707. The dealers come to the door and buy the produce if there is any spare produce to sell?—Yes.

48,708. Is there much spare produce?—They sell dairy-fed pork, eggs, some poultry and butter. A very large quantity of butter is made in the Forest.

48,709. Is it good butter?—It is good butter. I do not say that it is made according to the best modern system, but I think we shall come to that.

Dairy education.

48,710. Have they any advantages for dairy education in that district?—They have, but they are very wedded to their old methods.

48,711. That is the case usually, is it not? But you think their butter may be improved?—I think it might be improved. Hitherto they have been supplying Southampton and Bournemouth. One side of the Forest supplies Bournemouth and the other supplies Southampton.

48,712. So that if their butter-making was improved there would be additional opportunities for their being prosperous?—Yes.

48,713. They have escaped depression to a great extent, I understand?—Practically altogether, the little men.

Subsidiary occupations of small holders.

48,714. And that you attribute mainly to the fact that they are not wholly dependent on agriculture?—Yes; then they get the full advantage of the modern cheapness of necessaries, because they buy their own food and their clothes, and feeding stuffs, at greatly reduced rates, compared with what they used to pay years ago.

48,715. They are nearly all, I understand, engaged in some other business or occupation in addition to the management of their little holdings?—Yes, mostly; they ought to be, especially in the smallest holdings, where the wife can do most of the work and management.

48,716. (*Mr. Dalton.*) Has the Small Holdings Act been put in force at all in the Forest by the County Council?—I have not heard so.

Small Holdings Act.

48,717. Do you think there is any necessity for it, or that there would be any advantage in it; are there small holdings that would be bought up by means of it?—These small holdings are so readily bought by the people themselves that I should have thought it was a pity to interfere with a system that worked so well.

48,718. They already have sufficient money to buy small holdings without borrowing?—As a general rule, I believe a New Forester has got money. "Little places" find a ready sale, and are, I believe, very seldom encumbered.

Allotments.

48,719. Are there many allotments in the district?—Yes. There is no demand for more allotments in my own parish, where there have been allotments for a century; the people prefer a good garden, and several of the allotments are now held together, practically as little strips of meadow.

Area of cultivated land.

48,720. Has most of the cultivated land in the Forest been long under cultivation?—I think mostly immemorially. Afforestation, that is, the introduction of forest law, would tend to fix the *status quo ante* afforestation.

48,721. The area under cultivation does not increase?—Of late, arable land has rather been let down to grass.

Subdivision of holdings.

48,722. Do you think there is much room for breaking up more farms into small holdings?—I believe it is undoubtedly the right thing to do, and I understand that in various parts of the Forest people are beginning seriously to talk of doing it, especially where farms have been thrown together.

48,723. Would the Forest carry many more animals than it does at present if this system of breaking up the farms was largely increased?—I think it would, because one generally finds on such wastes that the harder in reason they are fed the better the feed.

48,724. Then there is room for having a larger population there by breaking up the farms and practically increasing the amount of the Forest rights?—Increasing their exercise rather. I imagine that we are only going back to the original state of things, are reverting to the almost prehistoric agricultural system of the district. I think we shall eventually come back to something like the old system of small holders, which prevailed before the consolidation of farms and the enclosure of commons, and that we shall have gentlemen's residences, residential estates, and small holdings, and little else in the Forest.

Digitized by Google

Mr. G. E. B. Eyre. 16 May 1895.

48,725. Is the population increasing much?—The Chairman, I think, gave some figures upon that point.

Proportion of Forest land in different unions.

48,726. Yes, with regard to particular unions, and I was going to ask you about those unions; is any one of those unions entirely situate in the Forest or do they take in land outside?—Every union would have an outside margin of land not in the Forest, or not abutting on it.

48,727. Which union contains the larger proportion of Forest land, do you know; some of them, I think, extend a considerable distance beyond the Forest?—Generally speaking, if you imagine the district containing the Forest—that is, S. W. Hampshire between the Downs and the sea, and between the Salisbury Avon and the Southampton Water—as a square, and divide it into four pieces, each union would have so much waste in the middle, and so much cultivated land, and so much inhabited land on the outside. The towns lie on the outer edges, by the rivers or the sea.

48,728. But they would also have a certain number of parishes, would they not, lying altogether outside the Forest?—Yes, outside the perambulation, but not outside the reach of the Forest—that is, not outside the limit of the rights.

Pauperism.

48,729. I have not got any statistics of the pauperism here, but the statistics as to the poor rate show that the rates in these four unions are not at all below the average. Indeed, I think they are rather above?—You would find a town in each of these unions; Totton and Eling, for instance, in the New Forest Union, Lymington in the Lymington Union, and the towns of Fordingbridge and Ringwood in their respective unions. I feel quite clear as to what I call "real" Forest parishes. There was an inquiry three years ago before Mr. Pelham in the Forest, and he stopped the evidence on the subject of pauperism; he said he was quite satisfied from the evidence that he had already received that there was next to no pauperism in the New Forest proper.

Proportion of Crown to private property.

48,730. (*Mr. Everett.*) Does the great bulk of the Forest belong to the Crown?—The soil is in the Crown, subject to the common right.

48,731. Of the whole of it?—The whole of the waste is in the Crown, but there are parts of the Forest which are private property; the Office of Woods, &c. alleges that 25,000 to 26,000 acres of private property are within the perambulation, and states that the Crown owns about 2,000 acres of freehold in the Forest.

48,732. Is that private property freehold?—That is freehold.

48,733. And it carries common rights on the other parts besides?—The common right extends over the whole Forest. I do not know whether all the 25,000 or 26,000 acres have rights, but probably the bulk is on the register of 1854. The common right attaches to property also in Wiltshire and in Dorsetshire.

48,734. Are the old parish boundaries of the parishes which were laid waste to make this Forest still kept up?—I am afraid they never existed for parishes that William the Conqueror is supposed to have laid waste.

48,735. He is supposed to have levelled 60 churches or so?—I do not think they were ever there; there is no evidence of such. The physical conditions of the district, including the scarcity of wholesome water, must always have prevented its settlement.

Religious provision.

48,736. What is the religious provision made for the people in the Forest now—are there places of worship?—Every place, as far as I am aware, has its place of worship. Moreover, the Nonconformists are very active, and they have chapels everywhere.

48,737. Are there parochial churches?—There are 27 parishes and each has its church, and there are districts being formed from time to time.

Tithes.

48,738. Are tithes levied over the Forest?—Not over the Forest itself; but over the cultivated lands in the Forest, yes.

48,739. As land is brought into cultivation it becomes titheable, I suppose?—Not if it was waste before.

48,740. I think if waste is brought into cultivation it becomes titheable still anywhere?—I believe that the lands subject to tithe are a fixed quantity, so that if waste is brought into cultivation it would not become subject to tithe.

Land tax.

48,741. I am not sure since the commutation how that is. Is the land tax payable in the Forest?—Yes, where it has not been redeemed; but not on the waste, only on the private property.

Mr. G. E. B. Eyre. 16 May 1895.

Cost of maintaining ponies in winter.

48,742. In your proof you say that these ponies in the winter cost 1*s.* or 1*s.* 6*d.* a week; in what way is that money spent? Are they taken out of the Forest and put on to the private lands?—Yes, when they begin to wander, and when they are liable to get pounded in the roads, then the people find that it pays them better to put them into a park or somewhere, and they get them taken in at about 1*s.* a head in winter. Some mares are never taken in, and never leave the Forest.

Freeholders and common rights.

48,743. Can outsiders now with money in their pockets get hold of a bit of land in the Forest and become occupiers or freeholders?—If you buy the land you buy the rights that go with it; in the same way if you buy the house and it has got a fuel right you buy the fuel right of turf or of wood with the house.

48,744. It is not confined to people born in the district?—No.

Subdivision of holdings.

48,745. (*Lord Rendel.*) You spoke of having subdivided into small holdings some 2,700 acres of your land; how was the question of buildings provided for?—As there were small holdings in the neighbourhood I was sometimes able to let land without buildings, otherwise I used to improve a cottage—that is, I took a labourer's cottage and built a third bedroom and a dairy under, or I added a lean-to and sometimes a wide verandah for outside work to a three-bed-roomed cottage, and so got a small farmhouse. Then if there were no buildings one had to put up a small building. But, generally speaking, I found that where the farms had been put together the old farmhouse survived as a cottage, and perhaps a barn, or some relic of the old buildings—very often these old oak buildings are nearly indestructible—and I converted them. In fact, I dealt with every holding according to its special circumstances just as I best could.

48,746. Then so far as these 2,700 acres were concerned, you met with no special difficulty?—No; the change gave me personally a vast deal of trouble, but by suiting the land to the demand I succeeded in the course of about 13 years.

48,747. So far as your interests as an owner are concerned you do not think you have been prejudicially affected, do you?—Of course it has involved a very large outlay, and, of course, one would not naturally have spent that money on the land, but if one has got a property one must either sell it or make the best of it, and I found that I should not have been able to sell mine in its then condition, but now that I have cut it up I believe I have made it comparatively a realisable asset; I believe I could sell it if I wished to, with success, taking time to do it.

48,748. And a sufficient interval has elapsed for you to form a pretty fair opinion on that point?—I think so. I have watched them all very carefully and I have really no reason to be dissatisfied with any of my tenants; they are all doing well so far as I can see. And, being mostly natives of the Forest, they are not likely to leave their farms.

Tenure.

48,749. What is the nature of their tenure, what is the form of the agreement under which they hold?—Those who have not got agreements will not take any, but to new tenants I give an agreement. I have not got a form here, and I do not know whether you would care to see it. I have a very simple agreement—just an annual agreement.

48,750. Do you think in the case of the small holdings there may be more liberty in regard to occupation given to a tenant?—More do you mean than the general law gives them now?

48,751. More than the form of agreements as between landlord and tenant; in the case of small holdings, will there be a larger liberty of cultivation, for instance?—I should leave them, keeping an eye on them, to do what they thought fit; I should not tie my tenants to a four-course system, for instance.

48,752. In regard, therefore, to the whole of these holdings you would say that the relations as between landlord and tenant were freer and more elastic than they would be in the case of larger holdings?—Yes, I think they are.

Effect of common rights on occupiers of land.

48,753. I think you said that the secret of the comparative success of the whole of the New Forest district lay in the great advantages which all the occupiers of land derive from the Forest rights and privileges?—Yes, or from rights over the adjacent commons, and in the inducement thus given to them to exert themselves.

48,754. But I think you have also pointed out that the land generally is rented much more highly in reference to its agricultural value *per se* than it would be rented were

Digitized by Google

Mr. G. E. B. Eyre. 16 May 1896.

it without the advantage of these rights?—Certainly. The lowest estimate the tenants put upon the beneficial value of the land is that the value of the land is doubled by the rights. That is the lowest estimate. Of course if the beneficial value to the tenant is as much as that, the landlord gets some benefit in the way of rent.

48,755. And to the extent to which the landlord gets the benefit in the way of rent, to that extent the benefit to the occupier is discounted?—Yes, it is; but then he can well afford to pay it.

48,756. I am assuming that if on the balance of the whole transaction there is a favourable result to the tenant then there is also a favourable result to the landlord?—There is; he gets a very much better rent than he would get in any other way.

48,757. The whole credit of the success of the district is not to be debited, therefore, to the advantage due to the rights enjoyed by the occupier; I am merely suggesting that these are deductions from your evidence?—I am not quite sure that I apprehend your meaning. Of course a man pays a higher rent for the same article, so to speak; there is no doubt he does that; but then he get advantages with this land which far more than compensate him for that.

48,758. Then may I put it this way, that you consider that the Forest rights, so far as land is rented, take the shape, to some extent, of higher rent?—Yes, the land carries a higher rent.

48,759. And so far as the land is sold it takes the shape of a higher price?—Yes, it does so.

48,760. So that the freeholders, so far as they have bought, stand at a higher capital for their land than they would do in the absence of these rights?—Yes, certainly.

48,761. And the occupiers, so far as they rent, stand at a higher rent than they would do in the absence of these rights?—Yes.

48,762. And to that extent, if not more; but to that extent the benefit of these rights has not had to do with the general prosperity of the district?—No That is so; the tenant is handicapped to a certain extent, as regards the comparison which you suggest.

Subsidiary occupations of small holders.

48,763. Then with reference to the ancillary occupations, you have pointed out that most of the occupiers have had some other small business in addition to what might be strictly called agricultural; you have mentioned, I think, three, viz., dealing, higgling, and hauling?—Yes.

48,764. I suppose those would be called agricultural in the broad sense. Dealing, for instance?—Yes, those are agricultural occupations, part of the rural economy of the district.

48,765. Higgling?—Yes.

48,766. And even hauling, I suppose?—Yes, even hauling.

48,767. Therefore the prosperity of the district cannot be attributed wholly to the circumstance that the farmers have other occupations than farming?—No, it is due to three things put together—the land, the rights, and the chances of making also some third livelihood—which enables the smallest men in particular to better their condition. You have no doubt taken into account that there are artisans and tradesmen in the district who are also commoners.

Landlords and small holdings.

48,768. As a rule, you say the landlords are generally inclined to prefer a system of small holdings from the economical point of view?—I think they will come to do so. I do not think hitherto all have studied the question of these Forest rights. I think some of them have overlooked the value of the Forest rights. I have heard large owners of property say that Forest rights were worth nothing to them—probably because they turn nothing out themselves and own few small holdings.

Mr. G. E. B. Eyre. 16 May 1896.

48,769. To the extent to which they do adopt your view and practice, the functions of the landlords I assume will become less important to the prosperity of the district?—Yes, the independence of the population of the district will increase.

Expenditure on buildings &c.

48,770. (*Chairman.*) I understand that you have spent a considerable sum of money in providing houses and buildings for these small holdings?—I have spent a considerable proportion of the income of the estate thereon, and in putting things in order.

48,771. Can you form any idea of what you have spent in that direction?—I am afraid I could not, because there has been such an amount of conversion, and I have done so much with my own staff and stuff.

48,772. Does it represent some thousands of pounds?—I think it represents about as much capital as I have got interest upon in, so to speak, increased rent.

Rent.

48,773. What do you consider the increased rent that you have got in that way?—In some cases I have got 15 per cent.

48,774. Taking the whole property of about 3,000 acres, how much have you increased the rental by?—I reckon that the rental remains what it was about 20 years ago, but it has been maintained at the cost of the expenditure of capital.

48,775. If you had left it in large farms, would you have been obliged to take a lower rent?—I should have been obliged to take something between 12*s.* and 18*s.* an acre for it, because I should have had to let it to ordinary tenant farmers, probably strangers, and not to local men who understand the use of the commons and the Forest.

48,776. What does it fetch now?—The small holdings, buildings included, average 2*l.*, and the larger holdings 30*s.*, tithe free. That is the current rate in the district.

48,777. Then you have realised this by spending a certain amount in erecting buildings?—Yes, and by subdividing the holdings to suit the circumstances of the local farmers.

48,778. And you consider that the interest on the money you have thus expended is about equal to the difference between what you might have let the land at in large holdings, and what you now get from the small holdings?—Yes; I think I am neither better nor worse off.

48,779. Then on the whole it has about paid you?—It has about paid me. I look particularly to the fact that the property is realisable, which it certainly was not before.

48,780. Do you have to maintain the repairs of the buildings?—Yes.

48,781. Is that considerable?—That will come in, I suppose, about 16 or 18 years' time.

48,782. You have not begun to realise that?—I have not begun to realise that yet, but one carries that in one's mind, of course.

48,783. That may be an important item in a few years hence?—If my successors find it so they can sell the property and get out; there are plenty of people willing to buy small holdings in the Forest with their liabilities as regards repairs, if the holdings are of the proper size.

(*The witness handed in a table of results attained. See Appendix* A III.)

The witness withdrew.

Mr. R. H. Rew.

Mr. Robert Henry Rew called and examined.

Mr. R. H. Rew.

Report on Heathfield district of Sussex.

48,784. (*Chairman.*) As an Assistant Commissioner you have visited the Heathfield district of Sussex, and reported upon it to this Commission?—Yes, I have reported upon the poultry industry of that district.

Poultry farming.

48,785. I gather from your report that although there has been a very great extension of the poultry industry in that district, yet there have been no farms, or very few farms at all events, devoted exclusively to poultry?—That is so. I did not find, and I could not hear of, any farm at the present moment devoted exclusively to poultry farming. There have been such farms in existence, but I could not hear of one existing at the moment in the district.

48,786. The industry is rather ancillary to other industries connected with the farm?—That is so.

48,787. But in that respect it has become an extremely important one, and apparently has largely accounted for that district not suffering so much from agricultural depression as other districts have done?—Yes, I think that is undoubted.

48,788. Did you inquire at all as to what the effect of it has been upon rents and upon the demand for farms?—No. In that district there are no farms unoccupied.

Demand for farms.

48,789. Did you hear whether there was a demand for farms in the district?—I should gather that there was a

Digitized by Google

Mr. R. H. Rew. 16 May 1895.

fair demand. There were no farms vacant, and I heard of no difficulty, but I ought to say that I did not make any special inquiries into the agricultural conditions, and that I confined my attention exclusively to the poultry industry.

Effect of poultry industry on agriculture of district.

48,790. I am afraid you a little misunderstood the instructions—perhaps rightly—in thinking that you were confined to an inquiry into the poultry industry?—I entirely understood that.

48,791. Of course it is a rather important element in the matter as to how far this particular industry has affected the general agricultural condition of the district, but you did inquire into that?—No, only incidentally.

48,792. I observe that on page 29 in Appendix VIII. you show that in all 13 parishes where this industry has grown up the rateable value of the land has increased during the last 10 years instead of falling off as in other parts of the country?—Yes.

Rateable value of land.

48,793. I see from that Appendix that the rateable value, I will not say of the land, but of the parishes, has increased from 96,500*l.* to 112,000*l.*?—Yes.

48,794. Turning to another return which I have in my hand showing the difference in the rateable value of the land as compared with houses, I find that in the Union of Uckfield, which appears to be the main union where these parishes exist, the assessment of the lands has increased from 47,000*l.* to 55,000*l.* between the years 1871 and 1894, showing a considerable increase in the rateable value of the land, and that in the Union of Battle, which is another of the unions affected, the value of land has increased from 34,000*l.* to 39,000*l.* in that interval. Those facts would tend to show that the growth of this industry has had an important effect in maintaining the value of land?—Quite so.

48,795. At all events, without having inquired deeply into the matter, you can say that there is a demand for farms, and that rent has been fairly maintained, I suppose?—Yes, that was the impression I gathered.

Poultry fattening and rearing.

48,796. Then I understand from you that there are two very distinct industries, one the rearing of this poultry and the other the feeding?—Yes.

48,797. Did you ascertain which on the whole was the most profitable of the two?—Some of the persons engaged in the fattening industry were not communicative as regards the financial results of it, and were rather apt to give a somewhat gloomy view, but I do not think that their statements were fully supported. I should say that it was a fairly profitable industry.

48,798. One would gather that an industry which is growing so rapidly must, almost as a matter of course, be fairly profitable, otherwise people would not continue to increase their interest in it?—Quite so. They complained a great deal of the new men who were going into it; that is to say, those who were already established complained of the increasing competition, but of course the increase in competition showed that it had been fairly lucrative.

48,799. But you cannot say which of the two industries, the rearing or the fattening, has been the most profitable?—It is very difficult to judge. I should judge them both to be fairly profitable. I am bound to say on the part of those who only reared them, almost all admitted that it was quite profitable. I think in all cases they admitted that.

48,800. And you say that throughout this district either the rearing or the fattening of poultry formed a very important element in every one of the farms?—Certainly. There are some farms I believe where it is carried on to a very slight extent indeed, and those of course I did not go to. I went to those where it is conducted on a larger scale.

Profits of poultry farming.

48,801. I observe that in your Appendix you mention the case of a farm of 200 acres, where the profit for the year 1891 was 268*l.* after paying wages to the extent of 249*l.* (and I suppose the accounts were kept separately for the labour) and interest at 5 per cent. upon 600*l.*?—Yes.

48,802. That is, I suppose, more than sufficient to pay the rent of the farm?—Yes.

48,803. As it consists of 200 acres, I presume the rent is not more than 200*l.* a year?—The rent would be about a pound an acre in that case.

48,804. Is that the general average of rent—about a pound an acre?—It is about the average of agricultural holdings in that district.

48,805. What other produce would the farm produce; was it mainly pasture farm or arable farm?—It was about half and half, if I remember aright.

48,806. Did the tenant grow much of the corn himself with which he fed his poultry?—Yes, a considerable quantity; he fed a lot of his corn to his poultry.

48,807. Is the value of the corn that he has produced himself taken into consideration in this poultry account; for instance, there is an item of 739*l.* for oats; was any of that grown by himself?—As I understood, these figures were for corn actually bought; but this is a case in which the man combined the rearing and the fattening, and of course in the fattening a very large quantity of oats would be used. They fatten almost exclusively on oats.

Mr. R. H. Rew. 16 May 1895.

48,808. It is important to know whether in this account the corn which he produced on his own farm, and which he gave to his poultry, is included or not, because of course its value would make a considerable difference. In that account has he valued the corn which he produced himself?—I do not seem to state that in my report; and I should not like, without a reference to my notes, to speak with confidence on that point.

48,809. Of course it is a very important element. In this account the items are mentioned as so much oats bought and wheat bought and maize bought, but if in addition to that he gave to the poultry a large quantity of corn grown upon the farm, the account ought to be somewhat different?—Yes. I am sorry I cannot speak at the moment confidently without reference to my notes. The account was sent on to me after I left the district. I have no doubt, looking at the figures now, that it does include the corn that he fed.

48,810. (*Sir Nigel Kingscote.*) That he has charged for everything, you think?—Yes.

48,811. Whether he grew it or whether he did not?—Yes, I have no doubt it is so.

48,812. (*Chairman.*) I see that an occupier—I think it is the occupier of this farm—has said that a hundred hens properly looked after will yield as large a return in 12 months as a hundred breeding ewes?—That is not the occupier of this farm; it was the occupier of a farm somewhat outside the district who sent me that statement; he is not a man whom I met myself.

Prices of poultry.

48,813. Have you any figures which show what the prices of poultry year by year have been, and whether the price has been maintained during the last 15 or 20 years, or whether it has fallen in proportion to the fall in the price of food?—No, I am afraid I have not any figures that go back so far as that. I give figures for 18 months back.

48,814. It is important to ascertain that, because it would be important to know whether the price has fallen or not?—No doubt it would have been possible to obtain it, or rather it would be possible for Messrs. Oliver, and people like them—the fatteners—to give it; but Mr. Kenward, for instance, who gave me a lot of information, I think, would only go back about five or six years.

48,815. If you can get somebody in the neighbourhood to give you a return of what the average price of chickens has been, unfattened and fattened, over a series of years it would be interesting to the Commission, so that one might see what the effect has been as compared with general prices?—Quite so. The price of fowls at the market could, of course, be got from the "Times" in the same way that I give the returns here for 18 months by reference back.

48,816. Will you try to get that, and add it afterwards to your evidence if you can get it?—Yes. (*See* Appendix A IV.)

48,817. Of course the very low price of food must have been a very important element in the prosperity of this business?—Yes.

48,818. I observe that you state that chickens are sent over in considerable numbers from Ireland to be fattened in this district?—Yes.

48,819. Are they sent from other parts of Great Britain too?—No, it was rather curious to find that they should come so long a distance when there seemed to be no reason on the face of it why they should not have been obtained nearer at hand.

Extension of poultry industry to other districts.

48,820. From what you have seen in this district do you consider that there is no reason why it should not be increased and extended to other parts?—I think, as I have pointed out in my report, that there are various circumstances which make the district favourable for the industry. It has grown up in the district, of course, and all the conditions so to speak are favourable to it; for instance, they have organised a very excellent system of collecting and of sending away to market, and, of course, all those conditions would have to be created if it was proposed to transplant it to another district.

48,821. That, of course, especially affects the fattening; but one does not see why the buying of chickens for the

Digitized by Google

Mr. R. H. Rew. 16 May 1895.

purpose of fattening should not be equally carried out in other districts as in Ireland?—Quite so; there is no doubt that that might be done in the same way as in Ireland, but at the same time if they are introduced into another district, if the farmers of a particular district, for instance, were to combine to set up in some convenient centre a fattening establishment, and then were to organise a system of collection in the same way as the higglers collect in the Heathfield district—if the farmers agreed to that and were willing to go into the industry, it might very reasonably be undertaken in a great many districts of this country.

48,822. Then I rather gather from you that you think this system could not well be extended to other districts without some organisation of the farmers of the district with a view to common enterprise, if they were to organise in the same way as these Sussex farmers have done, or if we are to advise them to introduce an industry similar to that which has prevailed in this district?—Yes, I think it might quite probably be done.

48,823. I suppose there is nothing very peculiar about the soil of Sussex which is particularly suitable for this industry?—A good part of it is light gravelly heath land.

48,824. There must be a good many other parts of England which would be equally suitable, I suppose?—Certainly.

48,825. The fact of this industry seems to have had an important effect upon the labouring population, for I see that you state that a young labourer can rapidly save money, and that it has had an effect upon early marriages in the district?—That was a remark made by the Vicar of Heathfield.

Effect of poultry industry on labourers.

48,826. Which shows, I presume, that small occupiers or even labourers can derive benefit from the whole system?—Yes. There is no doubt that it has provided a sort of ladder by which the men have been able to rise, and have risen in many cases.

48,827. Should you say that it is a district of small occupiers or not?—I think it is so.

Small and large poultry farms compared.

48,828. Do the small occupiers, as a rule, do better in this business than the larger ones?—It would be very difficult for me to express an opinion whether a small holder with poultry would do better—probably he would—than a larger occupier without poultry. I think it is probable that he would, but I can hardly say so with certainty.

48,829. It is an industry which lends itself rather to the smaller occupier than to the larger one. I suppose?—Certainly. It requires great personal attention from whoever is responsible for it.

48,830. (*Lord Rendel.*) I gather that you find that poultry-farming pure and simple cannot be said to have paid in that district?—That was the evidence I received.

Disadvantage of large poultry farms.

48,831. Is it a business which must be conducted on a very large scale to be successful?—Do you mean as a poultry farm?

48,832. Yes?—I am informed that the largeness of the undertaking is what eventually brings it to grief. The land gets fouled, and that is, I believe, a very common cause of the failure of poultry farms; I have understood so; I do not speak, of course, of that from personal observation.

48,833. In that sense it is very precarious, owing to chicken cholera and other pests sweeping off the stock upon the over-used land?—Yes, that is so, I believe.

Poultry farming a subsidiary occupation.

48,834. In short, it is looked upon as a subordinate industry, or only as an accompaniment of other forms of agricultural industry?—Certainly; that was what was stated to me by several practical farmers who have been going in for poultry; they said that they would not undertake to go in for poultry alone.

48,835. That applies both to breeding and to fattening, does it?—Yes, certainly. Of course the fattening may be undertaken by a man who has not an acre of land; it may be undertaken in a house, so to speak, and was; I found it existed on a small scale in a labourer's cottage.

Poultry fattening.

48,836. (*Chairman.*) The chickens do not roam about at all, do they?—No, they do not get any chance; after they once go to the fattening establishment they never touch the ground again.

48,837. They are put into hatches?—Yes.

48,838. Therefore it does not need a farm for that purpose?—It does not need land at all.

48,839. (*Lord Rendel.*) It is hardly a farming process at all then?—Not the fattening itself.

48,840. Are foreign practices of fattening adopted much, such as revolving hatches, for instance?—No, the staging and cages, so to speak, in which they are penned while they are being fattened, are of the most primitive kind; there is no attempt at any elaboration of plant in that way.

Mr. R. H. Rew. 16 May 1895.

Sale of eggs.

48,841. Then so far as the egg industry is concerned, is that treated sometimes as a separate part of the business of poultry farming?—The sale of eggs?

48,842. Yes?—I heard very little about it; it is only incidental. Of course a man might sell eggs occasionally, and does sell a few eggs, but it is quite subsidiary to the fattening of chickens.

48,843. And subsidiary to poultry farming?—That I could not say, but I should imagine so.

48,844. Did you find that those engaged in the industry were satisfied with the railway conveniences given them?—Yes, there was no complaint.

Price of Irish lean poultry.

48,845. (*Captain Owen Thomas.*) At what age do they buy the lean poultry?—At about three months.

48,846. Three months?—Yes. It varies slightly, according to the time of year, but I should say generally from three to four months is the average age.

48,847. Have you any idea of what they pay for the Irish fowls?—I give the prices in my report. They vary somewhat according to the season. I cannot put my hand on it at the moment, but I think from about 1*s.* 8*d.* to 2*s.* 6*d.*, or something of that sort.

48,848. How do they bring them over?—In "tops" containing 50 each.

48,849. Part of the way by rail, or all the way by sea?—I do not know where they are landed; I think they are landed at Milford Haven.

48,850. How long does it take to fatten them when they are put into these hatches?—It varies slightly, from three weeks to four weeks.

Poultry cramming.

48,851. When do they begin to cram them?—About half way through the time of their being penned up.

48,852. Did you see them crammed?—Yes.

48,853. Would you say it is cruel?—There is certainly no indication on the part of the birds that there is any cruelty in it, and they do not seem in the least to object or to protest in any way against the operation.

48,854. How many times a day do they cram them?—Three times a day, I think, is the usual practice.

48,855. Do they require much labour for it; I mean to say where a man keeps 500 or 600 poultry how many men would he require to feed them and cram them?—I am not sure that I could say exactly how many fowls to a man it would be.

Mr. Oliver's farm.

48,856. Did you visit Mr. Oliver's farm?—Yes, I went to Mr. Oliver, and I think I give the number of men he employs, but I forget at the moment how many. Mr. Oliver turns out about a hundred dozen a week.

48,857. He fattens only?—Quite so.

48,858. Did he complain of foreign competition—of Russian poultry, for instance?—Yes, he complained of the competition of Russian partridges.

48,859. Does he carry on his business to the same extent now as he did formerly?—Yes, I think so. There has recently been a change; the father died and it has come into the hands of the son; he spoke as though he might be giving it up, but I think that was not seriously intended.

48,860. Do they fatten turkeys and ducks?—Messrs. Olivers fatten turkeys at Christmas time to a small extent, but not to a very large extent I gathered.

Rateable value of land.

48,861. In your Appendix you have got a statement of the rateable value which the Chairman has already questioned you about, is it not a fact that a great many houses have been built in this district which would account for the increase of the rateable value?—That is so. I think I have drawn attention in my report to the fact that these figures of rateable value as given in the report include houses, and that there has been a very considerable increase in the number of houses from people going there to live.

48,862. (*Chairman.*) I was quoting from the return of the assessment of land only as distinguished from houses?—Yes, I gathered that those figures you mentioned were so, but my figures in the Appendix include houses of course.

Digitized by Google

Mr. R. H. Rew. 16 May 1895.

48,863. (*Captain Owen Thomas.*) Do you know how much it costs to send this poultry from the Heathfield district to London, including the collection of them?—It is 2*s.* 6*d.* to 3*s.* a dozen.

Cost of carriage of poultry.

48,864. (*Mr. Channing.*) Have you found that the prosperity of these people was limited to a few very skilful men, or did it seem capable of general development by men of average intelligence?—So far as the rearing is concerned there is no reason why anyone of ordinary intelligence should not undertake it successfully. The fattening industry, of course, is especially a skilled industry, but it is one which could be easily learned.

Extension of industry to other districts.

48,865. Do you think the industry could be spread so as to cut out the foreign competition?—That is rather a difficult question to answer.

48,866. (*Captain Owen Thomas.*) Russian chickens sell for 1*s.* each, do they not, now?—I am not sure what the price would be now.

Rents.

48,867. (*Mr. Channing.*) Are the rents asked for this bit of land high?—No, I had no complaints of the rents being high. In many cases, of course, the poultry rearing is carried on by a single occupant of a cottage, who has no land at all, and the chickens go out in coops on the roadside.

48,868. So they are producing them at something like the lowest possible cost of production now in fact?—I should think so.

Rates.

48,869. (*Mr. Dalton.*) On page 16 of your report you give two instances in which the rates are very high; in one parish you say the highway rate is 1*s.* 8*d.*, and in another 1*s.* 2*d.*; would you give me the names of those parishes—they have most exceptional rates I see?—I am afraid I could not from memory; I know it was one of two informants who gave me that information, but I forget for the moment which it was.

Report on North Devon agricultural depression.

48,870. (*Chairman.*) We will now go to your report upon North Devon. I gather from that report that that district has not suffered so severely as many other parts of England have?—No; of the districts covered by the reports upon which you are examining me to-day that certainly has suffered the least.

48,871. Apparently the Unions of Crediton and South Molton have suffered more than those of Bideford, Barnstaple, and Tiverton?—That is, judging by the rateable value?

Increase in rateable value.

48,872. Yes, judging from the reduction or otherwise in the rateable value?—Yes; but I point out in the report, I think, especially in the case of the unions of Bideford and Barnstaple, the enormous increase and attractiveness for residential purposes of the district. All the villages along the coast, for instance, I believe, have very much increased in rateable value owing to that.

48,873. This return which I have, which distinguishes the assessment of rent apart from buildings and other property, shows, comparing 1870 with 1894, that in Barnstaple the value of land was 127,000*l.* in 1870, and 128,000*l.* in 1894, which is practically the same; there may have been an increase in the value of land between 1870 and 1879, there probably was, but comparing the 24 years there has been no reduction in the value of land; in Bideford the same is the case; it has risen from 40,000*l.* to 40,100*l.*; in Tiverton the assessment in value has decreased from 121,000*l.* in 1870 to 117,000*l.* in 1894, which is an inconsiderable reduction; whereas in South Molton the reduction in the assessments has been from 93,000*l.* to 84,000*l.*, and in Crediton from 95,000*l.* to 79,000*l.*—a very considerable reduction in both those unions. These figures would seem to indicate that there must have been some circumstances in those two unions of Crediton and South Molten different from the circumstances in the other three unions?—I went over a considerable part of the South Molton Union, but I am bound to say as regards the Crediton Union that I visited very few of the parishes there.

48,874. In what respect did South Molton differ from Barnstaple and Tiverton?—In Barnstaple and Tiverton and Bideford they have greater access to the markets for one thing, and I should say, on the whole, better land.

48,875. (*Mr. Lambert.*) Better land than at Crediton?—In regard to Crediton I am saying that I am not able to speak really with confidence because I went very little in the Crediton Union.

Demand for farms.

48,876. (*Chairman.*) In all these districts that you have been in there appears to have been a demand for farms?—Yes.

48,877. Is there any difficulty in letting the farms?—Not on the whole, except of course in some cases.

Mr. R. H. Rew. 16 May 189.

48,878. You say you were told of two farms on a large estate, which were just relet. In the one case there were 13 tenders and 12 in the other, one being 60 acres and the other about 200 acres?—Yes.

Reductions and abatement of rent.

48,879. Apparently in a considerable part of these districts there has been no permanent reduction of rent, but there have been from time to time temporary abatements of rent?—Yes, there have been temporary abatements, and in some cases there have been permanent reductions. I put the reduction on the average from 10 per cent. to 15 per cent. taking all things into account, that is as from 1881.

Competition for farms.

48,880. Then the farmers apparently rather complain of the competition for farms?—Yes; that complaint was very general.

48,881. That would tend to show that there is a demand for farms, and that there are people ready to give rents at the old rates?—Yes, that was particularly so in the neighbourhood of Barnstaple and Bideford.

Arbitration for fair rents.

48,882. Then apparently in the South Molton district there was a desire on the part of the tenants for some form of arbitration between themselves and their landlords on the question of rent?—Yes; that was not confined to the South Molton district, in fact it was a subject which was mentioned at more than one of the meetings and mentioned by several of the witnesses.

Tenure.

48,883. What is the general system of tenure there; is it yearly agreements?—Yearly agreements are increasing, but there are a large number of leases still running.

48,884. A large number still running?—Yes, I gathered so.

48,885. Are they running out or are there new tenancies?—The new tenancies are not so much under leases.

48,886. The new tenancies are generally yearly tenancies?—Yes.

48,887. Is that because the tenants are unwilling to take leases?—I think there is rather an unwillingness on both sides as far as I could gather.

48,888. Owing to the uncertainty as to what the future may bring?—Certainly.

Arbitration for fair rents.

48,889. What did you understand that the farmers meant by arbitration?—I think I pointed out in my report that it seems to me that in many cases they were not very clear as to whether they meant such arbitration as that which takes place for instance when a man quits a farm and when a subject is referred by mutual consent to a valuer appointed and agreed to by both sides. That was the sort of arbitration which seemed to me to be in the minds of a good many of them.

48,890. A kind of voluntary arrangement entered into at the time by agreement of both parties referring it to a particular person?—Yes.

48,891. But not an arbitration in the sense that either party would have the right of referring to an arbitrator appointed by the State who should have the power of determining as between both and binding them both as to what the rent should be?—No. I am bound to say that those to whom I referred as, I think, having in contemplation what may be determined a voluntary reference, also thought that it ought to be to a person who was appointed officially either by the State or by the County Council, or by some authority. Then of course there was that further class of people who would be prepared to refer matters to a court which should have compulsory powers. I gathered that many of those who in a general way, so to speak, advocated a reference on a question of rent would not be prepared to follow out to its final conclusion a reference to a court having compulsory powers.

48,892. What they meant was a kind of voluntary arrangement to be entered into at the moment by agreement between the parties just as they might refer any other matter of dispute which might occur at the moment?—Yes.

48,893. (*Mr. Lambert.*) By agreement between the parties?—Well, by consent of both parties.

48,894. But presuming that the one party did not consent was it not then to be referred on the application of the other party?—As I say, in many cases I came across witnesses who were prepared to take that view.

48,895. (*Chairman.*) What I understand you to say is, that there were two kinds of opinion among the tenant farmers; some were in favour of the reference to a court or

Digitized by Google

Mr. R. H. Rew. 16 May 1895

to an arbitrator who should have compulsory powers and to whom either party might have the right of appealing in a manner which would bind the other?—Yes.

48,896. And the other and more numerous body were in favour of an understanding or an arrangement under which the two together by agreement might refer to a particular person or an arbitrator appointed by the State?—Yes, and in those cases they thought it would be an advantage to have a person who was officially appointed, so to speak.

48,897. (*Mr. Lambert.*) Did you go into that subject? Presuming on a question of rent the landlord and tenant did not agree as to the amount of the rent, would it be likely that they would agree to bring in another, and an outside authority, to determine how much rent should be paid?—It arose, as I gathered, in this way, and of course I am speaking now rather from impressions gathered, because one did not discuss the whole question of land tenure with every witness; it would not have been possible. The impressions I gathered were these, that there was certainly an idea among many of those with whom I came in contact that it would be quite possible for landlords and tenants not agreeing at the moment as to what the market value of the farm was, to agree to a valuer. Of course, as you are aware, it is very common—at least not uncommon—for a valuer to be called in to determine at a particular moment what the rental value of a farm is.

48,898. Yes, it is possible as you say; but do you think it would be probable?—I can only say that in many cases I believe it is done at the present time. When there is a dispute as between the agent and the tenant a valuer is occasionally called in and puts a value on the farm. It does not follow that his valuation is necessarily accepted by both sides, but that is a practice which I think a good many witnesses had in view, and they thought of extending that principle.

48,899. (*Chairman.*) That is what you think many of them contemplate?—I gathered that.

48,900. Not a reference to a court or to an arbitrator to whom either party might appeal in a manner which would bind the other?—No, but I should say that in that case they would certainly think that that person should be a person who was, so to speak, a public official.

Local rates

48,901. (*Mr. Dalton.*) I see that on page 28 you say that one man who bought a farm for 6,000*l.* some years ago, thinks that he is very unfairly taxed as compared with the owner of 6,000*l.* worth of Consols?—Yes.

48,902. Would not the fact that he would have to pay rates on the farm be taken into account in fixing the purchase money of the farm?—Yes, of course, that would be in any case taken into account.

48,903. The rates are now 2*s.* 4*d.* in the £?—Yes.

48,904. Did he mention whether they had fallen or risen since he bought the farm?—No.

48,905. Clearly if it had been free from rates he would have had to pay more than 6,000*l.* for that farm, is that not so?—Presumably he would.

48,906. In Appendix B. III., on page 49, where you give the rate in the pound of the poor rate in the six unions of Okehampton, South Molton, Barnstaple, Torrington, Bideford, and Holsworthy, the figures show that, as a general rule, the rate in the pound has considerably fallen; for example, in Okehampton it has fallen from 2*s.* 10*d.* in 1881 to 1*s.* 10½*d.* in 1893?—Yes, but the other falls are not by any means so great.

48,907. In South Molton it has fallen from 2*s.* 2*d.* to 1*s.* 9½*d.*; in Barnstaple from 2*s.* 4¾*d.* to 2*s.* 2¾*d.*; in Torrington it has fallen a halfpenny, namely, from 2*s.* 9¾*d.* to 2*s.* 9¼*d.*, and it has fallen fourpence in Bideford, namely, from 3*s.* 4¾*d.* to 3*s.* 0¾*d.*; and it has risen three farthings in Holsworthy, namely, from 3*s.* 1½*d.* to 3*s.* 2¼*d.*?—Yes.

48,908. So that, on the whole, there is a considerable fall in the rates, and in only one case has there been a rise, and in that case it is only three farthings?—That is so, comparing 1881 with 1893.

48,909. Consequently if this farm had been bought in 1880 or 1881 and the rates have fallen since, he could not have been damaged at all by the rates?—Those figures that are given in the appendix only refer to the poor rate, I imagine.

48,910. What does the poor rate include there?—These are figures taken from the local taxation returns.

48,911. The poor rate appears in these unions to include nearly everything; it includes the contributions to the highway boards?—Yes.

48,912. Can you say whether there are any separate highway parishes in these unions? If these parishes in these unions are all under highway boards I take it that these figures do include the whole of the rates raised in the unions?—For the most part there are highway boards, I believe.

Mr. R. H. Rew. 16 May 1895.

48,913. Therefore, the only rates that would be excluded in this case would be in those exceptional parishes, if any, where the highways are under separate highway surveyors?—Yes, and, of course, school boards.

48,914. School boards are included here, I think, you will find; the school board rate is certainly included in that table; you have the item of school boards, and you have got a figure in every case?—Yes, I beg your pardon.

48,915. Therefore, it would include every rate unless you happened to have separate highway parishes?—Yes.

48,916. (*Mr. Little.*) Or urban sanitary rates?—Yes. I came across one or two instances where there were special sanitary rates which would I think not be included here.

48,917. (*Mr. Dalton.*) Not the urban sanitary ones; but you were speaking of rural rates, were you not?—Yes, that is so; there would be no urban sanitary rate in this particular instance.

48,918. Therefore in the district that you have been reporting on here, the rural rates have fallen very considerably?—Of course the fall has not been universal, for instance, in one case it has absolutely increased. You could not say that for the whole of the union.

48,919. In one union there is a rise of three farthings, but there is a fall of nearly one shilling in another, and in all the other unions there has been a fall?—Yes, there has been a decrease.

Abatements of rent.

48,920. (*Mr. Lambert.*) Generally speaking should you say that the reductions of rent have been given in the nature of temporary abatements?—Generally speaking yes, with exceptions, of course.

48,921. The phrase is used that they get a reduction "as long as the bad times last"?—Yes, that was rather a common phrase.

48,922. In some cases you found that some reduction was entered as by the gift from the landlord to the tenant?—I quote one case in which I saw the receipt in which it was so entered.

48,923. That was rather in the nature, well, of a charitable view of the matter taken by the landlord, was it not?—The phrase might possibly be open to that construction.

Letting of farms by tender.

48,924. You say that there are cases in which farms have been let at a higher rent than the old tenant paid?—Yes, I was informed of such cases.

48,925. Recently?—Yes, quite recently.

48,926. To what do you attribute that fact?—No doubt they would be cases in which the farms had great advantages in the way of situation and market, and so on. There is no doubt about it, as far as I could gather, that certainly in the Bideford and Barnstaple Unions, and to some extent, I should say, in the South Molton Union, there is a considerable competition still for farms.

48,927. And the fact of which you were informed, which I presume would be a not uncommon case, that there were 13 tenders for one and 12 tenders for another farm would show that there is an enormous deal of competition for farms there?—Yes, I should say that those were perhaps a little exceptional, but they were cases given to me by the agent.

48,928. Are the farms usually let by tender?—Yes.

48,929. Then those 12 or 13 tenants would be bidding one against the other for these farms?—Yes.

48,930. And sometimes a tenant who was considered to be a good man who had not put in the highest tender was induced to give the highest price?—Yes, there were witnesses who spoke of that being done in some instances.

Arbitration for fair rents.

48,931. Now, as regards the arbitration being called in and both parties being bound to accept his decision; you mention in paragraph 40 that there was a case in which an occupier had been occupying 500 acres for 35 years; that up to four or five years ago he held it on lease, that it was then re-valued by a well-known valuer who put it at 520*l.*, but that the agent asked 570*l.*, or 50*l.* more, and he was obliged to agree to pay this. Do you imagine that the farmers meant to call in an arbitrator whose decision was not to be at any rate in some degree binding upon both parties?—Of course, you are putting that case to me; in that case the witness who gave me that instance

Digitized by Google

(it was his own), was prepared to go to the length which I have indicated certain witnesses did go, that is to say, that there should be a reference which should involve the compulsory fixing of rent.

48,932. (*Mr. Little.*) Was he prepared to make it compulsory upon himself to accept at the rent named?—I am not sure that I put the point to him in particular, but I do not think that even in those cases that they quite accepted the absolute results of the practice that they recommended.

Disinclination of tenants to quit.

48,933. (*Mr. Lambert.*) But, still, the tenants show a very considerable disinclination to leave their farms?—A disinclination to leave their farms, certainly.

48,934. Owing to the possibility of the difficulty of getting into another through the great competition?—There are many reasons why they are unwilling to leave their farms. Some of them were leaving and going into other parts of the country. I came across cases of men who had left the district and gone to Suffolk, but I do not know whether you could say that the main cause of their disinclination was because they could not take other farms in the district.

48,935. Perhaps the disadvantages that are always incident on a man's quitting his farm and having to go into a new neighbourhood weighed with them also?—Yes.

Reduction of rents.

48,936. You say that in some cases there has been no reduction of rents?—Yes.

48,937. The old rents are exacted?—Yes.

48,938. But they are not willingly paid by the tenants?—They would all like their rents reduced.

Condition of buildings.

48,939. You found the condition of the buildings on the smaller estates was generally indifferent, and in some cases very bad?—Yes.

48,940. Would that be at all usual in the district?—No, I should not say that to call the condition very bad would be a description that you could apply to the district generally.

48,941. Would you say generally indifferent—do not let me press you?—I am speaking now from impressions rather, and I should say certainly, as applying to some of the principal estates in the districts that you could not say they were indifferent, but to a few estates which might almost be named, perhaps, I dare say that would apply.

48,942. Up to recently the landlord has always charged the tenant for the improvements he has made?—Yes, that had been the practice.

48,943. And since the tenants were unable to afford this, the landlords have shown a great disinclination to make these improvements?—Yes, and as I say in paragraph 17 "Consequently less outlay has been undertaken in this direction." I think it almost follows as a matter of course that if the landlords cannot get interest they would not be quite so willing to do it.

Deterioration of cultivation.

48,944. Then in paragraph 30 you say, "The common "opinion among farmers was that the general state of "farming had deteriorated since 1881"?—Yes, that was a subject that very often gave rise to very animated discussion. There was considerable difference of opinion on the subject. I am speaking of course of discussion among the farmers themselves. A few of them objected—I am not sure that I indicated it in the report—but the general balance of opinion was that there has been a deterioration.

Changes of cultivation.

48,945. You say that in the district a very considerable change has been made in the system of cultivation and in the manner of disposing of the produce—that is by fattening rather than by selling store stock?—Yes.

48,946. And there is a considerable increase of permanent pasture?—Yes.

Compensation for laying down permanent pasture.

48,947. Did you find a number of instances in which farmers complained that they had not sufficient security under the Agricultural Holdings Act, for being compensated for permanent pasture at the termination of their tenancies?—That was a point mentioned in discussing the Agricultural Holdings Act, and one of the amendments suggested was, that a tenant should have power to claim for the permanent pasture laid down notwithstanding that he had not received the consent of the landlord.

Relations of landlord and tenant.

48,948. Now the relations between landlord and tenant are friendly except as regards rent, and in some cases game?—Yes, I think that is a pretty fair description; that was given by somebody whom I quote.

48,949. Still there is a considerable amount of dissatisfaction as regards the rents in the district?—Yes, there was a good deal of dissatisfaction expressed to me as regards rent. Many of the tenants, I suppose the majority of the tenants who came to me, considered that the rents were too high in view of the times.

48,950. And thought that they had not been fairly dealt with by the landlords or that a sufficient reduction of rent had not been given to them?—I am bound to say that many of them did admit a difficulty—I am not sure that I refer to it, but I think I do somewhere in the report—they did refer to the difficulty of a landlord reducing rents in face of competition for farms at the same rents. Where a large number of tenants were willing to come forward and take the farms at the same rents the tenants themselves admitted it put the landlord in rather an awkward position when asked to reduce the rents.

48,951. It is not unusual for a man to take a farm possibly at a higher rent than the old tenant and as soon as he gets into it to ask for an abatement?—Yes.

Sporting rights.

48,952. Now there was a considerable amount of dissatisfaction expressed with the attitude of the landlords on the game question, was there not?—Yes.

Estate management.

48,953. And also a great deal of dissatisfaction against the agents who were employed to manage the estates?—Yes. So far as there was what one may term anything like an unfriendly feeling I should say it was displayed more to the agents than it was to the landlords themselves.

48,954. There were a considerable number of agents who were solicitors managing estates against whom a strong prejudice was manifested?—Yes.

48,955. And there were a considerable number of estates managed by solicitors, I suppose?—Yes. I think the majority, one may say, are so managed.

Effect of arbitration courts on relations of landlord and tenant.

48,956. You say as regards the land courts, or arbitration courts, or solicitors' courts, whatever you like to call them—"it did not seem to me that those who took this view"—that is that the court should have the power to compulsorily reduce rent—"fully appreciate the altered "relationship which would exist between a landlord and a "tenant who was compelled by an outside tribunal to "accept a rent less than that which he considered himself "entitled to"—What do you mean by the term "altered relationship"?—That is an impression which I gathered, and I am bound to say that it does not seem to me, expressing my own opinion, possible that the position of a landlord and a tenant could be the same after a landlord had been compelled to let his land at a rent which he considered to be unfair, as it was before.

48,957. That is, there would be less friendly feeling manifested by the landlord?—I should say certainly the relationship would become strained.

48,958. Do you not imagine that the relationship might become strained if the tenant was paying more than he ought to pay?—Yes, but at the present time I suppose rents are at bottom fixed by competition, and therefor a tenant cannot be paying more than theoretically some one is willing to give for the land.

48,959. If you go into the economical conditions, if you have 13 men bidding for one farm, you can scarcely get a fair economic rent?—I do not want to go into it, but I should have thought the greater the competition the more likely you are to arrive at the true value of a farm, because no man would offer to pay too much rent for any property, a farm or anything else.

48,960. That might be so in a competition for a free commodity, but land of course is a limited commodity especially in North Devon?—Yes, but after all nobody wants to have a limited commodity I suppose unless they can make it pay.

48,961. Certainly not; but still they are tempted—and I think I have brought it out in your evidence before—and sometimes go into it when they cannot make it pay, but trust to the generosity of the landlord. Now I want to come to the point as to whether you think a tenant would not be very much more friendly disposed towards the landlord if he had a sufficient reduction of rent?—"More friendly disposed"?

48,962. Yes, and that the ill-feeling that would be generated on the part of the landlord would be dispersed on the part of the tenant, and between the two there would be the same mutual good feeling existing?—No it does not seem to me that it would be so, it seems to me that if tribunals were set up to which either side might appeal to have rents fixed, which one side, of course, would necessarily consider to be unfair, the alteration in conditions which would result would entirely change the whole of the conditions between landlord and tenant.

Digitized by Google

Mr. R. H. Rew.
16 May 1896.

48,963. Yes, but there would be a considerable dissatisfaction felt by a tenant now who was paying too much rent?—Yes, and in many cases no doubt they had been met by the landlords, as I have shown by the cases which I quote. I have quoted cases where a farmer has offered a certain rent, really presuming, if one may say so, on the leniency of the landlord when he gets in. That, of course, is a condition of things which could not possibly occur if the rents were fixed by an outside tribunal.

48,964. No; because the man would have it at a fair rent, and he would not have to trust to the generosity of the landlord?—Then, of course, you get to the definition of a fair rent, which is a subject for controversy.

48,965. Of course, that is really pressing you too closely?—No; if it is the wish of the Commission I should be pleased to express my opinion.

Law of distress.

48,966. As to the question of the law of distress, there was rather a general feeling that it should be abolished, was there not?—Yes, that was certainly the general balance of opinion.

Restrictions on cultivation.

48,967. Now I suppose you found a great cause of dissatisfaction was owing to the antiquated agreements and obsolete restrictions that were placed upon tenant farmers cultivating as they pleased?—Yes, I think that was a ground of legitimate complaint in many cases as far as I saw some of the agreements.

48,968. Very legitimate indeed, I presume?—Yes, quite legitimate. They seem to me needlessly complicated and antiquated.

Freedom of cultivation and sale.

48,969. Tenants wanted to have freedom of cultivation and freedom of sale, provided they did not deteriorate the fertility of the holding?—Yes.

48,970. I presume there was a strong opinion expressed all round in that district that no tenant should be allowed to deteriorate the fertility of the farm?—I think most of the witnesses would take that view; they did not all of course express it in that way but I think if it were put to them they would all admit that it was necessary.

Ground game.

48,971. On the question of ground game you quote a resolution to the effect that the tenant should be allowed "to kill and take the ground game when, where, and "how he likes" on his farm?—Yes, that was, as I say, a favourite phrase.

48,972. I take credit for that phrase, I think I was the father of it?—Yes, so I understood.

The currency.

48,973. (*Mr. Everett.*) I notice that on page 33 you seem to have met with one gentleman in Exeter who anticipated that the price of wheat will come down to 2*s.* a bushel or less?—Yes.

48,974. And he attributes what has happened, and what he fears will still happen, to currency changes, and regards that "as the most surpassingly important political "question of the day"?—Yes.

48,975. Do you know whether that gentleman was one who stood in good repute among his neighbours as a man of intelligence, or was he supposed to be only fit for an asylum?—I know that he is a gentleman who takes a considerable part in discussing public matters, and as far as I know he is in very good repute in his district, though I did not have the pleasure of meeting him personally.

48,976. (*Mr. Lambert.*) He does not live in North Devon, does he?—No.

Depression in North Devon.

48,977. (*Mr. Little.*) The district which you visited in Devon, you say, was rather more favourably dealt with than most parts of England that you visited?—Yes.

48,978. It had less depression?—Yes.

48,979. Does that arise very largely from the fact that it is a great cattle breeding and rearing district?—Yes, I should judge so.

48,980. They are less dependent upon corn there?—Yes.

48,981. There is a large proportion of the land in pasture, and the arable land takes very kindly to grass?—Quite so.

48,982. The soil and the climate are both very favourable to the production of grass?—Yes.

48,983. Then they have also sheep breeding to a considerable extent?—Yes.

48,984. And they have as a small industry orchards and cider-making?—Yes.

48,985. Which gives a variety to their agriculture greater than is found in some parts of the east of England?—Quite so.

48,986. There is still a considerable competition for farms at rents pretty nearly equal to what they have been?—Yes.

Mr. R. H. Rew.
16 May 1896.

Competition for farms.

48,987. Notwithstanding that there have been voluntary remissions and reductions of rent to the extent of 10 per cent. or 15 per cent. on the average?—Yes.

Fall in prices.

48,988. (*Mr. Lambert.*) How much do you say the produce had depreciated in per-centage?—I am not sure that I worked out the per-centage, but I have given some figures, I think, showing the decrease in prices.

48,989. There has been a very considerable decrease, I presume?—There has been a decrease in prices, of course, especially in regard to corn. Then I give figures showing a great reduction in wool.

48,990. And cattle?—Cattle, of course, as you know, vary a good deal; I suppose the level of prices is somewhat lower.

Tenure.

48,991. (*Mr. Little.*) Some years ago it was very unusual to let a farm from year to year; they were all let upon leases, were they not?—Yes, that was so.

48,992. Where those leases have come to an end the agreements recently entered into have been from year to year, have they not?—Yes, generally speaking, but I found some cases of leases even at the present time being taken.

Restrictions on cultivation.

48,993. Are the restrictive covenants that were imposed in cases of leases continued in modern agreements from year to year?—In many cases I found they were—practically the same form being adopted in the case of yearly tenancies.

48,994. Exactly the same form?—Practically and substantially the same form.

48,995. Do you know whether they are enforced?—No, I should say not on a good tenant, of course.

48,996. Could it be said, generally, that they are held as a rod over the tenants' back, but they are not really enforced?—Yes, I think that would be a fair description.

48,997. They may be made the subject of a claim on the tenant quitting?—Yes.

48,998. But so long as he goes on they are not observed?—Yes.

48,999. You mentioned one particularly onerous condition, namely, that the tenant should "dress every acre "broken up or tilled with 60 bushels of lime," and that that would cost about 7*l.* an acre?—Yes.

49,000. Do you know whether that means land broken up out of grass?—No.

49,001. Do you think it does not?—"To dress every "acre which shall be broken up or tilled with 60 bushels "of lime of 224 lbs. to bushel, and after every such dressing to take but two crops of corn and one of roots or "a mowing of grass," that refers to breaking up land which has been for some years under pasture, does it not?—Under temporary grass.

49,002. You are aware that in the West country there is not that rigid distinction drawn between permanent pasture and arable land that there is in the eastern counties?—That is so.

49,003. And that it is questionable whether land which is let down for 6, 8, or 10 years is to be regarded as permanent pasture or as arable land; are you not aware that disputes have arisen on that point?—Yes.

49,004. Whether a tenant who had laid down land to grass and had kept it down for some 10 or 12 years had then a right to break it up?—Yes, cases have occurred I know, of course.

49,005. May not this be intended to refer to cases where land has been laid down and kept down to grass for some time, and then when it is broken up again has to be dressed with lime. It goes on to provide that after that dressing only two crops of corn and one of roots or a mowing of grass should be taken, the inference being that it should then be laid down again?—That might be so in that case.

49,006. (*Mr. Lambert.*) Is not "broken up" a common term for ploughing land that has been down for two years ley in Devonshire?—Yes, I heard it used; I was thinking that it referred to land in temporary grass.

49,007. In the common phraseology of the district it would mean usually a tenant breaking up what is termed a ley in Devonshire?—Yes, that is what I gathered.

49,008. (*Mr. Dalton.*) In the same agreement it is provided that an additional rent of 20*l.* per acre per annum

Digitized by Google

should be paid for any meadow or pasture broken up?—Yes.

49,009. (*Mr. Lambert.*) Then it clearly could not refer to that?—It struck me that it was breaking up what they call the leys in Devonshire.

Demand for farms.

49,010. (*Mr. Little.*) Then you said that the present demand for farms encourages the landlord to maintain his present rent?—Yes.

49,011. It acts to him as an inducement not to make any substantial reduction, does it not?—Yes.

49,012. Of course that would apply with still greater force to an agent who has to advise a landlord?—Yes.

49,013. He is obliged to say there are half a dozen people who want this farm and who will give the present rent, and I cannot therefore advise you to take less; the competition of course keeps up the rent?—Yes.

Arbitration for fair rents.

49,014. Do you imagine that an official valuer if appointed an arbitrator could disregard the fact of this competition?—No, I do not know on what principle an official valuer could fix rents. It must be either on competition or not on competition.

49,015. Given the competition, and given the knowledge which a local man must possess, of the desire of a dozen people to have this farm at the present rent, he could not fix any other rent less than what other people would give?—If a tribunal of that sort was set up, and if they adopted competition as the basis of rent, I think the probable result would be that rents would be raised in many parts of Devonshire.

Inequality in rents.

49,016. Notwithstanding the competition that exists there is a very great inequality in the rents, taking into consideration the intrinsic value of the land, is there not?—Yes.

49,017. You give an instance in paragraph 39 of two small farms in the same parish, one of 55 acres and the other of 62 acres. The 55 acres is rented at 14*s.* 4*d.*, and the occupier of that land has had 25 per cent. abatement, which reduces it to 10*s.* 9*d.* an acre, and the 62 acres is let at 28*s.* per acre, but that occupier has had no reduction, so that the rents are as 10*s.* 9*d.* against 28*s.*, but your informant thinks that at an equal rent he would sooner occupy the one which is at the lowest rent?—I am afraid that is not what I intended to convey. The rent at the present moment is 14*s.* 4*d.*, including the abatement.

49,018. I misread it; but, still there is a difference between 28*s.* and 14*s.* 4*d.*?—Yes, that is so.

49,019. The farm let at 14*s.* 4*d.* per acre, being rather the better of the two in the opinion of your informant?—Yes, quite so.

49,020. Then it is quite clear that there must be a very great difference in the rental in proportion to value?—Yes.

49,021. Then as bearing upon a question which has been frequently mentioned here; if assessments for rates were based entirely upon rental, the occupier of the highly rented farm would pay double the rates that the occupier of the low-rented farm would?—Yes.

49,022. Would there be any justice or fairness in that?—No, there does not seem to be any reason why one should pay higher rates than the other.

49,023. (*Mr. Lambert.*) Nor does there why one should pay a higher rent than the other?—No.

49,024. (*Mr Little.*) That is a matter within his control and the other is not?—Yes.

49,025. The one is a burden assumed, and the other is a burden imposed?—Yes.

The Agricultural Holdings Act.

49,026. With regard to the Agricultural Holdings Act, what was the specific grievance except the formality and costliness of the procedure under the Act?—There was a sort of general grievance that the Act was as many people thought inoperative, because it was so complicated for one thing, so difficult to put into operation, and I give a few cases in the report of more specific grievances.

49,027. You think it is desired that the scope of the Act should be enlarged?—Yes.

49,028. Do you imagine that it is possible when the legislature interferes between landlord and tenant to have anything but a formal and costly proceeding?—No; it must be, I suppose, costly, but I think it is too costly.

49,029. It must be formal?—Yes, it must be formal.

Scheduling the value of improvements.

49,030. And probably it will be costly?—Yes.

49,031. There is one suggestion I did not quite understand; perhaps you can explain it. On page 24 you say:

"Three farmers whom I met together, at the house of one "of them, in discussing the Act suggested that there "should be a schedule of the value of improvements "added to the Act,"—what does that mean?—That is a suggestion which I believe has been made before; that is that Parliament should, in point of fact, draw up a schedule which should show practically what the valuers are to give in a rough way.

49,032. That would be a uniform per-centage within certain limits?—Yes.

49,033. Of the cost of the improvement?—No, of the value.

49,034. How would that be got at?—It would be a per-centage.

49,035. On the basis of cost?—It would have to be.

49,036. Is that not exactly one of the things that many object to in regard to the practice under the Act, namely, that the same per-centage is given under all circumstances—that one half of last year's cake is given whether the man has used it for many years or for only one; is that not one of the subjects of complaint?—Yes, I have heard that made a subject of complaint, but not in this district.

49,037. The object of this suggestion is that the Act should specify the proportionate part of the original cost which should be paid to the tenant for the consumption of cake and corn and the use of manures?—Yes.

49,038. That would be considered by others a retrograde step, would it not?—Yes, in my opinion it would.

49,039. It would be going back rather to the principles of the Duke of Richmond's Act?—Yes, it is going back to the principle of the Act of 1875; if I remember rightly.

Decrease in rates and value of produce.

49,040. Mr. Dalton has pointed out to you the decrease in the rates in certain Unions; would you say that the decrease in the rates has been as great as the decrease in the value of produce, out of which the rates are paid?—No, certainly not, as I think the figures I give would prove.

49,041. The capacity for payment has been reduced to a greater extent than the demand?—Very much greater, I should say.

49,042. (*Mr. Dalton.*) But then the rent has not fallen, if that is the case, in the same proportion as the produce?—Yes, I have already said that.

49,043. That it had not fallen?—Yes.

Scheduling condition of farms.

49,044. (*Mr. Channing.*) I want to ask you whether there was any reference at these meetings to the principle of scheduling the condition of the farms in Devonshire?—The question has been raised, but I forget whether it was raised in Devonshire; I think it was.

49,045. Was there any strong feeling as to the usefulness of the practice?—The suggestion of a record of the condition of the holding to be taken by a competent valuer, and endorsed on the lease or agreement was brought forward by the Bideford Committee.

49,046. Did you have any representations from any farmers in Devonshire embodying a practical scheme?—I did discuss it with two or three competent men; men whose opinion I think ought to be considered, and they thought it would be a very good plan; they thought that, supposing a record of the farm could be taken on entry, that would form a very good basis, so to speak, upon which to make the valuation between the incoming and the outgoing tenant on quitting the farm.

49,047. They did not see any special difficulties?—No.

Report on Dorsetshire. Unlet farms.

49,048. (*Chairman.*) Now, turning to the report which you have prepared on Dorsetshire, did you, in that district, find any land unlet?—There was not very much actually unlet in Dorset, or rather I should say there was not very much land not farmed; there was a good deal of land in the landlords' hands.

49,049. Lots of farms on hand, comparatively speaking?—Yes.

Demand for farms.

49,050. Was there a demand for farms in that county?—Yes, but nothing to the same extent as there was in Devonshire.

49,051. Still land could be let?—Yes.

Land courts.

49,052. Was there a demand there on the part of tenants for land courts?—The question was brought forward by a few witnesses and I think at one or two meetings—at the Wool meeting for instance.

49,053. But not at other meetings?—That was the only meeting at which the subject was brought forward in that way, and very few witnesses really referred to that matter or brought it forward.

Digitized by Google

Mr. R. H. Rew.

16 May 1895.

49,054. I suppose that yearly tenancies prevailed there?—Yes.

49,055. Had leases been common at one time and had they gone out?—Yes.

49,056. Now the farmers are only inclined to take yearly tenancies?—Yes.

49,057. Was anything said as to whether this land court should decide upon rents for a term of years, or was the land court to determine the rent only for one year?—The way in which it was put was that a court of appeal "should be formed to which a tenant might apply, without "prejudice to his occupation, for a re-assessment of his "rent, or for the adjustment of any other grievance."

49,058. What is the meaning of the term, "without "prejudice to his occupation"?—It was difficult to arrive at that, and the subject was not, I am bound to say, very fully discussed. It was adopted at a meeting at which a large number of other subjects were brought forward first, and only voted upon by a comparatively few of those present: what those words actually mean I cannot quite explain.

49,059. Do you think that the tenant farmers who are unwilling to take leases from their landlords would be more willing to take a lease on the determination of a land court?—No, I do not think so.

49,060. Then if not that would mean that the land court, whenever applied to, is to determine for a year what the rent should be?—Yes.

49,061. And it might be applied to year by year?—Quite so; that would I think be the meaning.

49,062. You think that was what they meant?—Yes, that was probably their view.

Subdivision of holdings.

49,063. There is a very interesting statement on page 32 of your report of the sale of a farm of 343 acres in a number of small lots—30 lots ranging from 1½ to 31 acres. I think the general result of that is that the purchasers, though belonging to the agricultural class, generally had some other occupation, I suppose either as labourers or as higglers, or as carriers or something of that kind?—Yes, that was so.

49,064. Was it in a purely rural district?—Yes, it is about four miles, I suppose, from Dorchester.

49,065. The terms on which the purchase was made were that the purchase money was to be paid off in equal annual instalments in 10 years?—Yes.

49,066. I think you have stated that this occurred in 1888, but so far the instalments have been paid and the money has been found by these purchasers?—Yes, there were, I think, one or two exceptions which are referred to in the report, but, generally speaking, that was so.

49,067. And generally the tenants in these small holdings seem to be doing fairly well?—Yes.

49,068. And many of them have built houses?—Yes; they were then building several.

49,069. Is there anything exceptional about that place favourable to the success of a project of this kind?—No; I do not know that there was anything that one could say was exceptional.

49,070. Do you think that if in other parts of the country land were put up in a form convenient for the purchase in small lots by people of this kind there would be a similar demand?—Yes, I think there might be in many districts. I could see nothing exceptional in the conditions which accounted for its being successful there.

49,071. (*Sir Nigel Kingscote.*) Is it near a town?—It was near a town, and I am speaking of course of similar circumstances.

Cultivation of small holdings.

49,072. (*Chairman.*) What kind of cultivation do they carry on in these small holdings; do they lay them down in grass, or do they cultivate them with garden cultivation to a certain extent?—It varies; some are all in grass, but the majority cultivate them as gardens more or less. There is one case I mention in the report, I think, in which a man had been a gardener—evidently a very skilled gardener—and he had put up houses and gone in for growing tomatoes very largely. He was I should imagine making it pay.

49,073. But most of them either lay them down in grass, or cultivate them by intense cultivation?—Yes.

49,074. They do not grow corn upon them?—Except in one or two of the larger holdings.

49,075. (*Sir Nigel Kingscote.*) Is there anything you wish to call our particular attention to in this report on Dorsetshire?—No, I do not think so.

Mr. R. H. Rew.

16 May 1895.

The currency.

49,076. (*Mr. Everett.*) I see that you found rather a strong feeling in Dorsetshire on the question of the influence of the currency upon the prices of the produce?—Yes, I was rather surprised to find—perhaps I ought not to have been surprised, but at any rate it did surprise me to find—the amount of interest that was taken in the subject there.

49,077. At two or three meetings it came up and resolutions were passed upon the question?—Yes.

Rates.

49,078. (*Mr. Dalton.*) You say that you found in Dorsetshire a general opinion that rates had increased in recent years, and that in fact many witnesses stated this was the case; but, as you point out, the statement that you give in the appendix to your report referring to 12 unions shows that in all those cases with one exception where the rates remained the same, there had been a fall in the rate in the £ of the poor rates including the county rates?—Yes.

49,079. In some of those unions the fall was very considerable, for example in Poole from 5*s.* to 3*s.* 4½*d.*, and in Blandford from 2*s.* 8*d.* to 1*s.* 9½*d.*?—Yes.

49,080. In every one of the cases there was a fall with that exception of Cerne, where it remained stationary?—Yes. Of course in such a place as Poole it would be very largely due to the houses; there is a great increase of rateable value there which would account for it in that particular place.

49,081. The rates in Poole no doubt include the borough rate, and that is why they are so high in that union?—Very likely.

49,082. But there are many purely agricultural unions in this Dorsetshire district, in fact I suppose this list in the appendix includes the whole of the unions you visited in Dorsetshire?—Yes.

49,083. Therefore it is quite clear that the very common opinion which prevailed in Dorsetshire, as well as in other places, that the rates have increased, is not in accordance with the facts?—That is so, the rate in the £ has not increased.

49,084. On the contrary the rates have fallen very considerably, speaking generally?—Yes, I have no doubt that the opinion which farmers express as regards that, namely, that the rates had increased was simply because in these times they feel the burden so much more although the amount in the £ of course might be less.

49,085. The rent had fallen too, I suppose, in Dorsetshire; —Yes.

49,086. Therefore if the rate in the £ had also fallen, they must be paying a very much smaller amount than they used to pay in the shape of rates?—The total amount that they paid would probably be less, but still, as I say, they would feel it more.

49,087. Have you made any calculations for the purpose of ascertaining whether the amount they pay in rates really bears a larger proportion to the value of the produce than it formerly did?—No, I have not any calculations here in that respect.

Reduced rates and value of produce.

49,088. It is impossible to say so without a very careful calculation, is it not? You would have first of all to see to what extent the rent had fallen, and then if the rent had fallen in proportion to the produce, and the assessable value had fallen in proportion to the produce, even assuming that the rate in the £ had not fallen, the actual rates would have fallen in proportion to the produce; but in this case we have the fact that the rate in the £ has fallen, and you cannot say off-hand, without calculation, that the amount of rates has not fallen to the extent of the value of the produce, can you?—I give it here in this particular instance as accounting for the general impression of farmers which, as pointed out is not accounted for by the figures of the rate in the £, but there is no doubt a very general impression among farmers that rates have risen, and I say I account for that impression prevailing by the fact that they feel the burden so much more.

49,089. Is it not quite as common for urban ratepayers to think that the rates have risen when as a matter of fact they have fallen in a particular town? Do you not find it very seldom that anybody without going into it very carefully and looking at the figures knows whether his rates have risen or fallen?—Of course it is a very much larger proportion in the case of the farmers than it is in the case of even an ordinary resident in town. I should not have thought that explanation would quite account for it.

49,090. There was a general impression that rates had increased, and we have had that from many places; but I

Digitized by Google

do not see how they could have that impression if they had looked at the figures and seen that they had fallen so considerably as they have done here?—As I say, the impression was evidently in itself not supported by the figures, but the fact that that impression prevails very largely seems to me to prove that they do feel the outlay—the outgoing—so much more than they used to do.

49,091. (*Mr. Little.*) Do you think that rent does immediately adjust itself to a fall of produce?—Not immediately.

49,092. If the fall was continuous from year to year it would be impossible, would it not, for rent to be adjusted at once to the value of the produce?—Yes, at once.

49,093. Then do you believe that assessments are adjusted to rent at once?—No, they are certainly not.

Fall in prices.

49,094. (*Mr. Chaplin.*) You found evidence of very severe depression in Dorsetshire, I believe?—Yes.

49,095. What did they attribute the main cause of that depression to?—The fall in prices was the main thing; that was the first thing everybody said.

49,096. I observe that you make this statement on page 9, section 18, as having been made at some meeting:—"'Give us back the prices of 20 years ago and we want "'nothing more' is the main burden of the cry from every "farmer"?—That represents practically the evidence that I received.

49,097. That would be the general view, as far as you could ascertain, of Dorsetshire farmers?—Yes. Of course it is not literally correct that they would not want anything more, but broadly speaking it is.

49,098. Still, if they could only have back the old prices there is very little they would have to complain of?—Yes, that is so.

The three "F's."

49,099. I understand from your reference to the question of the three F's in sections 56 to 59 that it met only with very moderate support, and was only advocated by a very few persons?—Yes.

49,100. Therefore, probably, that sort of cry and demand would die away altogether if there was a return to better prices?—Yes, if they got back to the prices of 20 years ago I do not think they would very much trouble themselves about those subjects, at any rate not to the same extent that they do now.

49,101. You do not think there is any serious feeling in Dorsetshire in favour of extreme changes in the law like that as far as you can ascertain?—No, I think there is a feeling in favour of fairly free sale of produce and of fair freedom of cultivation; but beyond that I do not think there is any evidence of any feeling on these subjects.

Freedom of cultivation and sale.

49,102. What is meant by free sale there is freedom from restrictions on the sale of produce?—Yes.

49,103. And being allowed to crop pretty well as they like?—Yes.

49,104. But it does not at all mean what is represented by free sale in Ireland, that is to say, that they are to have the right of selling the succession to the farm?—Oh! no; that is not what is understood by free sale in Dorsetshire.

The currency.

49,105. Then I observe that there appears to have been a much greater feeling in favour of some dealing with the currency laws than you expected to find in that district, that is so, is it not?—Yes, that is so.

49,106. I notice that you devoted one chapter of your report very much to that subject, and I want to ask you one or two questions about that. You say in section 76: "Three questions shared the distinction of being the "subjects of resolutions at three meetings. One was the "amendment of the Agricultural Holdings Act, the second "was bimetallism, and the third was the burden on land. "I confess I was somewhat surprised to find the "amount of general interest the question of bimetallism "excited." Could you give us any information as to how long that had been a subject of interest, is it quite recent?—Quite within the last two or three years.

49,107. Do you gather from what you heard that farmers are really beginning to take a rational interest in that subject?—There is no doubt that all the farmers I met seem to have given a good deal of consideration to it at any rate.

49,108. And they begin to think that it is a subject very important in the interests of agriculture?—Yes, that was the feeling of the majority certainly—and of a large majority.

49,109. It was being very much discussed at some of their meetings, I understand?—Yes, it was discussed at practically every meeting that I attended.

Mr. R. H. Rew. 16 May 1895.

49,110. I suppose this is entirely new—within the last few years?—Yes, entirely, I should say.

49,111. In your statement I observe that you quote the evidence of one gentleman, Mr. George Wood Homer who appears to have been the chief antagonist of those proposals, is that the gentleman who stood quite recently for Dorsetshire?—Yes.

49,112. Then apparently his views on that subject did not meet with very great support. On the whole may I take it from you that as far as you could gather the majority of the agriculturists in that district attached importance to this question and were in favour of its being dealt with?—Undoubtedly.

49,113. What other recommendations do they make as remedies for agricultural depression?—They referred to the burdens on land, local taxation, and then I think I have already referred to the amendment of the Agricultural Holdings Act upon which they make various suggestions. There is a good deal of feeling also, no doubt, on the question of railway rates.

The Agricultural Holdings Act. Appeals.

49,114. In what direction is it that they propose amendments in the Agricultural Holdings Act chiefly?—The chief point in Dorset that was brought forward was the question of appeals. In Dorsetshire, they had two or three cases, and one certainly of the cases was taken to the Court of Appeal. That was almost the first point which anyone who began to speak about the Agricultural Holdings Act would bring forward. They considered that it was very prejudicial to the interest of tenants that there should be facilities for taking a case up to the Court of Appeal.

49,115. They think that the case ought to end with the decision of the umpire if the umpire is called in, is that so?—Yes. I am not sure if it is in the report, but I think the proposal that the decision of the arbitrator on questions of fact, or the decision of the County Court judge on questions of law to be final, would be something like what they would propose.

49,116. Now, as far as you could gather in the complaints which were made of the working of the Agricultural Holdings Act, were these founded upon an insufficient understanding of the provisions of the Act? Do you think that the people who made complaints as a rule were really acquainted with all that the Act contains and does, or were their complaints to some extent founded on a misapprehension of the Act?—I think in many cases—in the majority of cases one might almost say—that those who complain of the Act have not very carefully studied it.

49,117. We have had some curious evidence before this Commission on that point; for instance recommendations have been made to amend the Act in respects for which it has been found that the Act already provided. Do you think there is anything of that sort at all in what you heard in Dorsetshire?—Yes, one finds that I think quite constantly. Certainly in Dorsetshire I found that people did complain of things which are in the Act, and in other cases where they made complaints they showed that they had not really studied the Act, and very often complaints made against the Act were really complaints against the practice of a particular valuer.

49,118. Were they acquainted in Dorsetshire with the recommendations of the Committee of the Central Chamber of Agriculture?—Yes, it so happened that three of the bodies which are connected with the Central Chamber of Agriculture were in my district, and they had considered these recommendations in all those cases.

49,119. What was the general impression with regard to the recommendations of that Committee?—On the whole they were endorsed, I think, in all cases; there were one or two minor criticisms.

49,120. But apart from being endorsed, were they considered to be sufficient; were they generally regarded as likely to prove satisfactory and adequate amendments of the Act?—Yes, they were so taken, so to speak. When they were discussed I do not think the bodies that discussed them suggested material alterations; they suggested one or two minor alterations on points of detail, but they did not make suggestions that went to extend their scope.

49,121. Generally speaking they agreed with the recommendations of the Committee then?—Yes.

49,122. Should I be right, then, in saying that, as far as you could ascertain, if those amendments recommended by the Chamber were adopted that would be regarded in Dorsetshire as a fairly satisfactory solution of the question?—I think so.

Digitized by Google

Mr. R. H. Rew.
16 May 1895.

Paul v. Portarlington.

49,123. (*Mr. Little.*) On page 26 you mention a case where a good deal of feeling was created by the result of an appeal from a decision under the Agricultural Holdings Act in the case of "Paul *v.* Portarlington"?—Yes.

49,124. That introduces a great difficulty, does it not, in the case of tenants like Dorsetshire tenants where a tenant holds a farm very often for a considerable period?—Yes.

49,125. The effect of that decision was that a notice on the 10th of December was held to be a sufficient notice under the Act although the tenant quitted the main parts of the occupation on the 10th of October?—The notice was given on the 10th of December in respect of a claim for compensation over the whole holding.

49,126. But his occupancy was considered to be continued till the 10th February?—Yes, quite so.

49,127. There is a general feeling in the district, is there not, that if that be the law it ought to be amended?—Yes, that was brought forward by several people.

49,128. It is very difficult for a valuer to value improvements on land which has passed for some months out of the occupation of the tenant practically, though he has a certain right over it for some months after the conclusion of his tenancy?—Yes.

49,129. The determination of the tenancy ought to be the period when his rent ceases?—Yes.

49,130. And when the main part of his occupation is given up?—Yes, though they think provision should be made, so that a man could claim in respect of the overholding and therefore that a supplementary claim might be allowed in respect of that part.

49,131. For example, that he should be allowed to make a supplementary claim for the consumption of feeding stuff after his original claim had been made?—Yes, that the claim itself—the substantive claim—should be made in respect of the whole holding up to the time at which rent ceased, and that that supplementary claim should be allowed in respect of the land over-held.

Effect of depression on labourers.

49,132. Then the effect of the depression has been to considerably diminish the employment of labourers, has it not, in Dorsetshire?—Yes.

49,133. There has been a large decrease in the agricultural population?—Yes.

49,134. Which, I think, you show to be 25 per cent. in 20 years?—Yes.

49,135. And yet there is an abundance of labour for the requirements of farmers?—Yes, quite.

The Agricultural Holdings Act.

49,136. (*Mr. Clay.*) In regard to the Agricultural Holdings Act you say that one great drawback complained of was the liberty to appeal?—Yes.

49,137. What cases do you refer to?—I am stating that that was a complaint made by several witnesses, but I think it was based a good deal on "Paul *v.* Portarlington," and on "Farquharson *v.* Morgan." "Paul *v.* Portarlington" went to the Queen's Bench of the High Court, and "Farquharson *v.* Morgan" went to the Court of Appeal.

49,138. Were there any others?—Of course there is "Black *v.* Clay" under the Scottish Agricultural Holdings Act, which points to the same fact. It was objected that it was possible to take cases through so many courts. In that case, of course, it went so high as the House of Lords.

49,139. They object that the tenants were dragged into these expensive courts, and that really it frightens many tenants against making a claim under the Agricultural Holdings Act?—Yes, that was the view. Of course, speaking generally, the landlord is the person with the longest purse, and therefore it is, as a rule, detrimental to the tenants that there should be the power of appeal to such an extent.

49,140. Acquainted as you are with these cases, do you think that it is rather a cruelty to tenants that the landlords should be allowed to drag these cases so far into the higher courts?—I think so, certainly.

49,141. It has been advocated here that there should be a final decision on the point of law by a county court judge or a single referee; that would simplify the Agricultural Holdings Act, would it not?—Yes.

49,142. Would that please the majority of men that you met in Dorsetshire?—Yes; I think the intention of the present Agricultural Holdings Act was to have done that but it does not seem to have done it.

49,143. I can speak a little on one case you have referred to, namely, "Black *v.* Clay"; it cost nearly 2,000*l.* in the House of Lords and the Court of Session; that is a pretty stiff business to face, is it not?—Yes. I met the Mr. Morgan who was concerned in "Farquharson *v.* Morgan," and he objected on the ground of the great cost he had been put to.

Mr. R. H. Rew.
16 May 1895.

49,144. The different people you saw regarding this Act thought the procedure should be simplified and the expense lessened?—Yes, that was the general view.

49,145. Was there much said about a special referee, a single referee, being appointed to settle matters?—Do you mean to say a single referee in the place of the two referees and an umpire?

49,146. Yes; was that ever brought forward?—No, I do not remember that it was in Dorsetshire particularly; I do not think it was.

Reduction of rents.

49,147. What has been the general fall of rents in North Devon and Dorset?—In North Devon I think I arrived at the conclusion that it had been something like from 10 per cent. to 15 per cent., in Dorsetshire the fall on dairy farms has been from 10 to 20 per cent., and on mixed farms from 20 to 30 per cent.; and there are cases on the poorer soils in which the reduction has been as great as from 40 to 50 per cent.

Fall in prices.

49,148. Will you give us the opinion you have formed upon the fall of farm produce all over, from wool to grain and other produce?—I am afraid I have not worked that out in per-centages. In the case of wheat I suppose it has been a fall of 50 per cent., has it not?

49,149. Wool has fallen 50 per cent., has it not?—Yes, I should fancy it has.

49,150. In one of your tables you say wool has fallen from 1*s.* to 6½*d.*; that is nearly 50 per cent.?—Yes, that would be.

Fall in rent and prices compared.

49,151. After considering all these things, have you anything to say as to whether the fall of rent has been in proportion to the fall of agricultural produce in value?—I should say that in Dorsetshire there is not a very great deal of difference. I should not have gathered that there had been. I should think the fall in rents has pretty fairly met the times, so to speak; that was the evidence which was laid before me.

49,152. Do you think the fall of rent has been in proportion to the general fall of farm produce, which you pay rent by?—You see in Dorsetshire so many of the farms have dairying attached to them, and the fall in dairy produce has not been so great.

49,153. And how in North Devon?—In North Devon of course the fall there has not been so great as the fall in wheat.

49,154. (*Sir Nigel Kingscote.*) North Devon is where they grow cattle?—Yes, but it is more difficult to speak if you take cattle as an index; though there I should say, speaking generally, the fall in rent has not been quite equivalent to the fall in produce.

49,155. (*Mr. Clay.*) Is it your opinion, or is it not, that the fall in rent should have been greater to meet the fall of farm produce on arable land?—How do you mean it should have been?

49,156. I mean has the rent of land fallen in proportion to the fall of produce—that is coming back to the old question?—I say that in North Devon I do not think it has been quite equivalent; in Dorsetshire I should say, on the whole, that it would be fairly represented by it.

49,157. Because it is a dairy country?—Yes, that would be one of the reasons.

49,158. (*Viscount Cobham.*) You should add to the fall of rent the fall in manures, foods, and so forth, which are other economies that farmers can make?—Yes; that is pointed out in the Devon report.

Rates.

49,159. (*Mr. Dalton.*) If the fall of rent has been there equivalent to the fall in the value of the produce, and the rate in the £ of the rates has fallen, surely the burden of the rates must be very much lighter than it was proportionately?—I am afraid I do not quite follow that.

49,160. It is clear from the table that you put in that in the Dorsetshire unions the rate in the £ has fallen very considerably?—Yes.

49,161. I understand that, in answer to Mr. Clay, you consider that the rent has fallen in proportion to the produce?—Yes.

49,162. And if the rateable value, as presumably is the case, has been fixed in these unions in proportion to the rent, and the rate in the £ has fallen, then the amount of the rates must have fallen to a greater extent than the

Digitized by Google

Mr. R. H. Rew. 16 May 1895.

value of the produce?—What I meant just now is that the burden of the rates has not fallen. For instance, supposing there is a fall of 40 per cent. in the price of produce that means a much greater fall in the profits from it, because of course the cost of production of a particular article of produce does not fall in the same proportion.

49,163. I understood that the cost of production had diminished in two ways—by the fall in rent and by cheapening manures, and so forth?—It has no doubt been reduced, but I do not think it leaves the same margin of profit, and the rates must cut down the margin of profit.

49,164. The profit is a new point; I understood that both in Devonshire and in Dorsetshire it was contended that the fall in rates was not equivalent to the fall in the value of the produce?—I do not think I put it in that way. I think I put it that the rates now, notwithstanding that they had fallen, were felt as a greater burden.

Mr. R. H. Rew. 16 May 1895

Subsidiary occupation of small holders.

49,165. (*Sir Nigel Kingscote.*) I want to ask you whether those who hold the small holdings referred to by the Chairman actually live off the land or whether the majority of them do not have other work to do, such as hauling or letting out carts and horses?—The large majority of them have other occupations, except in the case, of course, of some of the larger holdings—there is one of 38 acres.

49,166. The majority have other occupations?—In the majority of cases they have other occupations.

49,167. (*Mr. Little.*) The man who failed was the one who attempted to live on the occupation, was it not?—I do not think he was the only one who attempted to live on the occupation; but one of the men who did do so failed.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

(For Mr. Rew's further evidence, *see* page 430)

Ninety-fourth Day.

Friday, 17th May 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq. } *Assistant*
ALAN MACKINNON, Esq. } *Secretaries.*

Mr. W. W. Berry. 17 May 1895.

Mr. WALTER WHEELER BERRY called and examined.

49,168. (*Chairman.*) You are a hop grower and farmer living at Gushmere Court, Selling, in the county of Kent?—Yes.

49,169. You represent the Canterbury Farmers' Club and Chamber of Agriculture and are one of the delegates from that body to the Central and Associated Chamber of Agriculture?—Yes, that is so.

49,170. You are a member of the Council and Executive Committees of the Mansion House Association on Railway and Canal Traffic?—Yes.

49,171. And of the English Hop Growers' Association and the Kent Fruit Growers' Association?—Yes.

49,172. You have had considerable experience in regard to railway rates and were the complainant in a successful application made in 1884 on behalf of the hop growers of Kent to the Railway Commissioners questioning the legality of excessive rates charged for the carriage of hops to London by the London, Chatham, and Dover Railway Company?—Yes, that was so.

Railway rates.

49,173. Are you of opinion that the high railway rates are an important factor among the causes of the present depression?—Yes.

49,174. Can you give instances where the railway rates on agricultural produce have been excessive?—Original rates, or increased rates, do you ask me for?

49,175. I think we must not deal with the increased rates of the beginning of last year, because that matter has been dealt with by legislation, but we should like to hear generally of preferential rates?—There are many increased rates now on agricultural produce. There is a very big difference which has not been remedied by legislation.

49,176. I suppose the time has not yet come for it; I presume action is being taken under the Act of last year, and those cases have not yet reached their stage of decision?—We fear they never will.

Mr. W. W. Berry. 17 May 1895.

49,177. But at all events there is an opportunity?—Complaint has been made, of course, to the Board of Trade. I have some instances here. I had the notice that my presence would be required here to-day so recently that it has been impossible to cover a very large area, because I found that the railway companies have recently somewhat altered their through rates for foreign produce, and I felt it was necessary to bring the particulars which I had up to date. I have taken steps to get information. I have got an expert to go to certain ports to get me the particulars up to date, which were brought up to last night, and I have here just two or three instances. A great number of particulars I would be prepared to send in, in tabulated form, if you required them, but I have not got them with me. These instances are instances of preferential rates. Take butter; the through rate from Calais to London is 1*l.* per ton; the water rate, Calais to Dover, with dock charges of all kinds, is 15*s.*, leaving 5*s.* as the local rate from Dover to London; whereas the English farmer pays a rate of 12*s.* 3*d.*

Examples of preferential rates.

49,178. From Dover?—From Dover. I do not think much butter would come from Dover, however, but from Canterbury the farmer now pays 11*s.* 9*d.* as against 5*s.* the station-to-station rate. Dover to London for foreign butter.

49,179. Do you mean to say that the water rate from Calais to Dover is 15*s.*?—Yes. If I import butter to Dover for consumption in Dover, the cross channel rate, including the dock charges on either side, is 15*s.*

49,180. (*Viscount Cobham.*) Is that for quantities of not less than a ton?—I should imagine it would be so, but I am not quite clear on that point; I should imagine it would be for quantities over 3 cwt. at the tonnage rate.

49,181. And the Canterbury rate?—That would also be for quantities of over 3 cwt. at the tonnage rate, at

Digitized by Google

Mr. W. W. Berry. 17 May 1895.

least I believe that is so. Then take as another illustration, onions; the through rate, Calais to London, is 14*s.* 5*d.*, owner's risk, and the cross-channel rate is 13*s.* 4*d.*, owner's risk, which shows that the 72 miles, Dover to London, is covered at the rate of 1*s.* 1*d.* per ton; whereas the rate for English onions is 12*s.* 3*d.*, company's risk.

49,182. (*Chairman.*) Are you quite certain of your facts there, because it seems—— ?—It seems absurd, does it not? I can vouch for these figures; they were brought up to date only last night, and it is for any quantity—there is no special quantity—but it is for any quantity over 3 cwt. Then potatoes; the through rate, Calais to London, is 13*s.* 9*d.*, company's risk, and the water rate is 8*s.* 4*d.*, owner's risk. The difference between company's risk and owner's risk is only a small matter of insurance, and two per cent. or three per cent. would cover that, and the difference between the rate is therefore very slight. The difference between the water rate and the through rate for potatoes leaves 5*s.* 5*d.* for the local rate, Dover to London, whereas the English rate, Dover to London, is 10*s.* 6*d.*, company's risk, and Canterbury to London 10*s.*, company's risk, as against 5*s.* 5*d.* as I said before, for the foreign potatoes, which leaves 4*s.* 7*d.* per ton in favour of the foreign produce between Canterbury and London.

49,183. Do you know what the water rate from Calais to London would be?—No; I have no knowledge of that.

49,184. I suppose the rate from Calais by Dover to London is to a large extent regulated by the cost of the water rate from Calais to London direct?—Undoubtedly it would be to some extent.

49,185. (*Mr. Lambert.*) If it pays the companies to carry it so cheaply through competition, or if they do not make a loss by carrying it at the foreign through rates, they ought to carry the home produce at the same price?—I think it is reasonable to suggest that they ought to do so.

49,186. (*Chairman.*) It might be absolutely impossible for them to lower the rates on their English line, and it would be better for them to raise the other rate, even though the effect might be that they would lose all the traffic?—I have no doubt they would say they would lose the traffic if they raised the rate; but on the other hand, it is particularly hard to us, as farmers, that we should have these foreign potatoes carried past our door at 5*s.* a ton less than we are charged for a less distance.

49,187. Would it benefit the farmers to raise the rate direct from Calais to London, *viâ* Dover?—It would benefit them to some extent, I am sure. The foreign potatoes would come by water, you are suggesting, all the same.

49,188. Yes?—I think the point rather indicates that the companies would not carry the potatoes, Dover to London, by this through rate, if it did not pay them so to do, and that being so, they are charging an unreasonable rate to the agriculturist.

49,189. Of course, there are two ways in which the thing might be met, one is by lowering the inland rate, and the other is by raising the rate from Calais?—Certainly.

49,190. I do not see how the farmers would be benefited by the companies raising the rates from Calais?—I do not think the farmer would be very much benefited by raising the through rate.

49,191. The effect would be that the goods would go direct from Calais to London by sea?—Yes, quite so; but on the other hand, if the 5*s.* reduction was given, or if the price was reduced to what the foreign now is, it would reduce the cost of getting our crop to London by about something like 2*l.* an acre, and 2*l.* an acre in these days and——

49,192. (*Mr. Little.*) Is the rent of the land?—Quite so.

49,193. (*Chairman.*) It might be that the company could not possibly afford to do that?—I think it is evident that they can afford to do it. If they can carry foreign goods at the price they can carry ours, it is like for like.

49,194–6. (*Viscount Cobham.*) Are the conditions of the carriage the same?—Exactly identical. The rate quoted is for any quantity, which means any quantity over 3 cwt.

49,197. Are the inland consignments as large as the foreign?—I can quite understand that very large quantities come by ocean steamers to various ports, but in this kind of traffic I do not think that larger consignments come than are consigned locally. *Mr. W. W. Berry.* 17 May 1895.

49,198. (*Mr. Little.*) There would not be a train load?—No, one or two truck loads every day would be something like it.

49,199. You only want to have the same rate under the same conditions?—Quite so.

49,200. (*Mr. Dalton.*) But is it clear that the railway company carries for the difference between the through rate and the water rate? Does the steamship company take the entire water rate in those cases?—It is the same company.

49,201. The same company?—It is presumably the same company.

49,202. Then you do not mean to say that it necessarily costs the railway company the entire amount of the water rate to carry it between Dover and Calais?—I am giving you the actual extracts from the rate-book.

49,203. Yes, but you are supposing that the water rate is a fixed charge and the other a fixed charge?—Quite so; I am saying that the through rate for potatoes is 13*s.* 9*d.*, and the water rate 8*s.* 4*d.*, which leaves 5*s.* 5*d.* for the railway carriage.

49,204. Yes, but you do not know that they are not getting a large profit on the water carriage from Calais to Dover?—8*s.* 4*d.* does not appear to me to be an unreasonably high rate for the loading into the boat and out of it, and for the dock charges on both sides; 8*s.* 4*d.* appears to be a reasonable charge.

49,205. (*Mr. Little.*) Have they a definite rate from Calais to Dover?—Yes.

49,206. Stopping at Dover?—Yes.

49,207. And you have taken that as the cost?—Certainly. I have taken that from the rate book. There is, of course, considerable local consumption; there are the barracks, for instance, Shorncliffe Camp, and Dover Castle with the troops, and all that kind of thing. A great many tons are consumed which are grown abroad, and this is the rate for those potatoes across the channel.

49,208. (*Mr. Dalton.*) Where do they deliver them when they bring them across the channel for local purposes; do they take them to another station?—They deliver them in Dover town.

49,209. In Dover town?—Dover harbour.

49,210. Then is the cost of delivery included in the water rate?—No; if a trader in Dover pays this 8*s.* 4*d.* rate he takes delivery on the quay.

49,211. (*Chairman.*) Can you quote some other cases?—There is one other similar case with apples. The through rate, Calais to London, is 15*s.*, owner's risk. The water rate to Dover only is 13*s.* 4*d.*, which leaves simply 1*s.* 8*d.* for the railway charge on this side.

49,212. (*Viscount Cobham.*) At whose risk?—Owners' risk in both cases. The English rate, Dover to London, is 12*s.* 3*d.*; Canterbury to London (and I quote Canterbury because it is a station at which large quantities of fruit would be likely to be despatched) is 11*s.* 9*d.*, which is 10*s.* a ton in favour of foreign apples, and taking an estimated crop of five tons to the acre, that is 2*l.* 10*s.* per acre against the British agriculturist, or fruit grower.

49,213. What service does the consignor render in those cases?—A consignor at Canterbury?

49,214. Yes?—He has to put the goods into the truck.

49,215. Without any assistance, is there not one man?—You are supposed to have assistance, but as a matter of fact, it is just oversight in loading.

49,216. And at the London end?—The rate I am quoting to you is simply from station to station; there would be a trifling terminal cost, of course.

49,217. (*Chairman.*) Was the case you brought against the London, Chatham, and Dover about hops a case of preference?—No, it was a question of local rates.

49,218. Have you brought any case of preference against them?—No.

49,219. You are aware, of course, that there has been a recent case of rates from Southampton?—Yes.

Digitized by Google

Mr. W. W. Berry. 17 May 1895.

49,220. Have you studied that case to see what effect it would have upon the particular cases you have mentioned?—Yes; it would appear from the decision in that case that further legislation is necessary.

Existing legislation and preferential rates.

49,221. I am asking now, not with reference to that case, but have you considered what effect the law, as laid down in that case, would have upon these particular cases that you have mentioned to us?—Well, I am an agriculturist, and I have had some experience in railway rates, but I confess, after very careful reading of the judgment in that case, I am not competent to give an opinion as to what our position is.

49,222. Have you taken legal advice upon it, because there the law is laid down as to what can be done under existing Acts in favour of the English producer?—I have not taken advice formally, but I have discussed the matter with lawyers who have been engaged in the case, and with parliamentary agents and gentlemen who understand these matters — I did so only last evening—but I cannot get three gentlemen to agree.

49,223. Still a certain remedy is given in that case, although perhaps not in the opinion of some people a sufficient remedy; and is it not worth while to consider carefully the bearing of that case upon such cases as those that you have mentioned to us?—Yes. Whereas with fresh meat, and hops, and cheese, the applicants were successful, the case appeared to me to be on all fours with the cases which I put before you.

49,224. Then if that was so, you have got a remedy under the existing law?—In some of those cases we probably have, but in the present position of agriculturists I take it that we shall be compelled to smart under the existing state of affairs, for we have no money to fight these cases out—and every one of these cases have to be fought.

Board of Trade and railway rates.

49,225. But you are aware that you can make an appeal to the Board of Trade in these matters, and the Board of Trade have some power of intervention, I think, have they not? — You are referring to the conciliation clause of the Act of 1888?

49,226. Yes; under the conciliation clause you could represent your case to the Board of Trade, and without entering upon litigation the Board of Trade have power to intervene as conciliators?—I quite admit that that conciliation clause is very useful, but in the present congested state of business at the Board of Trade it is impossible to get any assistance. I have been to the Board of Trade on other matters, and I have always had the very kindest attention and sympathy in regard to all the cases I have brought before them, but I have never got any redress. The gentlemen of the Board of Trade tell me that their position is this: they have power, and they are directed by Parliament to advise railway companies, but they have absolutely no control; they can only suggest.

49,227. You yourself admit that the clause is a valuable one, and the question is, whether you and those whom you represent have endeavoured to make use of the facilities which the Act has given you through the Board of Trade?—Yes, we have endeavoured frequently.

49,228. I understood that you objected to going to law on the ground of the want of money?—Quite so.

49,229. This clause that I have referred to is especially to meet those cases?—Quite so; and if some authority were given to the Board of Trade to insist on their decisions it would be extremely useful.

49,230. (*Mr. Channing.*) Do not the operations under the Act of 1894 take up the whole time of the Board of Trade now?—I have just stated that the present state of business at the Board of Trade is so congested that it is impossible to do anything.

49,231. You are referring to the complaints as to increases under the Act of 1894?—Quite so, and also under the conciliation clause. I think if I were to apply now to the Board of Trade it would be months before I could be heard. I am told that that is the state of business.

49,232. (*Chairman.*) I understand that you are unwilling to go to law yourself on the ground of the expense of it?—Quite so.

Existing legislation and preferential rates.

49,233. But have you formed a definite opinion as to what would be the effect of reduction of charges in the instances that you have mentioned upon the principles laid down in the Southampton case?—I have not gone into that, because I felt this: that the Southampton case has by no way cleared the ground, and the whole thing will have to be begun again and fought out again. The mere fact that in regard to the three items upon which the traders were successful in the Southampton case the companies were able to justify the difference in their charges of 300 or 400 per cent. on the ground of services rendered, and so on, makes it absolutely necessary, in my opinion, and in the opinion of the Central Chamber of Agriculture, that no redress whatever can be given to agriculturists until the law is so altered as to put the English produce on something like all fours with the foreign.

Mr. W. W. Berry. 17 May 1895.

49,234. It seemed to me, on the facts you give, that the case of the apples from Calais to London, and from Canterbury to London, was on all fours with that of the potatoes or the hay, in the case of Southampton?—Yes, I think that is so.

49,235. Therefore it would appear that there is some remedy under the existing law?—Quite so. I have given you these three or four cases as representative of many across-channel cases; some of them are probably covered by the Southampton case; but I suggest that there may be very many hundreds of instances of rates of this kind which are not covered by the Southampton case. This I should say, certainly, is covered.

49,236. Have you any other cases that you would like to mention?—As you are excluding the question of raising the rates I do not think I have any others that would be of any use to you.

Conveyance by road.

49,237. Now, in the case of hops from districts which are within 30 or 40 miles of London, can you compete by the road?—No.

49,238. What is the distance from London where you can compete by road?—Hops, within 15 miles of London, would go in by road.

49,239. Not farther off than that?—When you get 15 miles out of London there is not a very large acreage of hops to go.

49,240. I live in a hop district, about 25 miles from London, and I am under the impression that a good many of the hops go up by road?—I have no knowledge of that in my district, but I am 55 miles from London.

49,241. (*Mr. Little.*) They come by water from Maidstone, do they not?—Yes, and also from Sittingbourne and Faversham they come by water. In reference to your suggestion that a larger quantity might possibly come by road, those market gardeners who are growers of hops, and who know something about the road work, and are accustomed to take their produce to London by road, probably do take their hops by road, but the ordinary hop-grower is a little farther off, and has not that opportunity.

49,242. (*Chairman.*) Of course, where a farm is four or five miles from a railway station, to send hops to the railway station and there to handle them and put them on to the truck would add to the expense?—Quite so, and if it is within anything like a reasonable distance of London for a horse's journey in a day's work they would go to London by road.

Examples of preferential rates.

49,243. (*Mr. Lambert.*) I suppose there are innumerable other cases which you have not brought before us?—Quite so, instead of bringing a whole batch of cases, especially preference cases, I got an expert to go and verify those items I have given to the Commission. He has only had time to verify a few at this one port, but I thought it was better to give you those instances, and to say that there are hundreds, many hundreds I believe, of cases where these rates affect agriculturists of which these are fair samples.

49,244. (*Chairman.*) You simply mentioned those as illustrations?—Quite so, and I would be pleased to send you a further list in tabulated form if you wish to have them.

49,245. Then you can put them in later?—I will do so. (*See* Appendix A. V.)

Remedy for preferential rates.

49,246. What is your specific remedy, what do you think ought to be done?—On the question of railway rates?

49,247. I mean not as to railway rates altogether but on these questions of preference?—What I suggest is what is suggested by the Central Chamber of Agriculture, a report of which I will put in if you like.

49,248. (*Mr. Channing.*) I understand that you do not consider yourself sufficiently acquainted with the law on this matter, and the interpretation of the law to

Digitized by Google

Mr. W. W. Berry. 17 May 1895.

offer opinions on those points?—Do you refer to the decision in the Southampton case?

49,249. Yes?—Quite so.

49,250. And you yourself, having regard to the interest that you represent, would prefer to have those opinions stated to the Commission, if the Commission wish for an explanation on those points, by a legal expert?—Yes, I should be very glad of that.

49,251. The practical point on which you could give an opinion is, perhaps, as to the practical effect of that decision in regard to the question of the same or similar services; you are able to speak as to the result of that to agriculturists, are you not?—Yes.

Packing of English and foreign produce compared.

49,252. Is not the effect of the decision upon the questions of the packing and the amount that can be put into a truck, and the question of similarity and ease of handling and all the rest of it, being used in that decision to the very great prejudice of agriculturists in this country?—Yes, quite so, but on the other hand it is only fair to admit straightaway that the goods which are either manufactured or produced 100 or a 1,000, or possibly 1,500 miles from the seaboard in America must be so packed for handling and for export that when they arrived here, having come by ocean steamer, they would be in somewhat better condition for handling and unshipping, and there would be less risk than, as a rule, there would be with the English goods, and goods so packed would occupy less space than the English goods. But, I believe that is being made an unfair use of against us; I do not think there is anything like the difference which has been suggested.

49,253. It is quite inevitable that all agricultural products which come from abroad should be in such a shape that they give special facility for handling to the railway companies?—Quite so.

49,254. That must be so from the fact of their having to go across the sea?—Quite so.

49,255. (*Viscount Cobham.*) You consider that weight should be given to those considerations?—Yes, some weight certainly.

49,256. Only you differ on the point of degree?—Quite so; for instance, the ordinary railway waggon loaded with English hops would carry from 2 to 2½ tons; as the minimum rate is for 2 tons we always give a 2-ton load——

49,257. The traders succeeded in the matter of hops?—Yes, we did, but I was going on to say that the ordinary railway waggon loaded with foreign hops would be possibly three tons, because they are packed in square bales, whereas the English hops are packed in round bales.

49,258. (*Mr. Channing.*) Is it your opinion that the English agriculturist who naturally and inevitably has to deal with a small quantity of product, and to send in moderate quantities is placed in an unfair and disadvantageous position owing to these rates?—Quite so. We claim that our one ton ought to be carried at the same rate that the railway company carries two or three tons of foreign goods, that is if we can give them a fair average load.

49,259. You think the rates are entirely excessive having regard to the fact that the railway companies are entitled to some allowance for the facility in handling the foreign goods?—Yes.

49,260. They are excessive?—Altogether excessive.

49,261. And the English products are really paying for the cheap transit of the foreign goods?—That is our view.

49,262. What solution would you advise of that difficulty, how would you remedy that?—As the law now stands it appears that the services not being altogether alike and similar the companies may charge these enormous differences between home and foreign goods. We claim that under no circumstances whatever should foreign produce be carried at a less rate per ton per mile than English produce.

49,263. (*Viscount Cobham.*) Do you ask for an equal mileage rate?—For English as against foreign produce, but not an equal mileage rate as against all distances.

49,264. (*Mr. Channing.*) What allowance would you make, then, for the difference of quantity which can be stowed in a truck?—I would give the same difference to the foreigner as you give to the English. The quantity put into a truck, did you say?

49,265. Yes?—If it could be shown that the foreign was so much better to handle than the other a fair allowance should be made, but not such an allowance as has been suggested.

Mr. W. W. Berry. 17 May 1895.

49,266. 200 or 300 per cent. is altogether out of proportion?—Five to 15 cent. would be, in my opinion, much more reasonable.

49,267. (*Viscount Cobham.*) Those are the rates given to the Irish traffic, are they not?—I have no knowledge of the Irish traffic.

49,268. That is so; as a matter of fact the Irish Southampton rate is the same as the foreign rate?—Indeed.

49,269. The Irish rates, of course, are home rates?—Quite so.

49,270. (*Mr. Channing.*) In most cases the English producer has no alternative whatever?—None whatever.

Conveyance by road.

49,271. The few cases of carriage by road are comparatively unimportant compared with the vast number of cases where farms are in a position which is beyond the point of cartage?—I should think outside the market garden produce not more than five per cent. of the produce which comes to London would come by road—possibly not nearly that.

Remedy for preferential rates.

49,272. And having regard to the results of the case against the South-Western Railway Company, you agree with the opinion of the Central Chamber of Agriculture that further legislation is urgently needed?—Quite so. We do not believe that it was the intention that all these differences should be allowed.

49,273. (*Mr. Lambert.*) There is a very widespread feeling of dissatisfaction, is there not, amongst agriculturists about these rates?—Yes, and has been from 1873 up to date.

Freight on hops.

49,274. (*Mr. Giffen.*) Would you tell me what is the freight on hops from your part of the county to London?—The local rate, station to station (I can only give it from memory), is, I believe, 18*s.* 11*d.* per ton.

49,275. What is the value of the hops per ton?—The value of the hops would be 70*l.* per ton, sometimes very much more and sometimes less.

49,276. What would the freight be on the foreign hops?—I do not think there is any traffic in foreign hops *viâ* Dover. There is a small traffic in hops *viâ* Flushing and Queenborough at a through rate of 20*s.* a ton. I am also giving you that from memory, but I think it is 20*s.* a ton. We had a very large and substantial grievance in the hop rates 10 or 12 years ago, but through the action taken before the Railway Commission followed by the inquiry by the Board of Trade, and the re-arrangement of classification confirmed in the Provisional Order Bills, we have got such reductions as I think, generally speaking, the hop growers would be fairly well satisfied with.

49,277. So that there is no particular grievance as regards hops?—I have not come here to bring forward any grievance respecting hops, although I believe there are some instances where certain districts are favoured rather more than other districts; but I have no strong case to make out against the railway charges for hops at the present time. We have got a reduction of about 40 per cent. from the highest point.

Packing of English and foreign produce compared.

49,278. (*Viscount Cobham.*) You say too much weight has been given to these considerations of packing and bulk, and so forth; how would you correct that, by legislation?—I think the difference is so slight that it would be only fair to English agriculturists to make the rate the same whether the goods are foreign or English. If the companies find it somewhat better to load the foreign so much the better for them.

49,279. I understood you to say in a previous answer that you thought those questions of packing, and so forth, should be considered?—There is a difference, and the advantage is in favour of the railway companies, of course; but I claim that the same rate should be given for English cheese in one ton loads as for foreign cheese in one ton loads.

49,280. Are you sure that those terms are not offered?—I think they are not offered.

49,281. On your own particular line?—I have never known the same terms to be offered for English as for foreign, there is always something like a difference.

49,282. Have you any reason to believe they would be refused if they were asked for?—From past experience I should say they would be refused.

Digitized by Google

Mr. W. W. Berry. 17 May 1895.

49,283. Have you ever tried to get them?—I have often asked for reductions; for instance, in hops, I have sent consignments of hops, 40 or 50 tons at a time.

49,284. But you have never put the specific question to the railway company whether, if your consignments were assimilated to the foreign consignments, they would give you the same rates?—Personally, I have never had any business to compare with the foreign traffic that was going. I do not think hops go through my station in any quantity, and my particular business is chiefly with the north of England; therefore my business is carried on almost entirely on through rates. I do no business with London; I have, therefore, not been in a position to do exactly what you suggest.

49,285–6. Would you put on the same footing home butter or cheese carried in consignments of hundred weights at the most and foreign butter and cheese coming in full truck loads?—I do not suggest that it is carried in consignments of hundredweights at the most.

Mr. W. W. Berry. 17 May 1895.

Equal mileage rates on home produce.

49,287–8. And that equal mileage rates should be given as between home and foreign consignments generally?—If the foreign butter was at a certain price per ton I think the English butter should be at the same price per ton under the regulations laid down by the Provisional Order Bills, which is that the minimum should be three hundredweights. For small quantities under three hundredweights in a consignment something more should be charged to pay for the extra trouble of the small consignments.

The witness withdrew.

Mr. E. Samson.

Mr. Ernest Samson called and examined.

Mr. E. Samson.

49,289. (*Viscount Cobham.*) I think you are the Secretary of the National Association of Cider Makers?—Yes.

Cider industry.

49,290. And you come here to-day to speak to the importance of the cider industry in ten counties?—Yes, and also to give an idea of cider making; how it is carried on at the present time, and what its requirements are.

49,291. Which are the counties that you more particularly wish to speak of?—The five principal ones are Devon, Somerset, Gloucester, Hereford and Worcester, and then there are the five neighbouring counties, Cornwall, Dorset, Wilts, Shropshire and Monmouthshire. As a matter of fact it is only in those counties that cider is made now to any extent; in Kent it is almost extinct, and in Norfolk there is very little made, although there is one maker of importance there.

Acreage of cider orchards.

49,292. What is the acreage under cider orchards in these ten counties?—It is a matter of calculation. The total under fruit trees is, I consider, about 140,000 acres. The latest returns are for 1893, and they give 135,000 acres, but as it is a growing industry by this time I think it can be taken that there are 140,000 acres under fruit trees.

49,293. Do you suppose that the return to which you refer is exhaustive? Does it include every worn out little orchard that may be attached to a farm?—Yes, I think so, except where they are merely allotments, and then it would only be a matter of a few trees and gardens. To obtain the acreage of the orchards under apples for cider I deduct one-fifth, that is, I imagine that one-fifth of the trees are either trees other than apple or pear trees, or that the fruit from them is used for other purposes than for cider making, that is, for the table, for making jam, and for other purposes. By deducting that one-fifth I make the nett acreage of cider orchards to be 112,000 acres in those ten counties.

49,294. Have you seen Mr. Radcliffe Cooke's evidence on this subject?—I was here at the time he gave it, so I heard it all. He spoke more particularly as to Hereford.

49,295. Are your figures pretty well in accordance with his?—Yes, they seem to agree. I fancy he deducted one-sixth, but then of course he spoke of Hereford only, and I speak of the ten counties. For the five counties I mentioned last it is necessary to deduct more than a sixth for certain.

Yield of cider per acre.

49,296. What would you give as the average yield per acre?—In Hereford the trees are planted rather sparsely, and run about 50 to the acre. There the yield would be from five to six hogsheads; my hogshead is 54 gallons. As I say, the yield in Herefordshire and those parts is about five to six hogsheads to the acre, but as you get farther down into Somersetshire and farther down again into Devonshire, the trees are planted much thicker and the average yield is about 15 hogsheads to the acre, a very large increase on the northern counties. I take the average for all the ten counties to be nine hogsheads per acre, the hogshead being, as I say, 54 gallons.

Value of cider produced.

49,297. Representing a value of how much?—That will make a total yield for the ten counties of a million hogsheads. Some of the cider sells at from 10*d.* to 1*s.* per gallon, and the poorer kinds from 3*d.* to 5*d.* a gallon; I have made an average of about 4½*d.*, or say 1*l.* per hogshead. One pound per hogshead for a million hogsheads is 1,000,000*l.* sterling; that is the value of the cider produced in those ten counties every year. The probable rental of the orchards I have not mentioned. Mr. Cooke put it at about 2*l.* 10*s.* to 3*l.*; I should raise that, because of Somersetshire and Devonshire, where the orchards are worth more than that. I consider that they are worth from 3*l.* to 3*l.* 10*s.* per acre, so they represent a rent roll of nearly 400,000*l.* a year.

49,298. Is the greater quantity of trees in the south of England due to the superiority of the soil?—And of the climate as well. In Somersetshire the trees yield more freely, certainly; and the same may be said in Devonshire. That is as to the importance of the cider industry. Now as to the value. The question then arises as to whether we can really make good cider here in England. First of all, as to the apples; there is no doubt about the flavour of them; they are excellent, and no one has ever suggested that better could be produced anywhere. In cider making we have to take into consideration not only the flavour of the apples, but the quantity of the juice yielded and its strength. In that respect we do not stand pre-eminent, but that I look upon as merely temporary. It is owing to the fact that a bad class of trees has been allowed to accumulate on the land. We have not propagated the best kinds; we have not raised the standard; whereas in foreign countries, France in particular, they have improved the trees very much, so that the yield of juice is greater and the strength is increased very considerably. The average strength in England, with the hydrometer, would be about 1,050, and in France they would consider that decidedly poor; theirs run from 1,060 to 1,070, and often up to 1,100. Of course you have only to calculate on the added 60 or 70, so that the proportion between 50 and 70 is a rise of 40 per cent.

Quality of cider.

49,299. Does the flavour depend upon the strength?—Not in the least.

49,300. (*Mr. Lambert.*) Is there any great advantage in having a high alcoholic strength in cider?—You make the cider much more easily when it contains a large quantity of alcohol, and it keeps much better, just as a strong beer will keep much better than a light beer.

49,301. (*Viscount Cobham.*) Does the ordinary consumer prefer it strong?—That entirely depends upon the neighbourhood. In Somersetshire, in the neighbourhood of Martock, for instance, or the neighbourhood where Mr. Elton comes from, they drink strong cider; in Herefordshire it is a much weaker cider; and in Devonshire it is usually a sweet cider.

49,302. (*Mr. Lambert.*) Amongst the labourers?—Not amongst the labourers in particular. I am sorry to say all the sugar is fermented.

49,303. The cider is allowed to ferment, but there is nothing detrimental introduced into the cider?—No, nothing is introduced, but the whole of the sugar is fermented, and then it becomes hard.

49,304. Is it not the fact that Devonshire people prefer this, what you call hard cider, to the sweet?—Yes, they do, but still in Somersetshire they not only like it hard, but they like it strong at the same time.

49,305. (*Mr. Little.*) Do they drink as much?—They drink as much as they can get.

49,306. (*Viscount Cobham.*) Is strong cider as strong in alcohol as strong beer?—A fair average strength is 5 per cent. of absolute alcohol, but some of the very

Digitized by Google

Mr. E Samson 17 May 1895.

strong ciders run to 8, 9, and 10 per cent. of absolute alcohol. That of course means double the quantity of proof spirit, namely, 10 per cent. up to 16, 18, and 20 per cent. of proof spirit.

49,307. So that it can easily be made as strong as beer or stronger?—Yes, it can easily be made as strong. At certain times it may be considered a teetotal drink, it can be made containing 3 per cent. of absolute alcohol, which is just about the limit, I believe, of a temperance drink.

Small holders and cider making.

49,308. Then is it your opinion that with good management this country ought at least to hold its own against any foreign competitors?—No doubt it can, because good cider can be made, and it is made at the present time, by small landowners and tenants to whom the cider industry is relatively of great importance. They very likely look to pay their rent out of the sale of the cider or at any rate to receive an important sum—in all probability it is the largest sum that they do receive for the sale of any one product. One important item in connexion with it is that these as a rule are not men who depute the work to other people to do; they attend to it personally, and that enables them with a long experience and the interest they have in it to produce a very good cider. The small landowners and tenants who attend to it personally are the people who make the best cider in the country.

49,309. Are they any considerable proportion of the whole?—It is a decreasing proportion. I have put the word "yeoman" in my brief. It seems to me that that word somewhat represents the class of people I speak of, and they I should certainly say have been on the decline; I do not know whether they are actually now on the decline, but at any rate they have been for the last 20 years.

49,310. Owing to economic causes?—Yes, owing to the change in the conditions of the land.

Cider manufactories.

49,311. Not owing to the falling off in their special business of selling cider?—No, they have no reason to complain of the falling off of their sales because good cider sells readily. Then good cider is also made at the present time by large manufacturers who invest capital in the business, and bring to bear on it skill and a good deal of science—as much science as they can command at any rate. Some of them have spent very considerable sums in obtaining the best methods of manufacture.

49,312-13. How do they obtain their apples?—Some of them have orchards of their own—most of them have to some extent orchards of their own and the rest they buy; they buy either apples or the juice as it runs from the press; the principal manufacturers and the best manufacturers do that.

49,314. Do they import as well?—They import apples sometimes. If there is a bad year certainly they import apples from Normandy and Brittany, and sometimes from Holland I think, but still the importation of apples is rather the exception.

Quality of cider.

49,315. A large amount of inferior cider is now produced I understand?—Yes, unfortunately the bulk of the cider now made is inferior, and it is of those people who produce that cider that I want more particularly to speak. In the 10 counties I have mentioned nearly all the farms have an orchard, and there the apples are made into cider, in the first place, to give to the labourers, as in those parts it is usual to supply the men with cider as well as wages; and then, of course, the farmer drinks some himself, the rest, if it is of anything like good quality, being sold. Speaking of the good cider, it sells readily at remunerative prices—there is never any difficulty in selling good cider. Wherever it is made it will sell from 10*d.* to 1*s.* a gallon, which leaves the maker a very good profit. But the poor cider does not sell, or, if it does sell, at a very low price, which does not repay the man for his labour and rent and so on. It is only natural to ask why they do not make good cider all round, seeing that, as I said at starting, it is possible to make good cider. The trouble is that the farmers and those who have apples to make into cider do not know how to make the cider and they have no means of learning. Therein arises the difficulty. Those farmers who do know how to make good cider have been connected with the district all their lives and have learned by tradition and experience the proper blending and treatment of the apples and the juice and how to produce a sound cider. Those are the small men I termed yeomen.

Mr. E. Samson. 17 May 1895.

49,316. They do not impart their knowledge?—Their knowledge is empirical; they have no rules to go by; they tell by the taste or by the feel, or they know from habit. Then that knowledge is only applicable to their particular district and probably to their particular farm. Therefore, if these people could impart the knowledge it would be of very little service to people 20 miles off and differently situated. But empirical knowledge is very often difficult to impart; it, in fact, only can be imparted by the long training and experience which these men have.

Instruction in cider making.

49,317. How would you give the training which is required?—If a man wishes to learn, or wishes to get his sons instructed, he has a good many difficulties to encounter. He might learn, it would be imagined, from books or from some other person. The cider industry in this country has been so neglected that there is not a book published showing how to make cider, so that any person versed in that kind of industry can by following the instructions make a good cider. There are some antiquated books where men relate their experience, and there are others which devote some pages to cider making, but where the science is treated, it is merely a transcript of an imperfectly understood foreign book, with many blunders and important omissions. When I want to know anything about cider I am obliged to refer to some French or German book. There is no book published in England or in English that I am aware of—not even in America—that will really help a man over all his difficulties or teach him how to make cider.

49,318. Are there competent teachers to be had?—There are no competent teachers at the present time. He cannot go to his neighbours very well to learn, because, as I said before, theirs is an empirical knowledge and only applies to their immediate neighbourhood, and they are men as a rule who are competent of making cider, but not very competent of communicating it to other people. Then he might apply to the manufacturers, but, as I have said before, they have obtained their experience and knowledge at great cost and outlay to themselves, and they regard it as a trade secret,—in fact, as a part of their stock-in-trade; and they will not communicate it to others who are likely to be competitors. The instructors that he would naturally apply to would be professional instructors, people who make it their business to teach a science or an industry: but there are none in this case. A man in order to be of service in teaching how to make cider must have a theoretical and scientific knowledge joined to practice. He must have a knowledge of the soils and situations, the sorts of apples and their suitability, and he must also have a knowledge of chemistry and of fermentation. He should also have visited or seen something of the wine trade, because it is an analogous trade. At the same time in order to be of great assistance he must be in constant touch with the orchards and with the makers of cider, so as to know the peculiarities of the different districts. There are no such instructors and there are no opportunities for training them. That is where the difficulty comes in at present, there being no instructors and no opportunities to train them.

County councils and cider making.

49,319. How would you meet that difficulty?—The county councils in some of the districts interested have done, I think I may say, all they could towards meeting the difficulty; they have endeavoured to instruct the farmers and those interested in cider in cider making, but the men that they have chosen, although the best obtainable, have not been suitable men, because these would-be instructors have not the knowledge which I have said is requisite; they are not theoretical and scientific men with a practical knowledge; they are either purely theoretical men or simply practical men who have had no wide experience.

49,320. Do you think that very little success has been attained by these teachers so far?—I am afraid that it has not met with the success which it deserves. The good will was there; the intention was quite good on the part of the county councils, but they cannot find the men to instruct, that is where the difficulty is.

Cider experimental station.

49,321. Do you think that teachers could be trained; if not, apparently we shall never get the necessary staff?—The teachers can be trained in this way; by taking the general knowledge which has been obtained by research and experiment in other countries, and then applying it to the particular needs of our various districts. The way I should suggest would be that some central station should be established or added on

Digitized by Google

to some agricultural experimental farm already in existence, and there attention should especially be given to everything that is necessary to cider making, that is, attention to the trees—that is, to the thinning, the pruning, the grafting, and then the manuring of the ground and the fertilising of the ground by digging it up, and so on. That, of course, in market gardens is already done, but in orchards they seem never to dig up round the trees, or at any rate, very seldom in the majority of them. But the ground should be dug up so that the earth may oxydise a little, and so that the insects and grubs, and one thing and the other may be disturbed and be killed either by the frost or by being eaten up by the birds. All that requires to be impressed upon the orchardists.

49,322. As to the management of the orchards, you could get practical persons, I suppose?—Yes, to some extent, as far as I have mentioned you can; but then, in this country we have never studied the particular trees that should be planted for cider. A good apple for cider must not only have a perfume, but it must give a free yield of juice, and that juice must be of great density; it should be certainly up to 1,075; that is, where a thousand parts of water weigh a thousand, a thousand parts of juice should weigh 1,075; that part of it has never been studied to any extent in England, and where you see any analyses of apple juice you will find that they are principally taken from the French. It was done to some extent through the society that issued the book called "Pomona," of which Mr. Cooke spoke. Then, attention has never been given to the sorts of apples to plant to meet deficiences. Many of our orchards contain very good apples, but when taken together they do not form a happy blend for making cider, whereas a man of experience would very soon recognise what kind of apples were required to be planted in order to complete the blend to make a perfect cider. That is a thing that can only be done by experiments. The experiments need not be conducted on the experimental farm. When different people are planting, if it was watched a little what they were doing, so that it was seen what kind of soils the trees are planted in, and what kind of trees are planted, the results could soon be judged and tabulated, and the results given to others for their benefit and their guidance in planting elsewhere.

49,323. But you must get a man of experience to conduct these experiments; how would you get him?—Take the best that is to be found. Of course, there are some men who have given some attention to these matters.

State aid for cider making.

49,324. Do you think that the State or the cider counties might perhaps interest themselves in this matter?—You can see what has been done in foreign countries in this matter. In the colonies all this is done direct by the Board of Agriculture; they arrange these stations and appoint inspectors or teachers themselves. In France and Germany, on the other hand, although the aid comes from the State, it is done through some society or other, which devotes itself to this particular culture. In that way it seems, as far as we can judge, that greater results have been attained at a smaller price, because the people who have been connected with these pomological societies, and cider societies, understand the business, and have their heart in it, and certainly, judging by the results, it has been a great economical success, both in France and in Germany.

Cider making in France.

49,325. Is it a much more important industry in France and Germany than it is in England?—Yes, much so. The average yield of cider in France is 6,500,000 hogsheads, so that that would be six or seven times as much as it is in England, and in the year 1893, the year before last, the yield was no less than 13,000,000 hogsheads. That is a correct figure; that is not an estimate the same as mine is of England; that is taken from actual returns, similar to the returns of the Board of Agriculture here as to acres, and fruit trees in orchards.

Imports of cider.

49,326. Does a large quantity of cider come over here?—The principal import of cider is from America, from the neighbourhood of Boston, Massachusetts. I should think that probably this year it will be from 800,000 to 1,000,000 gallons.

49,327. Is that of good quality?—No, it is not of first rate quality, but still it sells pretty readily here. It is made sweet; it contains about 5 per cent. of absolute alcohol, and is not unpleasant; but to say that it is a first rate cider would be giving it praise which it does not merit. There is some imported from France, and some from Germany, but the quantities from there so far have not been very great. However, as far as I can make out, from the French papers, they are rather thinking of trying to create a market for more French cider over here.

Consumption of cider in France.

49,328. There is a much larger consumption of cider in those countries than in England then?—Yes, the consumption is very great, because, of course, in France they consume all they make. It is consumed in France in rather a different way to what it is here. They send it on board their ships there for the use of the crews, and that is a considerable item in the course of 12 months. It is sent on board their men of war, and their trading ships as well, as an anti-scorbutic, instead of lime juice. Then there is also a considerable consumption in France for making eau de vie de cidre—cider brandy—of which some is sent over here; I do not know where it gets to, or under what name it is sold when it gets here; that I have not been able to trace, but some cider brandy is sent to this country, and sold under some name or other.

49,329. Does it come under the name of champagne?—I do not think so. We can detect malic acid in champagne very readily. I have seen lots of letters in the "Times" about it, but I do not attach much importance to that myself. To go to the general subject, assistance must come from some part or the other, whether it is better it should come from individuals, the same as some of our experimental farms have been made here, or whether it should come from the Government or how, I am not prepared exactly to say; but assistance must come from somewhere, because the cider maker at the present time is helpless; he cannot obtain instruction or information.

Position of English cider industry.

49,330. Is the result of that, that the manufacture is declining?—At the present time I do not consider it is declining, because the National Association of Cider Makers have certainly done some good, and I hope it is only the beginning of the good they will do. A few years ago the cider industry was in a lower state than it is now. There is a great demand for a light non-alcoholic drink in this country; when I say non-alcoholic, I mean of slight alcoholic strength. That has stimulated the cider industry beyond a doubt, and there are men who are looking round to see how they can utilise their farms to good account, who have turned their attention to cider making. The cider industry has improved slightly of late, but only very slightly: as I say, the people are helpless, and they do not know where to go for instruction or information.

Demand for good cider.

49,331. Do you think that if there was an increased supply of good cider there would be an increased demand?—No doubt about that whatever. As I said at the very beginning, the good cider sells very readily at a remunerative price, and the fact that we import a considerable quantity of only fairish cider, which finds a ready sale, is proof that the demand is greater than the supply. Then more than that, in many districts people will not trouble to sell cider, because they say that when they have worked up a sale for it, they find the supply gives out, and then their labour is practically useless. If we have a spell of hot weather in August, or something of that sort, when it has become well known in the district that they sell good cider they find that they can no longer get a good supply, and so the labour is lost. I am satisfied that if there was a constant supply of good cider, many people would take up the selling of it, more particularly in the manufacturing towns in the north, and that the sale might be doubled or quadrupled in a very few years—always supposing that you could supply and sell good cider—therein is the difficulty, to supply good cider.

County councils and cider making.

49,332. Do you consider that the county councils, by a possible combination among themselves, could affect all that is required in the supply of trained teachers?—If those 10 counties that I have mentioned were to join together, it would be a very slight tax on each one, but still if cider is once made good the industry would soon extend, and then, I suppose, they would think it a hardship that they should be at the expense for other counties. It seems to me to be a matter worthy of more general assistance.

Cider experimental station.

49,333. A small experimental farm would not be very costly, would it?—I should think that a matter of a couple of thousand a year for five years would give opportunity for proving whether anything can be done in the industry. There is no outlay of capital required; it is only a matter of a couple of hundred pounds.

Digitized by Google

Mr. E. Samson. 17 May 1895.

49,334. Competent persons might be assisted to be trained in France or Germany?—Yes; that could be done. I daresay that through our Government we might obtain the assistance of foreign teachers. We might have access to their laboratories and see what they have done on general principles, and apply those to the special circumstances in England. That is what is wanted.

Management of orchards.

49,335. Do you consider that the management of orchards is better understood, or the contrary, at the present day?—The fruit orchards are certainly better managed now in England than ever they were; but that does not apply to apple orchards.

49,336. Do you mean fruit for the table?—Fruit for the table, for jam making, and so on, but it does not apply to apple orchards. The farmers not knowing how to make good cider have made bad cider, and they have found it does not pay, so the orchards have been neglected, and the men have not troubled about anything in connexion with them. If you travel in the West of England and look at the orchards, even from the railway, you will see that the trees are ragged and covered with moss; all a sign of weakness, all a sign of neglect.

Cider factories.

49,337. Could the factory system be much extended, do you think, for the benefit of these farmers?—That would be somewhat of the same thing as the wholesale men buying the juice direct from the mill.

49,338. Something in the nature of creameries, so that the farmers should send in their raw produce to be made up at local factories?—That might be done in certain districts, certainly; the same as the wholesale men buy the juice now, or the apples.

49,339. Would it not pay farmers who do not understand the art of making cider better than making bad cider?—Yes, certainly. That is so at the present time; in certain districts the farmers prefer to sell the apples, because the man who buys the apples knows how to make good cider, and he gets good prices for it, whereas the farmer can only make poor stuff, which sells at a bad price. I have an example of that which occurred last year at Mr. Neville Grenville's, near Glastonbury. He made experiments in the year before (1893) and wished to continue them in 1894, but he had very few apples, so he bought the apples in the neighbourhood from anyone who offered them, and under the guidance of a scientific man, these apples were made into cider, and the whole of the produce was sold at 10*d.* per gallon right away, without any bickering, which was a very good price, and no doubt a remunerative one, although Mr. Neville Grenville did not undertake it for the sake of the gain. A neighbour of Mr. Grenville, who had the command of the same kind of apples at his own place, and bought some in the neighbourhood too, made cider, but he could not succeed, and did not succeed in selling that cider at more than 4*d.* a gallon. The two lots of cider were made from the same apples, but the second one was made badly. I think that is proof positive that it is the skill in making the cider which gives the good cider or the bad.

49,340. That, no doubt, was a great benefit to the neighbouring farmers?—They are opening their eyes to the fact that good cider can be made from apples which they considered only poor cider could be made from; and now they are anxious to learn, but there is nobody to teach them and nobody to help them.

Demand for good cider.

49,341. If the farmers knew how to make cider do you think they would make a greater profit by making it themselves, even on a small scale, than by selling their apples?—If they could make it good. Besides, they want it for their own consumption, and they want it for the consumption of their men. A good deal of it could be sold locally at no very great distance. Sell the apples if you can only make bad cider, but make cider if you can make it good. Then they have the mills, they have the presses, and they have the cider cellars, so that they would like to utilise those, and I think they would to advantage.

Consumption of cider by labourers.

49,342. The labourers drink less cider than they did, do they not?—Yes, I should think they do, because formerly employers used to buy cider to give to the men very often; now instead of buying poor cider they buy light beer. In that way there is less cider consumed. But I do not know but what the labourer is just as fond of cider as ever he was.

Compulsory destruction of insect and fungoid pests.

49,343. How would you protect farmers against insect and fungoid pests?—That refers more particularly to the orchards. I should certainly suggest that the Government should compel the tenant to maintain the trees in a clean and vigorous state, and that the owner of the orchard should, in the first place, put the orchard in a clean and vigorous state. In this country, of course, we do not care about legislative interference; but, still there are instances when it is not only desirable, but when it is the duty of the Government to interfere. In this case what we ask is, that the careful man may be protected against the negligent, which seems to me to be one of the duties of the Government.

Mr. E. Samson. 17 May 1895.

49,344. That principle would carry us rather far, would it not? Why should this interference be extended to the orchard industry solely?—It would not be only to the cider industry, it would include orchards of all kinds of fruit. You will find it is only one little step further than the law goes already. For instance, we have vaccination, which is quite personal; the muzzling of dogs to protect persons and animals; and owners are compelled to keep their property in a sanitary repair to prevent nuisances and infection. Then we have legislation with regard to foot-and-mouth disease, glanders, scab, and so on. Then, again, a man is compelled to keep his chimney clean in order that he may not be a nuisance or a source of danger to his neighbours. Factories are not allowed to pollute streams, and a factory is not allowed to belch forth smoke or noxious vapours which destroy vegetation. So that as things are now the owner of an orchard suffering damage to his orchard from the fumes of a factory has a remedy against the manufacturer.

49,345. I think all those cases you have quoted affect the health of the community?—Here I am speaking of the noxious fumes from a factory which caused damage to vegetation.

49,346. Yes, and also to health?—But, still, the fact that it is causing damage to vegetation would allow the man who receives the damage to obtain compensation, and, at least, to cause the nuisance to be abated. I think the Rio Tinto Company had a case of the kind at Port Talbot on a large scale.

49,347. I suppose you would not confine these protective measures to orchards alone; you would have no objection to seeing it extended to the other departments of agricultural industry?—I do not know.

49,348. Why should you not compel a man to keep his thistles down, for instance?—The thistles are apt to extend to other farms I must admit, but not to anything like the same extent that these orchard pests do. We ask that the owner of an orchard suffering damage from the infliction of insect pests from neighbouring orchards may be protected. He can protect his orchard against his neighbour's cattle but he can do nothing to protect himself against the insect pests; he is absolutely helpless there. Besides, you really are not allowing a man who keeps his orchard in a healthy and vigorous state to reap the full benefit of his outlay at present. Whatever he may do he is at the mercy of any negligent neighbour from whose orchard infection comes in a variety of ways, from these moths, or the wind may carry the eggs and a variety of other things.

49,349. Do you think that the landowner should do more to maintain orchards in a clean and healthy condition?—No, I do not ask that the landlord should maintain it at all—I ask that the tenant should.

49,350. Encouraged by a liberal system of compensation?—No, none whatever; the tenant should simply be compelled to keep the orchards in good order; let the tenants be compelled to keep them in good order; the maintaining of the orchard should be solely at his expense. The reason is this: the outlay for maintaining the orchard in good condition takes place in the winter and in the spring principally—almost exclusively—and the benefit from that is reaped immediately afterwards, namely, in the autumn in the same year. Therefore the man who obtains the benefit—namely, the tenant should pay for it. What we ask is that the Government should compel the tenant to maintain the orchard in good condition. When a tenant takes a farm, supposing it is in good condition, on leaving it he must leave it in the same condition or pay for dilapidations under certain little conditions which I do not know affect the issue in this case. If he neglects a field the field is damaged and nothing more, but if he neglects an orchard not only does the orchard suffer but the neighbour's orchard suffers. Therefore, for that reason we ask that the tenant should not only be obliged to deliver up the orchard in a good condition, but that he

Digitized by Google

should be bound from year to year to keep it in good condition so as not to become a source of infection and of damage to his neighbours. There is only one step to be taken; the thing is that it has to be done annually instead of at the end of the time.

Compensation for planting.

49,351. Are you satisfied with the existing law as regards the planting of trees by tenants and the compensation therefor?—I do not think that we need trouble very much about that at the present time, because the Agricultural Holdings Act is perhaps not quite perfect, but very little amendment there would do. I consider that if the landlords find that their tenants are making good cider and selling it at a profitable price, that part will soon arrange itself. I do not think that there will be any difficulty about that. When cider making is found to be a profitable industry landlords and tenants will soon agree who shall make the outlay and so on. Capital will be found for that by arrangement between landlord and tenant. The main thing is to make the cider industry a paying industry by teaching the farmers how to make good cider.

Deleterious preservatives in imported cider.

49,352. Are deleterious preservatives in cider much used?—This American cider which is brought over is generally considered as being preserved by a chemical which is deleterious—certainly injurious.

49,353. (*Mr. Giffen.*) What is the chemical?—Salicylic acid. That is certainly used to preserve a good many food products, but I am told that in other businesses, the best houses, the best distributors insist that the products which are supplied to them for distribution shall not be preserved by salicylic acid, showing that the best people consider that salicylic acid is detrimental. More than that, in France the use of salicylic acid as a preservative in any food products whatever—food products, of course, include drinks—is forbidden by law, and certainly I consider that it should not be used in this country for preserving cider.

49,354. Is that acid not used in beer to some extent in this country?—I think not; I fancy they put a stop to it.

49,355. I have heard of it in lager beer at least?—That would be foreign beer. There it may be used.

Adulteration of cider.

49,356. (*Viscount Cobham.*) Would you make all cider, home and foreign, liable to inspection and analysis by proper officers?—Certainly; it must be the same as with other foods; coffee, for instance, must be sold pure if you ask for pure coffee: so if you ask for pure cider there should be pure cider sold without the preservatives.

49,357–8. Is not the adulteration of cider forbidden at present?—No, there is no definition of cider; the Government does not interfere in any way whatever.

Cider not dutiable.

49,359. (*Mr. Little.*) And there is no excise duty?—No excise duty and no import duty.

49,360. (*Viscount Cobham.*) If you have one you will have the other probably?—In every country the natural wine of the country is allowed to be made and sold free of duty.

49,361. (*Mr. Little.*) Except beer?—I said wine.

49,362. (*Mr. Giffen.*) Is there any duty upon cider in France?—No, anybody can make it, anybody can sell it.

Licenses for sale of cider.

49,363. (*Viscount Cobham.*) I see you are in favour of the freer issue of licenses for the sale of cider?—The trouble is that the licenses are not very freely granted at the present time. The off-licenses cost 25*s.*, and they are not very readily granted. I do not know that we should complain about that, but we do complain that there is considerable difficulty in obtaining freely on-licenses (which cost five guineas) for a kind of cider cellars, of which there are only six in London, strange to say. I do not know that there are more than five actually open, but then there is one that will be opened soon. What we want is that those licenses shall be granted freely. More than that, we complain that in the tied houses—tied houses being public-houses owned generally by breweries—brewers object to the sale of cider under any circumstances. That we consider a hardship. The law ought not to allow the owners of tied houses to insist on that under any circumstances, which they now do. Of course the brewer says it interferes with the sale of beer, and "I do not get any profit on the cider whereas I should get a profit on the beer," and therefore he will not allow the sale of cider in his tied houses. That does not apply everywhere, but it does in a number of instances. That we consider is a decided hardship.

49,364. Do you think that cider should be defined by law?—A Commission sat on whisky some years ago and tried to define whisky, and they did not succeed I believe. So I do not see how they are going to define cider. Still certain things could be objected to.

Definition of pure cider.

49,365. (*Mr. Little.*) How would you insist upon pure cider unless you define it?—I would not define it, but still I would forbid certain things being used in it. For instance, a definition of cider is this—it is the expressed juice of apples, or the expressed juice of mellow apples, fermented and matured from which nothing has been abstracted but that thrown out by its own action. That would be a kind of definition of cider, but it would be very difficult to have nothing sold under the name of cider but that. At the same time it might be possible to prevent things being added to fermented apple juice. I think a happy mean might be found between the two. Salicylic acid is a foreign matter added, and that I certainly would object to. You cannot object to some things being added to cider. For instance, some of the natural constituents are occasionally in small proportion or not in sufficient proportion for the cider to mature or to keep; the astringent matter, for instance, may be a little short.

49,366. You mean the tannin?—The tannin would be the astringent matter; I think then it would only be fair to allow the maker to use a little of that because it is a natural constituent of pure cider.

49,367. Then you see the difficulty of legislating is that you have to lay down a definition?—I do not ask for any legislation in reference to that; I do not think it is desirable, and I do not think it is necessary.

Adulteration of cider.

49,368. I thought you want legislation to prevent adulteration?—No, I want to say that certain things are not to be used in cider.

49,369. Prohibited by law?—Yes. I want the use of salicylic acid in cider to be prohibited by law. All the same, I should think it is not at all improbable that salicylic acid will be prohibited as a preservative in all food products in England. But it will not be necessary, for instance, to define strawberry jam if you prohibit the use of salicylic acid in making strawberry jam.

49,370. (*Lord Rendel.*) Your object in coming here is to point to the improvements of the cider industry generally, is it not?—To give an idea of it. Nobody has ever ventured before to give an idea of the improvements of the cider industry, or to draw attention to the fact that the output is valued at a million a year.

State aid for cider making and protection of orchards.

49,371. You have shown us it is very important to suggest that it might be considerably assisted by some intervention on the part of the State?—Yes, on the part of the State, as far as the orchards are concerned, in protecting the orchards against insect pests; there I consider that the intervention of the State is absolutely necessary.

49,372. Then do you limit your suggestions of State intervention to the protection of orchards?—And the small matter of preservatives. The principal thing that I would insist upon is the need of instruction in making cider. The State of course could easily supply a small sum of a couple of thousand a year out of some of its grants, or that money might come from other sources, not necessarily from the Government.

49,373. Then you suggest two forms of State intervention—one, the protection of the orchards, and two, a system of scientific education in cider making?—Yes, you want the assistance of someone for the second thing.

49,374. Dealing with the first, are you aware of the practice in those portions of France in which the olive is grown with reference to the protection of olive yards?—I do not know the olive yards of France; I know the olive yards of Spain. I lived in Spain. I do not know the regulations in France.

49,375. Is there any system there of giving protection to the olive yards of the kind you suggest?—I do not know that there is. If there is any law in Spain to that effect it is very indifferently administered.

49,376. Assuming Spain to be in a somewhat backward condition generally, would you expect that there would be a better state of things in France?—Certainly, or in the olive industry, more particularly in Italy, because there it is of such vast importance; the olive industry in France is not of such vast importance as it is in Italy and Spain.

Digitized by Google

Mr. E. Samson. 17 May 1895.

49,377. You would not be surprised to find that in the olive-growing country of France there are administrative regulations for the protection of olives?—I should expect it is so; the same as there is with the orchards in France.

49,378. Then with reference to the intervention of the State with regard to education, you consider that the making of good cider is at present an empirical art generally?—Yes, certainly it is an empirical art, with the exception of a few manufacturers.

49,379. Take the case of beer: would you say that the home-brewed beers of old times were also, generally, made in an empirical fashion?—Yes, I think they must have been. I do not think that they even used the thermometer or hydrometer in the olden times; they simply brewed in October, and they judged of the weather by their own feelings. I should think it must have been empirical. I have no doubt they weighed the malt, and measured the water, and they told when it boiled, but it would have been certainly empirical.

49,380. Do you consider the beer supplied by the best brewers of this country to be of a very admirable character?—I know nothing better than Bass, I think, the world over, and nothing better than Guinness.

49,381. Then in that case, without the aid of the State, beer has arrived at very great perfection in the hands of skilled makers?—Undoubtedly, but that is a very large industry, and large brewers are able to obtain trained men to put in as brewers' chemists, and so on, which the unfortunate farmer cannot do.

49,382. And at high salaries, too?—At very high salaries.

49,383. Men who have studied with very great care abroad and at home?—Yes.

49,384. Then take the case of wine—the most successful wine districts, for example; would you consider that wine was there made rather by empirical or by scientific processes?—Scientific, certainly, now. Take the highest; take champagne, for instance; that certainly is no longer made empirically; that is made by a scientific process, everything is watched most carefully, and science brought to bear upon it.

49,385. Are you aware whether the State has interfered, or assisted in any measure?—The State in France has interfered in various ways—with the phylloxera, for instance—in stamping out the disease at the very beginning in the vineyards. All through the Continent you will find experimental vineyards. I have been over some of them.

49,386. Assisted by the State?—Certainly, and some of them administered by the State—administered under the State at any rate.

49,387. Then you would take that as an analogy in favour of your proposal?—Certainly.

Effect of soil and situation on quality of cider.

49,388. Are you aware whether there is any strict relation between the districts growing the best wine grape and the districts producing the best wine?—Take on the Rhine; for instance, Johannisberg, the finest wine they make there is made from grapes grown on a particular hill. The wine depends upon the particular kind of grape grown upon a particular soil in a particular situation. Then with Hungary it is the same; the most celebrated Tokay wine is made from grapes grown in a particular vineyard on a particular hillside. The wine depends upon a particular kind of grape grown upon a particular soil and in a particular situation.

49,389. As regards those vintages to which you have referred?—Yes, as regards the Johannisberg and Tokay which I have mentioned.

49,390. As regards the great bulk of wine that is grown, do you think that there is any very definite relation between the districts producing the best wine and the districts producing the best grapes?—The vintage grapes? Certainly the soil and the situation are the principal things in making wine, because you can easily alter the sort of grape if it is not found to be suitable, but you cannot alter the soil or the situation to any material extent.

49,391. You have never heard, for instance, of French wine growers envying the grapes of Italy or the grapes of Spain?—No, they do not; they know that their country is not warm enough to grow that particular kind of grape, which gives a very heavy juice, and so they import the juice or they import the wine. For instance, at Alicante, Valencia and Barcelona I have seen tens of thousands of barrels of heavy Spanish clarets shipped to France. The French know, that in order to make their cheap clarets suitable for export it is necessary to add some heavy full-bodied wine, full in colour and full-bodied in spirit, and they import it, they do not try to grow it to any extent in their own country. The only place they can grow them is round the Burgundy district.

Mr. E. Samson. 17 May 1895.

49,392. You would not be wholly surprised then to hear that many French growers would be very glad if they could have the skill that they possess and the grapes that other people possess?—Yes, they would be glad of that, I daresay; if they could get all the good things to themselves, no doubt they would be glad of that, but I never heard of it exactly; they give it up as a hopeless case, I think.

Skill in cider making.

49,393. If that were so, your point that skill in manufacture is of very high importance would be strengthened, because superior skill, as I gather in the making of cider, would be of more importance even than superior quality in the apple?—Yes, certainly; because with superior skill you can make a very good cider from an indifferent apple, but if you have not the skill with good apples you will not make a good cider. The skill certainly is of more importance than the material you work upon.

49,394. As you mentioned your experience I was only desirous of bringing out whether you could strengthen your case by the example of wine making in France and beer making in England?—Certainly the skill is all-important; for instance, the French with their skill and their thin clarets of the Bordeaux district make the best wine; the Spaniards have a heavier wine, but they make poor stuff.

Consumption of cider by labourers.

49,395. Going back to the 10 counties which you spoke of as producing a million hogsheads, what proportion would you judge, roughly speaking, of those million hogsheads takes shape in wages?—I am afraid I have not thought that out, but I should certainly say one-half.

49,396. Therefore you would say that as regards one-half of the whole produce of this important industry the growers have a certain sale and a limited interest in the quality?—Yes, that is so, and I put that on the original sheets on which I made notes. But there is this to be said, that the poorer the cider the more the master gives to the labourer. If a man is to have three pints a day and the cider is particularly bad the labourer says, "Master, give us a drop more."

49,397. If a particular proportion of wages takes the shape of cider I presume the wage payer will require a minimum quantity every year?—He will require a minimum quantity for giving to his labourers?

49,398. Yes?—But he would require certainly a less quantity if it was good cider, and then he would economise it because he would be able to sell it.

49,399. Therefore the quality of the cider is to that extent of some importance?—Certainly.

49,400. The same in regard to strengthening its saleable character generally?—I am afraid I do not quite understand.

49,401. The quality would be important to him because the better cider would go farther?—Certainly, in that way it would be an advantage.

49,402. And it is not of importance to him as regards its being of a more saleable and of a higher quality?—And the particular quantity which he gives to the men would not make so very much difference to the man, only he would make a smaller quantity go very much farther because when the cider is very bad, and the farmer cannot dispose of it at all, he is not very particular whether he gives three pints or four pints, but when he gets a good cider which he can easily dispose of, the labourers get rather less than three pints instead of four.

Production of cider and table apples compared.

49,403. Are there any orchards in which both fruit apples and cider apples are grown?—Yes, in certain districts in Herefordshire and Gloucestershire, and around there. In some places the apples are plucked and sent to market, and sold for the table or sold for cooking.

49,404. From year to year, is there any disposition to be shifting from one class of apple to another?—I think that the cider apples have rather decreased, if anything, and the table apples rather increased.

Digitized by Google

Mr. E. Samson.
17 May 1895.

County councils and cider making.

49,405. Do you think that whether in reference to superior teaching or to the superior protection of the orchard it is requisite to go beyond the administrative facilities the county councils have given?—The county councils have done their best, and they have done no good; therefore, I think it is necessary.

49,406. But that is the only reason why you suggest that legislation should be carried out?—In connexion with the insect pests, of course, the county councils have nothing whatever to do, but the other (education) is not to be obtained at the present time, and I ask that some means may be found of supplying a want which is not found to be supplied anywhere at the present time.

Association of Cider Makers.

49,407. (*Sir Nigel Kingscote.*) Would you tell me the composition of your Association of Cider Makers; what are your members chiefly; are they tenant farmers?—No, certainly not; I have here a proof of the list of vice-presidents and members of the council.

49,408. Are there so many from each of these ten counties that you have mentioned?—Yes, we have a vice-president for each of 15 counties, and then for the five important counties we also have a council as well, of which the vice-president is the chairman, and then there are three other members——

49,409. In what line of life are these councillors; are they tenant farmers or landlords?—They are landlords in each county, and there is a cider maker as well. Take Gloucestershire, for instance, G. E. Lloyd-Baker, Esq., is vice-president, and the other members of the council are—Sir John F. Dorington, Lieut.-Colonel Curtis Hayward, and Jas. Harper, Esq., who is the manufacturer. Then take Hereford. C. W. Radcliffe-Cooke, Esq., M.P., is the vice-president, and the other members are—James Rankin, Esq., John H. Arkwright, Esq., E. F. Bulmer, Esq.

49,410. (*Viscount Cobham.*) Will you give the names for Worcestershire?—I have not got that council complete yet, but Alfred Baldwin, Esq., M.P., of Stourport, is the vice-president, and A. F. Godson, Esq., M.P., of Droitwich, is one of the members of the council; I have not got any farther than that.

Objects of Association of Cider Makers.

49,411. (*Sir Nigel Kingscote.*) In each of these counties do they meet and talk the matter over; and what is the object of your association?—Answering the first part about the meeting, the association has only been formed about six or seven months, and so far we have only had meetings in Herefordshire, where Mr. Cooke has been very active indeed. But we are now beginning in Somersetshire, and in about 10 days' time I shall be at Taunton, and I hope that will be the beginning of having meetings in Somersetshire. The objects of the association are to assist the cider makers in every possible way. I have a small handbill here which says that an account will be given of the efforts made by the National Association of Cider Makers towards improving the process and the methods of the production of sound cider, and the legislation proposed for the suppression of insect pests, compensation to tenants for planting and renovating orchards, reduction of transport rates, and the suppression of adulteration of cider. Then we assist anybody connected with the cider industry in any way. For instance, a man quite recently sent to me a bottle of perry, and said: "It is "not clear; what am I to do to it?" With the best means at my disposal I discovered it was wanting in tannin, so I sent him a small bottle of tannin solution, and told him to put that to a champagne bottle of perry, and see if it had the desired effect. He wrote back in the course of time: "Yes, the perry has deposited, and "is beautifully clear." Then I sent him sufficient for over 300 gallons, I forget the exact figure, and told him to put the whole of this into the three casks.

49,412. Was this given to him gratis?—Yes; that I gave to him gratis to encourage him.

49,413. I want to get at the object of your Association; are you going to get up a large fund to help these people?—I do not consider that it is necessary to give him anything because if this man derives the benefit which he has derived from the improvement of his cider he can well afford to pay. There can be no harm in it. This man is not a member of the Association I should tell you; I do not even draw the line as to whether a man is a member of the Association or not because I want to help everybody.

49,414. Is your object to get as many members as you can from the tenant farmers and those who possess orchards?—Yes, but still we do not make it a point that a man shall become a member and subscribe whenever he seeks assistance because we know how poor farmers are and how very loath they are to part with their money if they can have it without. We want to help them all we can, and then if we have done them any good we can with a good grace ask them to subscribe and become members at a guinea a year.

Mr. E. Samson.
17 May 1895.

Co-operation in cider making.

49,415. Have you any idea of co-operation in the matter in order to establish the manufacture of cider in the district?—No, we do not trade at all, and we have no intention of trading.

49,416. You do not wish to?—No, there is no intention of buying or selling or acting as agents; there is nothing of that. If it would be an advantage to help such an association when it did not enter into competition with others we would very willingly give it our assistance.

49,417. But there is no such thing at the present moment you say?—There are one or two things in embryo, but I cannot say there is one in working order. I have heard of one or two somewhere in Herefordshire, but I do no not know whether they are in working order.

Demand for good cider.

49,418. I think you have expressed a very strong opinion that the consumption of cider would increase?—Yes, undoubtedly.

49,419. Upon what do you base that generally?—At the present time all good cider sells readily at from 10*d.* to 1*s.* a gallon. Cider dealers often have to go round the country and hunt up the actual makers of cider, the farmers, to look for this kind of cider and they do not get sufficient to supply the demand.

49,420. What kind of cider are you particularly alluding to—the best, the sweet?—To some extent the sweet of a gravity of about 1020.

49,421. In bottles or in casks?—In casks; because it is not usually bottled until it passes into the hands of the dealers.

49,422. Perhaps you are aware that especially in the vale of Berkeley, between Gloucester and Bristol, a great deal of what is called rough cider is made?—Yes; hard cider.

49,423. As far as my information goes, I am told that the sale of that has very much fallen off, although I do not think the material has fallen off?—The people do not know how to make it.

49,424. I say I do not think the goodness of the cider has fallen off at all?—No; I do not know that it has.

49,425. But I am told that the consumption has very much?—Yes; I quite agree. I do not imagine that the quality is any worse now than it was formerly, but still it is a hard cider.

49,426. That I admit?—The people who formerly bought that kind of cider now prefer to buy light beer. It was probably always bought by people who gave it to their labourers as part wages, and now they find it preferable to buy light beer. Instead of making that hard cider, if the people had skill, they would make a light sweet cider which would sell readily.

49,427. You think it would?—I feel certain of it; there is demand for it which we cannot meet.

49,428. In the big towns or where?—In the big towns, more especially in the summer time.

Consumption of cider by labourers.

49,429. I think you have already said so, but my experience is that the labourer does not consume anything like the quantity of cider that he did; he will not now take cider in many cases as part of his wages which he used to do at harvest time. I am only wanting to get at where you consider the consumption of cider will be found?—The consumption of cider will be found where the American cider sells now so readily and where the better kinds of cider sell.

English and American cider compared.

49,430. Do you think that the English made cider, if it was better attended to and better made, would cut out the American cider; is that the idea of your association?—That is my idea, and I can quote as proof that one of the largest cider merchants who formerly sold American cider and who said, "I have a demand "for cider, and I will meet it; if I cannot get good "cider in England I will get it from abroad," and he did get it from abroad—now that there is some slight improvement in the manufacture of home cider has been able to dispense with American cider. So it

Digitized by Google

Mr. E. Samson. 17 May 1895.

would be with all. If we could only make sufficient in this country, people would rather have English cider, for it is better in many respects than the American.

49,431. You think it is more a question of quality than of value—that we can produce cider here at such a price that if it was properly made, it would fairly compete with, if not extinguish the American cider?—Yes.

49,432. That is your opinion—I only want to get your opinion?—Yes. We have many advantages. It is very difficult to send a light alcoholic drink all the way from America here; it is very apt to deteriorate in many ways. The people should not make these poor ciders; but they do not know how to make better, they do not know how to make other ciders, at the present time. What we want is to teach them how to do it, but we have not the means, and there are not the means available.

Mr. E. Samson. 17 May 1895.

Compulsory destruction of insects and fungoid pests.

49,433. Do you not think that you are rather entrenching upon the State in asking them to come and get the insects off the trees in the orchards? Why should not the hopgrower do the same; why should not the turnip-grower when he is troubled with the fly do the same?—I only ask the State to compel the tenant to get the insects off the trees at his expense. I do not know that the fly goes from one turnip field to another to the same extent that insects do in orchards. Then again, they can help themselves to some extent in the turnips and in the hops. I have shown that it is only one little step from the noxious fumes against which a man can protect himself, to protecting himself against his neighbour's dirty orchard.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Ninety-fifth Day.

Thursday, 23rd May 1895.

PRESENT :

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. CRAWFORD, Esq. } *Assistant*
ALAN MACKINNON, Esq. } *Secretaries.*

Mr. A. W. Fox. 23 May 1895.

Mr. ARTHUR WILSON FOX re-called and further examined. (*For previous evidence, see Vol. I., page* 262.)

Mr. A. W. Fox. 23 May 1895.

Report on Lincolnshire. Condition of agriculture.

49,434. (*Viscount Cobham.*) As an Assistant Commissioner, I believe you have examined into the condition of agriculture in the county of Lincolnshire, excepting the Isle of Axholme?—Yes.

49,435. I think the general result of the report you have presented on that county is, that Lincolnshire has suffered very heavily from the recent prevailing depression of agriculture?—Yes; in the north more than in the south.

49,436. What is that owing to?—The soil is better in the south. There they can change their system more; they grow potatoes, and roots, and seeds in large quantities, and go in for market gardening; whereas in the north they have been severely hit by the recent fall in barley. Of course, they have been hit there for a long time; but the recent fall in the price of barley has pressed them very much.

Size of farms.

49,437. Does the size of the farms differ, as between the north and the south?—Yes. The farms in the north are very large ones in many districts on the Wolds and the heath and the cliff. On the east side, in the marsh land, there are a great many small farms in the north. But certainly, in the south, taking in the whole, there are many more small farms than there are in the north.

Small and large farms compared.

49,438. Would you say the small farms have done better because they are small?—I do not think so on the whole—certainly not. The small farms near towns which can grow market-garden produce and have not got to send the market-garden produce any great distance have done fairly well in some cases.

Reduction of rents.

49,439. The landowners have suffered very severely in common with the tenants, I presume. What do you state is the general fall of rent in Lincolnshire?—It was generally agreed that on the best land, putting aside accommodation land close to a town, the fall in rents was 33 per cent. when I visited the district; but they have fallen since.

49,440. (*Mr. Chaplin.*) On the best land, near to a town, did you say?—No; taking the best land, but excluding purely accommodation land. There are cases where clay land has been reduced enormously; I mean down to a rent of 5*s.* an acre; but that is exceptional, because there is not a great deal of clay in the county.

49,441. (*Viscount Cobham.*) But the farms have still been retained in cultivation even on the worst land?—Yes, there is no abandoned farm in Lincolnshire.

49,442. (*Mr. Chaplin.*) You spoke, I think, of the best land?—Yes.

49,443. What is the average land reduced to?—I should say that on an average rents have gone down between 45 and 50 per cent. I have, in the report given, a list of reductions in rent.

Tithes.

49,444. (*Viscount Cobham.*) With regard to the tithes, are they paid by the tenant or by the landowner?—The landowners have paid the tithe in a great many cases in Lincolnshire for a number of years.

49,445. On the large estates?—Yes, on the large estates.

Landlords' outlay.

49,446. I think you say that since the last 15 years there has been a large increase in the amount of outlay upon the land?—Yes, there has in Lincolnshire.

49,447. Is that still being maintained?—It was up to the time of my visit a year ago; I have no reason to doubt it has not since.

49,448. With the result, should you say, that Lincolnshire compares well with any county that you know in regard to the provision of buildings and farming accommodation?—With any county I have ever been in.

Digitized by Google

49,449. Do you say the same with regard to the cottages?—Taking the county as a whole, certainly yes.

Effect of depression on landlords and tenants.

49,450. Have the tenant farmers suffered at least as much as the landlords?—That would be a difficult thing to say. I asked that question at several meetings when both were present, and they seemed generally to say that they had suffered about equally; but I should not like to say one way or the other.

49,451. Could you form any conclusion as to the relative amount of capital lost by the two classes?—I think, that looking at the fact at all the public meetings I held, which were numerous, the farmers said they thought that rent had been reduced fairly to meet the fall in prices at the time I visited the county; judging from that, I think the farmers thought the landlords had made as many sacrifices as the situation then demanded.

Wages.

49,452. With regard to the labourers, their wages have kept up till quite recently, have they not?—Yes. They went down last autumn lower than they had been for a great many years, but they have risen again this March, but not to the same level that they were this time last year, for they are about a shilling a week lower than they were at this time last year.

Reduction of labour.

49,453. Has there been a considerable reduction in the amount of labour employed in the county?—I should not say so on the best land.

49,454. Is much land going into grass?—A good deal has been turned to grass.

49,455. Wherever that is the case, of course, there is a reduction in the labour bill?—Yes, but with these big arable farms where they grow a large acreage of barley and wheat, there is a great deal of the country splendidly farmed: still, as you will see from accounts which I have shown in my report, there have been farms that have lost.

49,456. Do you give us, in your report, the agricultural population of Lincolnshire?—Yes, the figures appear on Table A. 6-C., at page 139. You will see from that table that the agricultural population has not decreased much in Lincolnshire.

49,457. Do you think the tendency will be towards a further diminution in the labour employed unless prices recover to some extent?—It was unanimously said that all the poor land would go out of cultivation at present prices.

Barley growing.

49,458. Is the arable land in Lincolnshire still mainly devoted to the cultivation of wheat?—In the last few years they have turned their attention more to barley, because wheat has not been paying and barley was paying before, but now that the price of barley has gone down so low they look at the future with much apprehension.

Low prices.

49,459. I think you have found it to be unanimously the opinion of the farmers in Lincolnshire that the depression is mainly due to the fall in prices, but partly also due to the heavy taxation that they labour under?—Yes. The fall in prices is their chief complaint—their one complaint I may say, generally speaking.

Burdens on land.

49,460. But they also complained a good deal as to the burden of rates and taxes, did they not?—They put that second.

49,461. You state that they maintain that grain at present prices is grown at a loss; does that mean all classes of grain?—No, that refers to wheat and barley. In the report I have shown the cost of producing an acre of wheat and barley as far as it is possible to do so, and the price obtained for it.

49,462. Can you then state that under these two heads are comprised, according to the opinion in Lincolnshire, the causes of the depression in agriculture?—Yes, I feel sure of it, and I held a great many meetings throughout the county.

Tenure.

49,463. There appears to be no feeling as to the existing system of tenure having anything to do with farming depression?—No, there was none, I think.

49,464. There was a strong feeling, a universal feeling, in fact, against land courts?—Yes.

49,465. Should you say that the tenant-farmers of Lincolnshire are, relatively speaking, a very powerful and intelligent body of men?—Yes, as powerful and intelligent as I have met in any county—perhaps more so.

The Agricultural Holdings Act and Lincolnshire custom.

49,466. Very little advantage has been taken of the Agricultural Holdings Act, I gather from your report?—Practically none.

49,467. Because the Lincolnshire custom is held in much more esteem?—Yes, they prefer their custom.

49,468. Could you point out the main differences between the Lincolnshire custom and the Agricultural Holdings Act?—Under the Lincolnshire custom a claim is not prepared, nor is a counter-claim prepared in the way in which it is under the Agricultural Holdings Act which savours very much like an action at law, in which both sides frequently make the largest claim they can and solicitors are often introduced into the case, or a large number of witnesses, or valuers, or representatives who are practically partisans in many counties. There is a Valuers' Association in Lincolnshire which is held in great esteem by the tenant-farmers. The valuers spring from the agricultural classes themselves; their fathers frequently are farmers, and they are looked upon as an entirely impartial body. One of those gentlemen is selected by the outgoing tenant, and one by the incoming tenant or by the landlord, and those two settle all questions of compensation between themselves in a few hours or in a day, and the parties always seem perfectly satisfied with their decision; in fact, I hardly heard one farmer say that he did not think that they got full compensation.

49,469. Is it certain that the procedure is far cheaper under the Lincolnshire custom?—All the valuers say so, and I suppose if it is that it is rather to their interest to have the Agricultural Holdings Act.

49,470. Would you say that a matter very rarely goes to the referee?—Very seldom.

49,471. (*Mr. Chaplin.*) Did you ever hear of any case that had been taken to a court of law?—No, I did not.

49,472. There is no instance on record as far as you know?—No. I asked that question, and I never heard of a single case where there was litigation.

49,473. (*Viscount Cobham.*) Would you say that the preference given to the local custom was mainly owing to the cheapness and expedition of the procedure rather than to the scale of compensation allowed?—I think the procedure is the chief point. It is no trouble to either party; they put the matter into the hands of a valuer, and it is settled in a day. The farmers consider that they take all out of the soil that they put in.

49,474. (*Mr. Chaplin.*) Does the preference for the Lincolnshire custom rather rise from this, that in the case of the Agricultural Holdings Act the compensation is given for the value to the incoming tenant, whereas in the case of the Lincolnshire custom the compensation is given upon a definite part of the outlay?—Yes, there is certainly that difference.

49,475. So that the parties know practically exactly what they are going to get?—Under the scale?

49,476. Yes?—There is a scale, certainly.

49,477. (*Viscount Cobham.*) Are they satisfied with the scale, and do they believe it is as liberal as under the Agricultural Holdings Act?—Yes; perhaps if you take the Agricultural Holdings Act you will find that in some cases higher compensation has been given under it; but taking the Lincolnshire custom as a whole I should say that higher compensation must be given under it, because there would not be this universal feeling in favour of it otherwise. In paragraph 42 I quote statements made at some of my largest meetings. At Grimsby the farmers said, "We feel perfectly "secure under our custom. We take out what we put "into the land." The farmers at Horncastle said, "Men farm high up to the end of their tenancies, "as they are properly compensated under the custom." At Brigg they said, "We farm high right up to the "end of our tenancy." There can be no stronger proof than that of the success of the custom.

49,478. I suppose the custom sprang up under the special conditions of the county, and is therefore more acceptable than a cut-and-dried system which would apply to the whole country alike?—They have had it for years. Sir James Caird commented on the custom in 1850 when he wrote to the *Times*. They were given compensation in Lincolnshire, I believe, before it was given to any one else in the country.

49,479. Do you consider that compensation for dilapidations is a less burdensome matter for the tenants under this custom than it might be under the Agricultural Holdings Act?—The landowners say that they

Digitized by Google

Mr. A. W. Fox.
23 May 1895.

get less under the custom for dilapidations than they would if they fought a case under the Act.

49,480. Claims under the custom go back a much shorter time, do they not?—I think the tendency is to help the outgoing tenant as much as possible in a good many cases. That was rather the feeling. But there was no grumbling about it; the landlords said they would much prefer the custom to the Act, because there was no friction. But then I think it should be remembered that the landlords in Lincolnshire have equipped the farms in such an excellent manner right throughout, and are now keeping the buildings themselves in repair; that practically there is very little dilapidation against the tenants with reference to buildings.

Restrictions as to cultivation.

49,481. I think you sum up the whole matter by quoting a farmer who said that agreements are really now put on one side and that so long as a farmer farms fairly he has nothing to fear?—Yes. In South Lincolnshire you may say there is practically freedom of cultivation and they grow roots and seeds or anything they like. No doubt in North Lincolnshire, where they have to farm more on the four or five course system there are more restrictions in the agreements especially in the old agreements, but the evidence was, that they were practically put on one side and, in the new agreements, in many cases, they are left out.

49,482. On large estates?—On large estates. I do not mean to say that all restrictions are left out, such as those relating to the ploughing up of grass land and so on.

Compensation for deterioration.

49,483. Do you think the feeling in favour of the principle of compensating for good farming preponderated?—No, I do not think it did. There were a good many points raised about that. In the first place it was said by farmers at one meeting that they would not care to be open to be dilapidated for deterioration of land at such a time as this, when the land might be deteriorating, because it really did not pay them to cultivate their bad land, and so, at the end of their tenancy, they might be dilapidated by the landlord for the deterioration.

49,484. They thought they would probably lose more than they would gain?—Yes; and a man who has got a bad soil in one half of his farm and chooses to let it go and to cultivate the other half well, thinks that he might suffer if he was dilapidated for deterioration.

49,485. Was there a strong feeling the other way?—No. The question was hardly raised; I may say that whenever it was raised I raised it myself in order to get their opinion about it.

Scheduling the condition of farms.

49,486. You are aware of the scheme proposed by the Central Chamber of Agriculture, that there should be a system of scheduling land on entry and on quitting?—Yes, I understand that.

49,487. Did it carry much weight with the Lincolnshire farmers?—No; not in Lincolnshire. I asked the Valuers' Association that question; their view was that if a man takes a farm in bad condition he should see that he got it cheaper and that he must not be compensated twice.

Compensation for consumption of home-grown corn.

49,488. With regard to compensation for corn consumed on the farm was there a difference of opinion as to that?—There was a difference of opinion about that. I think the majority decidedly were against it, not because they disagreed with the principle but because they did not think the incoming tenant could be protected.

49,489. There was really no check upon the outgoing tenant's account?—No; that was the objection that was always raised. The landowners said that if there was any method of protecting the incoming tenant they would be perfectly satisfied with the proposal.

49,490. Do large landowners have mills on their properties?—No.

49,491. One way of checking these claims might be for the landowner to maintain a mill, and to grind the corn there, and keep accounts against the farmers?—Yes. I may say that the Lincolnshire Agricultural Society, which is a very powerful body, decided against it. There was a large number of farmers at that meeting. I have heard since that there was a growing feeling in favour of compensating for corn, because, of course, the prices have fallen considerably since I was in the county. But the Lincolnshire Agricultural Society, I understand, still take the same view that they did when I was there.

Mr. A. W. Fox.
23 May 1895.

49,492-3. The Lincolnshire Agricultural Society consists mainly, I presume, of sitting tenants?—Yes.

49,494. But they clearly saw the disadvantage to agriculture which would result from putting too heavy a burden upon the incoming tenant?—Yes, that was their point.

Market gardening.

49,495. (*Mr. Whitehead.*) Is market gardening increasing in the district suitable to it?—Yes, it has increased of late years.

49,496. At the present time is there a tendency to increase?—At the time when I was there 12 months ago they were complaining very much of foreign competition in fruit and in vegetables from Spain and France and Brittany.

49,497. That would be especially with regard to the earlier sorts of vegetables, would it not?—Yes. With regard to fruit there is a good deal of competition now in currants and gooseberries, and also in apples and pears, which they complained of.

49,498. Do the market gardeners have fruit as well as vegetables?—Yes, in a good many instances.

49,499. So they have two strings to their bow?—The men who have fruit are generally close to towns, such as Spalding and Boston.

49,500. In regard to the potatoes, would those be early potatoes for early use?—There is some early potato land on the south and on the north-east side. That is very valuable land still, of course.

49,501. Is the cultivation of early potatoes remunerative?—In a good year no doubt it is, but then the land which would grow them is very limited.

49,502. Is that not interfered with very much by early potatoes from Cornwall and France?—I cannot say that directly; the only complaint I heard from them was of the foreign competition.

Flax growing.

49,503. With regard to flax; it used to be cultivated, you say, in certain districts in Lincolnshire?—Yes.

49,504. Can you say why it has been discontinued, and the buildings pulled down or allowed to go to ruin as you describe?—No, I do not know why.

49,505. You are aware that it has been considered lately that it is desirable to cultivate flax in this country?—Yes, I saw the same thing on the west coast of Ireland when I was there. I forget why it was given up.

49,506. You could not give us any information on that?—No.

49,507. (*Viscount Cobham.*) Where does the foreign importation of potatoes mainly come from?—From France.

Rates.

49,508. (*Mr. Clay.*) I think in reference to the rating you report that the tenants wish the rating should be divided between the landlord and the tenant?—I do not think that is generally so in Lincolnshire, but some witnesses said so.

49,509. Is it not the general idea that the rating as in Scotland should be divided between landlord and tenant?—I should not say that was the general desire, but certainly there was evidence of that, and there were a certain proportion of witnesses who advocated that.

49,510. I suppose the tenants in England pay all the rates?—Yes.

49,511. Do you not think it is not generally desired that the rates should be divided equally?—I should not like to say that as regards Lincolnshire. Certain tenants advocated that, but I could not say the whole county advocated it.

49,512. If the rating was divided it might help the tenantry, but it could not help the landlord?—I suppose where the rates were increasing it would certainly help the tenant, because the landlord would bear part of the new burden.

The Lincolnshire custom.

49,513. Regarding the Lincolnshire custom for compensation, it has always been easily wrought and cheaply wrought, has it not?—Yes.

49,514. And it is more liberal towards the tenant than even the Agricultural Holdings Act has been?—Taking the compensation given on a farm as a whole, yes, certainly. One ought, I think, to add that there is less given for dilapidations, at least, that was the evidence in Lincolnshire.

Digitized by Google

Compensation for deterioration.

49,515. But then the dilapidations in Lincolnshire have never come into play against the compensation to any great extent, have they?—Yes, the valuers take that into account, but as I understand from the valuers and from the landowners, it is taken less into account than it would be in a fight under the Agricultural Holdings Act. Although the Valuers' Association did not admit it, some valuers told me that it was the practice and the feeling among some of them that they ought not to go back more than one year for dilapidations on the ground that yearly tenancies meant a fresh contract every year, and that when the rent was paid the past was wiped out.

49,516. As a matter of fact, regarding the landlords' dilapidations, they have never made a charge against the tenant for leaving in a bad state?—They do not actually make a claim, because it is not the procedure. The valuer on behalf of the outgoing tenant or the landlord settles the whole matter, but without a formal claim being drawn up.

Valuers.

49,517. You seem to say that the appointment of these valuers has been very beneficial?—Very.

49,518. Would the same not apply to all counties, both in England and in Scotland if we had what has been advocated by many witnesses—that we should have in each county, namely, a few special referees or valuers?—It has worked very well in Lincolnshire, and in Suffolk, where it exists to an extent, it has worked very fairly too.

49,519. If we had a body of such practical men in other counties both in England and in Scotland, would it not work equally as well?—There is no reason why it should not, and I think a body of men to choose from would be more satisfactory than the appointment of a single arbitrator.

49,520. Have these valuators not sometimes acted a very good part in bringing the landlord and the tenant together?—Yes.

Arbitration for rent.

49,521. Are you able to say not only in the matter of compensation but in the matter of rent also—has that ever been left to them?—I do not think they have ever touched the question of rent in Lincolnshire.

49,522. Not for the sitting tenant?—I do not think they have ever touched the question of rent at all.

49,523. Is it the opinion of the people you met that a body of these men might be valuable to refer to where the landlord and the tenant were differing in regard to the rise or fall of rent, so that they might decide which was right and which was wrong?—The farmers of Lincolnshire were very emphatic as to their desire to fix their own rents with their landlords.

49,524. I am saying if there happened to be a difference of opinion of 100*l.* or 50*l.* a year would they not be a reasonable body to bring the landlord and tenant together?—I should not like to answer that question. All I can say is that in Lincolnshire they settle questions about rent satisfactorily themselves.

Changes in tenancy.

49,525. And there are very few changes in tenancy there, I understand?—There have been a good many since 1879, but on many of the large estates the same families have been there for several hundreds of years.

49,526. The old Lincolnshire principle, which has been carried out by our worthy Commissioner's uncle and himself, is that the landlords generally paid attention to and kept the sitting tenants?—Yes. I hardly heard any suggestion made in Lincolnshire that the sitting tenants did not get the same consideration as new tenants.

49,527. You know from going over these counties that it is much cheaper for a landlord generally, and perhaps for the tenant, that the tenant should be engaged for a long time in developing the agriculture of the country without being changed?—Yes, it is cheaper to keep a good tenant than to have a new one.

Unexhausted improvements.

49,528. (*Mr. Gilmour.*) Paragraph 42 which you have quoted sounds a little contradictory in a way. You state that at the meeting in Grimsby they said, "We "take out what we put into the land," and at Brigg, "we farm high right up to the end of our tenancy"?—Yes, they said so.

49,529. What do they mean by taking out what they put in?—What they meant was that any capital which they had put in and which they had not exhausted they took out under the custom.

49,530. That they were allowed for it at the end of the lease in the shape of compensation?—Yes.

49,531. It reads rather queerly?—I put down their own words.

49,532. However, that is the explanation. In regard to these valuers, what is the system whereby men become members of the association, are they selected or chosen in any way?—No. I think if a man wished to be a valuer he would naturally be a member of the Valuers' Association unless there was anything really against him. They meet together for the purpose of having a uniform system throughout the county, and when any matter crops up, like this question of compensation for corn, for instance, they discuss it as they have done lately. One object of the association is to secure uniformity.

49,533. Have the present members of the association the selecting of new members of the association?—They are elected by a majority of the committee.

49,534. Unless a man belongs to this Valuers' Association is he considered to be a proper arbiter on agricultural questions?—I did not hear that. All the valuers, whether in a large way of business or a small way of business, seemed to belong to the society.*

49,535. I put these questions in face of the fact which Mr. Clay has referred to; namely, that it is supposed that it might be a good thing to carry this scheme out in other places: it is therefore very important to know how these men are chosen who do give satisfaction?—I do not know that, I am afraid.

49,536. (*Mr. Clay.*) I think these men are drawn mostly from the practical agricultural element?—Yes, nearly all of them are. A great many of them, I think, have their fathers engaged in agriculture, some of them are farming themselves and there are one or two agents.

49,537. Has the landlord and agent confidence in these men for dispensing fair justice between all parties?—Yes, quite.

49,538. (*Mr. Gilmour.*) About how many of these men are supposed to be required to carry out this custom?—For what area?

49,539. I mean all over the county, how many does the association consist of?—66 members.*

Reduced rents and value of land.

49,540. (*Mr. Chaplin.*) What should you say has been the extreme fall of rents?—I think I have quoted about 80 per cent.

49,541. The capital value of land has fallen as much or even more than the rents in Lincolnshire, has it not?—It has fallen more because nobody will buy, though there are still people willing to become tenants in some parts.

49,542. A great deal of land, I think I heard you say, in your opinion, was still splendidly farmed?—Yes, some.

49,543. Is it being farmed at a profit under those circumstances?—No; I give the accounts of some of the best farms which show a loss.

49,544. Where it is being so highly farmed, still it is being farmed at an actual loss?—Yes.

High farming on the Wolds.

49,545. I suppose they only keep it in this high condition in the hope that times possibly may change, and the prices rise?—Yes, that is the case. They say: "It "is no use farming the Wolds badly; you must farm "high up to the end, or throw over the whole thing."

49,546. That is to say, that unless land is highly farmed in that part of Lincolnshire, and a great deal of capital spent upon it, it does not pay to farm it at all?—That is what is stated about the Wolds, the cliff, and the heath.

Prospects in North Lincolnshire.

49,547. What do you gather from that—that if the present prices continue, they will continue to farm at a loss?—They will continue to farm at a loss, and the end must come; in fact they have let the inferior land at the base of the Wolds and the cliff go.

49,548. I suppose it really has come to this: that the outgoings of this class of land are so large where it is farmed very highly, and the rent forms such a very insignificant item in the outgoings, that there is practically little to be gained further by any reductions of rent?—The reductions of rent cannot possibly save

* The Association consists of persons "whose chief occupation is that "of land agents or tenant right valuers, or both, who have been in "practice for 3 years at the least, or who have been pupils of members "3 years, or who have been taken into partnership by a member. "There are only a very few tenant right valuers in the county who do "not belong to the Association, and most of the valuing is undertaken "by members of the Association."

Mr. A. W. Fox.

23 May 1895.

them. I have shown that in several of these accounts their losses are much greater than their rent.

49,549. Do you look forward to the day when, unless there is a change in prices, a great number of these magnificent farms will cease to be cultivated?—I should think there is little doubt about that in North Lincolnshire, where they cannot turn their attention to growing something else like they can in the south.

49,550. You think that that magnificently-farmed district, which extends over an enormous area, is, unless we have a change in prices, practically doomed in the near future?—That is what was said all throughout the county. But I do not mean to say that the whole of North Lincolnshire is magnificently farmed; there is every apparent evidence of depression in driving through a great many parts of North Lincolnshire.

Small freeholders.

49,551. Did you see anything of the small freeholders on the east coast?—Yes; I did. I spent many days among them.

49,552. There have been a vast number of freeholders there for many years, I believe?—Yes.

49,553. They differ, I understand, rather from the freeholders in the Isle of Axholme in this respect, that in the east of Lincolnshire they each have their little holdings with their homes upon them all together?—I never visited the Isle of Axholme.

49,554. In the Isle of Axholme—perhaps you may have seen the report?—Yes; I read the report.

49,555. The holding is very often held there in strips of land; but in the east of Lincolnshire you very often find the small holdings separate—each little farm by itself?—Yes; quite distinct.

49,556. What was the general condition of these small freeholders?—I should say the majority of them are working like slaves to earn interest for money-lenders.

49,557. Is that their general condition?—I should say so.

49,558. Did you come across any of these men who have obtained their small holdings since the depression began and who got their farms or their land at comparatively cheaper prices?—I found some men who have bought their land since 1879, but not in very recent years.

49,559 Did you come across any instances in that part of Lincolnshire among the freeholders where you could say they were doing well and satisfactorily?—Where I found them doing best was at a place called Friskney and Wainfleet. There, no doubt, they were holding their own with enormous hard work and by living very hard.

49,560. In both of those two parishes it is exceptionally good land, I believe?—Yes; early potato land in certain quantities and wonderfully good land—beautiful land.

49,561. Some of the best land in the whole county?—Yes; splendid land; in fact the only really successful small holder I found told me that if he sold his land there he would want 120*l.* an acre for it.

49,562. That he could get it now?—He said he would not sell it unless he got that.

49,563. That kind of land is devoted practically to market gardening, I think?—Yes; practically, not entirely. But they all grow some market-garden produce or flowers or bulbs.

Character of Lincolnshire farmers.

49,564. I think you spoke very highly of your opinion of the intelligence and the ability of the tenant farmers, as a rule?—Yes; they are a very fine lot in Lincolnshire.

49,565. Men who understand their business and are intelligent?—Very; the large farmers are highly educated men in many cases.

49,566. It is not from any backwardness or want of knowledge or intelligence or desire to go with the times, then, that makes them in this unfortunate condition?—No, I asked that question, and the evidence was rather that the farmers had put forth fresh energies to meet the times.

49,567. They are ready to try anything or to do anything, or to adopt any system of cultivation if there is a reasonable prospect of its paying?—Yes, and they have tried new systems in South Lincolnshire.

Insecurity of tenure.

49,568. You tell us they say "there is no such thing as insecurity of tenure"?—There was no evidence of it brought before me except one case, and that was an exceptional one.

49,569. I think you make that statement on page 17 of your report, do you not?—Yes. Generally speaking they are a class of men that a landlord would never dream of getting rid of in his own interest.

49,570. All the grievances are summed up in low prices and high taxation?—Yes; those were the two points that were brought forward everywhere.

Claims and counter-claims under the custom.

49,571. You told us with regard to the custom that when valuations take place under the custom at the close of the tenancy the counter-claim as a rule is less than the counter-claim, under the Agricultural Holdings Act?—Yes, that is the opinion of the valuers of the landowners, and I may say of the farmers too.

49,572. What is the reason of that?—Is it because the landlords do not make the counter-claim, or is it that there is no counter-claim that can fairly be made, or is it from the absence of dilapidations as a rule, or is it because the landlords do not claim for dilapidations?—It is because they do not claim formally for dilapidations, to a considerable extent; then, as I have already said, the landowners have put up splendid buildings, which are very substantial; and having also done the repairs there are no dilapidations of buildings to claim for. But with reference to the dilapidations to the land, the deterioration of the land and the fences and the ditches, there is no doubt that in many parts it has been seriously deteriorated.

49,573. That is within comparatively recent years, is it not?—Yes.

49,574. In those cases have claims for dilapidations been made or are they smaller than in other counties?—They are smaller than in other counties because the landlords do not press for them, and because, as I say, there is a certain feeling among valuers that they should not go back very far for dilapidations.

49,575. As a matter of fact until these terribly bad times begun there was every inducement, I understand you to say, under the custom to the tenants to farm as high as possible up to the last moment?—Yes, and those who can afford it are doing it still.

49,576. Those who have got any money left?—Yes.

49,577. Where that was the case of course there was no claim for dilapidations?—No, of course not.

49,578. Then one great effect of the custom has been to induce people to farm high up to the last moment?—Yes.

49,579. And to leave their farms in excellent condition?—Yes.

49,580. Will you turn to paragraph 49; you deal there with some conversations you had, I think, with regard to the position of the sitting tenant?—Yes.

Compensation to sitting tenants.

49,581. The general view was that it is quite impossible to compensate a sitting tenant, is that not so?—You mean when he quits?

49,582. No; to compensate him when he remains?—Yes, that was regarded as an impossibility, because it was said how can you compensate him for something which he was going to sit down and obtain the full benefit of at once?

49,583. I think I have here the words of a farmer to you: "How can I get compensation for unexhausted "improvements which I myself am going to ex- "haust"?—Yes; that was the phrase; I remember that was used.

49,584. What they meant, I suppose, was this, that if the plan was adopted of giving compensation to a sitting tenant, which is now sometimes proposed, it seems to me, by people who do not very well understand the subject, the landlord in self-defence will have to farm the land himself?—Yes; the landlord would practically be financing his tenant.

49,585. Exactly; he would be finding all the money for the conduct of the farm?—Yes, without having the control or management.

Arbitration as to rent.

49,586. You were asked a question just now as to whether, supposing in the taking of a farm there came to be a difference of 50*l.* in the rent between the landlord and tenant, the tenant would not think it desirable to have someone to step in and to say how the difference should be composed; is it not the case generally in Lincolnshire at the present time that the tenants practically make the bargain for the rent themselves

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

and that they give their own rent?—No doubt that is the evidence in the majority of cases, and I have quoted that. Of course on some of the small farms capable of growing market produce there is some competition, and in some cases considerable competition; but then in cases of that sort that class of man is almost a tradesman, and sometimes is actually a tradesman.

49,587. You found, I think, a very decided and distinct opinion on the part of the farmers almost unanimously against any interference whatever of that kind?—Yes, and I think, on the whole, that the small farmers were, I should say, stronger almost, if they could be, than the large farmers on that point. It must not be forgotten, I think, that the land in South Lincolnshire is owned by small people in very many districts, and that they are on a social equality with the tenants; the tenants have sprung from them or are their relations.

Notice to quit.

49,588. With regard to the term of the notice to quit, which did you find, as a rule, that they preferred, the longer or the shorter term?—In many cases they preferred the shorter one.

49,589. Their preference for the shorter term was the most general, was it?—I think it was. I think that now the majority of men in the north certainly prefer six months' notice, but then you must take into consideration their excellent custom.

49,590. At all events it is the fact that under that custom, and with a six months' notice to quit, you have adduced numerous instances where the same farms have been held by the same families for generations?—Yes, for generations, and without anything in writing.

49,591. And all the whole time under a six months' notice to quit?—Yes.

49,592. You found that the county possessed great advantages from an agricultural point of view?—Yes, very great advantages.

The position of Agriculture in Lincolnshire.

49,593. I am now rather trying to sum up what you have told us; the land is fair, I think?—Yes, and very good in many parts.

49,594. The farming you have described as admirable, and the farmers as most intelligent?—Yes.

49,595. I do not think you have given us your opinion as to the quality of the labour?—The quality of the labour is as good as you can find anywhere in England I should think, except, perhaps, in Northumberland.

49,596. Is there a fairly good feeling between the labourers and the farmers?—Yes, I think there is; much better than in other eastern counties.

49,597. You spoke of the landlords, I think, as being, generally speaking, liberal?—Yes.

49,598. And the farmers themselves say that they have nothing whatever to complain of as regards security of tenure?—That is so. The landlords in Lincolnshire take an immense interest in their estates. They are nearly all resident landowners, and they take a very prominent part in all agricultural matters.

49,599. You formed, I think, the highest opinion generally of the way in which agriculture was conducted in that county?—Yes; it could not be conducted better I should think.

49,600. Yet with all this, I understand you to tell the Commission that in your opinion, as the result of your very careful inquiries, matters are getting into a very deplorable condition?—Yes, very; there is no doubt about that. A very large number of notices were given this Michaelmas after I left. As I point out in the report the landowners have tried farming their own land; they tried that five or six years ago, but they have given that up as a bad business, and they let their land at any price that they can get tenants at; and now the landlords say they are not going to make the experiment again.

Wages.

49,601. The wages of labour have also, I think, latterly begun to fall?—Yes; they fell lower this winter than they had been for a great many years, but they have risen again, although they are not quite so high as they were this time last year.

49,602. Since the busy time began they have risen?—Yes.

Low prices.

49,603. All these misfortunes and troubles from an agricultural point of view I understand you to attribute mainly, if not entirely, to the fall in the prices of agricultural produce?—Yes; if they had good prices they have got everything to make agriculture successful.

49,604. Is there anything in your opinion which can save this great agricultural county from the future which you appear to foresee for it except some change in the question of prices?—No, nothing, certainly in the north; some of them may hang on in the south. On the small farms which are so frequently tenanted by men who have been foremen, and who are renting them at times rents, the tenants can hardly exist at all, and they have to get their wives and their daughters to work like slaves on land which is very good and capable of growing market garden produce. I think that speaks for itself.

Mr. A. W. Fox. 23 May 1895.

Rates.

49,605. (*Mr. Dalton.*) I see from the recent return as to the rateable value of the properties in the different unions, there is one union in Lincolnshire—that is Holbeach—in which the rateable value of the lands does not seem to have fallen materially; have you got any information as to the reason of that?—The rateable value has increased by 641*l.*, has it not?

49,606. The rateable value of lands has only fallen from 124,889*l.* to 124,518*l.*, so it has practically remained stationary; whereas there has been a great fall in the rateable value of the lands in every other union in Lincolnshire. Is there anything exceptional in that union which has kept the land up in value?—No, not that I know of—I should not think there was; I do not think there is any large town there.

49,607. The lands in the union still have a rateable value of about 30*s.* an acre?—Up to what year are you alluding?

49,608. I am alluding to the year 1894?—I am afraid I have not got the figures for that year.

49,609. It seems to be a total exception from all the other unions in the county?—Yes; but I do not think there are any large towns in the Holbeach Union.

49,610. (*Viscount Cobham.*) Is that a potato district?—It is not the best potato district, but they do grow a great deal of market garden produce there.

49,611. (*Mr. Dalton.*) The fall in the rateable value in the Stamford Union is smaller than in most of the others; is there anything that keeps it up there?—Stamford is an increasing town.

49,612. The land is accommodation land, then, I suppose?—Yes.

49,613. Did you have any complaint of the land tax in Lincolnshire?—Not much.

49,614. Nor of the tithe?—No; that was not mentioned; the landowners have paid it generally long before the Tithe Act was passed.

The Lincolnshire custom.

49,615. (*Lord Rendel.*) Do I understand you to say that the Lincolnshire custom is thoroughly successful in its working?—Yes, I heard no criticism of it really at all, except the few suggestions about consuming corn.

49,616. Would you go so far as to say that the custom was so satisfactory as to prevent anything like a general desire to obtain legislative assistance in establishing the relations of landlord and tenant on a new basis?—I think that there would be a very serious objection raised in the county to such legislation.

49,617. In fact it is the other way, and the custom is so good that the tenants as well as the landlords, look to it as having a very important bearing on their mutual prosperity?—Yes, many of the large farmers attribute much of the success of agriculture in Lincolnshire to the custom.

49,618. Then that being the case, and all the other conditions being rather more favourable in Lincolnshire than the average of this great agricultural country, the custom has not saved the county at all from the prevalent depression?—No, but Lincolnshire is in this position that if prices went up now they have got their land in a much better state than they have in Norfolk or Suffolk—at least I ought not to speak of Norfolk for I do not know it officially; but certainly it is better than in Suffolk and in Cambridgeshire, and so they would have that start; they would not take perhaps five or six years to get their land into condition because they have got it into fair condition.

49,619. Is that state of things due to the working of the custom?—Many of the farmers say that the custom has had a great influence upon producing that state of things.

49,620. You would regard, I gather, a good local custom, where it gives satisfaction and stands the test of

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

time, as better than any legislative intervention?—That is the opinion of all the Lincolnshire people. They say they could not better their custom except perhaps in a few details which they are quite capable of working out for themselves.

49,621. Nevertheless you found the custom has not of itself had any influence in saving Lincolnshire from the depression common to other counties?—No, the fall in prices is said to be the great cause of it, and of course the custom has been powerless to arrest that.

49,622. Then to that extent all the evidence you have gained would lead to the conclusion that a material change in the relations of tenant and landlord, whether brought about by legislation or otherwise, would not materially affect the present depression?—No, not there.

49,623. You confine it to Lincolnshire?—I was only speaking about Lincolnshire.

49,624. But still you wish your answer to be limited locally to the case of Lincolnshire?—I should not be prepared to make a statement generally about the rest of the country.

Price of milk.

49,625. I observe that evidence was given you by a Mr. Powell of the Blankney Estate, with reference to the price that he was able to obtain for milk, and the price at which milk was then selling for in London the difference being a difference between 5½*d.* and 20*d.*?—Yes.

Railway rates.

49,626. Did that fact strike you as having any considerable importance?—The question of railway rates beats the Lincolnshire man, I think, with regard to the milk, at least that is what is said. I have not got the rates for milk here, but of course the county is a long way off for sending milk to London, and they cannot very well send milk up twice a day from there. There are very few men there who do sell milk in London, in fact I do not know of anybody.

49,627. I suppose in regard to the fish a great deal has been accomplished in the way of the rapid distribution of a very perishable commodity?—Yes, I suppose so, but I do not know anything about that particular trade.

49,628. You give some considerable importance to the evidence that you have obtained showing a very great variation of price between that obtained by the producer and that given by the consumer?—Quite so. Mr. Powell was advocating co-operation in both production and sale.

49,629. That would apply to many other articles besides milk, I presume?—Yes. That was one of his remedies.

Bad seasons.

49,630. (*Chairman.*) I believe this part of the country suffered very much between the years 1874 and 1882 from a series of wet seasons?—Yes, from 1875 to 1882.

49,631. And especially in 1879?—Yes.

49,632. A great deal of the land was very seriously deteriorated in consequence?—Yes.

49,633. It somewhat recovered between 1883 and 1890, did it not?—Yes. I have heard men say that they think the land has practically recovered from the effects of those bad seasons.

49,634. Of course the farmers through that period lost considerably owing to the wet seasons?—Yes, there is no doubt about it.

49,635. And their general position became very much worse?—Yes.

49,636. During the last three years I suppose they have suffered seriously from bad seasons?—The drought in Lincolnshire in 1893 affected them enormously.

49,637. Was not 1892 a bad year in consequence of the wet season?—Yes, 1892 was not a good year, but 1893 was the year which affected them chiefly.

49,638. In 1893 there was the main loss, but still there was a serious loss owing to the bad weather in 1892?—Yes, there was the wet weather then.

49,639. Then came the severe drought of 1893 which they suffered very much from?—Yes.

49,640. In 1894 did they suffer as some other parts of the country did from the bad harvest?—They had, on the whole, a very good harvest, but they suffered from the price they obtained for it.

49,641. I think that certainly, in some parts of the country, the crops were seriously damaged?—Yes, but I do not think on the whole that they suffered so much in Lincolnshire as they did in Cambridgeshire.

49,642. Did they suffer to some extent?—They suffered to some extent, and there is no doubt that, as a rule, the best samples of their barley were spoilt.

Mr. A. W. Fox. 23 May 1895.

Prices of barley.

49,643. Was part of the low prices which they obtained for their produce due to the inferior quality due to the bad harvests?—About a fourth of their barley was unsaleable; they did not sell it, but they fed with it.

49,644. The remainder was not fit for sale?—No; they fed their cattle on it.

49,645. (*Mr. Chaplin.*) On how much of it—about a fourth?—Yes.

49,646. (*Chairman.*) What was the remaining three quarters?—The rest was a fair sample.

49,647. Fit for malting?—Yes, some of it. The best barley, which came from the north, fetched a fair price.

49,648. Taking the average, was it up to the mark, or was the low price of the product somewhat due to the bad harvest?—No doubt, to a certain extent, it was due to the bad harvest.

49,649. Then in fact that part of the country, besides the low prices, has suffered also from three successive bad years, namely, 1892, 1893, and 1894?—Yes, but I should not say that 1894 was such a very bad season. The price of the bad samples went down to an absurdly low sum; there was damaged wheat being sold at 10*s.* and 12*s.* a quarter.

49,650. Was not the price to some extent due to the damaged quality of the wheat and barley?—Those very low prices were, but the good samples of wheat were selling at under 1*l.* all the autumn in Horncastle market.

Changes in the system of cultivation.

49,651. Has there been any change in the system of cultivation in that part of the country—has the rotation been extended from four years to a longer period?—Generally speaking, in North Lincolnshire there has not been much change. They say they can only farm on one system there. But in the south, where there is a splendid soil suitable for growing almost anything, they are growing almost anything, whatever they think may pay them, seeds or roots.

49,652. In the north there has been no change, you say?—Very little; they say they cannot change.

49,653. Has there been no attempt to grow temporary grasses and to extend the period of the rotation?—To some extent; but on the wolds, the heath, and the cliff they say they can only farm on the four-course system, as a rule.

49,654. They seem, according to your experience, to think that it is impossible that any modification can be made which would reduce the cost of cultivation and make them depend less upon corn crops?—I do not think on the wolds they could do much but grow turnips for sheep and barley.

Rent of large and small farms compared.

49,655. Will you turn to page 19 of your report; there you will find that the rent of the small farms up to 100 acres is considerably higher than that of farms above that amount?—It very much depends upon the situation.

49,656. You give the average apparently of farms up to 100 acres, and they range from 29*s.* to 21*s.*; 16*s.* 3*d.* is the lowest, but that seems an exceptional case; then coming to the larger farms, but omitting the very lowest, they average from 16*s.* to 23*s.*, and on larger farms still—above 400 acres—the average runs from 17*s.* to 19*s.*?—Yes.

49,657. Showing that the smaller farms fetch a much higher rent on the average?—I asked that question a good many times. At Grantham the farmers said they did not think that they did fetch more, considering the price of the buildings; I got the price of buildings per acre on farms in that district, and I found that a 100 acre farm worked out to 7*l.* per acre for buildings, and that a 1,000 acre farm worked out to 4*l.* 10*s.* per acre.

49,658. What do the farms under 100 acres work out to?—Lord Ancaster's evidence—and he has built a number of farm buildings—is, that on small farms of from 5 to 10 acres, they cost 30*l.* per acre.

49,659. On page 19 of your report, you say that for 100 acres the average is from 6*l.* 10*s.* to 7*l.* an acre?—Yes.

49,660. And for 300 acres the average is about 7*l.* 6*s.* 8*d.*?—Yes.

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

49,661. Therefore, apparently from what you have said there, the cost of buildings in the smaller farms is not quite so great?—No, it is just about that, up to 300 acres.

49,662. (*Viscount Cobham.*) There must be something exceptional about that, must there not?—I cannot say that; these figures were worked out with a good deal of trouble because they entailed going into a great many estate accounts, and that was the result. I cannot say how they are made up.

49,663. (*Chairman.*) From that it would appear that in that part of the country there was not very much difference between small farms and the medium-sized farms; it is only when you get up to the very large farms that you get a reduction?—Yes.

Demand for small farms.

49,664. Is there a demand for the small farms?—Yes, they are let.

49,665. When they are vacant is there a demand for them?—On good land and near a town there is a considerable demand for them.

49,666. But taking the average of the country, should you say that there is still a demand for the small farms up to 100 acres?—Yes, but it has decreased. The mortgagees of the small men dare not sell them up, because they are afraid they will not get anything like as much rent as they are getting interest.

49,667. I mean, is there a demand at a reduced rent? I understand from your answer that where the mortgagees are unwilling to lower the rent there is a difficulty?—Yes.

49,668. But where the land is not mortgaged and where the owner has any control over it and makes reasonable reductions of rent, is there a demand for these farms; can he let these farms?—Yes, the small farms are nearly all let.

49,669. Then the main difficulty in letting has been in the very large farms, I take it?—There is more difficulty in letting the large farms because there are not so many men with capital in the county to take them.

Difficulty in letting large farms.

49,670. Is that the main reason, the difficulty of finding capital?—Yes; if they had capital a great number of men said they would rather farm on a large scale than on a small one.

49,671. Then the question is rather one of the difficulty of finding men of capital?—Yes.

49,672. Not from a difficulty of making a profit out of those farms?—Of course a man who had the capital would at present prices be afraid to put it into a large farm, he would rather put half of it into a small farm and keep the other half of his capital especially with falling prices, in fact I state that as one of the reasons for the greater demand for smaller farms.

Milk selling.

49,673. Has there been much extension of dairying in the county?—No, and I think as regards milk selling that the possibilities for development are not great. There are no large consuming populations in Lincolnshire, and where there has been competition the price has sunk so low that men have given it up. In a few instances where one or two men have got the monopoly of the milk selling no doubt they find it remunerative.

Butter making.

49,674. What about the making of butter?—The butter has not been at all of a good quality in Lincolnshire, and in Lincoln itself at a large butter shop they are selling Danish butter—in fact, I think that is the case in all their towns.

49,675. Apparently from what you say, that is very much due to the bad quality of the butter produced by these farms?—Yes, to the want of uniformity in the butter.

Co-operation.

49,676. May not something be done in that direction by co-operation with a view to improving the quality of their butter?—I am not an expert about butter making, but I have read a great deal about the way they make butter abroad, and I have asked a great many questions of merchants and of farmers. I have never heard any serious objection raised to the possibility of the English agriculturists competing with foreign ones.

49,677. Does it not seem to you somewhat strange that Danish butter should be sold in the towns of Lincolnshire in preference to the Lincolnshire butter?—Yes, I have frequently been told that we can produce as good samples as the foreigner but that we cannot produce the bulk.

Mr. A. W. Fox. 23 May 1895.

49,678. Is that not in a very large degree due to the want of co-operation among the farmers?—They send a uniform bulk over here from abroad because they have got co-operation abroad.

49,679. I gather that in your opinion the inferior quality is due to the want of uniformity?—Yes.

49,680. And that is due to the want of co-operation?—Yes, every farm-house makes a different sample, but the London merchants want a uniform quality for their customers.

49,681. Is there any possibility of some advance in that direction?—Yes, I should certainly say so.

49,682. When you spoke of the small owners or occupiers, were you speaking of men who lived entirely by their land?—Yes.

Subsidiary employment for small holders.

49,683. Are there many cases of men holding land or owning land who are employed on other pursuits?—In some parts of South Lincolnshire they have been driven to try and get other work because their land is not paying. At Market Deeping, where the land is excellent and where everything looks in favour of a small system of farming, I found that the majority of men had turned to something—carrying coal or keeping a horse and doing carting work of all sorts or working as labourers occasionally.

49,684. Is there room for much extension in that direction—I am not now speaking of holdings on which men may live entirely, but where they use their holdings as adjuncts to other business?—No, I do not think so, because there are not a great many large towns in Lincolnshire, and it is not a trading county. There is very little employment for them to get except from the big farmers at busy times. It is not customary in Lincolnshire, as a rule, for men to do other work.

49,685. Still there are towns in Lincolnshire, places like Grimsby and Lincoln itself?—Yes, but as a rule they have not taken to that sort of holding. That class of men began as labourers, and up to a few years ago, relatively speaking, they were fairly well paid, and saved money, especially those who boarded in the farmhouse; and they did not begin farming until they had got enough to get on a farm and be entirely independent of other labour.

Allotments.

49,686. And the labourers, as a rule, are mere labourers that have no land and no holdings?—Some of them have allotments.

49,687. Of course they have allotments, but I mean nothing like small holdings in the sense of anything above allotments?—No. In some cases near Sleaford a gentleman has let out some large allotments of three or four or five acres, and they have been very successful I think.

Assessment to rates.

49,688. Have the assessments of land generally been reduced in proportion to the reduction of rents?—No, I think in Lincolnshire, as a rule, they do not take rent as a basis of assessment.

49,689. You think, as a rule, that is the case?—Yes, I think I may say that is the rule.

49,690. Do you say they have had no abatements in their assessments?—They have, but they do not take rent as the actual basis of assessment; I mean if the land is reduced to 5*s.* an acre, which it would be in extreme cases, they would not take that as the rent.

49,691. I am not now talking of the laying down of an absolute rule; but would you say that on the average the abatements have been in proportion to the reductions?—No, I should not think they have. I asked a good many men who were members of assessment committees.

49,692. Did they give you any reason for not doing so?—They said that they thought it was unfair on the others in the same district who had not got reductions of rent.

49,693. Are there any districts where there have been no reductions of rent?—No, in all there have been reductions of rent.

49,694. What would you say has been the average reduction of the assessments?—I should not like to answer that question offhand, but I can give you the average reduction in rent. I have set out on page 141 the figures in certain years as a comparison; I have made a comparison between 1881-82, and the latest year I was able to get the figures for, namely, 1892-93.

Digitized by Google

Mr. A. W. Fox.

23 May 1895.

49,695. That table includes everything, does it not?—Yes.

49,696. Property as well?—Yes, that would include everything.

49,697. But the important thing is to separate the land from the houses?—Yes, but I had not got the material, I am afraid, to do that.

49,698. Then you have not seen the return which has been laid before Parliament on that point?—I think that it is lately that that return has been made, and after I had written this report.

49,699. It shows very enormous reductions in the assessments of lands. Taking the Union of Gainsborough, I see the assessment of land has dropped from 137,800*l.* to 85,292*l.*; in the Union of Grantham it has dropped from 135,331*l.* to 91,921*l.*; in Horncastle, from 131,081*l.* to 96,232*l.*; and in Lincoln, from 186,930*l.* to 131,298*l.*; showing very large reductions?—I was only able to give it altogether. The only materials I had were the local taxation returns.

49,700. On page 82, in paragraph 135, you say, "I "heard but few complaints as to the mode of assess- "ment?—Yes; there were not many complaints.

49,701. "The assessment committees do not take "rent as the actual basis, but, I understand, are "chiefly guided by it. They endeavour, as far as "possible, to determine the fair annual value, which "they consider is not always represented by the rent "paid. Several witnesses expressed strong opinions "that the rent paid should be conclusive evidence of "value." I gather from that, that although the assessment committees are not absolutely bound by the rent, yet they are chiefly guided by it?—Yes.

49,702. And that they reduce the assessment in proportion to the reduction of rent?—Yes; but I do not think that a Lincolnshire assessment committee would look at any rent under 10*s.* an acre.

49,703. But that is a very low rent?—Yes. I do not think they would look at that.

49,704. But still, in the main they have been guided by the rent?—Yes; I think they have in Lincolnshire.

Wages.

49,705. One word as to the labourers. You say that the wages of the labourers fell during the past winter?—Yes.

49,706. But rose again in the spring?—They rose again in the spring, but not so high as they were.

49,707. What should you say was the difference, as compared with two or three years ago?—When I was there wages were generally in the summer 15*s.*, and in the winter 13*s.* 6*d.* This winter they fell to 12*s.* in the majority of cases, and they have lately been rising to 13*s.* 6*d.* as a summer wage.

49,708. How does that compare with 15 years ago?—The wages in Lincolnshire have remained very much the same for a number of years, except during the seventies. On page 139 I put out the wages paid on a farm since 1837. Without considering the seventies, and beginning at 1878, those figures show that there has been very little change. But I might say that in 1887, 1888, and 1889, when the wages there were 12*s.* a week on that farm, I think it was exceptional. Why they fell on that farm I cannot say; but I know that generally the wage of 12*s.* is lower than has been paid since the sixties. It is true that on that farm they did fall to 12*s.* in those three years; but I had a great many other figures, although not so complete as these figures for that farm. It is generally stated that 12*s.* is a lower wage than has been paid since the sixties.

49,709. They appear to have been lowest between 1887 and 1889?—Yes; on that farm.

49,710. And they rose again to 13*s.* 6*d.* in 1890?—Yes.

49,711. But you think that fall was exceptional?—I think it was.

49,712. Would you say that they had been fairly maintained until the last year?—Yes.

49,713. When they fell 1*s.* 6*d.*?—Yes.

Employment of labourers.

49,714. Then I presume that the labourers have gained enormously by the very low price of wheat?—No doubt they have gained; but then there were a good many men out of work during the last two or three years in the winter.

49,715. But not in the summer, I suppose?—In the spring succeeding that very dry summer there were a number of men out of work and a considerable number of men did not get hired; but then, of course, that very dry summer produced no hay, so there was no feeding; and it produced no roots, so there was very little work. That was an exceptional year. There is no doubt about it, that labour has been knocked off in parts and that there are a good many men out of work.

Mr. A. W. Fox.

23 May 1895.

49,716. I think, generally speaking, that during the last winter there was a less want of employment than you expected?—Yes.

49,717. Mainly due to the fact that the crop of turnips was very good?—Yes.

49,718. And that there was a good deal of field for employment?—Yes, if it had not been for that heavy fall of snow this winter there would not have been, certainly, as many men out this winter as there were the winter before.

49,719. The previous winter was rather exceptional, due to the drought in the previous summer?—Yes, it was influenced a great deal by the drought.

Report on Suffolk. Condition of agriculture.

49,720. (*Viscount Cobham.*) I think you give even a considerably worse account of Suffolk than you do of Lincolnshire?—Yes, Suffolk stands on a different footing to Lincolnshire.

49,721. There has been a much more considerable loss of capital there apparently?—Yes; taking the whole county the land is of very different quality, and it is difficult to grow anything else but cereals on a considerable proportion of it.

49,722. The result has been that a great many of the landowners are absolutely now without means?—Yes, there is no doubt about that.

49,723. And their properties are bringing in no return at all?—No, and a great many properties have been sold and the men have gone.

49,724. A considerable amount of land has gone out of cultivation?—Some has.

Derelict land.

49,725. Could you give an estimate of the amount of land that is derelict in Suffolk?—I have given that on page 51 of my report. When I was in the county up to June 1894 there were eight farms abandoned, comprising 1,388 acres; and after Michaelmas 1894 there were 30 other farms abandoned, comprising 3,353 acres; that made 38 farms. I mention also in the paragraph alluding to these derelict farms, two farms of 565½ acres and 532½ acres respectively, which at that time were supposed not to be abandoned, at least the landowner did not want it said that they were abandoned, and does not want it said now; but the agent, who is a very well-known man in Suffolk, has written to me—I have got his letter—to say that they are abandoned, and that all the labour has been knocked off and nothing has been done to them since Michaelmas. So that would make above a thousand acres more.

49,726. These figures would hardly be complete, I presume; you could not make an exhaustive inquiry into this point?—I think I took all the steps that could be taken. I made the most complete inquiry that could be made, I think.

49,727. Then you think the figures are not far short of the reality?—I expect, from what I am told by several leading agents, that there are a few other farms which the landlords will not declare abandoned because they still hope to let them, but which have had nothing practically done to them since Michaelmas.

49,728. Would your figures include cases of farms that have been practically abandoned but a few cattle are allowed to run over them?—No. The definition I gave when I asked for these figures was farms which were "absolutely uncultivated either by landlord or by "tenant." I may say with reference to those eight farms that were abandoned before Michaelmas 1894, that it has been the custom on some of them to let by auction the rough feed, that is, whatever the land grows in the summer. An auction is held on the farm, and butchers and graziers will come and bid.

49,729. That land would still have to pay rates and tithe rentcharge then, would it not?—I gave instances where they have found it has not been really worth while to do it. I gave one instance in particular of a farm that has been abandoned where they lost a pound by letting it. They let the feed for 20*l.* I think, and the charges came to 21*l.*

Condition of buildings, &c.

49,730. And it results from this, I suppose, that a considerable number of landowners are totally unable to keep the estates up in any condition?—Yes, in some

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

cases. Of course there are some very bad districts, much worse than others.

49,731. Did you find that the buildings were going back and compared very unfavourably with the buildings in Lincolnshire, for instance?—They never were as good as the Lincolnshire buildings, and the class of buildings is not the same. There is no doubt about it that generally speaking the buildings are going back. Of course there are a few rich landowners and some men who have bought property recently who have got capital apart from the land.

49,732. But there are very few properties in Suffolk where the rents are sufficiently high to enable the landowner to keep up buildings?—I should think in no case can a man do it who is dependent on land for his livelihood.

Average rents.

49,733. Would the rent average 10*s.* an acre in Suffolk?—I have given particular instances of the rents on the landowners' estates, because I always felt a difficulty in binding myself down to saying what was the average rent in the county. I have quoted the rents on a great many of the large estates in my report. I think in the Blything Union the average rent is about 12*s.* an acre.

49,734. Out of which the tithe rentcharge has to come?—Yes. On page 21 I give some of the rents per acre.

49,735. They run from something under 10*s.* to perhaps 12*s.* or 13*s.* an acre?—Yes.

49,736. Those would be on large properties representing a large extent of land?—Yes. In the appendix there is a table showing the assessment of occupations of 20 acres and upwards in the Blything Union; three parishes, comprising 8,700 acres are assessed under 10*s.* per acre; and 19 parishes, comprising 85,543 acres, are assessed between 10*s.* and 15*s.* per acre, and the rents per acre in the whole union (92,316 acres), average 14*s.* 8*d.*

49,737. Nevertheless on these large properties you still find the buildings are fairly well maintained?—Yes, on properties where landowners have made money elsewhere.

49,738. Amongst the tenant farmers there seems to be almost a feeling of panic and despair?—Yes.

Demand for farms.

49,739. It seems to be rather a special characteristic in Suffolk that even on the estates of very wealthy men and where land is fairly good there are no applicants for farms?—Yes, in many cases.

49,740. Notwithstanding the most liberal treatment? Yes. But there are one or two better districts in Suffolk where there are still applications for farms.

49,741. (*Chairman.*) Where are those?—In the Samford Union, which is near Ipswich; I think the land is all let there, but it is an exceptional district. It is close to the River Orwell, and they can bring up manure by barges from London, and they can send their produce back by barges to London. Then of course, the land being near the river, they have moisture, which is so wanted in the eastern counties.

49,742. *Viscount Cobham.*) And the water competition would also affect the railway rates there?—Yes.

49,743. But probably the proximity of a large town like Ipswich is the main factor?—That is no doubt another reason. Then you might also take just the immediate district of Felixstowe, Lowestoft, and one or two such places, but they are quite the exceptions.

Average rents.

49,744. I think you say that rents range from, practically, nil to about 20*s.* an acre, excluding accommodation land?—Twenty shillings an acre was put as the very top price.

49,745. Did you come across any large farms that are let for a pound an acre?—No, it would be exceptional land, and a small farm, that was let for that.

49,746. Special cases, in fact?—Yes. I found men farming, with no rent, and other men farming at 2*s.* 6*d.* and 5*s.* an acre.

Cottages.

49,747. You found the cottages in a somewhat low condition in Suffolk generally, I see?—The cottages in many of the open villages are very bad indeed.

49,748. Are open villages common in Suffolk?—Yes, there are a good many of them. The cottages on the large estates are wonderfully good. There are extremes in Suffolk: you either get them very good—I do not say too good—but so much money has been spent on them that they cannot possibly be a remunerative investment or anything like it—or else they are very bad. There is a much greater uniformity in Lincolnshire, where I was just before.

Mr. A. W. Fox. 23 May 1895.

49,749. There is a large number of villages where the cottages belong to speculators, small owners, and shopkeepers, is there not?—Yes.

49,750. Who make a good deal of money out of those cottages, no doubt?—No doubt they do. They buy a row which ought to be destroyed, and they let them for the same rent that a new cottage costing 200*l.* would let at.

49,751. You point out a danger that exists in your mind, namely, that the extension of local control is more likely to lead to deterioration than to improvement as regards this class of property?—I have always held that opinion very strongly. I have been into hundreds of these cottages in the eastern counties, and measured them, and stayed in some of them. I have spent weeks going into cottages and talking to the class of people who owned them. I quote in the report, I think, the case of a railway porter whom I know down there, who told me that he considered cottage property the best investment for a poor man's savings. That is the opinion of that class of person. They sometimes buy a tumbledown cottage for 40*l.* to 50*l.* and they let it for 4*l.* or 5*l.* a year.

49,752. That being the case it is not likely that if the power is in the hands of this class in Suffolk sanitary conditions will be observed or enforced?—No, it is not.

49,753. (*Lord Rendel.*) Is it not always an axiom that the small owner is the worst owner?—He is necessarily compelled in many cases to be a hard landlord. I found a case where there were five cottages in very wretched repair. They were owned by the unfortunate widow of a coachman, who, when she had paid the mortgages on this property had 5*s.* a week to live on, and she was living in the fifth. Her position was a desperate one as an owner; she could not repair them, and of course the sanitary authority do not like to close them because they have sympathy with her—and one can understand that.

Tenure.

49,754. (*Viscount Cobham.*) Is there any strong feeling as to the existing conditions of tenure?—No, certainly not; it was the exception to hear of it. I have quoted in the report the whole of the evidence which was given as to any desire for change. The fact is that in Suffolk the position of the farmers is so desperate that they will not listen to any suggestions which one may make to them with reference to such questions. At the meetings I put the points to the farmers which had been raised by this Commission, but it was with the greatest difficulty one could engage their attention upon anything except the question of prices. When I asked them about the Agricultural Holdings Act at the Bury St. Edmund's meeting, at which there were several hundred people present, they laughed at me.

The Agricultural Holdings Act.

49,755. One farmer, I see, said "As to fixity of tenure "we are all too much fixed already"?—Yes.

49,756. One man was in favour of a four years' lease?—Yes.

49,757. And another man of a long lease with the option of a break?—Yes. The landlords would be only too glad to make any arrangement if they could get tenants.

49,758. You could find no views in support of an amendment of the Act?—They said they were losing money by wholesale, and that whatever amendment of the Agricultural Holdings Act might be necessary was nothing compared with what a rise in price would do for them.

The Suffolk custom.

49,759. The Suffolk custom is, I suppose, almost universal in Suffolk?—Yes, on the whole, I think, that the custom is fairly satisfactory; it is not as satisfactory as the Lincolnshire custom, and there is more grumbling about it. On the whole there was not very much grumbling, still there was more than in Lincolnshire.

49,760. It seems, in fact, as if matters had got beyond the improvement of conditions of tenure or of the Agricultural Holdings Act?—Yes, in the greater part of Suffolk. That was the distinction I found between the eastern counties and the northern counties, the northern people are well enough off to discuss these things.

Farm accounts. Successful farming.

49,761. Do you find here and there men who are holding their own?—Yes, I did as far as one can say

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

without being able to produce their accounts. I have produced the accounts of one or two men. They were the men who were doing better than anybody else, and for that reason I hardly thought that putting forward these accounts was a fair sample of the farmers' position.

49,762. Were they farming fairly representative farms?—They were farming in the best district. On pages 91 and 92 I give the accounts of a farm in East Suffolk to which I might refer you.

49,763. I see that the average annual profit from 1887 to 1894 was 456*l.* 17*s.* 1*d.* or 7·9 per cent. on the capital employed, nothing being charged for management, no interest being charged on capital and no produce from the farm consumed in the house?—Yes, but the Suffolk farmers would say that was not at all a fair instance, I should think that man was doing as well as anybody, perhaps better.

49,764. With five per cent. on the capital there would still be a clear profit?—Yes.

49,765. What sort of farm was this, would you say it was a good farm?—I went over it, it is one of the best farms in Suffolk, taking situation into account.

49,766. You state that the "soil is very mixed, some "light, poor, and sandy, some very heavy, and some very "good mixed"—a sort of average farm, in fact?—He lives within two or three miles of a large town and he sells milk as you can see. His milk business has very largely increased—in 1891 it was 188*l.*; in 1892, 290*l.*; in 1893, 502*l.*; and in 1894 nearly 500*l.* He goes in pretty heavily for stock.

49,767. In fact, he has increased his output all round except in corn, which has fallen, but not very much?—Yes. He is a man with plenty of capital.

49,768. Is he a Suffolk man?—Yes.

49,769. Has he and his family been on that farm for any length of time?—He has been on that farm since 1884. He farms a good deal of land. On page 93 is the general farming account for the year of all the land that man farms. He is really farming 1,700 acres.

49,770. That account only shows a profit of two per cent. on the capital?—Yes, for that year. He is farming in a very large way.

49,771. Does he do any dealing as well?—No.

49,772. Is there any reason why he has done so much better than his neighbours?—He is a very good judge of stock, and he has not done badly, as you can see, in the milk business—in fact, the milk business really saved him.

49,773. Where does he sell his milk?—In a large town he is only three miles from it, and he can deliver with his own carts. If it was not for the 500*l.* for milk he would not have made a profit at all.

49,774. (*Lord Rendel.*) The milk and the sundries almost equal the amount of his corn?—Yes. The milk in 1893 made his profit. He has doubled his milk in the last two years for the reason that he is a man with capital and a man who will take up anything that he thinks will pay.

49,775. (*Viscount Cobham.*) His special advantage was proximity to a large town?—Yes, no doubt that was it.

49,776. What breed were his cows?—Shorthorns chiefly, but he had gone over to Denmark and got some Danish cows and he was trying some of them. He takes a great interest in all dairying matters and was one of those men who advocated the creation of creameries and factories. He holds the opinion that we may do a great deal more in England with our butter than we have done in the past.

49,777. Had he a good opinion of the Danish breed?—Yes, he had found it economical. The Danish cows gave a great deal of milk and did not cost a great deal to feed.

Scotch farmers.

49,778. Do you think there is room for a considerable extension of arable dairying in Suffolk on the Danish system?—The Scotchmen are trying it. There are a good many Scotchmen there.

49,779. How are they getting on?—I have given the evidence of the Scotch agents because I thought it would be better to get Scotch evidence as to their position and because the Scotch agents brought them down. I think I ought to state that it is generally the opinion of the Scotch agents that they are generally by no means a good type of Scotch farmer; that is what they generally said as a rule. It was generally said that the good type of Scotchman had not come. Then it must be remembered also that they have come from Ayrshire, which is a grass country, and that they do not understand plough land at all or arable land, and so landowners find that they do great harm to the arable land. Still they are just existing and in some cases they exist where the Suffolk men have not been able to.

Mr. A. W. Fox. 23 May 1895.

Farm accounts.

49,780. Can you point to any other accounts showing something of a profit?—On page 66 I give the figures for two farms, farmed by the same family since 1839–1840. Farms A. and B. show an average annual profit during a long series of years. You will see that in 1839–43, in fact right up to 1875, they were making on farm A. over 700*l.* a year; then for 1890–93 the average profit was 45*l.* and for 1893–1894 the loss was 32*l.* In the next farm B., held by the same family, you see the profit in 1893–1894 was only 7*l.* 12*s.*

49,781. Dealing with the present day there is a dead loss going on?—Yes.

49,782. And has been for a considerable time past?—Yes. For the next farm on that table I give very detailed accounts. A man went into it who came from a farming family. He has put a good deal of money into this farm; it is a good farm and he gives his balance sheet. That is shown in Appendix A. 1 (C), which begins on page 85 and continues over two or three pages. The result of his farming from 1883 to 1893 is a loss of 204*l.* He is giving it up; he is going back into the business which he came from, which was a cake and manure business.

49,783. (*Chairman.*) Now taking the next farm, on page 66, D.?—There was a profit there; that is the one we have discussed which is near Ipswich. D. and E. are the farms we have already alluded to.

49,784. Between the years 1877 and 1894 the occupier of D. seems to have made an average profit of 8·4 per cent.?—Yes.

49,785. And in the case of E., another farmer, farming 590 acres, between 1887 and 1894 made a profit of 3,654*l.*, an average of 7·9 per cent.?—Yes. Those farms are both in the good district which I alluded to first—the Samford Union.

49,786. (*Viscount Cobham.*) You said that at one time early in the century there was a great deal of dairying in Suffolk?—Yes, when Arthur Young visited the county, dairying, I think, was one of the chief sources of their income.

49,787. (*Mr. Everett.*) In the last century, I think, not in this?—Yes.

49,788. (*Lord Rendel.*) You quote a gentleman as saying: "At the beginning of the present century a "large portion of the dairy produce sent to the metro-"polis came from the county of Suffolk. It was then "essentially a dairy county"?—Yes, I think that was quoting Mr. Herman Biddell's evidence. Then I quote what Arthur Young said about it.

49,789. (*Viscount Cobham.*) There is a development of dairying going on now to some extent, is there not?—Yes, the Scotchmen have started selling milk in London, or rather, I do not say they have started it exactly, but they are doing more than anybody else at it.

49,790. Do you think there is much prospect of further development in that?—It is a long way to London, and I have met a good many farmers who tried it and gave it up. They say that the railway rates beat them. But the Scotchmen say the Suffolk men do not understand the business; they do not understand how to feed their cows, and they do not understand how to do it economically. The Scotchmen pursue an entirely different system; they keep their cows indoors. The first thing a Scotchman requires, when he comes down, is a byre to hold about 60 cows, which the landlord has to put up for him.

49,791. Does he keep them indoors all the year round?—He keeps them indoors a great deal and the other men keep them out in the yard. The Scotchmen feed them on hot food and they buy grain from the breweries; they feed on a different system. Then also, they have Ayrshire cows, which they consider much more economical.

Land going to grass.

49,792. Is much land going to grass?—Not to good pasture, but there is a lot of rough grass land.

49,793. Not properly seeded down, but tumbling down?—Yes, but then the fact is that land is reduced to such an appalling condition that they sow it with

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

grass seed as the last resource, and no one could expect the grass to do on such land at all.

49,794. And it is not properly treated after it is sown?—Neither before nor after it is sown.

49,795. Is much of the land fairly well adapted for carrying pasture?—No, there is not enough moisture; the east winds all the spring are very much against growing grass.

49,796. Probably like Essex, though in a less degree?—Yes, there is very little good pasture there comparatively speaking.

Creameries and butter factories.

49,797. Do you think that intelligent arable dairy farming might pay if the necessary capital and knowledge were forthcoming?—The secretary of the Akenham Dairy Company went into the dairying question a great deal with me, and he advocated the creation of creameries and of butter factories. He gave me an example, which I quote, of how he took up a sample of their butter from the Akenham Dairy Company to a wholesale man in London who is buying very largely from Denmark. The man said it was a very good sample and he asked him to supply him with 700 lbs. a day. He said it was quite impossible. Then the merchant said he should continue to buy the butter abroad till it was possible, but he said that the sample was just as good as the Danish or the Brittany—I forget which it was.

49,798. You can hardly say there is sufficient capital left in the county for any large development of that description, can you?—No, I do not think it would come from the farmers; I think it would be very difficult to get the farmers to take it up.

49,799. Or the landowners?—The landowners in Suffolk, I do not think, could afford it.

Landlords' improvements.

49,800. (*Mr. Clay.*) You said, I think, that in Lincolnshire, the landlords had been not only resident, but had paid a great deal of attention to the improvement of their properties?—Yes.

49,801. Do you consider that that is a very healthy state of matters?—Yes, certainly.

49,802. If all other landlords, like those in Lincolnshire, had performed the same duties to their properties and their tenantry, matters might have been a little different from what they are?—In Lincolnshire the property has been in the hands of many of the landowners for a great many generations, and they have also been men of considerable capital, taking the average of Lincolnshire landowners; and I should say that has obtained more in Lincolnshire than in Suffolk.

Position of landlords.

49,803. Has Suffolk benefited as much as Lincolnshire from a resident proprietorship?—The proprietors have not been able to be resident in many cases since the last 15 years, because they have been obliged to go away or let their houses.

49,804. Is that from having decreased rents and perhaps mortgages upon their properties?—Yes.

49,805. Then this agricultural depression is a very serious matter for the country?—Yes, it is very serious indeed. The farmers themselves raised that very question. They said the men of capital have gone in many cases, and the village shopkeepers and others are generally suffering from that cause.

Position of labourers.

49,806. Do you look forward to the labourer unfortunately suffering from the same cause as the tenants and landlords have suffered from?—In Suffolk he has suffered from it in the last 18 months or two years.

49,807. Have the tenants in Suffolk been an industrious, hard-working class of men?—Yes, I am sure of that.

Tenant's capital.

49,808. Has their capital got short?—Yes, very short indeed.

49,809. Is that not by paying perhaps too much rent for the land?—In certain cases it might have been, but generally speaking I should say certainly not.

Reduction in rents.

49,810. Why?—Because rents have been reduced enormously. I do not think there is any property in Suffolk, except perhaps one or two in very favourable districts, where the gross rental of the property is not 50 per cent. at least less than it was in 1879.

49,811. Yes; but perhaps they may have been paying too much rent before even the bad times came on to leave them any capital for an emergency?—I have set out the rents per acre before the '70's, and at the '70's, and at the present time on some of the large properties. At the present time 1*l.* an acre is the top price for agricultural land of any sort. There are many men farming at a rent which leaves a dead loss to the landlord at the present time.

Mr. A. W. Fox. 23 May 1895.

49,812. (*Viscount Cobham.*) I think that the Table to which you are referring shows that the rents have fallen to a point considerably below any point reached in the last 60 or 70 years?—Yes.

Changes in system of farming.

49,813. (*Mr. Clay.*) Have the tenants in Suffolk and some other places you have gone over been adapting themselves to the change of circumstances in the business and trade of this country?—It is difficult, I understand, to make any radical change in the use of a great deal of the land in Suffolk. The very heavy clay land is suitable only for wheat, and a good deal of the light land is only suitable for either barley or wheat when prices are at a certain point; they have got below that point and the land has been allowed to go. The farmers have extended their course and they are farming on the five or six course system with the object of knocking off the labour; but otherwise they have not been able to go in for market gardening and so on, because there is very little soil in the county fit for it.

49,814. In your report on Northumberland, I think, you said that you found there among the tenantry that they adapted themselves to circumstances which might be more profitable?—It is more possible there to go in for sheep and for stock. I do not say for one moment that it might not be possible to go in more for either milk selling or butter making if there was a radical change brought about, particularly in the mode of making butter. But that would be more for the opinion of an expert on the subject than for me.

Successful farming.

49,815. You give us a very striking example of a man in Suffolk with capital, energy, and tact, who has made his farm pay in the midst of all this serious depression which surrounds the farmers in Suffolk?—Yes; but he is one of a few. He does not consider it at all a satisfactory position himself, because he says he has got no interest on his capital; and he charges nothing for management, and gets nothing out of the farm. He is one of the best farmers in Suffolk. He is within three miles of a large town.

49,816. (*Chairman.*) Who is that?—He is that man whose accounts we discussed—D. or E., who got 8 per cent. I should not like to put his account forward as a sample of a Suffolk account.

49,817. (*Mr. Clay.*) Might not farmers, if they were to stop more at home and look more closely into their business—which unfortunately now they do not do as much as they did 30 or 40 years ago—might they not find it better both for themselves and for their landlord? At any rate, it would bring more practical experience and more capital into the business?—I do not know that on a large farm, where a man has got a good foreman and everything goes more or less mechanically when once it has been started, it would be so necessary as on a small farm.

Farming capital.

49,818. As a general rule, do you think the Suffolk farmer has sufficient capital to cultivate the land and make the most of it?—Not now; certainly not.

49,819. Had they that capital do you think to begin with?—Yes; they did have it.

49,820. Twenty years ago?—I should certainly think so. I should think in the Crimean War time some farmers made a great deal of money. I remember one of them told me he bought the farm he was renting out of the Crimean War prices.

49,821. Has that capital not disappeared by, perhaps, lower prices and too much rent for the subject they were dealing with?—I cannot say that they paid too much rent. I assume that the farmer is the best judge of what rent should be.

49,822. But a farmer may be wrong in giving more rent for an article in bad times than what he made up his mind to begin with?—Yes, he might make a mistake; but then I cannot imagine that all the Suffolk farmers would have made a mistake.

49,823. It must be the extra rent that he has been paying and the extra expenses he has been put to which have brought him into this position?—The evidence in Suffolk is, that the rents, when I was there had been fairly reduced to meet the times; in fact, they had been so reduced that the landowners have had to leave the country.

49,824. The tenant has to leave the country now?—Yes, they are both leaving the country.

Digitized by Google

Mr. A. W. Fox.

23 May 1895.

49,825. What is to become of the country?—Suffolk an be given away to anybody who will take it.

Compensation to sitting tenant.

49,826. You have a paragraph on page 28 of your Suffolk Report—No. 42—the marginal note of which is "Compensation to the sitting tenant." You are dealing there with the Marquis of Bristol, are you not?—Yes.

49,827. Does he give a per-centage back for the interest on the unexhausted earnings of the sitting tenant after making the rent?—That is in his agreement. I made a good many inquiries about that clause. It has never been put in operation.

49,828. But that is in his agreement, I think you say?—That is in his agreement, but it has never been put into operation.

49,829. The clause reads thus: "The landlord agrees "that in default of any special agreement, if upon the "determination of this tenancy the tenant continues "in the farm, the improvements, with the exception "of the last two items of the first schedule, for which (had he quitted the occupation) he would have been "entitled to compensation under the Agricultural "Holdings Act, 1883, may be valued in a manner by "that Act, or as by this agreement provided, and the "tenant shall thereafter, during his resumed tenancy, "receive interest upon the sum awarded at the rate of "4 per cent. per annum. Such interest to be deducted "at the time he pays his half-year's rent. But if the "landlord at any time during the resumed tenancy "pays the amount awarded, or any part thereof, in "such case the said interest or proportionate part "thereof shall cease to be so paid." Did you receive that as a part of a lease or of a yearly agreement?—That agreement has never been put into operation, because it excludes cake and manure, and Lord Bristol does all the other improvements. He does all the substantial building, he does all the repairs, and he does the drainage.

49,830. Does he deal with the sitting tenant in that way so that he should not be rented upon his own improvements?—This clause could never apply on Lord Bristol's estate as long as the present state of things continues because it happens that Lord Bristol does the whole of these improvements. I know his agent very well, and I asked him about this clause, and I think that he has got a very hazy idea what it means.

49,831. Is the meaning of the clause that you put in your report, that if a farm has developed into the improved position made by the tenant that the tenant is, I do not say entitled to full compensation in money, but that he is entitled to 4 or 5 per cent. on what that money would come to being taken off the rent?—That was not the real intention why that clause was put in by Lord Bristol. He held the opinion, that on a property where there was a poor landlord, and where the landlord had not got sufficient capital to put up a building, if the tenant had capital and chose to put out the money he should not have to bear the whole burden, but the landlord should pay him interest upon it.

49,832. That is just what I am coming to. I am looking upon this as a benefit to the landlord because the landlord has not to pay the principal sum?—Yes, that would be so.

49,833. But the sitting tenant, the man who has taken the farm, is to be allowed so much a year on the improvement; if the cost of the improvement were to come to 800*l.* then at 4 per cent. that would come to 32*l.*; and he is to be allowed 32*l.* off the year's rent—was that your meaning?—Yes, if it was possible in Suffolk.

49,834. I am not saying whether it is in Suffolk or not; I am taking the general principle; that was your meaning, was it?—If there was a rich tenant in another county who could afford to put up a building no doubt it would be an advantage to the landlord to be able to get a tenant who would put it up, and to have only to pay him interest on it.

49,835. That is why I put this matter to you; I think in doing that the tenant is entitled to 4 or 5 per cent. on what the compensation money would come to?—Yes, the compensation would decrease, I suppose, as the life of the building declined.

49,836. Still the sitting tenant is entitled to even interest on money docked off his rent, the interest on the money that he has spent upon the farm in improvement?—Yes, if he put up the building.

Mr. A. W. Fox.

23 May 1895.

49,837. (*Mr. Gilmour.*) You speak entirely of buildings, which is a totally different matter from what Mr. Clay refers to, I think, which is the benefit to the land of what the sitting tenant may have done; that is not what you got out of the agents at any rate?—No.

49,838. That is not their reading of this clause?—No.

49,839. The clause refers entirely to buildings put up?—Yes, that was what was in Lord Bristol's mind I understood when I asked him about it, and what made him put that clause in his agreement.

49,840. So that it does not cover really the point Mr. Clay has been driving at?—No.

49,841. (*Sir Nigel Kingscote.*) Does it mean to include the draining?—I could not say that.

49,842. Supposing it did?—Supposing it included draining?

49,843. Supposing this was a general clause to cover everything?—Do you mean cake and manures too?

49,844. Yes, that a man who was sitting on and not quitting was to get this compensation during the time he was taking out the benefit for what he had done himself; I was going to ask you would not the end of that be that the landlords would simply have to regulate the rent so as to cover what he had to pay to the tenant in interest?—I should say it would, but I should say further that it would be a most extremely difficult thing to arrange, because supposing he was compensated for some walls which would last say 30 years; that he was compensated for a building which might last 50 years; that he was compensated for lime which might last 8 years; he would then be compensated for a lot of things which had different lives, and it would be a most extremely difficult matter I should think to work out the rate of interest which would be really due for each year.

49,845. (*Mr. Dalton.*) The clause is only suitable for permanent improvements, is it not?—That is what it was intended for; but then as far as Suffolk is concerned, things have reached such a stage that there is no tenant ever likely to put up a building.

49,846. (*Mr. Clay.*) I was only asking you with reference to the meaning of the clause?—Yes, I understood that.

Buildings in Suffolk.

49,847. (*Mr. Gilmour.*) As to the buildings necessary to carry on these farms, does the climate in that part of the country make it possible to carry on with less permanent buildings than other parts like Lincolnshire where the buildings are evidently so much better?—No, I do not think so.

Fixity of tenure and land courts.

49,848. As far as I read your report, there is really no complaint as to fixity of tenure?—No, none.

49,849. And no demand for a land court?—No.

The Suffolk custom.

49,850. Then on the whole is the Suffolk custom as favourable to the tenant, or is it considered by the tenants to be as favourable, as the Lincolnshire custom?—No, I should hardly say that, but they consider it a great deal more favourable than the Agricultural Holdings Act.

Valuers.

49,851. Are the valuers held there in the same high esteem that they are in Lincolnshire?—No, not quite. I came to the conclusion—although I did not put it in my report—that it was rather the lack of uniformity in the awards which made their custom less successful than the Lincolnshire one.

49,852. Have they not a Valuers' Association there the same as in Lincolnshire?—No, they have not; there are a certain number of well-known men who are always employed.

Compensation for breach of agreements.

49,853. I see you notice that a breach of an agreement is not taken notice of by the valuers unless actual damage is sustained?—That is so. I asked all the leading valuers that question.

49,854. Do they act in the same spirit of easy manner in regard to other agreements that are entered into between man and man?—They wish proof of actual damage. In fact—they expect it—they demand it—before they give compensation.

49,855. They do away with all penal clauses in fact?—Yes, in practice.

49,856. In that county is it understood and taken for granted that everyone that enters for a farm is under the custom without any agreement at all?—If nothing is said they would go in under the custom of the country, but on a good many of the large estates there

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

are definite schedules for compensation in the agreements.

49,857. They are schedules which are agreed to?—Yes.

49,858. Would the valuers in Suffolk put these aside in the same way that they do other agreements?—No. Then it would be simply a question of how much dilapidation there had been. I may say that when that is the case in many cases landlords do not claim dilapidations unless there is anything very bad. At Wickham Brook I had a meeting, and the farmers made the somewhat astounding statement that they did not know of a single case in the neighbourhood where a man had been dilapidated when he left his farm. Under the custom the valuers would consider what dilapidations there are, but the amounts awarded would not be so large as under the Agricultural Holdings Act.

Scotch farmers.

49,859. There is a good deal said on page 70, some of it flattering and some of it not flattering, about the Scotchmen who have gone there?—Those remarks were made by witnesses.

49,860. I understand that. They are quoted chiefly from agents, I see?—Yes.

49,861. One remark, is "A good Scotchman will pay his rent to the hour," and anothe "They won't lose money"?—Yes.

49,862. That is surely what we want in these days, go where we like?—That was their general character, that they were never behindhand in their rent.

49,863. The reason why they have been able to hold their own in the county where the others have gone to the wall very largely is that they and their families do very much harder work and live very much more economically?—Yes, there is no doubt about that.

49,864. Does it not point to the fact that these agents ought to have some restrictions in their leases with these men if they do not want their land run down?—You see it is a case of taking these men as they are or not taking them at all. I understand from what these Scotch agents have said that they are men with practically no capital. They have come from Ayrshire and they know nothing about arable farming, and what is more, they have not got the capital if they did. They take a large area of this worn-out land at a cheap rent and they bring down a lot of Ayrshire cows and let the place run wild and get what they can off it by selling milk. I do not think the agents could restrict them. If they did they would not get them, because they have not got the capital to farm that land as a Suffolk landlord would desire it to be farmed. They could not farm on the four or five course system.

49,865. No, but by laying down restrictions they could surely prevent them so utterly impoverishing the land as seems to be represented here in the same way as they do in Ayrshire?—I take it that there is much more grass in Ayrshire than in Suffolk. You see the proportion of acres of grass land on a farm is very small in Suffolk.

The Suffolk custom.

49,866. (*Mr. Chaplin.*) When you say there is not so much unanimity about the custom in Suffolk as there is with regard to the custom in Lincolnshire, is that because it is not so definite?—That is what I suggested. The awards are not so uniform. I believe there is an implied understanding of what is usually given, but it is not definite like it is in Lincolnshire.

49,867. If I am rightly informed it is not so extensive, is it?—No.

49,868. It does not extend to matters of a quasi-permanent character?—No.

Condition of agriculture in Suffolk.

49,869. You found the condition of Suffolk, on the whole, worse than Lincolnshire?—Yes, certainly.

49,870. Is that because of the quality of the land, or what is the reason in your mind?—The quality of the land, I should say, in the first place.

49,871. And being such good land, of course it has suffered most?—Yes.

49,872. And part of it has gone out of cultivation altogether?—Yes. It is land of a character which makes them necessarily more dependent upon the growth of cereals.

49,873. I think it is between 5,000 and 6,000 acres that have come under your own knowledge as having already gone out of cultivation practically?—Yes, I think that is it roughly.

49,874. In spite of this great depression, and the great trouble under which the farmers are suffering, you do not find any demands for extreme legislation with regard to land or for land courts?—No, they are opposed to that sort of thing.

Mr. A. W. Fox. 23 May 1895. Land courts.

49,875. They think it is useless?—Yes, absolutely useless.

49,876. They consider in the face of troubles from which they are suffering, which they believe arise from the fall in prices, that it is entirely beside the point to put these questions before them?—They can get land on practically any terms they like, except, you may say, some of the best land in the Samford Union, which there might be a little competition for. As in Lincolnshire the landowners tried farming their own land six or seven years ago and some of them made enormous losses—I have quoted one large landowner in the report; and on that estate it was determined then not to have any land on their hands again. So that when the farmers throw the land up now it will go out of cultivation.

Rent.

49,877. There are no complaints, as a rule, about the rent being too high, are there?—No, they are very exceptional.

49,878. They point to the times of higher prices and higher rents and tell you that they made great profits and did will then?—Yes.

49,879. Whereas with very low rents and low prices they are all ruined?—Practically all ruined. I found men farming without paying rent at all. I found one man leaving a farm he had been farming for three years with no rent, and a considerable portion of that farm was grass. He was eight miles from a railway station.

The currency question.

49,880. You found a good deal of feeling upon the question of the currency, did you not?—Yes, particularly in the Ipswich district.

49,881. At a good many meetings that you attended?—They raised it at all the meetings.

49,882. At all the meetings that you went to?—Yes.

49,883. Was it discussed with some understanding of the subject apparently?—A good many of the leading farmers in the west and in the east were very interested in the matter and discussed the question at considerable length at all the meetings; in fact, the question of the currency was generally brought forward in the form of a resolution at the meetings.

49,884. There is evidently a growing feeling in favour of it?—Yes, certainly, in Suffolk and in Lincolnshire.

Prospects of Suffolk agriculture.

49,885. I gather from your evidence as a whole that you form the grimmest opinion both of the present and of the future prospects of agriculture in Suffolk?—The future is about as black as can be. There is a very large number of farmers who have given notice to quit at Michaelmas next, and the landlords say they cannot raise the money to farm the land.

49,886. Are those farmers who have given notice going out of business wherever they can?—A good many of them are, I expect. A farmer whose accounts I have given has farmed for 10 years on the Duke of Grafton's estate; he is a man with plenty of capital, and he is going out of the farming business.

49,887. I want to call your attention to one statement in paragraph 118. You say, "The agriculturists in "Suffolk say, in effect, 'We are losing money and are "'on the high road to a supreme disaster, and, while "'this is the case, to discuss questions such as tenure, "'tenant right, the law of distress, marking of foreign "'meat, &c.' is simply throwing straw to drowning "men." Would that be the general expression of opinion on the part of the farmers in Suffolk, as far as you are acquainted with it?—Yes, certainly; they would not let me discuss anything of that sort at meetings.

49,888. In the last paragraph of your report you express the opinion that agriculture in the county of Suffolk is well nigh strangled?—Yes.

49,889. That is speaking of it as you find it now?—Yes, as I found it when I was there last, and I have been in communication with Suffolk people every day for the last year.

49,890. All this, or by far the greater part of this, you attribute practically to the fall in prices?—Yes.

49,891. And as regards the prospect in the future unless there be a change in the prices, do you see any hope whatever for agriculture in any direction in that

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

county?—No, none, unless it is possible to do something with reference to butter-making: but that would take probably a great many years; perhaps the next generation will be able to make it.

Rents.

49,892. (*Mr. Dalton.*) Were the rents in Suffolk ever very high as compared with other counties?—No, I should not think so at all as compared with other counties. I have given the rents in the seventies as far as I could.

49,893. In the seventies they seem to have been low as compared with what they were in other parts of the country?—The seventies were the highest point; I tried to collect as many cases as I could.

49,894. Were they higher in 1870 than in the Crimean War?—Yes, I think so. I think that men were making money in the fifties, and the sixties, and the seventies. I should not like to say off-hand how much, but, of course, that 30 years was the time that the farmers made money, and they probably had more money in the seventies than they had in the fifties.

49,895. They would be exceptionally well off in those years in Suffolk?—Yes.

49,896. Because they were not heavily rented?—I asked a very great number of farmers whether they thought rents were too high in the seventies, and they said they would much rather go back to the seventies now.

49,897. The point I wanted to make was that Suffolk has always been a low-rented county, has it not?—I should say it has been a fairly-rented county. I heard no complaints of the rents in the seventies, and that is as far as I can go.

Rates taxes.

49,898. The rates in the £ seem very light on the whole?—The rates in Suffolk have gone down in some parts.

49,899. I see in this account that you give of farm D. on page 91, that the rates and taxes on that farm of 260 acres have gone down from 30*l.* in 1877 to 14*l.* 10*s.* in 1892, and 7*l.* 8*s.* 9*d.* in 1894?—Yes, but I do not understand that 7*l.* 8*s.* 9*d.*

49,900. Leaving out the 7*l.* 8*s.* 9*d.* in the three years 1891, 1892, and 1893, they were very much lower than they were in the early years—they were 17*l.* 4*s.*, 14*l.* 10*s.*, and 15*l.* 14*s.*, as compared with 30*l.* in 1877?—That of course includes taxes, and there is no doubt about it that the man got remission for his income tax that year; you see he lost money.

49,901. Taking the three preceding years they seem very low—they would have been low if they had only been for rates?—Yes.

49,902. It does not come to much more than a shilling an acre reckoning rates and taxes, does it?—No.

49,903. In farm E. you show that there has been a great fall in the rates and taxes?—That is in the same union.

49,904. How do you account for the rates keeping so low although the rents have fallen so considerably?—They have been assisted by Treasury subventions for one thing.

49,905. And the expenditure has also gone down, I think?—The expenditure has gone down.

49,906. In the rural unions?—I see the expenditure has gone down in nine of the unions.

49,907. In your table on page 108 there are no high rates anywhere?—Comparing 1883 with 1893 I see the total expenditure is less in half the unions and in the other half of the unions it is more, but of course the Treasury subventions have to be taken into account.

49,908. The nine in which it is more comprise towns such as Ipswich, Bury St. Edmund's, and so on?—Yes, quite so

49,909. In the rural unions generally there seems to have been a decrease in the expenditure that is borne by the rates, and the rates in the £ still seem very low notwithstanding the terrible condition of agriculture in the county?—I have set out what the rates in the £ are. I have taken whole unions, which include what towns there are; but they do not represent the urban districts.

49,910. I am taking it as representing the rural expenditure?—Generally speaking, I think that the expenditure has decreased more in Suffolk than in Lincolnshire.

49,911. Yes, but looking at that table at page 108, which I think takes in all the unions in the county?—Yes.

Mr. A. W. Fox. 23 May 1895.

49,912. The rate in the £ in 1892 and 1893 appears to be very healthy, for the rates are considerably below the average rural rates for England, with the exception of Risbridge Union, where they are 2*s.* 10*d.* in the £?—Yes, but it is very difficult to say what is a healthy rate in the eyes of the farmer.

49,913. I suppose the lower it is below the average of England the better it is?—Yes.

49,914. It is some consolation to find that, in the great depression of agriculture which prevails in Suffolk, the rural rates are still less in the £ than they are in the average of England?—Yes, it would be, but I have not compared these figures with the average.

49,915. The average, I think, according to Mr. Fowler's report came out to 2*s.* 3*d.*?—I know it was over 2*s.*

49,916. There is only one of these unions where it is over that amount, and there are a great number where it is 1*s.* 7*d.* or 1*s.* 6*d.*, or 1*s.* 9*d.*, and so forth?—Yes, there are.

49,917. Is there any good grass land in the county?—There is some, but there is not much of it.

The grass lands of Suffolk.

49,918. One would gather from the quotations you make in the earlier part of the report that there was good grass in the county in the early part of the century?—Yes. It had probably taken a very great number of years to grow; and that is the difficulty of course of turning land down to grass now.

49,919. The mischief was done when they turned it down into corn land?—They ploughed up land which never ought to be ploughed up, and which only paid to grow cereals when the price was at least 40*s.* a quarter.

49,920. And then did not command a very high rent?—No, because in order to grow cereals at all that land had to be clayed as it was a very light land. That was an operation which cost a farmer 3*l.* an acre. Of course it is perfectly impossible to do anything of the sort now.

49,921. Then what has done the great mischief in Suffolk was the ploughing up of this land?—Yes, the ploughing up of that bad land did mischief.

49,922. What would it take to get it back again?—It would take years, I should think, because it has been absolutely exhausted, and I did not come across any instance where people were really trying it properly. If they laid it down to permanent pasture and prepared it properly, and sowed it properly with seeds, and top-dressed it at the end of three or four years, and so on, it might as an experiment be worth trying, but I do not think it has been often tried.

Land unfit for cultivation.

49,923. (*Lord Rendel.*) Do you estimate that there is any very considerable quantity of this land which it would have been better never to have cultivated?—Yes, there is a great deal in the north, in the Thetford district, but they abandoned that 10 or 12 years ago to game. It was given up then, and all through the Maharajah Dhuleep Singh's property, and all round that district where the light land is it has been all shooting for the last 10 years.

49,924. I suppose the same causes have led in a very large degree, throughout all the counties you have examined, to the same result—the ploughing up of land?—Not in Lincolnshire, I think; in Suffolk certainly they ploughed up land which was only remunerative to grow corn when corn was at its highest, or nearly at its highest.

49,925. Would you be prepared to find that a very considerable area of land had been brought into cultivation which never could be cultivated except under conditions of price which were artificially raised?—I should not say a very considerable area. There was a great deal in the north and north-west which has been, but it has not been really cultivated for 8 or 10 years.

49,926. But that land, I suppose, still is brought into account when the depressed condition of agriculture is stated?—I really hardly visited that district as I knew it before; I knew there was nothing to report upon there. Some people say that planting might be successful on that very light land; I have heard men say that.

Digitized by Google

Mr. A. W. Fox. 23 May 1895.

49,927. In the counties you have studied there have been very large enclosures, I presume, of common waste land?—I cannot say that, there is no evidence of it because it is all cultivated in both those counties; they have been first-rate farming counties.

49,928. You have not gone into the past history of it?—No.

49,929. You have no means yourself with your large experience now of saying to what extent the great enclosures of the early part of the century have led to the cultivation of land which could not be successfully cultivated without the support of special prices?—No, I cannot say that; a very great deal of Lincolnshire has been brought into cultivation, and very successful cultivation, within only this century.

49,930. That is from a special circumstance altogether?—Yes.

Dairying in Suffolk.

49,931. May I go back to an early part of your report, to which some reference has already been made. You state that Arthur Young gave interesting information about the Suffolk dairies in 1786?—Yes.

49,932. You say he mentions "a tract of country in "the north-eastern side comprising about 20 miles long "by 12 miles broad as 'the seat of dairies,' and within "which area 'nearly all are good'"?—Yes.

49,933. You also observe that Mr. Biddell, a high authority, and Mr. J. A. Smith, state that at the beginning of the present century a large proportion of the dairy produce sent to the metropolis came from the county of Suffolk?—Yes.

49,934. The county was then essentially a dairy county?—Yes.

49,935. Do you think that the change made in ploughing up very largely and in adopting corn growing very largely in Suffolk, was a change which has proved partly a cause of the present special depression in Suffolk?—No doubt at the time they ploughed it up, it was a better business to go in for cereals, and no doubt a great many men made their fortunes out of it; but how far they could change and now make money by selling milk it is difficult to say. The Scotchmen are gaining a poor livelihood out of it. It will take a great many years to make that land anything like good grass land, and it wants capital spent upon it at once to start it.

49,936. Do you think that the prospects are sufficiently good to warrant any effort at an experiment on a larger scale than the experiment already being made at Akenham?—Mr. Smith, who was the secretary and gives lectures throughout the eastern counties, was of opinion that a large experiment ought to be made, and he mentioned the Isle of Ely, which is a dairying centre, as the most favourable place for a butter factory that he knew of in the eastern counties. He considers that there ought to be creameries at different parts, and that there ought to be a large butter factory in some central part, and he thinks if this were done there would be a great impetus given to dairying.

49,937. Suffolk would have a great advantage over Lincolnshire, I suppose, in reference to the markets?—They are nearer London, and they have got rather larger markets themselves. Ipswich is a good market, and so is Felixstowe and Lowestoft.

49,938. I suppose, as compared with the beginning of the century, there would be an enormous development of what markets then existed?—The markets would be much greater now; I suppose London would be enormously larger.

49,939. On the other hand, it remains to be seen how far dairying might run out the land?—Yes, some people hold the opinion that dairying injures the land, but I have heard contrary views expressed; I mean that it can be done without injuring the land.

49,940. (*Viscount Cobham.*) You mean milk selling?—Yes; it depends on what is put back, and it depends on what the cattle are fed on a good deal.

49,941. (*Lord Rendel.*) I suppose there is no suitable labour on any large scale in the county at present for milking, and butter making, and so on?—No, I should think the labour would be difficult to get for that class of work.

49,942. It would all have to be found?—Yes, it would have to grow.

49,943. (*Sir Nigel Kingscote.*) And to be created?—They are finding it very difficult in the dairying counties now to get either men to milk or women to make butter and cheese. Of course if it was done in factories it might be different.

Mr. A. W. Fox. 23 May 1895.

49,944. (*Lord Rendel.*) Nevertheless, do you think you could find a sound opinion in favour of some exceptional experiment in this direction?—Yes; certainly. The men who understood dairying thought that the only way to retake possession of the British markets in butter was to start creameries and butter factories. Mr. Smith expressed that opinion also to Mr. Ernest Prentice, and Mr. Fiske, who is a well-known member of the Dairy Farmers' Association and who farms largely himself, are very strenuous advocates of that in Suffolk.

49,945. Would an important experiment in any part of the country of an analogous character be also favourable to Suffolk as an example of what might be done?—Yes; I should think it would be. It is an experiment which a great many people whom I have met desire to see tried, at any rate. They draw attention to the enormous imports of butter, and they say we can make just as good butter if it is done in a certain way. In Ireland, I went through some of the butter factories there, and the small farmers there told me it was a very great advantage to them to be able to have a ready sale for their milk without having the risk of not selling their butter.

49,946. Then taking the two facts, that Suffolk appears to have the blackest outlook of all the counties you have examined, and that Suffolk originally prospered as a dairying county, would you be inclined to support with your own opinion the suggestion that a considerable experiment in the direction of dairying, Suffolk land would be of great value to that county?—I think it would be a very valuable experiment to make and might turn out well. There is a colony of Devonshire farmers there, and they make better butter than the Suffolk people. They have not been there very long, but they find that they get a ready sale for their butter and a good price for it. There is, no doubt, a demand for good butter if it can be got in sufficient quantities.

Cottages and resident ownership.

49,947. You make some reference to the cottage property and to the condition of cottages in what I think you described as open villages?—Yes.

49,948. I think you point out that the smaller owners are not in a position to maintain a lot of the cottages in a condition satisfactory to the labouring population?—Yes, that is so.

49,949. And that they receive some indulgence from the local authorities?—Yes.

49,950. Are there cases in which the residents of these cottages are owners?—There are not many, I should think.

49,951. Do you think that the small ownership derives its origin very much in resident and small ownership?—No, I do not think so. There are a certain number of cases where squatters put them up on waste years ago, but I think most of those have tumbled down. They simply built them of clay lump, and there are very few of that class of house left. I went into hundreds of cottages in Suffolk for the Labour Commission; I spent weeks in doing it, and I did not find a single instance of a labourer owning his own cottage.

49,952. Would you be prepared to favour the growth of a resident ownership?—I do not think it would be possible, because a labourer does not want to be fixed. In Lincolnshire they have got a very good co-operative society, and they have tried that there, but if I remember right only one or two agricultural labourers have attempted to own their own houses. You see it stops them in their promotion. If a labourer has got any ambition at all it is in the direction of being a small farmer, and if you give him his cottage in a certain spot he becomes a permanent agricultural labourer in a restricted area.

49,953. And tied to particular employers?—Yes, and if he gets a chance of being a foreman 10 miles off he cannot move.

49,954. Has it been within your observation that the objection of the labouring classes of the higher trades to resident ownership is of the same character?—No. I think that a good many men on small farms of 50 or 60 acres like to own the land and to own the house, although if they can rent them moderately they are probably better off.

49,955. Taking the case of the smaller towns and of the handicraft labour in the towns in your enquiries

Digitized by Google

Mr. A. W. Fox. 3 May 1895.

on the labour question, have you found whether the resident ownership was popular among them?—In towns, immensely. I am thinking rather of the Lincoln experiment where a great many of the artisans own their own houses, or are in process of owning them, and it is difficult to find a more thrifty, or a more intelligent, or a more law-abiding set of citizens than in Lincoln.

49,956. But you draw some distinction between their position and that of the scattered agricultural labourers?—Yes, because the agricultural labourer cannot be fixed down.

49,957. You found it to be a tie upon his promotion in life?—Yes.

49,958. And then there is the obligation it imposes upon him to work for a particular master?—Yes. *Mr. A. W. Fox.* 23 May 1895.

49,959. With a less command therefore of freedom in settling terms?—Yes.

49,960. Therefore the resident ownership in the agricultural classes is possibly for that reason non-existent in Suffolk?—Yes, chiefly, though perhaps partly from want of means.

49,961. A small ownership, therefore, of small houses is an unmixed evil in your view?—For the agricultural labourer.

49,962. It does not tend to throw such houses into the hands of resident owners?—No.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

(For Mr. Wilson-Fox's further evidence, *see* page 408).

Ninety-sixth Day.

Friday, 24th May 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON RENDEL.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.,
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Joint*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. SETH TAYLOR called and examined.

Mr. S. Taylor. 24 May 1895.

49,963. (*Chairman.*) You are, I believe, a flour merchant on a large scale, and owner of the Waterloo Mills in London?—Yes.

49,964. Your dealings in wheat have been very great of late years?—Yes.

Increased importation of foreign wheat.

49,965. You come here to tell us what your experience of late years has been with regard to the increased importation of foreign wheat and flour and the fall in the price of wheat?—Yes. The great fall in the prices has, of course, been due to the excess of the supply over the requirements, and during the last few years more particularly it is due to the extra growth in Argentina, which has thrown an extra supply upon us which was quite new to us.

49,966. Since when have the imports from the Argentine assumed a large amount?—In 1886 the production in Argentina was 3,000,000 quarters; and it did not vary very much up till 1891, when it was 4,000,000; in 1892 it was 6,500,000; and in 1893 Argentina grew 11,000,000 quarters.

49,967. Do you know what the imports into this country were?—I can hardly tell you. I should think that for the last few years we have had two-thirds of the crop.

49,968. Then do you consider that the great fall in price which has occurred recently has been mainly due to the fact that the growth of wheat has been so enormously increased in the Argentine Republic, and, therefore, a fresh competitor has come into the market?—Yes, and that, of course, has been much assisted by the low rate of exchange. Their paper currency has given them such a great advantage in being able to produce it at a much less price than any other country.

49,969. (*Mr. Chaplin.*) Where is that?—In the Argentine Republic; their paper currency is so depreciated that gold is now, I suppose, at 260 or 270 premium there.

Decreased area of wheat in Great Britain.

49,970. (*Chairman.*) Is it not the fact also that although the acreage of wheat in the United States has somewhat decreased of late years, yet in consequence of a succession of very good harvests the production of that country has been enormously increased?—Yes, but "somewhat" hardly expresses the reduction of our acreage here in wheat, because it has been so largely reduced.

49,971. The English production forms a very small item, you mean?—Our own production was in my time the principal supply we had, but now it has a very small influence. We grew some 14,000,000 when our consumption was perhaps only 20,000,000, but now, when our consumption is 28,000,000, we do not produce more than 7,000,000, so the ratio is altered entirely.

Consumption of wheat.

49,972. (*Mr. Chaplin.*) What is the consumption now?—Roughly 28,000,000.

49,973. That is quarters?—Yes.

49,974. (*Mr. Giffen.*) Of course it increases every year?—Yes, naturally, with the population.

Production of wheat.

49,975. (*Mr. Chaplin.*) What was the production last year?—It was 7,400,000 quarters in 1894.

49,976. (*Viscount Cobham.*) That was rather more than in one or two of the preceding years, was it not?—The produce in 1892 was 6,300,000, in 1892 it was 7,600,000, and in 1878 we grew 12,500,000.

Causes of fall in prices.

49,977. (*Chairman.*) Do you consider that the great fall in price has arisen, first, from the excess of production over consumption in different foreign countries, and especially in the United States and the Argentine Republic, I suppose; secondly, from the lower cost of production in these countries; thirdly, from the great fall in freights which has taken place——?—Yes, but rather more is it due, in Argentina, to the high rates of exchange.

49,978. I was coming to that; and, fourthly, it has arisen from the depreciation of paper and silver currencies?—Yes.

Commercial gambling.

49,979. Do you consider that it is also due in some respect to the great speculations which have taken

Digitized by Google

place, and to what is known as options and futures?—I think options, when there is a superabundance, have a depressing influence rather than otherwise. You see it makes people who sell wheat forward, take liberties with the market when they know that there is an excess of wheat in the world; and so there is a great deal more wheat in circulation, or purported to be, than really exists. The sale of options and futures, therefore, rather accentuates the position.

49,980. (*Mr. Channing.*) In the last few days there has been a great rise in prices, has there not?—Yes.

Fluctuations in the price of wheat.

49,981. Is that not also due partly to speculation?—I think public opinion has rather turned round. So much is due to sentiment; public opinion drifts very much in one direction, and at the first turn in price we had a few weeks ago consumers would not believe in it; but the rise having been continued the consumers are now coming in, and are very sore indeed that they have missed their opportunity.

49,982. (*Chairman.*) What is the lowest price to which wheat has fallen within the last few months?—The lowest English price was 17*s.* 6*d.*

49,983. Was that the average?—It was the English price last autumn.

49,984. That was partly influenced, I suppose, by the bad quality?—To some extent as compared with foreign wheat. I will give you the exact quotation. The English average for October of last year was 17*s.* 8*d.* per quarter.

49,985. Was that partly influenced by the bad quality?—No; the quality of the year's wheat was not so bad.

49,986. Then the low price was not much influenced by it?—No.

49,987. What was the price of, what may be called, standard wheat?—The average of foreign wheat would be, perhaps, 2*s.* in excess of that.

49,988. I believe there has been a rise within the last few weeks?—Yes.

49,989. What has it been?—It is within the last few days that the great rise has taken place. I have no record yet, however, of what the English wheat is; but I should think English wheat to-day would be 24*s.* or 25*s.* at least, judging from the price of foreign wheat.

49,990. What has been the rise in foreign wheat?—I have not the figures showing what the actual returns are of English wheat, but I should think foreign wheat would be 27*s.* or 28*s.* now on an average price; that is, taking to-day's price.

49,991. Then there has been a rise of nearly 8*s.* a quarter?—Yes, there has been a rise of 8*s.* a quarter.

49,992. (*Mr. Chaplin.*) What was the price for foreign wheat?—27*s.* or 28*s.*, you may say, taking an all-round price. Of course, it is very difficult to fix the price, because some wheat is much under and some over 30*s.*

49,993. This has occurred mainly only in the last few days?—Yes.

49,994. (*Viscount Cobham.*) Is there much English wheat coming forward?—No, but I should think this rise in price will bring it out.

49,995. Do you think there is a good deal left?—I have not the means of knowing exactly, but I should think there is an average quantity left.

Commercial gambling.

49,996. (*Chairman.*) Then is it your view that when the quantity is in excess of the demand, the speculations in options and futures rather tend to depreciate unduly the value of wheat?—Yes.

49,997. I presume, *e converso*, that when the demand has become a little in excess of the supply, the reverse would happen?—Yes, I think you may take that.

49,998. That at all events is your view?—I think so.

49,999. Part of the sudden rise may be due to that then?—I think the general tendency is to depress, though it may exceptionally tend to inflate it. People are oversold, and they get frightened, as bears do, at a certain point, and rush in to cover, and that rather unduly inflates it.

50,000. You state it as your proposition that when wheat is in excess of the demand, the effect of the speculation is unduly to depress wheat?—Yes.

50,001. Therefore, when the reverse happens, when the demand is perhaps overtaking the supply, one would expect the reverse to occur?—I do not think it would be so as a rule. It is really a question for the people who are uncovered. They get so frightened; they have sold a great deal of wheat as bears, and they generally rush in when things look dangerous, and so rather temporarily inflate the market.

Mr. S. Taylor. 24 May 1895.

50,002. One would have supposed that if there had been large speculations in options by people who had been selling for the future, on the assumption that the quantity was largely in excess of the demand, they must have fallen into a very unfortunate hole, looking at the enormous rise of price which has occurred during the last few weeks and which amounts practically to nearly 40 per cent. being, as you say, from 17*s.* 8*d.* to 25*s.*?—No; the 17*s.* 8*d.* was the average for last October.

50,003. I am taking the lowest price; it is a rise of getting on to 50 per cent. in a few months?—The English average for barley was 20*s.* 6*d.*

50,004. (*Mr. Giffen.*) Would you say there has been a rise of 20 per cent. in about a fortnight?—Within a month there has been a rise of nearly 20 per cent. in wheat.

50,005. (*Chairman.*) Then the price of wheat you may say has now got back to the point from which it fell in the course of last year?—Yes, I should think you may.

50,006. Would you say it has got back to the average of what it was in 1893?—The English average in January 1894 was 26*s.* 3*d.*, and in February 1894 it was 25*s.*; I should think it is approximately that price now.

50,007. Then the fall in price from that period up till recently was abnormal, and apparently not justified by the quality of the wheat?—Of course you must consider that Argentina did not produce so much last year as she was expected to produce, by some two or three million quarters.

Effect of low prices.

50,008. Do you suppose that the low price to which wheat had fallen had already begun to operate in the minds of the producers, and that they were not cultivating so large an area in some parts of the world?—I think the tendency of the low prices is to squeeze out production, because people find it unprofitable. It is not a thing that operates straight away, it must take its course. I think when we get consumption overtaking supply again, it will take a little time to put it right on the other side. A baker bakes a batch of bread too much to-day, but he puts his position right in 24 hours, for he bakes a very short batch to-morrow, and in that way puts his stock right; but with the farmer it is a question of years if he wants to alter his production. I think that naturally—though of course the general range of prices may be and will be lower doubtless in the future because of the increased acreage and the number of countries who supply us now—but we shall have the swing of the pendulum backwards and forwards, as we have done in the past.

Future prices of wheat.

50,009. Is it your view that we may look, on the whole, for a somewhat higher range of prices for wheat in the future?—I cannot tell you when, but I have no doubt that in the course of time we shall see a higher range of prices again.

50,010. (*Mr. Chaplin.*) Do you mean that you expect to see a permanently higher range?—No. When consumption and demand overtake supply, naturally then those who have it to sell will feel very strong, and be more independent about it, and that will naturally produce a higher level of prices for a time.

Commercial gambling

50,011. (*Chairman.*) Apparently, from the accounts in the newspapers, there are violent speculations going on at this moment in America on the subject of wheat. I see in to-day's paper that there is this telegram from Chicago: "Wheat.—At the opening traders pushed, "shoved, and struggled, and soon 80 to 80¼ cents was "bid for July. Trading was enormous, and it is "estimated that probably 200,000,000 bushels were "bought and sold. Every broker loaded out town-"buying orders. There was another bulge to 82 cents "in the afternoon. The market was very nervous "during the last hour, selling from 81 cents to 81¾ "cents; and it ruled very erratic, finally closing with "a decided slump, owing to heavy profit-taking at "78¾ cents"?—Wheat in America serves the purpose of our Stock Exchange; it is dealt in from the millionaire to the boy in the street. They all have their fling in wheat. People who know nothing about it, and who would hardly know wheat from barley—a great many of them—go in for it. It is the fashionable article of speculation there.

50,012. But for every seller there must be a buyer and for every buyer there must be a seller?—Yes, but they may know equally nothing about it.

Digitized by Google

Mr. S. Taylor. 24 May 1895.

50,013. One does not understand why these speculations should in the long run affect the price?—When the people are selling wheat blank and in options, more wheat is apparently in circulation than exists. If I want to buy wheat myself, and if a man sells me 50,000 quarters of wheat, it does not matter to me whether he has them or not; it is stock to me, and as long as the man is good, either to deliver the wheat or to pay me the loss or the difference that I should have to pay in the market for it, it serves my purpose equally well. It is like a man trading on bills; until the bills have to be paid, the man appears to have a good deal more capital in his business than really he has; and so people do not care whether they hold the wheat in the shape of actual produce, or whether they hold it in the shape of contracts, because they are equally protected and profited if there is a rise in the value of it.

50,014. (*Captain Owen Thomas.*) Then if you do not want the wheat, I suppose you would pay him the difference?—Yes; but, as a rule, people in trade would take it; but, of course, if we did not take delivery of it, we should have to pay the difference. If you hold the actual wheat, you have the benefit of it if it goes up, and if you take the delivery of the actual wheat and it goes down, you have to sell it at the depreciation, whatever it may be.

50,015. (*Viscount Cobham.*) You do not take so strong a view on the subject as Mr. Smith did in his evidence, of which you have, no doubt, heard?—I have not read his evidence, but I have heard that he felt strongly that options did depress the market. I feel very strongly that they do depress it in times of abundance; they accentuate the position and are very damaging then.

50,016. (*Mr. Chaplin.*) This system of buying and selling options and futures does very greatly affect the price?—Yes, I think it is very damaging to the price as a rule.

50,017. But it affects it both ways—sometimes it causes the price to rise and at other times to fall?—The rises are exceptional, and it is cases of panic when there is a smart rise. You must recollect that when a man has sold blank he is in a position of unlimited liability; he never knows where he is going to be taken to. He gets frightened. He says, "I can pay "my debts up to the present, but it may go up still "more." He cannot limit it; he has unlimited liability, and he never knows where he may be taken to, so he covers in generally upon unfavourable terms.

50,018. (*Mr. Giffen.*) It is a very dangerous thing to sell blank, is it not?—Very dangerous. I never knew a bear to keep his money yet.

50,019. (*Mr. Chaplin.*) Still, at the present moment, do we understand from you, that you attribute this rise in a great measure to the speculation that has been going on?—I do not think so altogether. I think there is no doubt that it has been accentuated by that speculation, because people have got frightened. The American prospects are not so good as they were, and that has given them a sort of basis to start upon. When people find it is going to be against them a man says, "I owe "so much to-day, and if it goes on like this I shall not "be able to pay my debts," so he closes his account. It is very much like our mining market here has been of late.

50,020. (*Viscount Cobham.*) But that has operated to raise prices, has it not?—Yes, it has; of course the re-action has not come yet.

50,021. (*Mr. Chaplin.*) What would be the course of prices, would you suppose, without this speculation and this buying of options and futures; would it be much steadier?—I think prices would be steadier. Twenty years ago we used to lead in our market; the demand or the excess of supply here led, and America followed us. Then we could tell quite well that if we had good markets here to-morrow American quotations would be dearer in response to ours. Now we follow America, and it is just the other way about.

50,022. (*Viscount Cobham.*) If you think we have got to the bottom of wheat prices it would be rather a pity if this system of speculation were to stop, because in a rising market it tends to enhance prices?—I am not prepared to say that we are now at the bottom, but the price we reached last year must have been the bottom price.

50,023. (*Chairman.*) If your argument is sound then it would seem to follow that speculation is now in favour of this country, or, at all events, of the growers?—I do not think the extreme low price was ever justified. I think the present price is a much more consistent price than the price which existed last year. But the man is not born who can give an opinion as to the course of prices.

Mr. S. Taylor. 24 May 1895.

Importation of wheat from India.

50,024. The import of wheat from India seems to have very largely fallen off in the last few years?—Of course the low price has discouraged the production there, and then the paper currency of the Argentine has beaten India out of the field so far as the advantage that her silver currency gave her goes. Then they have not had good crops, their weather has not been very favourable, and I think the consumption of wheat in India itself has increased somewhat.

Production in Argentina.

50,025. Do you really believe that the increased production in the Argentine Republic is due simply to the depreciation of their paper?—Yes. You see that a sovereign is worth nearly four times as much in their paper that it purports to be. These men who cultivate in the Argentine are Italians, who live on home-grown produce. They do not go in for European luxuries, so they do not feel the difference in the exchange themselves; they live on maize and meat produced in the country, and the money they get for their wheat they spend in the same proportion and in the same ratio. But they feel the difference when they come to import European goods or machinery, then, of course, the difference comes in; but as long as they are living as these people can do on their native produce they do not feel the difference.

50,026. (*Mr. Everett.*) And they get now nearly four times as much money in their currency for their produce as it sells for in English money in England?—Nearly four times as much, you may say, in their currency.

Depreciated currency in Argentina.

50,027. (*Chairman.*) It would seem to follow from your remarks, that the more a county depreciates its currency the better for it?—No. It is almost as if we had discovered the philosopher's stone; the Argentine grower is satisfied with the price he gets, and we are getting it at about half the price we can produce it for.

50,028. Is it a benefit to this country, or to the Argentine?—I think the masses of this country are benefited.

50,029. Who are benefited by it?—The masses, the consumers.

50,030. In this country?—Yes.

Effect.

50,031. Or consumers generally?—Consumers generally. Of course not the merchants, and the producers here, they, of course, are suffering, but the good of the greater number is served by the low price.

50,032. (*Mr. Everett.*) Is not the growth of agriculture in a new country, I mean the increase of its productive ability, an enormous benefit to that country itself?—Yes, it enables it to exist; without it the people there could not exist.

50,033. (*Chairman.*) Then apparently this depreciation of the currency in the Argentine Republic is an immense benefit to the Argentine Republic, inasmuch as it encourages production, and it is a benefit to the rest of the world also inasmuch as it lowers the price of wheat?—To the consuming part of it.

50,034. (*Mr. Everett.*) Not to the rest of the world reckoning producers as part of it?—No, to the masses who consume the produce.

50,035. (*Chairman.*) Therefore it would seem to follow that the more a country depreciates its currency, the better for all the world?—Not for taking a high social position; but these natives, who are content to live on the mere necessaries of life, are enabled to live by it.

50,036. Then have you any suggestions to make in reference to the present depression of agriculture?—I am afraid it is rather beyond me; I think the problem is too deep a one for me to solve.

"Protection" and bounties.

50,037. I presume you think that a protective duty on wheat is out of the question?—I do think so.

50,038. You are not opposed to the idea of a bounty on wheat-growing, I understand?—No, I think a bounty on wheat, if the people would submit to it, would be an advantage.

50,039. And I believe you are favourable to a duty on flour as distinguished from a duty on wheat?—A duty on wheat must be a tax either in the shape of a

Digitized by Google

Mr. S. Taylor. 24 May 1895.

protective duty or of a bounty; it must be a tax on the country in some way but a duty on flour would not be felt.

Price of wheat in America.

50,040. (*Mr. Whitehead.*) Is not this rise of prices in America due to the bad prospects of the American crops?—That, as I mentioned, was really the foundation of it; that gave the first impulse.

50,041. It was caused by bad weather and the attacks of insects, was it not?—Yes. The prospects are not so good there. It is very difficult to assess the reports at their proper value, but I have no doubt that gave the start to the rise in prices which has occurred.

50,042. But you do not know whether there is any actual foundation for it?—I am informed that there is a foundation for the reports.

World's wheat area.

50,043. (*Mr. Giffen.*) Could you tell us whether you have made any calculations as to the increase of the wheat area all over the world, setting off the reductions in some countries, such as this country, against the increases in other parts of the world?—The increase in the production of the world in the last 21 years has been nearly 100 million quarters.

50,044. From 200 millions to 300 million quarters, would you say?—From 220 millions to 318 millions the production of the world in the year 1873 was 220 millions, as against 318 millions in 1894.

50,045. Are these averages?—They are figures which are very dependable; they are not assessments made before the crop; they are the results of the export and the consumption of the country taken after the event.

50,046. But could you say whether that figure for 1873, for instance, was a good average of two or three years about that time or not?—In 1873 it was 220 millions; in 1875, 223 millions; and in 1876, 216 millions; so that you get a fair average there. The 220 millions would be a mean figure.

50,047. At the present time do you think that 318 millions would be about the same sort of average figure?—I should think it would. In 1892 it was 300 millions; in 1893, the world grew 314 millions; and in 1894, the world's growth was 318 millions.

50,048. It is, rather, perhaps, a high figure then?—Yes; I think, perhaps, that the Argentine having turned out a greater deficiency than we expected, these figures are full as compared with the others.

50,049. On the whole your figures seem to me to show rather an extreme increase, and I wish to ask the question for that reason, whether you have compared it with the increase of the wheat consuming population throughout the world?—I have not the figures here of the wheat consumption of the population, but these figures have been very carefully compiled. Of course, they, as all such figures must be, are to be taken as approximate, but I think they are very fairly dependable, as far as they go.

Consumption of wheat.

50,050. You mentioned that you thought there had been some increase in the consumption of wheat in India?—Yes, among the native population, but not to a large extent. I imagine that is one of the causes—to some extent, but, as I say, not to a great extent.

50,051. You could not say that the increase in the growth of wheat generally has been much in excess of the increase of the numbers of the wheat-consuming population of the world?—Yes, it has rather; that is what we have suffered from in the last few years, the growth of wheat has rather outstripped the consumption.

50,052. But only rather outstripped, it has not greatly increased as far as you can conjecture?—I suppose the annual increase of consumption is some three or four million quarters; three million quarters, perhaps, would be the annual rate of increase of consumption, and the increase in production has been in excess of that.

50,053. (*Mr. Chaplin.*) Are you talking of the increase of consumption in the world?—Yes, in the world it would be about three millions in the wheat-consuming countries.

50,054. Three million quarters you mean?—Yes.

50,055. (*Mr. Everett.*) It would be a constantly increasing margin evidently?—Yes, *pro rata*; but that would be merely, roughly speaking, 1 per cent., I think.

50,056. (*Mr. Giffen.*) But you could not say that the increase in the production of wheat has been enormously in excess of the demand?—No, I think there has been a sufficient excess to justify taking liberties with the market, but I do not think the excess has justified the extremely low prices to which we have gone.

Mr. S. Taylor. 24 May 1895.

50,057. Have you found at all that wheat is an article where the consumption per head of the wheat-consuming countries does not increase very much; and does that not affect the question of prices?—I should think the consumption per head in this country is rather less than in other countries, because our people earning a better wage are eating more meat and other things.

50,058. Precisely, but does that not affect other countries to some extent as well?—Yes; to some extent, but it would not have the same effect in all European countries.

50,059. All that would have an effect on the price, and that is a point we must consider?—It is a point.

50,060. As well as the mere increase of the production of wheat?—Yes.

50,061. (*Mr. Everett.*) Would there not also be a margin constantly of people who become consumers of wheat, but who had hitherto been consumers of rye, and such things?—Yes, that has happened in Germany. I think the deficient rye crop in 1891 in Germany made people eat more wheat, and I do not think they have gone back to rye.

50,062. (*Mr. Giffen.*) The area under rye, I believe, has not been increased of late years?—No, I think the tendency has been to go from rye to wheat. There was a great dearth of rye in 1891, and a great many people in Germany then adopted wheat bread instead of rye bread, and they have not gone back to rye to any large extent.

50,063. Is there not a tendency in some countries, where the scale of living has been rather low, to take to the consumption of wheat under those circumstances?—Yes, I should think that might perhaps compensate for the countries where they have been earning better wages, and where there is a higher state of civilisation, and where the wheat consumption has decreased; I think perhaps you might put the one against the other pretty much.

50,064. Is there any other country, besides Germany, which you could state distinctly as having increased its consumption of wheat?—No, not to my knowledge. I have some figures here which are very interesting about the quantity of bread consumed in different countries. It varies tremendously, according to the country. This is taken from a Swiss paper, which appeared some time ago. In France, the average consumption of bread stuffs, or flour, or wheat in some shape or other, is about 705 lbs. per head of population. Of course, France is a regular bread-eating country, and they live on farinaceous food very much. In Switzerland, the average consumption of bread stuffs is 405 lbs. per head; in Spain, it is 418 lbs. per head; in Belgium, 378 lbs. per head; in Hungary, 361 lbs. per head; in England, it is 352 lbs. per head, which is only about half the consumption per head of bread stuffs as compared with France.

50,065. (*Mr. Everett.*) That is very remarkable?—It is very speculative.

50,066. (*Mr. Giffen.*) Did you get the consumption in the United States?—That is about the same as in our own country; it is 357 lbs. per head. In Italy it is 310 lbs.; in Holland, 283 lbs.; in Austria, 187 lbs.; in Portugal, 176 lbs.; in Denmark, 165 lbs.; in Norway and Sweden, where they eat black bread, 66 lbs.; in Russia, where they eat black bread again, 99 lbs.; and in Germany, 143 lbs.

50,067. Are there not some of these countries who are large consumers of potatoes as well as black bread?—Yes, and that may affect it to some extent.

50,068. You are not aware whether there has been a large increase in the consumption of potatoes, in Russia, for instance?—I do not know how that has affected it. Of course, these figures can only be very approximate; still they are interesting, as showing in round figures what the effect is.

Bounties

50,069. With regard to your suggestion that the position of wheat growers in this country might be improved by a bounty on the production of wheat in this country, do you attach much importance to that as a practical suggestion?—The advantage to the nation of encouraging such an industry as agriculture would

Digitized by Google

Mr. S. Taylor. 24 May 1895.

justify its consideration, only I think the difficulty is that people would feel that the benefit would go so largely to the landowner.

50,070. Might not the effect be to eventually increase the evil from which we are suffering, namely, that of an excess of production of wheat over the demand for it?—I do not think that, because the whole possibility of our growth here is limited, you see.

50,071. Suppose you add a few million quarters, say, 10 million quarters, to the 318 millions that are now produced throughout the world, would that not have a very great effect upon the price?—Yes, but if we get the industry here, or rather if we retain the industry, it would, of course, be an advantage. I do not say I can recommend it, but I think it is a suggestion which is worth considering, because there is no doubt at present agriculture is almost squeezed out.

50,072. Still, you have not followed out what the consequences might be of a bounty of that kind?—It is a tax upon somebody, and if the Imperial taxpayer will bear it, I think perhaps the country can afford it; but I do not think the masses will bear it.

50,073. I am rather looking at it from the point of view that it would not do any good so far as the agriculturists in this country are concerned, because it would tend to bring about an excess of production, and then the price would go down again to pretty much what it is now?—I think it would rather tend to discourage agriculture in other countries than in our own to some extent.

50,074. But other countries might take to the same expedient and give bounties also in a similar measure?—Of course anything which reduces prices is good for the masses. It is only a question whether we, as taxpayers here, can afford to say we are willing to pay a tax for the benefit of this particular industry. The difficulty that I have mentioned is that the feeling would be that it would go largely in the landowners' pocket; that is where I think the difficulty would come in.

50,075. You are aware, I suppose, that we had bounties upon the export of wheat in this country during the last century, I think?—Yes.

50,076. And that the results were not altogether satisfactory?—I do not know what the effect of that was; I am not posted up in it.

50,077. You have not gone into the history of that?—No. I have not gone as far as that.

Commercial gambling.

50,078. How much of the fall in the price of wheat would you attribute to the system of options; how far did the accentuation go that you speak of?—I do not think it is possible to say how much; one can only speak generally; I think it did accentuate it.

50,079. It would not be what Mr. Smith told us, namely, that the price of wheat was 24*s*., whereas but for the system of options it would be 40*s*.?—I do not think he is capable of assessing what the difference would be. I think he can tell the direction in which it would affect it, but I do not think he can assess the amount at all.

50,080. You do not believe in anything of that kind?—I do not think that would account for it altogether, but I do think it does have an effect. I say that when there is an excess of supply it makes that excess appear still greater than it is. You can tell that from the fact that when we have had a really legitimate extra demand and there is a better feeling in this consumptive country, America has practically jumped upon us, instead of becoming dearer to-morrow or the next day, as it used to do when we led the way. When there is a little rise people think it is a good time to sell options; when there has been a little inflation they sell, and so put a lot of paper wheat on the market, which has the effect, as I say, of taking the sentiment out of us.

50,081. Still, I think, you have not gone minutely into the question, theoretically as to how far that effect would result from the system of options; you speak of paper wheat, for instance?—Paper wheat is option; I mean that when I say paper wheat.

50,082. Is paper wheat on the market if somebody else has bought it—if there is a purchase to set off against the wheat that has been sold?—People are merely backing their opinion; they think it is a safe thing to sell it, but the wheat does not exist at all.

50,083. Somebody else has bought it, and, so far, has taken it off the market?—If you have competed yourself as a man of capital with a man who is trading on bills, for a long time, till this man gets to the end of his tether, you suffer very much, because he is working on a system of credit, and you are working on actual money.

Mr. S. Taylor. 24 May 1895.

50,084. That applies to every business, and is not a thing special to this system of options?—I think the man who is trading on bills finds that it gives him an appearance of having capital which he has not; and so those men who sell wheat in options have the credit of having so much wheat which they do not possess. I think it is undoubted myself that the tendency of this system is to depress the market.

50,085. Would it have made the price of wheat this last few months, for instance, 2*s*. a quarter less than it would otherwise have been?—It is very difficult to estimate; I should think it would be fully that amount; but I think it might be easily more than that.

50,086. But it would not be a large amount, would it?—It is so difficult to say; I do not think anyone can assess it. You can only assess the direction, I think; you can only see the direction in which it effects it; it is an unbounded quantity, I think.

50,087. Is not the whole idea as to whether it causes any depression at all or not, one of mere speculation, and one on which you have very few data to go upon?—I know from the effects on the market that the options do depress our legitimate consuming market. You see all rises are sentimental to some extent. They are the effect of opinion; it is not the fact so much as opinions which govern it; and if there are people who are willing to back their opinion by selling a lot of wheat forward, and take the risk of it, it has a depressing effect on the market generally.

50,088. If people at the same time are backing the opposite opinion, does not the one balance the other?—Yes, but I do not think it obtains to the same extent.

50,089. But you cannot explain to us why it is the one opinion overpowers the other, so that there is not a complete set-off in the balance?—I say when there is the knowledge of there being an excess of supply of wheat in the world, it makes people who are inclined to take a bear view, very venturesome indeed in the risks they run.

50,090. But somebody of the contrary opinion takes the opposite view?—When you get to higher prices and when there is scarcity, then, of course, they dare not do it; but I say when there is an excess it makes the depression worse. When there is a knowledge that wheat is in a few hands and actual wheat is short, they dare not take the liberties with the market which they do at other times. The option sellers are very much like butterflies, they come out when the sun is shining, when everything looks as if it was going on for ever, and there is never going to be scarcity again, but they disappear whenever there is any real scarcity; they dare not face it; in fact, at the very time they ought to come out and to sell with advantage to themselves, they dare not do it.

50,091. Have you compared these markets with the Stock Exchange markets, for instance, where the opinion prevails, that speculation rather tends to keep up the prices, and to make them steadier than they otherwise would be?—I do not know what the effect would be on the Stock Exchange. I feel pretty certain from very long experience that the effect of the option market has been to depress it. We might easily have got a rise in the last few years legitimately, but for the bears or option sellers who have come out, and put these immense quantities of wheat on the market. As the Chairman said just now, 200 million bushels of wheat have been sold in one day, and that wheat does not exist.

50,092. That was not in one day?—That wheat does not exist; that is in excess of the actual wheat existing in America at this time of the year.

50,093. This is a case where the speculative buyer has rather beaten the other man?—Yes, he has just now, and the man is suffering, and these men have become nervous.

50,094. The puzzle to outsiders like myself is, how it is that the speculative seller can overcome the other when the other man has money, and is able to demand delivery if the circumstances of supply and demand should establish a better price than what the option

Digitized by Google

Mr. S. Taylor. 24 May 1895.

seller is getting?—When there is real scarcity, that comes in; but as long as there is excess, as there has been in the last few years, it does not.

50,095. Would that excess not have operated in any case, whether you had speculation or not?—Not to the same extent, I think.

50,096. Who would have held the excess?—I think growers and traders would have been content to hold it; the quantity was bearable; the excess was of a compassable quantity.

50,097. But somebody must have held it?—Yes, a good many of us in the trade have been content to hold a great deal of wheat during the last few years.

50,098. Have you not done so?—I have done so myself, but then, of course, these people, over and above what we have held, have put a lot more wheat into circulation which does not exist at all.

50,099. It seems to me, and I speak from some acquaintance with the opinion of the Stock Exchange to the same effect, that all these speculative sales would rather tend to raise the price than to lower it?—You must recollect that stocks are of a much more limited character. They can estimate the exact quantity there is of all the stocks and shares, but wheat rather comes into a different category; it is all the world's production that we have to deal with.

50,100. Still if the surplus is a kind of manageable quantity, apart from the speculation, it would have been held by different people, and prices would not have gone so low?—No.

50,101. Would not the effect of these speculative sales to people who go into the market and buy what they knew did not exist, be to send up the price?—No, because you cannot get to the end; they might sell an unlimited quantity; as long as the bears are willing to sell it is an unlimited quantity.

50,102. If you go into the market and offer money for it and take the wheat and lock up what they pretend to sell, you would put them into a corner at once?—You cannot. The quantities they deal in are for future delivery, and as soon as they are in excess I do not think it is practicable to corner them in any way. It has been tried over and over again, but wheat has always been found too large an article to corner in that way.

50,103. (*Mr. Clay.*) Regarding this question of options and futures which has been brought very prominently before this Commission, have you any remedies to suggest in order to stop this excess of gambling?—I do not think there is any remedy which would meet it entirely, because if men are disposed to sell what they have not got, you cannot ascertain whether a man has it or not. If I think well to sell 100,000 sacks of flour, no one has a right to ask me whether I have them in my possession or not; it is a matter of my own business. I think you can hardly draw the line between this business which is so purely speculative and that which may be legitimate. It has been going on to an extent for a long time. To a limited extent the Greeks used to do that up to 30 years ago; they used to sell cargoes of wheat, and take their chance of buying them in Russia afterwards; but then of course that was to a limited amount. I do not know how you are to go behind a man's private business and say whether he shall sell so many million bushels of wheat or whether he shall not.

50,104. Mr. Smith brought very prominently before us, that it really damaged the wheat-grower in the agricultural parts of the country by bearing down the price of wheat; and you too say it has a deteriorating effect upon the price of wheat?—I think it has myself.

50,105. Is it legitimate to have that sort of gambling in the trade?—The question is how to prevent it; I do not think you can do so.

50,106. That is the question I am asking you, have you no remedy?—I do not think you can prevent it.

50,107. (*Chairman.*) Is there much of this speculation in England, or is it mainly in America?—In Liverpool it is done largely, but in London it is not done so much, though, of course, London people buy it in American or Liverpool markets. There is an option market, but it has not succeeded very well because they do not know how to adopt any particular standard here, because we have such a varied supply in London as compared with other places. In Liverpool they make it either red winter wheat or Californian wheat; which are the two great articles they import there and they always have a large enough quantity in store, or generally have, to speculate upon, we have not any particular class of wheat here or any particular grade, which we can sell in sufficient quantity to enable people to form a market here with success.

Mr. S. Taylor. 24 May 1895.

50,108. In Liverpool is there a large amount of dealing in this kind of purchases and sales with regard to the future?—Yes.

50,109. And not represented by any actual stock?—Yes, but nothing like there is in America. It is very limited in Liverpool.

50,110. Then nothing that could be done by the law in this country would very much affect the matter?—I do not think it is possible at all to do anything in this country with it.

50,111. (*Mr. Clay.*) Mr. Smith said that all the old substantial wheat dealers and wheat agents in Liverpool had been nearly killed out in a sense?—Some of us who have had long experience never thought that such prices as we have had were possible. We were brought up in the idea that 40*s.* was the bottom price of wheat, and we have paid very dearly for our education.

50,112. Gambling in options for wheat has not taken root in the London market, you say?—Not now, they have tried it but it has not been a success here at all; they have not been able to work it, and it is not worth speaking of at all here.

Price of wheat

50,113. You referred to the price of English wheat falling to 17*s.* 8*d.* a quarter, I think?—Yes.

50,114. What month was that in last year?—That was in October of last year.

50,115. That was English wheat then of the crop of 1894?—Yes, one week it was down to 17*s.* 6*d.*; 17*s.* 8*d.* was the monthly average, but, as I say, it touched 17*s.* 6*d.* in one particular week.

50,116. The Chairman put a question to you as to the condition of the wheat and as to its being of a bad quality; had that anything to do with the lowering of the price?—No, last year's crop was not so bad; it was not of a first rate quality, but it was not so bad as to justify us in taking it as accounting for the lowering of price.

50,117. The condition of the English wheat then did not much deteriorate the price?—To a very small extent that would come into account for the low price.

50,118. You say now that the English wheat has gone up 7*s.* a quarter, is there not always a general rise from the back-end of the year to the good spring weather, bringing the wheat into better condition?—I do not think the rise in the quality has so much to do with the rise in the price; that has a very small influence on the rise in the market.

Cause of fall in price of wheat.

50,119. Do you consider that the fine condition of wheat from the Argentine Republic and of No. 1 Dakota has deteriorated or decreased the price of our English wheat?—Yes, it has; because our English wheat has so much more moisture, and roller milling having been introduced the foreign, dryer wheat, shows better results than English wheat does.

50,120. The Argentine Republic wheat and Dakota No. 1 and No. 2 are very superior wheats for flour making and baking purposes, are they not?—In the matter of gluten the Argentine is not a strong wheat, but the American wheats from Dakota and Minnesota are very strong and there is much more gluten in them.

50,121. The Dakota wheat is the finest wheat in the market, is it not?—Yes, the wheat from the north-west States.

50,122. That has had an influence on the English wheats?—Yes, relatively; because it has been worth more to the English miller for mixing with English wheat.

50,123. Have you any idea what proportion of the soft English wheat is now put in with the foreign wheat to make flour, has it not very much decreased?—In places like Liverpool and London the proportion of English wheat that is now being used is infinitesimal.

50,124. Is it not somewhere about 25 per cent. of the English wheat that is used with the foreign wheat?—That is so, taking the whole country through. In ports, such as London and Liverpool, the per-centage is lower; there would not be 5 per cent. of English wheat used in London as compared with the foreign wheat.

Digitized by Google

Mr. S. Taylor. 24 May 1895.

50,125. That is very much against the English farmer in selling his wheat, is it not?—The growth of wheat in the English counties has not been much more than the provinces where it is grown have been able to consume themselves, in the principal towns; and the ports where the foreign wheats come in have been able to do much better by using the foreign wheat largely, rather than having to pay the carriage of English wheat up the country to those points.

50,126. I understand—perhaps you may corrobrate it—from millers and people who are dealing in it, that about 75 per cent. or 80 per cent. of foreign wheat is used to 25 per cent. of our English wheat?—If you take our consumption roughly as 28 millions and recollect that our crop is only 7 millions, you have it at once that it is 25 per cent. only.

50,127. That is very much against the English wheat grower, is it not?—Yes.

Foreign wheat supply.

50,128. (*Mr. Chaplin.*) What did you say were our chief sources of supply for foreign wheat?—The United States, of all countries, is the largest source.

50,129. And next?—Russia.

50,130. And then?—Of course, that varies very much according to the year; I should think India would be our next, but India has not given us so much these last two or three years as Argentina has done.

50,131. India is a very great wheat-producing country, is it not?—Yes, it is very great; but not in proportion to its size.

50,132. Where does it rank among the wheat-producing countries of the world, is it third?—No, it would be fourth; France would be third.

50,133. (*Mr. Everett.*) There are supposed to be 32 million acres of wheat in India, or something like that?—The consumption last year was 32 million quarters, and I do not suppose they grow more than 8 or 10 bushels to the acre.

50,134. (*Mr. Chaplin.*) Latterly, I understand, that Argentina has come very much to the front as a wheat-producing country?—Yes.

50,135. What proportion of our foreign supply do we get at present from Argentina?—I should think that last year we got nearly 20 per cent.—17 or 18 per cent., perhaps.

Wheat production in Argentina.

50,136. The capacity of Argentina for wheat production is very great, is it not?—It is almost unlimited.

50,137. And it is increasing very rapidly?—Yes.

50,138. (*Chairman.*) Did you say 17 per cent.?—Of our imports I should think it is.

50,139. I think that is an over-statement taking the figures for 1893?—I am speaking of the last year; I have not the figures exactly; in 1893 it would be less.

50,140. (*Mr. Chaplin.*) You are speaking really of its present position?—Yes.

50,141. And you say that its capacity for production and therefore, I suppose, for export, as regards the future, is practically unlimited?—Yes.

50,142. Do you anticipate from your knowledge of the wheat trade, and from what you have learned about Argentina that that capacity is likely to be developed?—Yes, and would be very much assisted by any rise in price.

Consumption of wheat.

50,143. Now you told Mr. Giffen, I think, in reply to him, what the increase in production of the world's crop was between 1873 and 1893, did you not?—Yes.

50,144. Can you also tell us what was the increase of population during that time?—No, I have not those figures.

50,145. Have you considered them?—I could not speak at all on that. I know that the increased consumption is about 1 per cent. per annum.

50,146. You told us that three million quarters of wheat every year was what you estimated as the increase of consumption?—Yes.

50,147. How do you estimate this if you do not know what the increase of the population of the world is?—I only know that as a figure, but I could not give you the population of the whole of the consuming countries of the world. I think Mr. Giffen would accept that 1 per cent. as being about right.

50,148. (*Mr. Giffen.*) That is for this country, I believe, but is there not a difficulty in getting any statistics of the wheat-consuming population, because many countries include people who do not consume wheat?—Yes; you can only do it in very round approximate figures indeed.

Mr. S. Taylor. 24 May 1895.

50,149. (*Mr. Chaplin.*) What I want to arrive at is this: You have told us that there is an increase of production over consumption; and I want to ascertain upon what figures or facts you base that statement. I ask you if you are able to tell us what the increase of population has been, and you say that you cannot do it?—I have seen the figures, and I have drawn my conclusion from figures which I have had before me; I have not got the figures here.

Production of wheat.

50,150. What do you estimate the increase of production to be—how many million quarters per annum?—Of course it has varied very much. I will try back from 1894. In 1894 the estimate is 318,000,000; in 1893, 314,000,000; in 1892, 300,000,000; in 1891, 297,000,000; in 1890, 282,000,000; in 1889, 267,000,000; in 1888, 278,000,000; in 1887, 286,000,000; in 1886, 270,000,000; and in 1885, 260,000,000.

50,151. Of course the production according to those figures varies very considerably?—Yes, as the crops are better or worse.

50,152. However, it comes to this: I think that when you tell us the increase of production as estimated by you to exceed the increase of consumption, you do not base that upon any figures as to population which you are able to put before us now?—I am not prepared with them here, but I can tell you that is the conclusion, and I think it is an accepted fact, and Mr. Giffen, who has figures more at his fingers' end than myself would, I think, confirm that.

50,153. (*Mr. Giffen.*) My difficulty is to find the exact figures of the wheat-consuming populations?—Yes, I understand.

Wheat production in Argentina.

50,154. (*Mr. Chaplin.*) Now to go back to the question of the Argentine for the moment; capacity in the future for wheat-production will, you think, be very great indeed, and you anticipate that it will be greatly developed?—Of course with a continuance of the low prices it would not go on so rapidly as if we got an increased price. I think this late increase will help it very much.

50,155. The continuance of the low prices will be a discouragement to production everywhere?—Yes.

50,156. What country can sell wheat at the lowest price at the present time with a profit?—Argentina.

59,157. Then Argentina, if the wheat production of the world is very largely developed will practically be in a position to control and rule the market price?—I should think she will have a great influence—a larger influence than any other.

50,158. I think I understood you to say that the price at which Argentina can afford to sell depends really on the premium on gold?—Yes, very much indeed.

50,159. More than on anything?—More than on anything else.

50,160. That is to say, if the premium on gold is high they can afford to take a lower price?—A lower price relatively.

50,161. And if the premium on gold falls, then they require to have a higher price?—Yes.

Depreciated currency in Argentina.

50,162. Can you form any opinion as to the lowest price at which Argentina can afford to sell wheat now?—I should think we have found the lowest level. The wheat growers have been able to pay their way, but I should not think they have done much more than that.

50,163. When you say, "the lowest price" do you mean the 17*s.* 6*d.* a quarter of which you have told us?—It was on the basis of that. I have bought Argentina wheat here myself at 18*s.* a quarter, including freight and all the expenses attaching to it.

50,164. You have not the slightest doubt as to the effect of a depreciated currency in Argentina enabling them to sell wheat at a much lower price than they otherwise would be able to do?—No, none whatever, because the price of wheat fluctuates from day to day to a great extent with the fluctuations in gold.

50,165. If, for instance, the paper currency was at a par with gold what price would they require to get here to enable them to sell at a profit?—It would put them on a level with the United States and other countries where the premium did not operate.

Digitized by Google

Mr. S. Taylor. 24 May 1895.

50,166. If the currency ceased to be depreciated and was brought back to its original par value with gold, it would necessitate a very considerable rise in price?—Yes, to pay them to grow wheat at all.

50,167. Then, if I understand you aright, what is really the cause which lies at the root of the extremely low price of wheat which we have had to contend with recently is the depreciated currency in Argentina?—Yes, I may say so.

50,168. And the future price, then, really depends upon what the premium on gold may or may not be?—Yes, very largely indeed.

Currency in Russia and India.

50,169. Now as to the other countries which you have mentioned; you have mentioned Russia and India as, I think, being the second and third large exporting countries to us?—Yes.

50,170. Does the same thing hold good in a modified degree with regard to their currency?—Yes, because the paper rouble in Russia gives a person there an advantage to that extent in the same way as it does in Argentina, although, of course, not to the same extent.

50,171. It has not depreciated so much as to the other?—No, not at all.

50,172. But so far as it has depreciated —— ?—The operation is the same.

50,173. It enables them to sell more cheaply?—Yes, in proportion.

50,174. The same thing holds good, I presume, in regard to India?—Yes.

50,175. It would hold the same, too, with regard to India and her silver depreciation?—Yes, it has an effect there because India is a long way off and the carriage is very heavy, and but for the depreciation of silver she could not supply us at the price she does.

50,176. Did I understand you to say just now that the extreme depreciation of the currency in Argentina was considerably greater than in India?—Yes.

50,177. And it had injured India in competition with Argentina very much?—Yes, it has.

Currency in India and Argentina compared.

50,178. Is that how you explain the lesser amount of exports from India?—It is due to some extent to the failure of the crops, but then, also, the low prices discouraged the increased production which would have occurred, because India can grow us any amount if we give her price enough for it.

50,179. The capacity of India, you think, is enormous?—Yes, at a price.

50,180. It might be developed immensely?—Immensely at a price.

50,181. (*Mr. Giffen.*) Does that price depend upon the currency?—Of course that is one of the things our price here depends upon. Even she has now almost found her limit, because with all the advantage she has in the low price of the silver exchange she has not increased her production in the last few years.

50,182. (*Mr. Chaplin.*) She is cut out now by Argentina?—Yes.

50,183. Who gains a greater advantage from the exchange even than she does?—Yes.

50,184. Is there a large visible supply of wheat, as it is called, in sight at the present time?—Yes, but not so much as there was last year.

50,185. Is it about the average of what we have had during recent years?—It is not quite so large, but still there is enough in the world for our requirements.

50,186. There is more than is required for consumption?—Yes, I should think there is.

Price of wheat.

50,187. What do you say are the main causes for this recent rise in the price of wheat?—I think the first cause was the bad reports of American crops which gave the bulls a certain justification for buying largely.

Commercial gambling.

50,188. So that really, this rise being so sudden, looks as if it was owing very much indeed to this system of speculation?—Yes, I think that is one reason why it has gone up so much all at once. No doubt the people who have been uncovered have helped to accentuate the rise, because they have become frightened.

50,189. What I mean is this, that the information as to the crops in America, I suppose, has not been received within the last few days?—Within the last few weeks the reports of failures in different districts have been more current.

Mr. S. Taylor. 24 May 1895

50,190. Within the last few weeks?—Yes, they have acquired a certain amount of force ——

50,191. Within the last few weeks?—Yes, within the last week, or I may say, the last two or three weeks.

50,192. That has culminated in that time?—But it is not sufficient to account for the rise of itself, except that people have rather woke up to the fact of the prices being so low, and have followed it up.

50,193. What I am rather trying to elicit from you for the information of the Commission is this, whether in your opinion, the greater part of the sudden rise is due to this system of speculation or not?—I think it has been more due to the consumers also having taken alarm at seeing the rise has been persisted in from day to day, I speak myself as being in touch with consumers and with our consuming public; the consumers, that is, the traders, have come in to buy this last week or two, when they would not look at wheat a little while ago.

50,194. You mean there has been a little panic as to the possibility of the supply falling off?—Yes. Naturally, when there has been a certain excitement, it has affected all people, more or less. These cases and times, such as we have had the last week or two, are very exceptional; we have had nothing of the kind for years before.

Future price of wheat.

50,195. May I ask if you have formed any opinion as to what the general tendency of the price of wheat is likely to be in the future; do you think we must look forward to a gradual fall, or may we look forward to a gradual rise, or is the price likely to be stationary?—It is very hard to forecast. I think we must look forward to a much lower general level, because any rise in price has two effects—it, of course, increases the production of wheat in countries near at hand, and it also brings wheat from districts farther off, which can then pay the carriage, but which were closed at the low price.

50,196. (*Chairman.*) You mean low as compared with what price?—The cost of production.

50,197. I think you stated that you thought we might look forward to a lower range of price?—To a lower average level of price; but not to a lower level than to-day's price. Whereas, I suppose, 50*s.* might have been taken as an average price a generation ago, I think we must look forward, with the lower cost of freights and the increased production of the world, to a lower level.

50,198. (*Mr. Chaplain.*) You mean that if you were to take the average, for instance, of the last five years, you would be of opinion that we must look forward to a level somewhat lower than that in the future?—No, I do not think I would take the last five years, because the Russian prohibition was within those five years, and that took us up to very old prices for the time being. I think the prices for the last three years would be below the average price that we may expect.

50,199. The last three years would be lower?—Yes, I think the prices we have obtained the last three years would be below the average of a long series of years.

50,200. (*Chairman.*) Then you would rather look forward to a rise in prices as compared with the price of the last three years?—I think the tendency is rather to rise. I think production has been very much discouraged in many of the old countries, in India, and in the United States too. A rise in price will take a little time to have the effect of increasing the production again; they cannot do it at short notice.

Depreciated currency Argentina.

50,201. (*Mr. Chaplin.*) If what you tell us is the case about Argentina, as to the unlimited capacity that she has for the production and the export of wheat, would that argument still hold good?—I think so; this price with this gold premium can go on for ever. That is where her advantages come in, and one has to take all causes together in one's mind.

50,202. Do you anticipate, in the course of years, that the premium on gold will be less than it is now?—I should think it naturally would as the country consolidates.

50,203. Assuming it remains at its present average level, then Argentina would continue to sell as low as ever?—I think so. Of course, she had a very large crop last year, and I think she has got down to a point at which, though she has been able to do it, she has not profited much by sending us wheat.

Digitized by Google

Mr. S. Taylor. 24 May 1895.

Dependence of Great Britain on foreign wheat.

50,204. I understand you regard with some apprehension the future of this country, as we are so entirely dependent upon foreign countries for our supply of wheat?—Yes, I think it is a very serious question for statesmen.

50,205. And you have made some proposals as to remedies in order to guard against this?—Yes.

50,206. Do you think, as far as you can judge, that that dependence is likely to increase or to become less?—I think it is likely to increase, because the population here is increasing, and the growth of wheat has a tendency to diminish at the range of prices which have existed lately.

50,207. Do you think that year by year we are likely to become more and more dependent upon foreign countries for the staple of our food?—I think so at the low price which has obtained.

50,208. That is, as far as you can judge from your experience of the trade?—Yes.

Bounties.

50,209. Do you propose as one of the remedies for that that we should have a bounty upon wheat growing?—I am not prepared to recommend it, but I suggest that it is a thing which is worth being entertained, only the difficulty occurs to one as to whether the farmer or the landlord will benefit if the bounty upon the growth of wheat exists—whether the landlord will not get better rents than he has done. I am afraid the landlord has no sympathisers outside his own class.

50,210. Then, although it might be of general advantage to the country, do I understand you to say that you would not be in favour of it because at the same time it might help the landlord?—I do not say that, but I am afraid that is an objection. I do not say it from my own point of view; it is only that I think that is an objection which would be raised by the taxpayers. I should be quite prepared myself to support it.

50,211. It does not prevent you suggesting it?—No, and I should be prepared to support it myself.

National granaries.

50,212. Then you propose national granaries; what is the object of that?—We are really within such a limited distance of starvation if anything happened through the action of privateers. It is just such a question as whether it is worth a man's while to insure his house. A man may say, "If I have a fire I can "bear it and I will pay my loss, but I will not pay the "insurance." Of course insurances in some cases are very heavy, and I should not perhaps take the instance of a man insuring his house, because there the insurance is so ridiculously small. But in businesses like mine, where we pay 4 per cent. on our insurance for our mills, because it is a hazardous risk, the amount then becomes of importance.

50,213. How many days' or weeks' consumption have we in the country at the present time on an average?—I should think six weeks, perhaps.

50,214. As much as six weeks?—Not so much at the end of the harvest year.

50,215. (*Mr. Giffen.*) Have you gone into the question?—Only roughly. I should think we have only four weeks very often at the end of the harvest.

50,216. (*Mr. Chaplin.*) What used to be the case?—We used to be able to go on for months; when our growth was our own we could go on for several months.

50,217. What is it that you propose—that there should be national granaries in which to store the wheat?—I suggest that if it is thought worth while to go in for insurance that is the only way in which we can protect ourselves. With the number of ships that we have bringing wheat here it would be impossible to protect them at sea, and a general war would drive them off the seas. The vessels which bring our wheat here can be numbered by hundreds and hundreds.

50,218. What sort of granaries do you suggest—how much wheat should they hold or keep?—I think three or four months' supply might be just the difference between our being quickly doubled up in case of a general war or not.

50,219. And you make this as a practical suggestion on a subject which you regard as serious?—Yes, of course, as long as war does not come, as long as you do not have a fire in your house, you are as well off as the man who does insure.

50,220. (*Mr. Giffen.*) But you have made no calculation, I understand, of what the supply of wheat in this country at a given time is, such as the War Office and the Admiralty have made, and have stated in debate in Parliament?—I have not worked it out closely; I know it is only a question of a very few figures, but I could not tell you now.

Mr. S. Taylor. 24 May 1895.

50,221. Have you followed the debates in Parliament?—To some extent, and I have seen the calculations which I know at times have been within four weeks at the end of harvest.

50,222. Are there not very different statements made by the responsible military and naval authorities?—I am not prepared to put any opinion of my own against theirs. I know it is a question of very limited time.

50,223. I think it is rather a pity that we should continue this subject, because you have not studied it?—It is rather outside my business.

50,224. (*Mr. Chaplin.*) You have had a very great experience, and it is a subject of some interest, and I think your opinion is as good as that of many other people. Suppose the granaries established, would they have an effect on the price of wheat?—Whilst you are filling the granaries, it would have a very large effect. Of, course, it could only be done gradually. I am not prepared to recommend it altogether; it is for those who know what the chances of war are, and how great the risk is, to decide. I know myself that if anything interfered with our imports, our position would be of such a frightful character that I think it is worth considering.

50,225. What I wanted to arrive at now is, what would be the effect if it could be done; would it be to raise the price, or would it be to lower it?—It would raise the price to begin with.

50,226. And after it had been carried out?—I suppose it would find its level again. That would be a sort of dead stock which would always exist.

50,227. It would involve the purchase of a great quantity of wheat for the time being?—Yes, I should not suggest that it should be done all at once; it should be done by very slow degrees.

50,228. (*Mr. Gilmour.*) How long would this continue; it would be a very troublesome matter?—I think not.

50,229. These quantities being thrown upon the market would unsteady the market, would they not?—I suppose you would also be buying, and it could not create an excess in that way in the market. If you only sold out from time to time as you were replacing, the effect on the market would be nil after once the supply was secured.

Wheat production of Argentina.

50,230. (*Mr. Dalton.*) I understand you think that there is practically an unlimited power in Argentina to increase its supply of wheat?—Yes.

50,231. Does not its power to increase its supply almost entirely depend upon the increase of Italian immigration into the country?—It would, of course, but I think if there were a demand for labour a supply would follow.

50,232. Has not the immigration fallen off?—I have no figures before me to enable me to answer such a question.

50,233. Does not the depreciation in the paper currency there tend to cause a falling off in the immigration?—I do not see why it should.

50,234. We have heard that a great deal of the immigration there is temporary—that men go over from Italy and work there during the year and return to Italy—and, of course, as they are paid in paper they take back less as the paper currency depreciates?—I should think that the numbers who return are few compared with those who stay and who bring up their families there.

Bounties.

50,235. What amount of bounty do you think would be necessary to have any appreciable effect on the growth of wheat in this country—anything like 10*s.* a quarter?—No, I should think you would not put on anything to that extent.

50,236. Do you think it would have much effect if you put on much less than that?—A pound an acre——

50,237. An acre?—I suppose the bounty would be paid on the area sown with wheat rather than on the wheat itself.

50,238. What would that amount to a quarter—would it be 5*s.* a quarter?—A pound an acre would be about 5*s.* a quarter.

Digitized by Google

Mr. S. Taylor. 24 May 1895.

50,239. Then if you had 10 million quarters of wheat produced you would have to pay 2½ millions a year in bounties?—Yes.

50,240. That would be a clear charge on the taxation of this country?—Yes.

50,241. And I think Mr. Giffen has pointed out it would have the effect of depreciating the price of wheat?—It would be an annual charge, but our iron-clads are an annual charge.

50,242. I do not mean that; I mean it would have the effect of sending the price of wheat down, because you would be increasing the production?—Yes, but if you consider the production of the world you will see that the per-centage of the world's supply would not be large.

Accumulation of wheat.

50,243. Can you say at all what is the amount of the accumulation of the wheat remaining unconsumed in the world at any time—the visible supply?—Yes.

50,244. Are there any means of ascertaining that?—Yes, the figures are published.

50,245. What are they?—I have not those figures with me.

50,246. Does it amount to anything like half a year's production?—No.

50,247. Not in the whole world?—No, not at the end of the season.

50,248. Does it amount to a quarter of a year's production?—No, I should think not at the end of the season.

50,249. Then there is really a very small accumulation?—There is a very small accumulation. We use up year by year within a very small amount.

50,250. Then there is no considerable over-production?—Not at harvest time; of course there is the general fact that the quantity grown has been in excess in the last few years, but taking the rule that would not be so.

50,251. If you have only got a quarter of a year's production as the result of the accumulated over-production for a good many years you cannot say the over-production has been very large?—On a consumption of 300 million quarters if there is a known excess of 10, 15, or 20 millions, the per-centage is not large on the consumption of the whole world, but it is just large enough to create an excess of supply as compared with the demand. You see the per-centage of excess has been very small, and it would last a very short time.

50,252. Has it varied very much from one year to the other?—Yes; in the last three years the production has been in excess of the requirements.

Duty on flour.

50,253. (*Captain Owen Thomas.*) Why do you put a duty on foreign flour?—Because that is a duty which would not be paid by the consumer. A duty on wheat as the raw material must come on the consumer, a duty on flour would merely retain the industry here and keep the competition between the home manufacturers. You may think I am speaking in my own personal interest; I do not wish it in my own personal interest. I am quite satisfied to compete with the foreign miller myself. I think the effect here would be that the consumer would have the flour quite as cheaply as he does now and more consistently rather than have it capriciously. When we get an under-supply we get a very good price, and when we get an over-supply we get a bad price. The consumer here would be served rather than damaged by a duty on flour. If I may, I will just read you an extract from an American paper, which bears upon that, and you will see exactly if you look at it from the reverse side, that is from our point of view, what bearing it has upon us. It is an extract from a milling paper, giving an account of enormous flour mills which are being built at Minneapolis, and it runs as follows:—"We are glad to "chronicle the announcement of such an enterprise, "not only because we are proud of the growth and "progress of the manufacturing industries of the "great north-west, but for the still better reason "that we believe that our entire surplus wheat crop" —this is written from an American point of view— "ought to be exported in the shape of manufactured "flour instead of in its raw state, as the greater pro-"portion of it now is. We hope the day is not far "distant when not a bushel of wheat will be exported "from this country. It is the life and the vitality of "the soil that is exported with the wheat, but which is "saved and returned to it in the refuse product of the "mill turned into food for stock. And this, to say "nothing of the labour furnished to the army of "workmen required to carry on the work growing out "of the operations of the great mills required to turn "the hundreds of millions of bushels of wheat into the "manufactured flour." That is the American point view of the milling, and it is for retaining the manufacture in their own country. As it serves them, evidently it is against our interest in the reverse ratio. If we imported wheat instead of flour we should bring the 30 per cent. of offals at a very small cost here, and they would go rather to reduce the price of food for cattle here, and that would be in favour of reducing the price of meat here, besides maintaining the industries here which are growing so largely in America. I think the first effect of this would be that a number of large mills would grow up on the Thames and the Mersey and the other large rivers here, and so I think that the home production, as far as the consumer is concerned, would be quite as great, and the competition would continue to be as severe as it is between us and the American millers. The difference is that whereas now we get gluts from time to time there would then be a competition where we should all be on the same basis all the year round, which would produce an every-day competition as compared with the intermittent competition which we get now.

Mr. S. Taylor. 24 May 1895.

50,254. (*Mr. Clay.*) This shows that the flour competition in America has perfectly killed our milling trade, and deprived the farmer here of the 30 per cent. more of feeding stuff for his cattle?—Yes, being a miller you may think I speak in my own interests; it is open to that interpretation. But I quite disclaim that because I do not think it would be in my interest. I prefer to compete with the American market rather than to compete with millers in the same position as myself on the same stream and largely equipped. I speak from a national point of view. I think a duty on flour of say 6*d.* or 9*d.* a cwt. would give a very great impulse to milling here, and would be for the good of those who feed cattle here, inasmuch as the offal would come with the wheat.

50,255. And it would benefit the millers here, and the agriculturists would derive a benefit from the cheaper feed for their stock?—I do not think it would benefit the millers here; it would increase their number and increase the industry, but I do not think we as millers should be profited by it at all; I mean those who are existing here and have large mills.

50,256. The farming interest—that is the landlord and the tenant—would benefit?—I think the public interest would be served by it and the farming interest.

50,257. And the feeding properties of the offal would come with the wheat instead of not coming here at all?—Yes.

Importation of flour.

50,258. (*Captain Owen Thomas.*) How much flour do you import—have you any idea?—From America we import about a third of the imports in flour; the portion from the other countries is small.

50,259. What number of men would you say are employed in America to grind for our consumption?—That is a question of thousands not of millions—say 10,000.

Accumulation of wheat.

50,260. (*Mr. Everett.*) In regard to the stocks of wheat, you have known the trade many years, I think?—I have.

50,261. Do you suppose that the buyers of wheat, the millers and the merchants, hold more or less stocks of wheat now from year to year than they used to hold according to your early knowledge of the trade?—I think generally that people have been so discouraged that they hold less. I think the farmers also would hold much less. It used to be a mark of a man's position if he had several stacks of wheat in his farm yard, but now it would be almost regarded as an example of lunacy.

50,262. Why I asked the question was because my experience as a farmer exactly tallies with what you say, and no farmer that I know of thinks of keeping the wheat the year round now. You tell me the trade do not keep it and yet you tell us that the stocks of wheat in the world relative to the demand upon them have been excessive of recent years; my wonder is who holds these stocks—what proof is there that there are such stocks?—People produce wheat in different countries, and they simply hold it because the price

Digitized by Google

Mr. S. Taylor. 24 May 1895.

has been so low, and they have not been able to send it forward; the price has discouraged the sending forward of the stocks.

50,263. Is it not a fact with regard to the growers of wheat that the lower the price the less money it brings them, the more urgent is their necessity to sell because they cannot hold it?—There are other people besides; there are the merchants in the countries; and the financiers in this country. The Elevators in America, for instance, hold the wheat very largely. The price here is not good enough; if they sold they would glut our markets and would drive the price down still lower if they did.

Commercial gambling.

50,264. Do you think there is some quantity held by the Elevators?—Yes, I have no doubt there is; and the fact of there being this option market involves a good deal more being held than there would be if it were not made safe to deal in options.

Wheat area in India.

50,265. In regard to India, are you aware that the United States sent out a Commission there a few years ago to inquire into the increase or the decrease of the acreage of wheat, and that they reported there had been no perceptible increase in the acreage of wheat within man's memory?—I should hardly have thought that, at least the figures of the growth that I have, hardly agree with that. We had no Indian wheat here before about 25 years ago; whatever the growth was it did not come here.

50,266. That is quite true; but it is the fact that their Commission reported that there had been in man's memory no appreciable increase in the acreage of wheat grown in India, and that it had been all consumed in India?—Up to 25 years ago we hardly saw Indian wheat, and we hardly knew of it here as an article of consumption.

Importation of wheat from India.

50,267. The importation of wheat from India to Europe has all grown up then since the differences between the two standards the silver and the gold began to change?—Yes, very much so.

50,268. And since the English Government closed the mint of India in 1893, and so lessened the difference between the rupee and the sovereign, the export from India has fallen off?—Yes, but it is due somewhat to the bad crops as well as to the question of the currency.

Wheat production in Argentina.

50,269. Then in regard to Argentina the great increase in the cultivation of wheat there you have given us as showing itself about 1391?—Yes, in 1891 it was 4,000,000.

50,270. And it has increased hand over hand since then?—Yes.

50,271. Is it not the fact that the depreciation of their paper has in that period been progressing on something like the same scale?—Yes.

50,272. (*Chairman.*) It is not a silver currency there?—No, it is a paper currency.

The currency in Argentina.

50,273. (*Mr. Everett.*) It is not what the standard is, but it is the difference between their standard and our standard that makes the severity of the competition. I have figures here showing that the gold premium in the Argentine in 1888 was only 40, in 1889 it was 88, but in 1890 it had got up to 161, are you aware of that?—I have not those figures before me.

50,274. Are you aware of the facts so as to be able to say whether an ounce of silver will purchase about the same quantity of wheat to-day that it used to do?—In India?

50,275. In any country?—No; I am not prepared to say exactly what the fact is.

50,276. I think silver is about thirty pence an ounce now and it was sixty pence, that is it has fallen about one half?—Yes.

50,277. And wheat has fallen about one half what it used to be?—Wheat has fallen much more than that.

50,278. Even more?—Yes.

The currency.

50,279. Have you considered what would happen if we had free coinage of silver?—No, I am not prepared to express an opinion on that.

50,280. You are aware, I daresay, that what we call a shilling we can buy in the open market for fivepence?—Yes, I am quite aware of that.

50,281. And if we had free coinage we could get 2*s.* where we only get one now?—I am sorry to say I have no sympthya with the alteration in the currency.

Mr. S. Taylor. 24 May 1895.

Fluctuations in price of wheat.

50,282. Have you paid any attention to the great movements in the price of wheat over long periods of time so as to understand what is the real key to the great movements in prices?—No, except in regard to the excess of production over consumption and that has been accentuated, as I have said, by the large speculation which there has been in the option and speculative markets on the basis and with the knowledge of that excess.

50,283. Would that afford any explanation of why the price of wheat increased fourfold shortly after the opening of the mines of Potosi in America in Queen Elizabeth's time?—I am not able to give any evidence of that now.

50,284. When we buy wheat in England practically we barter gold for it?—Yes.

50,285. And anything that happens to gold to affect its value would probably, would it not, have quite as much effect on price as anything that happens to the wheat world?—No, I do not think so. With regard to that, things fluctuate so. Last year when wheat was in excess maize and other things were in a deficiency. I can show you by a chart that I have here that where wheat has gone down other things have not gone down. Price depends upon the excess of supply or the deficiency of supply not upon that to which you are pointing. Here is the chart which shows that wheat has gone down, but there are other things, barley, for instance, which have hardly gone down at all. [*Handing in chart*].

50,286. I notice that the chart shows that on the whole they have all gone down?—They have all gone down somewhat but not at all relatively. If gold had to do with it in the way you suggest they would all have gone down in the same ratio. There are many things which have gone up as compared with gold.

Wheat production of Canada.

50,287. (*Mr. Elton.*) I noticed that in your list of corn-producing countries you say the United States of America; did you omit Canada by accident?—The proportion from Canada is small compared with that of the United States.

50,288. Would you put Canada in the list anyhow?—Yes.

50,289. There used to be a very large export from Manitoba, and so on, did there not?—The production of Canada is only 6,000,000 as against the 62,000,000 produced in the United States of America.

50,290. Does that figure take in all the Red River?—Yes. The production of Canada last year was 6,000,000.

Sheep farming in Argentina.

50,291. About Argentina, I believe that not only have they gone in for corn growing, but that they also have in the last three or four years gone in for sheep farming; do you know that?—Yes, I know that.

50,292. But they have found the weather to be so very unprosperous, that a great many people are giving it up?—I have not followed that.

50,293. Have you heard of it?—I knew that they were producing wheat, but I have not given attention to it.

50,294. I will put it in another way; there are great droughts in Argentina?—Yes.

50,295. Great changes of weather? Their crop is subject to great vicissitudes, there is no doubt about that.

50,296. That puts it shortly; and that has to be taken into account?—Yes.

50,297. I think you have noticed that the labour rose, as the paper fell?—Naturally it would.

50,298. It does as a matter of fact?—Yes.

The currency in Argentina.

50,299. The phenomenon you call our attention to was, that so long as the labourer was only growing, and eating or selling the balance of what he grew, he would not pay much account to the rise in premium?—Not much, it only affects him if all the home produce goes on the same level, it does affect him if there is anything he wants from abroad.

50,300. It only affects a small class of people?—Yes. I suppose there are some things that are affected by gold.

50,301. For instance, the railway fares change continually as the premium advances; do you know that?—I am not sufficiently acquainted with it to be able to say that.

Digitized by Google

Mr. S. Taylor. — 24 May 1895.

50,302. And the price of labour changes?—I should think, naturally, it would.

50,303. And for a time, it may be, the people who sell corn off their own land might not notice these changes?—Not small differences.

Quality of Indian wheat.

50,304. I will not ask you about India, except as to the quality of the Indian wheat. It is of a peculiar quality, is it not—it is hard?—It is harsh and very dry.

50,305. People speak of Indian wheat, but, of course, they ought to speak of the Valley of the Indus; if the United States in their record take the whole of India, the wheat-growing country might be a very small proportion, but if they went to Bengal the wheat-growing country might be of a very large amount?—Yes.

Demand for Indian wheat.

50,306. Is there an unlimited demand for that hard Indian wheat from the Indus?—The demand has been equal to the supply; it is not wheat that we can use entirely by itself.

50,307. The supply has fallen?—Yes.

50,308. Has the demand increased or fallen?—I do not think it has increased. It is wheat that we can do very well without.

50,309. There is no great call for it?—No.

50,310. Except to mix?—Yes, it is in demand for mixing with the soft English wheat in order to dry it.

50,311. But there is not an unlimited demand for the Indian wheat?—No.

Mr. S. Taylor. — 24 May 1895.

Consumption of wheat.

50,312. There is one other point I am going to ask you about but only by way of correction. You mentioned that some countries eat black bread, and you stated that Norway was one of those countries?—Yes.

50,313. I think you will agree with me that as a matter of fact they eat oat bread, not rye bread to a very great extent?—The table I quoted from only gives the consumption of wheat per head, and no doubt the lessened consumption is compensated for by rye or oats.

50,314. You say that they only eat so many pounds of bread?—I was only giving the consumption of wheat per head.

50,315. But you gave us black bread?—I said that those small figures were accounted for by their eating rye bread somewhat largely, but, as I say, these figures only apply to the consumption of wheat.

50,316. Then you will allow me to add "and oat cakes"?—Or anything, whatever it may be. I am not accountable for whatever else they may eat; this table only gives the consumption of wheat.

50,317. It makes a great difference to them; when you mention the small amount of wheat-bread in the northern countries, and say they make it up with black bread you would also take into account the oat meal?—Yes, it all goes to constitute their food.

The witness withdrew.

Lieut.-Col. H. R. Hughes. — Lieut.-Col. HUGH ROBERT HUGHES called and examined.

50,318. (*Chairman.*) You have for many years been engaged in the management of estates in parts of England and Wales, I believe?—Yes.

50,319. And you manage estates altogether to the extent of 150,000 acres?—Yes.

50,320. Part of that being Sir Watkin Williams Wynn's estates in the counties of Denbighshire, Shropshire, Montgomeryshire, and Merionethshire, and other estates belonging to other landowners?—Yes.

50,321. You have also your own property in the counties of Flintshire and Denbighshire?—Yes.

50,322. How long have you managed Sir Watkin Wynn's property?—Eight years.

Depression in Wales.

50,323. In your district has there been agricultural depression since 1879?—It began in 1879, but in the upland districts it was not really felt until about five years after.

50,324. Not until 1884?—No.

50,325. Then, besides, the upland districts did not suffer from the bad seasons of 1879 as the lower lands did?—They did not.

Fluctuations in prices of stock.

50,326. During the 10 years, ending 1880, was the breeding of stock paying a good price?—We were doing very well with stock up to that time. I think the most notable rise after that was about 1889, when things looked far brighter for a time.

50,327. Since 1880 has there been in the main a decline in the value of cattle and sheep?—Yes, in the main.

50,328. But with temporary recoveries of price in the years 1886, 1889, and 1895?—Yes, in those three years, but notably in 1889.

50,329. How long did those recoveries last?—I think we were in less difficulty once for about two years.

50,330. Has there been any recovery in the present year?—There is a very good recovery this summer.

50,331. Could you give us anything to show what the comparative fall and rise has been?—It is rather hard to do that, because the quality of stock varies so much, but I should certainly say from what I hear this season that there is a rise of 2*l.* a head on store cattle.

Bad seasons.

50,332–3. To what had the price fallen as compared with 1880?—In the autumn of 1892 you could hardly call stock quotable. The extraordinarily bad year was 1893, but stock was most unsaleable in 1892.

50,334. That was due to the difficulties of the English farmers, I suppose?—Yes, they could not take them.

50,335. They would not buy?—No.

50,336. (*Mr. Chaplin.*) What was the difficulty in 1892?—1892 was a very bad year, and then that was followed by the bad season of 1893. There seemed to be a general collapse in 1892, and there was no demand for any stock at all. You could hardly get a quotation in the autumn markets in 1892.

Lieut.-Col. H. R. Hughes.

50,337. That was before the drought year?—Yes.

50,338. (*Chairman.*) What was the reason of that?—Bad trade, and a general depression all round. Things were as bad as they could be in 1892.

50,339. Then 1893 was the year of drought in England, and in that year there was little demand for lean stock, I suppose?—Yes.

Prices of stock.

50,340. In 1895 there has been a rise?—Yes, certainly.

50,341. Averaging about 2*l.* a head?—Yes.

50,342. What had been the average fall in price as compared with 1880?—It had gone down, I daresay, from 3*l.* to 3*l.* 10*s.* a head, certainly.

50,343. It went down that much before 1895?—Yes.

50,344. But there has been a recovery to the extent of 2*l.*?—I think about that. At one time farmers could not move their stock at all; there was no demand for it.

Stock breeding in Wales.

50,345. I am now comparing the present year, 1895, with 1880, and, as I understand you, the reduction is about 1*l.* a head; that is, the price went down 3*l.*, but it has recovered to the extent of 2*l.*?—There is no margin, the way stock is selling now between its price and the price of beef; there will be nothing left for the feeder.

50,346. I am now talking about the breeders in Wales?—This year has been the saving of them.

50,347. It is a favourable year for them?—Yes.

50,348. (*Captain Owen Thomas.*) They have a very limited stock of store cattle this year, have they not?—There are but few this year. There is no doubt the stock has very much gone down in the country.

50,349. (*Mr. Chaplin.*) In numbers, you mean?—Yes.

Abatements of rent.

50,350. (*Chairman.*) Then during the same period, have there been permanent reductions, and also abatements from time to time made by the landlords?—There has been a great deal of rent returned from time to time. I think there was more returned about 1892 than at any other time.

50,351. That was in the form of temporary abatements, I suppose?—Quite so.

Reduction of rent.

50,352. Has there been much in the direction of permanent reductions?—I think there has been a great deal, unquestionably.

Digitized by Google

Lieut.-Col. H. R. Hughes.
24 May 1895.

50,353. On Sir Watkin's estate, has there been much permanent reduction?—Yes, especially in Merionethshire, where it was necessary. I made a complete valuation of the whole estate, field by field, in Merionethshire. There was a very large reduction there.

50,354. What has the reduction been?—That, roughly, brought the rental in Merionethshire down from 5,500*l.* to 5,000*l.*

50,355. That was a 10 per cent. reduction; but have the reductions there been more than elsewhere on the estate?—Yes, certainly.

50,356. Then, besides that, have the landlords spent a good deal in the way of buildings, and so forth?—An immense sum, and it is being continually called for. Things are quite different now, the wants are so much greater, and they must be attended to.

Causes of depression.

50,357. What are the causes of the depression in your opinion?—It is very hard for a farmer to realise a sum of money now. Things are so low that a man cannot make up a sum of money. That is really the test; if a man goes to reckon about his rent he finds that what he sells comes to so very little money that he is very much pressed.

50,358. Is the depression mainly due, in your opinion, to foreign competition?—It is certainly due to foreign competition. The farmers in Wales feel the low prices of wool very much.

Effect of depression.

50,359. Now, let us go on to the effects of the depression; do you consider that the landowners have suffered by the diminution there has been of their income, and also by the larger expenditure which they have been compelled to make upon their property?—That is certain.

50,360. Have the small owners suffered more than the larger ones?—The small owners have not the same resources; they have suffered very much.

50,361. The limited owners have felt it, I suppose, because their fixed charges remain the same?—Yes.

50,362. Have the occupying owners lost their capital?—Very much. A great number of them want to sell their little estates, and it is very hard for them to do so. You cannot sell them unless they are so situated as to be an object to a landlord.

50,363. Have the tenant farmers suffered in the reduction of the value of their capital?—Undoubtedly, heavily.

50,364. Then as regards the agricultural labourers, how have they got on?—There are far fewer on a farm; they go away; they require more to live upon in these days than they formerly did.

Wages.

50,365. How have their wages been affected?—Wages are good.

50,366. Have they remained the same?—Fewer men are kept, but the wages are good.

50,367. Have wages been maintained at the same level, or have they risen or fallen?—They have risen considerably in the last 30 years, but not materially since 1880.

Condition of labourers.

50,368. Then you have to take into account what the labourer can get for his money?—Yes. The labourers in our country, as a class, are better off than the average; they are bound to be, because of the slate quarries which the men go to, and the brickworks that are there. The slate quarries take an enormous number of men.

50,369. The main cause, in your opinion, of the depression is the low price of agricultural produce?—Yes, certainly.

Foreign competition.

50,370. And the free importation of foreign and colonial produce?—Yes.

50,371. In your opinion, have unfavourable seasons contributed in part to the depression?—I do not think that they have in the main. Of course, you have a bad time now and then; but I do not think they have as a whole, taking a round of years.

50,372. But in some years they have?—Certainly, at times.

Quality of labour.

50,373. Do you consider that the quality of the labour is worse than it was?—I certainly do think it is.

50,374. Then if the rates of wages have somewhat increased, and the quality has diminished that has an important bearing on the position of the farmer, I take it?—Certainly.

Lieut.-Col. H. R. Hughes.
24 May 1895.
Rates.

50,375. Now, with regard to local rates, have the rates been increased in your district?—Where there are any works the rates do not increase, but where there are no works they do rather increase. But the point with us is the fresh rates; everything now at once goes on to the rates, we have the sanitary rate, the School Board rate, and all the things which have come very heavy upon the farmers.

50,376. Do you think the actual outgoings in respect of rates are larger than they were or not?—Certainly they are larger as a whole.

50,377. Have you any figures showing in detail what the position has been as compared with 10 years ago? I have not brought those with me here, but I have them at home. (*See* Appendix A. XIX.)

50,378. Perhaps you could add them to your evidence?—Certainly; I have several instances, especially where the rates press very heavily on land where the parties paying them receive no benefit whatever.

50,379. Would you advocate that there should be some relief given in the way of rates?—Most certainly, I think that is the main thing.

50,380. What do you suggest?—As a class they think, and I think too, that all these things that are required now ought to come out of the national purse, because they are for national purposes—especially as regards highways and schools.

50,381. Can you say what the average of the rates in your district is?—The poor rate would be certainly from 2*s.* to 2*s.* 6*d.*

50,382. And the other rates?—They vary very much. I could give you the schedule, but I could not give you any average figure, because it would be so different in the very next parish.

Charges on land.

50,383. Then with regard to the charges upon land, do you think there is anything that can be done to relieve the landowner?—I hardly think so; I never expect to see that.

50,384. You do not think anything can be done, is that what you mean?—I confess I do not see how it will be done.

Law of distress.

50,385. Then with respect to the landlord's preferential claim for rent?—Experience makes me very strong on that point, because there is no doubt about it; it enables landlords who know their district and know the men, often to take men who have not got money when it is proved that they are industrious and hard working men; and in that way men have risen from the ranks and have become substantial men.

50,386. Then you think it is not in the interests of the whole of the tenant farmers that the law with regard to distraint for rent should be done away with?—I think it is to the interest of the tenant farmer that that should go on.

50,387. You think the law with regard to distraint for rent should be maintained?—I do; I think it is in the tenants' favour.

Remedies for depression.

50,388. Among your remedies for the depression apparently you advocate that no foreign produce should be sold without having the place of origin clearly indicated upon it?—That is so.

50,389. Secondly, that the Adulteration Acts should be more strictly carried out, so that the British consumer may know what he is purchasing?—Yes.

50,390. Thirdly, you recommend that the taxation and the local burdens on land should be reduced by spreading them over personalty; and fourthly, that agricultural chemistry and other branches of scientific farming should be taught in village and county council schools?—Most certainly. The more they are taught the more they appreciate being taught, the more you can diffuse knowledge among them the more it comes out, it certainly does.

50,391. Then you also suggest the removal of excessive taxation on land?—Most certainly I think that comes first.

Rates.

50,392. Will you give an illustration of what you consider the hardship of the present sytsem of the taxation on land?—For instance, a farm is rented at 500*l.*; the poor's rate, say, at 2*s.* in the £, would amount to 50*l.*, less 10 per cent., and the occupier of the land, with very good management, after his rent, rates, taxes, cake, manure, seeds, and wages, &c., are paid, may have left 300*l.* to pay interest on capital and the expenses of himself and family. Then take a manufacturer, merchant, tradesman, or capitalist occupying a

Digitized by Google

Lieut.-Col. H. R. Hughes. 24 May 1895.

house or factory or shop, the rental value of which is 100*l.* per annum and the poor's rate 9*l.*; their net incomes are generally double and treble that of the farmer.

50,393. This comparison apparently is based upon the idea that the rates are paid by the tenant farmer and that they do not ultimately fall upon the landowner?—They are calculated in the letting of the farms.

50,394. If they are calculated in the letting of the farm they ultimately fall upon the landowner and not upon the tenant farmer?—Quite so.

50,395. Therefore, to that extent, the comparison between the tenant farmer and the tradesman is hardly an accurate one?—I think it is in a way if you consider his position; it becomes a matter of greater responsibility to the tenant farmer by far.

50,396. Then do you consider that the education rate, at all events, should be altered, so that the cost of education should be undertaken by the State?—I think so, certainly.

50,397. Also you suggest that personal property should bear its share of the expenditure?—Most certainly.

50,398. In your opinion are these parts of the country within urban districts where the occupiers of land are specially entitled to relief?—You have large boroughs, perhaps, four miles in diameter, and the farmers living outside the town but within the area, pay all the sanitary and lighting rates as if they actually lived in the town, although they derive no benefit whatever from them.

50,399. (*Mr. Dalton.*) Are you speaking of any particular borough in your district?—I happened to quote one then, but there are many of the same sort.

50,400. What is the one you mentioned?—The one I quote is my own.

50,401. Denbigh?—Yes. With the least trouble I could give you a long list. I know it is a very universal complaint.

Small holdings.

50,402. (*Chairman.*) Are you in favour of small holdings?—I think they are the very best thing where they exist or grow naturally, but I confess that I think it will take a long time to get any value out of the new allotments. I think that taking a number of small tenants is the very best thing on a large estate; it strengthens it in every way.

50,403. But you are not in favour of the artificial creation of small holdings?—We do not oppose it in any way, but I confess I have no great faith in its coming out.

50,404. You are not opposed to it in principle?—Certainly not; we shall not oppose it at all, but I confess I have no great faith in it.

Size of Welsh estates.

50,405. (*Lord Rendel.*) Your principal experience is in connection with North Wales, I gather?—It is. I have other work in Shropshire, and I have an estate in Middlesex, too, but I may say the estates in Wales and Shropshire have been my work.

50,406. The estate in Wales which you have had to manage is of a very exceptional size, it is not?—It is, indeed.

50,407. I suppose it is exceptional also in this that it is surrounded by comparatively small estates?—Yes.

50,408. In fact, with the exception of the great and almost historical estate you are connected with, North Wales might be described as a country of relatively small properties?—Quite so. We have an immense tract of very nearly 140,000 acres; out of that there is comparatively speaking very little in Shropshire.

50,409. With that exception you would distinguish Wales from England in its agricultural area as being broken up into small properties?—Undoubtedly they are smaller properties and smaller holdings.

50,410. That may probably be derived from the condition under which land was held in the more remote past?—Probably, and that is the way men have begun, too—they work on very small beginnings.

50,411. Waste land has to a very large extent been brought into cultivation, has it not?—Bit by bit.

Characteristics of farming in Wales.

50,412. Would you also describe that part of North Wales as a country of comparatively small farms?—Certainly. Of course we have in the Vale of Clwyd and Denbighshire some larger farms, and they are much more productive. Formerly, before the depression commenced, the cheese that was made in the Vale of Clwyd was always sold as Cheshire cheese; then that industry seemed to drop, and now apparently it is reviving under the dairy schools.

Lieut.-Col. H. R. Hughes. 24 May 1895.

50,413. Are a considerable number of those small farms so small as that they can be managed almost entirely by the tenant and his family?—A great many of them are; they hardly pay anything in wages, and if they have a threshing day or anything like that the neighbours around club together; there is a wonderfully good feeling among the Welsh farmers—wonderfully good.

50,414. It is rather exceptional for them to have labour, and then it is, is it not, an annually hired labour?—What they have they pay for at a higher rate now. The strong good labourers get away to the works, and farming is very much now confined to those of the children who stick at home with their fathers; the best men get away very much to the works.

Welsh small farmers.

50,415. Would you regard those small farmers as on the whole a singularly hardworking and thrifty class of people?—Very. I think they go through a great deal. Taking them as a race they are as true as steel and they go through a great deal.

50,416. They have hard living also?—Very.

50,417. They are very temperate?—Very temperate.

50,418. And very loyal?—Thoroughly loyal.

50,419. And thoroughly law-abiding people?—Yes. When riding about I often meet two or three men going home; they do not know I am about, but I see them going home from the fairs early in the afternoon, and it is the exception to see a man who has had the least drop too much. They are determined to live somehow.

50,420. And further, at home they have no alcoholic drink at all?—No, not one out of 20.

50,421. So that the market day is the only occasion when they might take some?—Quite so.

50,422. That might be perhaps more from the custom of sealing some bargain?—Yes; they meet each other and it is the rule to have every bargain settled in that way.

50,423. In fact they are a very hard living as well as a very hard working people?—Yes, very.

50,424. Do they hold generally upon written agreements?—We have written agreements with all our tenants, but really in those districts they are not much good. They are only of value in case you have a bad fellow, but that with us is nothing, because we never change. There is something remarkable about us—we never change. Of course, with all that quality of land the cropping is different, and it does not require to be tied down in the same way.

Changes of tenancy.

50,425. (*Captain Owen Thomas.*) What do you mean by "never change"?—It is something marvellous that on Sir Walkin's estate we never have a farm to let, or hardly ever. The continuity of tenancy is something remarkable, often up to 400 years.

50,426. (*Lord Rendel.*) From generation to generation the farmers stay on?—Yes. It is a marvellous thing. It is quite a record.

50,427. (*Captain Owen Thomas.*) Not on the Wynnstay estate proper?—There are not so many down there, but Sir Watkin's Wynnstay estate proper is a very small estate compared with the others.

Management of estates.

50,428. (*Lord Rendel.*) You have, I suppose, a very considerable staff of sub-agents?—Yes, it is very large. We have five main sub-agents. We have five men who have a fifth each, about as equal as can be; then we have a mineral agent, and the manor bailiff, and the rest are all clerks.

50,429. Relating to an English estate would you say that the cost of the management was somewhat greater?—It is greater unavoidably, because it is so scattered, and you must have a separate staff going. You must do it; so that it is very expensive.

50,430. Then is there not a somewhat peculiar condition that in the upland districts there are the competing industries of slate and lead?—Lead did affect us very much to the late Sir Watkins' advantage at Dylife, but this lead cannot be produced now, and it is a most miserable place to see now. It is dreadful, because the houses are unoccupied. At one time, however, it was a grand industry. Then the slate industry does not affect us in that part, but it does in

Digitized by Google

Lieut.-Col. H. R. Hughes. 24 May 1895.

other parts in Merionethshire; but not on the main property in Denbighshire and Montgomeryshire. They get over by the line up to Blaenau Festiniog. Mr. Oakley is the chief owner, and they have enormous quarries there.

50,431. Would you say that in North Wales there was the peculiarity in the agricultural districts that there existed in scattered positions industries of the nature of slate and lead which were of a capricious character and which employed highly paid labour but with some uncertainty; would you say that was a condition of things formerly?—Yes, certainly.

50,432. Until comparatively recent years?—Yes, certainly.

50,433. You spoke of the cost of schools amongst other charges which were put upon the rates?—They are very heavy.

50,434. Are not the conditions in Wales peculiarly unfavourable owing to the scattered character of the population?—In some parishes they cannot get a school subscription if they try beyond one or two, and, therefore, they have had school boards, and thus the rate is very heavy. It is very hard to keep a voluntary school in many parishes.

50,435. Is not the erection of schools relatively more costly in Wales owing to the difficulties of haulage, and the comparatively smaller population within any possible radius of a school?—I never heard that complained of.

Railway communication in Wales.

50,436. How would you regard North Wales from the agricultural point of view as served by railways, in comparison with England?—I think that in part it is very well served, but then when you get to those tremendous wild districts of mountain you cannot have railways up there; it is impossible. If ever the day comes when we see light railways, I look upon them as impossible in the country that I ride over. All along the north coast especially, and up towards the Great Western, all up Bala way, and to the terminus of the London and North-Western, in all that district the service is excellent, and it is six hours from London exactly.

50,437. But further south?—I do not know much about South Wales.

50,438. Further south of that district, I mean, but still within Central Wales?—The service on the Cambrian is not as good. You do arrive at a place in the course of the day, but it is very slow work, whereas in the part where you get the Great Western and the London and North-Western, the service is excellent, and, of course, we have the benefit of all the Irish trains.

50,439. As between North and South Wales how would you regard the service as adequate or otherwise?—It is capable of improvement, certainly. I think we have a great deal to be thankful for myself in the way of railways.

50,440. Were you connected with that country at the time these railways were undertaken?—Not with Sir Watkins' estate, but I quite recollect all the railways being made perfectly well. I remember when I went to school we always had to drive to Chester as there was nothing like a railway at all then. Then I remember perfectly well the Holyhead line being opened.

50,441. With regard to some of these railways, in fact the majority of them of which you have spoken, do you regard Wales as unfortunate in the capital outlay at which those railways stand?—Certainly not; whatever they cost that is grand for the country.

Extent of depression.

50,442. As regards the cost at which they were made, and upon which they expect to be repaid by rates, would you regard Wales as unfortunate or fortunate?—I do not think you can call it unfortunate, because they work it out that the Chester and Holyhead did not pay for a long time; then it became merged in the London and North-Western, and, of course, you do not know what the actual returns are on that branch. It was originally formed as a separate company called the Chester and Holyhead.

50,443. You do not happen to be aware of the circumstances under which the lines now under the Cambrian Railway, for instance, were built, and the capital expended upon them?—I did not go at that time into that district at all, but I fancy it was looked upon as a struggle; they are so short of main traffic.

50,444. Generally with regard to the upland districts, which form a very large portion, as I understand, of the area of the principal estate you speak of, the agricultural depression has not been felt so severely as elsewhere?—No, not so severely.

Lieut.-Col. H. R. Hughes. 24 May 1895.

50,445. And you see this year even a recovery?—There is undoubtedly a recovery.

Stock breeding.

50,446. And so far as the breeding farms are concerned —?—That is the one thing that we look to, namely, to encourage them in breeding stock. We ought to do all in our power to send good sires amongst them, because the land is fitted for that. If a man can get a good price for a horse, it is the saving of a a man. If you take men who are paying 40*l.* to 60*l.* rent, that would be the very saving of them; you really cannot do too much in the way of sending good sires down.

Relations between landlords and tenant.

50,447. Generally, with reference to Sir Watkin Wynn's Estate, the management has been for many years past extremely satisfactory, has it not?—Certainly; there has been the best feeling always. But, of course, in the present days tenants require so much more than they did formerly, and there has to be a great deal more attention paid to them; their wants are greater.

Management of estates.

50,448. Would you regard the condition of that estate as an indication of the condition of the smaller estates alongside, speaking generally?—I am sorry to say that we have a very great deal of work to do; there is enough work for a life to do if you look at what ought to be done to put everthing right. We are working tremendously hard at it, but there is a great deal to be done, whereas, of course, on some estates one has nothing to wish for.

50,449. You are speaking now of the Wynnstay estates?—Yes, the work there is so tremendous, you cannot get through it. The work and the change of times have come upon us so suddenly that it is impossible to quite compass the work.

50,450. So far as the personal relations of the tenants and the landlord are concerned you are satisfied?—I am perfectly satisfied, and can answer for their being on the very best terms.

50,451. So far as the condition of the installation of the estate is concerned—the repairs and general condition of the estate—you feel that there is a great deal still to be done even on that estate?—I do.

Relations between landlord and tenant.

50,452. I want to ask you whether you would say that the relations between the landlord and the tenants on the Wynnstay Estate, and the energy and liberality shown with regard to the installation of the farms on that estate, are a fair indication of the general condition of the smaller estates alongside it?—Certainly.

50,453. You think they are?—I should never wish for a better feeling to exist than I can answer for does exist between us.

50,454. You are speaking now of the estates within your own management?—Yes, and others that I know of as a rule.

50,455. Would you say that the same thing prevails outside your estates?—Of course, there may be exceptions, but as a rule the Welsh tenants are wonderfully good fellows.

50,456. Are you aware of the many cases where investments have been made in abandoned estates by Liverpool and other men of capital who are non-resident?—I know of several who have purchased, but it is the exception for them to understand what they are doing when they get the estates, quite the exception. On the other hand, I have seen men come who do well and look after their estates. As a rule, they only look for a certain amount of interest on their capital; with many of those men that is the real thing, that they become possessed of those estates, and they do not know what they are doing.

Changes of ownership in North Wales.

50,457. To no inconsiderable extent land is changing hands, I suppose, in North Wales?—Not much; the most notable part is in Anglesey, and there, I believe, about half the island has changed hands within a given period, but I forget what they say is the number of years.

50,458. In some cases to a non-resident owner?—Yes, but in Anglesey the tenants have themselves bought tremendously.

Expenditure on improvement.

50,459. (*Mr. Elton.*) You say that this great rush of business came upon you rather by surprise; when did the great rise take place in the quantity of repairs and things that you had to do?—I pointed it

Digitized by Google

out to Sir Watkin and Lady Wynn that it must be done, and it has gone on very heavily during the last six or seven years. I pointed out that it was absolutely necessary to cope with the times, that there must be a great deal done.

50,460. Then it is from about 1888?—Yes.

50,461. That answers to the figures you give us in your brief, showing a rise from 5,600*l.* in estates, buildings, and repairs to over 9,000*l.*?—Yes.

50,462. But then I see, going back again another 10 years' period, that it was equally heavy then or very nearly so. Look at the years 1876 to 1878; it was then 8,825*l.*, 8,248*l.*, and 8,862*l.* respectively, so that it is not very far off what it was in 1888?—There must have been something exceptional; there must have been some purchased property, but I am not reponsible for that. I merely took the figures out of the estate books.

50,463. I am merely quoting these to you, so that you can explain what you are telling us of the sudden and unexpected rush, and I am saying that these figures show there was something just like it 10 years before?—I will answer for the figures, and I merely took them out as a whole. We went up in the '90's to 11,763*l.* and 12,078*l.*

50,464. What you said was, that there was such a sudden and unexpected rush, and it has occurred to me that it was not so very different from what had been the case some 10 years previously?—There seems to have been some special reason, which I could get at with pleasure if I look it up, but I will answer for the figures being correct.

50,465. What you said just now is perfectly correct; that the average even now is distinctly higher than it was, even in the period which I mentioned of 10 years ago?—Yes.

50,466. It is a very high average now?—Very high.

Waste land.

50,467. In reference to these small farms in Montgomeryshire that you spoke about, and wastes there, are there very large tracts of waste there?—Tremendous tracts; we have a quantity of land at 6*d.* an acre.

50,468. Commons?—Yes.

50,469. Sides?—Sheep walks.

50,470. Suppose a farm is 40 or 50 acres, how much common would it have, or sheep walks?—It varies tremendously.

50,471. They have a custom there of holding a given expanse of waste with a given farm, have they not?—Yes, and it is thoroughly understood by the inhabitants. You can hardly believe how they know to the inch almost all those large tracts.

50,472. So that, practically, the farm comprises that tract of waste land as well as the farm itself?—Yes.

50,473. The system is in the local language, called "Lluast," I recollect. You say they add these things to the farms, so that the farm really is much bigger?—What they cultivate is very little.

50,474. But they are able to breed and sell?—Those little patches that they have they do very well. They pay great attention to those small patches in the valleys.

Tenure.

50,475. (*Captain Owen Thomas.*) Have you many leases on your estate?—Practically none; we are never asked for them.

50,476. There is no demand for them?—None whatever.

50,477. Why is that?—A man does not like to tie himself down. He knows he will never be disturbed if he is anyway going right, and they have confidence in us. I have never been asked for a lease yet.

Changes in tenancy.

50,478. Have changes in tenancy been frequent of late?—I do not think so, except in the natural course. Of course there must be some things happening, but there is nothing more than that. It is a marvellous thing how they stick to their homes in Wales, and what they will do to keep them.

50,479. I suppose about 90 or 95 per cent. of Sir Watkin's Welsh tenants are really Welsh-speaking tenants?—Quite that.

50,480. I think you speak Welsh, do you not?—I do. I speak the Welsh of the country. I am not a scholar. I cannot read or write Welsh, but I know Welsh thoroughly for all practical purposes.

50,481. I suppose you find it very useful in managing these estates?—I never can make out how agents do without it myself.

50,482. There are a great many agents who do not know it?—Yes, there are; but then they have to take an interpreter with them. If you can talk with a man it puts you in a different position directly. I am not speaking for a moment egotistically, but I find it the greatest blessing to be able to talk Welsh when you go into a house.

50,483. And the farmers always consider it a grievance when they cannot speak to the agent in their own language?—They do not like it.

50,484. Are your agreements in English or Welsh?—They are all in English.

50,485. Are they explained to the farmers?—Thoroughly. I never allow a man to sign an agreement till he has taken it home and shown it to his friends, and so on. I would never allow a man to come into a room and sign an agreement straight off.

50,486. Do you give him a copy of the agreement?—Always.

50,487. Does he pay for it?—Never; he pays nothing.

Rents.

50,488. Are rents considered fair and moderate in your district, I do not speak of your estate, but take the counties of Flint and Denbighshire, for instance?—Yes, I think they are as a rule. Of course, as I have explained before, the tenants have to live so hard to make up a sum of money. I think there is a great deal one has to do in adjusting rents, because they are very unfair for many places compared with others.

50,489. How are they fixed?—Many of them I am sure from what I have seen myself, and comparing farm with farm—some that we happen to touch—are bargains; then we come to another farm, and we know that is too dear. Of course we cannot raise those which are under the standard. You have to wait for some opportunity.

Commons.

50,490. Is there much common land attached to these farms?—A great deal.

50,491. If so the right of pasturage is taken into consideration when the rent is fixed?—Always. We generally value what the moorland will hold per head of sheep.

Rents.

50,492. Were rents raised pretty generally in the district about 30 years ago?—They were altered in Merionethshire, but I do not think they were at all altered in Montgomeryshire. I know they were in Merionethshire and it was prophesied when they were done that they would all have to be undone.

50,493. They have been permanently reduced?—Yes, but I do not think the others as a rule have been touched.

Reduction in rent.

50,494. How much have these rents been reduced?—On that estate that I spoke of it came down from 5,500*l.* to 5,000*l.*, which was a loss of 500*l.* a year out of 5,500*l.*

50,495. I suppose it was really more of a sheep walk?—Yes. There are a good many of what they call farms which are improving even now. They do try to get the farm better. We do a deal of draining and all that and they are striving very hard to improve.

50,496. Are the farmers pretty generally satisfied with the rents they are paying, or do they think the rents ought to be reduced further?—I have not been asked to reduce them further. I think in Merionethshire I have only one case that we have not settled in the whole lot. They took my valuation through and through, and we have not had a word upon it, but I have got one now that I have not settled out of the lot. I think we valued 105 farms or something of that sort—I know it was less than 120. It is a very long work, because of the climate, and you cannot do it without time.

50,497. Were you asked to re-value them by the tenants?—I was. Two years ago last June they applied for a reduction. Sir Watkin said he did not wish for a moment that they should pay more than was right, and that he would get me to go over it all. I did as well as I could without neglecting other work.

50,498. Do these tenants generally accept your valuation?—They have done so with hardly a question, and they are now satisfied.

50,499. What is the average size of farms in that part of the country?—They vary tremendously.

Digitized by Google

50,500. Have they been consolidated lately?—No, it is very much against the good of the estate to do so.

50,501. Have any of the farms been divided?—No.

Size of farms.

50,502. Are there many small freeholders in your district?—Yes, there are certainly a good many; but then many of them let their own freeholds and prefer being tenants.

Large and small tenants compared.

50,503. Are there many small tenants?—Yes, there are, scattered about.

50,504. What is their position as compared with that of large holders; is it better or worse?—Are you talking now of small owners?

50,505. I mean the small tenant farmers?—I think they are better, because their risk is not so great, and they are content to live as they do. That is the point—that their risk is so very small compared with that of the big men.

50,506. Are the rents of the small farms higher per acre than those of the larger farms, as a rule?—Rather, but not very much.

54,507. Do the small holders produce more or less pe acre?—More, on the small patches.

50,508. Why?—It is within their own power to cultivate it. Then so many of the large men are under the delusion of putting the land, what they call, down to grass; but it is not half done, and it is the ruin of the farm, because it will not keep stock.

50,509. Is there a better demand for these small farms than for the large ones?—Certainly.

50,510. A much better demand would you say?—Oh! dear, yes. The demand for small farms is now very great. I had last week the case of a man who died—he was a widower with no family. I have nine applications for his farm now—the men in that country almost fight for a small farm. That farm has a rent of about 45*l.*, I think.

50,511. Do you know of any instances where labourers have saved money, and been able to go on to the land?—I do.

50,512. Do you say that they are doing better as farmers than as labourers?—So much depends on the individual, and it is a very hard thing to answer that. Sixpence is as much to one man as 5*s.* to another; so you cannot give a regular opinion about it.

Rural depopulation.

50,513. How is it that so many farmers' sons and daughters drift away from Wales into the large towns?—I cannot accounnt for it, but I think their ideas are altered. They are not, all of them, content with their way of living at home. They hear of this, that, and the other, and they want to get away.

Small holdings.

50,514. You say you do not agree with or approve of the creation of these small holdings. How is it you are opposed to them?—I am in favour of them, but I have no great faith in them. We are going with the law, but my faith is in them where they have grown up according to the circumstances, naturally. As regards the actual creation of these small owners, I may be wrong, but I do not look forward to them doing much good. We shall never oppose it at all, though.

50,515. Is there any prospect of a natural growth in the future?—I doubt it very much.

50,516. Would it be, in your opinion, an advantage to have a larger resident population in these rural districts than there is at present?—Certainly; the thicker they are on the ground the better.

50,517. Would not the creation of these small holdings help to do that?—I doubt very much; who will go to them? It will be a work of time. I may be wrong, but I confess I doubt it.

50,518. How many acres of land do you think would be sufficient for a man to support his family and himself on in an ordinary mixed kind of farm, such as they have in your part of the country?—He certainly ought to have over 30 acres of average land.

Condition of freeholders.

50,519. Are there many freeholders in Flintshire and Denbighshire?—There are a great many, undoubtedly.

50,520. Are they large or small farms, mostly?—There are not many large; they are mostly small.

50,521. Are their holdings mortgaged?—I am afraid they are.

50,522. They pay a high interest, I expect?—No doubt they do, but, of course, that is a secret. However, it comes to light sometimes, and it is very much to be deplored.

50,523. Did these men buy their holdings?—They bought them and mortgaged them up to 1876, or up to 1878, and then they got frightened. Men bought when they probably could not do more than pay the deposit. There was an immense deal bought then by men who, to my knowledge, had not the means of paying more than the deposit.

50,524. Why did they buy?—Everyone in those days thought that farming was going ahead, and promised to be this, that, and the other. Then down came the drop. Land was sold then dreadfully high. There is no doubt that one of the things affecting us now is that land was sold too high up to 1876. There was a fictitious value—an inflated value—put upon land then. However good the times might have been there is no question about it.

50,525. A great many of these men were obliged to buy, were they not, or else leave their farms?—That I could not answer, I suppose they were afraid of having to leave. It depended entirely upon the individual buyers whether they would get into the hands of a good landlord, or whether they would get into the hands of a stranger and a mercantile man who would merely look to his own interest. But it is a notorious fact that they did all buy very dear.

50,526. What is the position of those freeholders as compared with the tenant farmers; do you think they are better off in some sense?—They are not so well off, I am certain of it.

50,527. I suppose it would be a great advantage to them if money could be lent to them at a cheap rate of interest?—No doubt, if it could be lent at a low rate. But then a freeholder does not get anything done for him like an estate does for a tenant.

Changes in cultivation.

50,528. What kind of farming is mostly pursued in Denbighshire and Flintshire?—In Denbighshire it is mixed farming, but there is a great deal of very good meadow land.

50,529. Has there been any change of late in the system of farming?—No; only that landlords are not nearly so particular about allowing farmers to sell off some of their crop. They do sell it off a great deal.

50,530. Has any arable land been laid down?—Very little has been laid down properly, very little indeed. I consider that is quite a landlord's question; it is not a tenant's question, because when land is laid down there must always be a certain amount of outgoings for from five to seven years; you cannot call it old pasture until then, and unless it is fed up it will be made worse than anything.

Ground game.

50,531. Are rabbits and hares ever preserved in that part of the country?—No, the men nearly all kill the ground game.

50,532. I am not speaking of your estate but I am speaking of the district generally?—I do not think there is much; there is one man certainly who does preserve enormously, but then he pays damages all round. He is a Warrington man and he rents an enormous tract of shooting, and he always pays compensation.

50,533. Is he a shooting tenant, or does he own the property?—He is a shooting tenant over a great many estates. I do not think you will find in our country that the tenants do complain at all about game—it is the exception if they do.

50,534. They are generally bitter against shooting tenants, are they not?—They do not look upon them in the same light as a landlord, and they never will.

Technical instruction.

50,535. Is there much attention paid to agricultural education in Denbighshire?—It is in a very incipient state at present, but I do think it is developing.

50,536. In which way?—Especially as regards dairying now.

Dairying.

50,537. You take a great interest in dairying, do you not?—I do, a great deal.

50,538. How many cows do you milk?—I have over 200.

50,539. Do you supply milk?—Yes; it was an idea of my own entirely. The land at the slate quarries will not produce good milk, and my own idea was to send the milk from my own farm up to a thickly-populated district which could not produce milk. It all goes by rail up to the quarries, and they are mainly dependent on it; it is the main supply to the North Wales slate quarries.

Digitized by Google

Lieut.-Col. H. R. Hughes. 24 May 1895.

50,540. What breed of cattle do you keep?—My cattle are all purchased; they are what are called colouny shorthorns. I do not buy myself now; I used to do so formerly, and to sell them, but now I have a regular salesman who undertakes the whole thing for me. My cattle all go away fat. I sell on an average about four a week; we milk them out.

50,541. Are they suitable to the locality?—Certainly, but we never turn a cow out. Mine are all model shippons, and we never turn one out; the milk is cooled properly and goes off every day.

50,542. Have you tried the Welsh breed?—We have a few.

50,543. Do they milk fairly well?—Yes, very well; but not so long.

50,544. (*Viscount Cobham.*) What price do you get for your milk?—We have two prices; one in the summer and one in the winter. Then I retail it all; I have my own salesman at every depôt; my milk never goes into anybody else's hands. I have established the thing, and I have my own salesman at each quarry; it is sent out with my own horse and trap, and he pays the money into the bank, and has to account for it in that way.

50,545. You sell it at retail prices?—I do; that is what creates the confidence in it; the men know that it never goes through another person's hands, and that it is pure milk.

Rates.

50,546. (*Mr. Dalton.*) I see you speak of the constantly increasing rates; do you feel sure that in Denbyshire and Flintshire the rural rates have increased at all of late years?—They have, there is no doubt about it; we have some parishes where they have not at all. The actual poor rate has not increased; it is the other rates that come on them now, that they feel so much.

50,547. I have a return here published a year or two ago—Mr. Fowler's return—in which the average rural rate for the county of Denbigh in 1868 is given at 3*s.* 4*d.*, and in 1891 at 2*s.* 4½*d.*, which was a fall of a 1*s.*?—That must be from the better management of the authorities—from the decreasing of the salaries, and so on.

50,548. What I wish to point out is that instead of a constantly increasing rate there was a very heavy fall indeed there of from 3*s.* 4*d.* to 2*s.* 4½*d.*; then in Flint the fall was from 3*s.* 10*d.* to 2*s.* 6*d.*, which is a still greater fall?—That comes from better management, I believe.

50,549. That is partly apparently due to the fall in the poor rate, and partly to the fact that you in those counties had a very low highway rate; is that still so?—The highway rate is low. I do not know how that will be now, but it is all going under the county council, and there will be no local township rates. As it will go under the county council it must be done better, because there will be fewer overlookers.

50,550. You do not have all your roads under the county council—only the main roads?—Yes, the main roads.

50,551. You have other roads left on the highway rate—the roads which are not main roads, have you not?—Very few now.

50,552. Looking at the county council returns I find that the rate in the £ of the county rate does not seem to have increased since the cost of these main roads has been thrown upon the county?—I believe that is so; I have been told so.

50,553. Owing mainly presumably to the Government subventions?—I believe that is so, but I have never really had time to go into the county council work. I have never been able to give the time to it.

50,554. The result appears to be that instead of the rates having increased as a whole they have diminished. I am quite aware that the purposes have increased; you have had school board rates and rural sanitary rates added, but the total rate in the £ seems to have fallen very heavily in both counties?—Yes, it has in one way.

50,555. The rate in the £, I mean?—Yes.

50,556. And that seems also partly due to the fact that railways in both counties contribute very heavily to the rates?—Yes, and also in parishes where there are works, that has taken them down very much. In Ruabon the brickworks have saved us very much.

50,557. In Denbigh the value of the railways seems to have gone up from 8,500*l.* in 1870 to 42,200*l.* in 1894?—Yes.

Lieut.-Col. H. R. Hughes. 24 May 1895.

50,558. And in Flint from 7,000*l.* to 41,000*l.*?—Yes.

Increased assessment of railways.

50,559. That is a considerable assistance to the rates, I suppose?—It is so.

50,560. And that is a contribution of personalty which you are advocating, I think?—To a certain extent.

50,561. These are contributions from the railway shareholders?—Forgive me, but I understand a witness whom you are going to examine—Mr. Pennant—would be far better up in those details than I am. I never had time to work out those sort of things, and he knows them, and has them all at his fingers' ends for the last 40 years; his whole time is given to it, and he will give you far better evidence upon them than I can.

Rates.

50,562. (*Chairman.*) Yes, but you have stated in your evidence that the rates have considerably increased, whereas the facts now brought to your notice would tend to show that there has been a considerable reduction of the rates?—I think, as a whole, the total amount paid by the farmers is heavier; that is what I believe.

50,563. (*Mr. Dalton.*) If the rate in the £ is lower, and the rents have gone down—and the rateable value evidently has gone down on lands—the amount paid must be considerably less?—I think you will find that on the whole it is more.

Land out of cultivation.

50,564. I think you say that if the burdens of those rates are not considerably decreased, the land will go out of cultivation?—There is a great deal of it now not half so well cultivated in parts as it was. I am not talking of small plots.

50,565. Has any of it gone out of cultivation?—Yes, it has been laid down badly.

50,566. But not owing to the rates, I suppose?—Not exactly; it is due to all sorts of causes.

50,567. (*Mr. Chaplin.*) I understand from your experience of Wales that the part of the country which you are acquainted with is suffering distinctly from agricultural depression?—It is suffering.

Extent of depression.

50,568. Are you acquainted at all with the condition of affairs in England, or any part of it?—I have to do with it considerably in Shropshire; my chief work with it is in Shropshire.

50,569. From your general knowledge of agriculture in England, should you say that depression was as severe in Wales, or not so severe as it is in some parts of this country?—It is not so severe.

50,570. (*Viscount Cobham.*) As in Shropshire do you say?—Shropshire feels it heavily, but I do not think Shropshire feels it like the Eastern Counties.

50,571. As between Wales and Shropshire?—I should say Wales less, because so much depends on what the man's take is—what his capital is, and what his risk is, they are a different class of people.

Cause of depression.

50,572. (*Mr. Chaplin.*) Do I understand that you attribute it, if not mostly, at all events, very largely, to the fall in the price of cattle?—That affects us, and also the demand for cattle. Our farmers cannot move them to the markets like they used to do; there is not the same demand for the Welsh cattle.

50,573. And consequently the price has fallen?—Yes.

50,574. What is the reason of the demand for Welsh cattle having fallen off?—We think that they are not wanted; they used to go for fabulous prices up to Northamptonshire and those counties compared with what they fetch now.

50,575. Your chief market for them was for the grazing counties in England as store stock, was it not?—Yes, and then they were moved on to London after grazing those counties.

50,576. That demand appears to have fallen off?—It is not nearly so great.

50,577. Since when has that occurred?—Within the last 10 years.

50,578. There is an improved demand this year, is there not?—Very much so just now.

50,579. But within the last 10 years, there has been a very marked falling off in the demand?—Yes; the

Digitized by Google

Lieut.-Col. H. R. Hughes. 24 May 1895

same men do not come in the eager way that they used to come to the fairs.

50,580. Have you tried to ascertain what is the reason of that?—They tell you that they have not got the money to buy them. Of course, you do not know whether it is so, but you are always told that they do not want them.

50,581. Had it anything to do with the imports of Canadian cattle, do you think?—Of course, they cannot make the same money of them, and therefore they are more shy of grazing them. They have to meet in the market the foreign production of meat.

Abatements of rent.

50,582. 1892 and 1893 you say were the very worst years of all; what was done to meet that by the owners of the land?—There was a larger return of rent. I think Lord Penrhyn gave up to 25 per cent. in that year.

50,583. What would the reductions average in your part of Wales?—They varied very much, from 5 to 10 and 15 per cent. with us.

50,584. Yes; to what is the maximum?—The maximum is what I quoted.

50,585. 25 per cent.?—Yes, I think Lord Penrhyn and Mr. Ashton Smith gave 25 per cent., but we never gave more than 15 per cent.

50,586. (*Chairman.*) What you are speaking of are temporary abatements?—Yes, returns.

Reductions in rent.

50,587. (*Mr. Chaplin.*) Not permanent reductions of rent?—No.

50,588. Have permanent reductions been made?—Not all round; only in individual cases, and undoubtedly on the re-letting of farms. I have had to do it myself, several permanent reductions.

Rent.

50,589. On page 2 of your brief, I observe you call attention to the fact that rent forms but a mere practical proportion of a tenant's outlay?—It is so; there is no doubt about it. The outgoings for everything, if it is a big sized farm especially, including the labour bill, the cake bill, the seeds, and everything, are tremendous.

50,590. What proportion of his whole outlay in the cultivation of the farm would the rent represent, taking the rent at the average in your district?—I should think a man would certainly expend two rents at least.

50,591. Not more than two rents?—I am talking of the ordinary class of farmer. Certainly I should say so.

50,592. Has anything else been done to meet them, and help the tenants in the depression?—We are continually considering cases, and give them time, and so forth. Whenever we think a man is working hard, we always try to meet him in that way as much as we can within reason.

50,593. You help him in other ways, in fact?—Yes; but you always must find out whether a man really is trying himself; that is my system.

50,594. Where you find that to be the case, you help the man with other things, as well as abatements of rent?—Certainly; always.

Expenditure on improvements.

50,595. Have you been called upon to make much greater outlay in buildings or improvements of that kind?—Certainly, they must have larger buildings. You cannot for a moment shut your eyes to the fact that they must have better buildings and more room.

50,596. And those you have been in the habit of making?—We are doing that as fast as ever we can.

50,597. As a general rule in the parts of Wales with which you are acquainted, who makes the improvement?—The landlords entirely; you will not get a tenant now to do anything, it is not expected.

50,598. Has that always been the case?—No; formerly the tenants did a great deal, but they cannot now, and they are not asked to do so on good estates.

50,599. Since when is it that the landlords have always made the improvements?—It has grown very much, and especially it has become so during the last 15 to 20 years.

50,600. At all events, as a matter of fact, now the landlords invariably make them, and the tenants hardly ever do?—They do not do a thing now; we do as much as we can, the gates and all.

50,601. You give some account, I think, of the outlay that has been made on the estate that you manage?—I know in the case of Canon Haygarth's property that he has spent enormously for his rental.

50,602. In your brief you give particulars of certain estates that have been bought adjoining the Wynnstay estates, or that have been added to the Wynnstay estates during the last 22 years—what is the amount that has been spent upon those?—A great deal, but at the same rate as the other part of the estate. I could not keep all that separate. I could give you the amount on the estate, only I should have to take it out of the books to give you that. It has gone in with the general expense.

Lieut.-Col. H. R. Hughes. 24 May 1895.

50,603. The return shown in the way of interest is something very small, is it not?—Yes.

50,604. What does that amount to?—It is about 2½ per cent. not more.

Effects of depression.

50,605. Now with regard to the effects of the depression. I understand that the losses of the owners have been very large?—Undoubtedly.

50,606. Is that entirely owing to the reductions that they have been called upon to make?—Yes, and to their having to spend more on the property.

50,607. Which has been the most costly to them—the reductions or the additional outlay upon the property?—That is rather a broad question; so much depends upon the state you find your property in.

50,608. I ask because the reductions do not appear in some cases to have been so very heavy, or not nearly so heavy as they have been in many parts of England?—I think that, certainly, the actual expenditure is far greater than the reductions of rent. In my own case I have had my own small property about 14 years, and the rental is 2,500*l.*, and I know I have spent 12,000*l.* in buildings in that time out of the income.

50,609. So that the abatements in rent do not by any means altogether represent the drain that has been made upon the landlords?—No, and after all it is a bad policy altogether. Giving back so much is merely tiding over the difficulty, and I do not believe in it a bit. It just keeps them quiet and makes them try; but I have really very little faith in it; it does not help them very much.

50,610. You are now speaking of temporary reductions?—Yes, I am.

Reductions in rent.

50,611. What do you advocate?—You must endeavour to get at the value of the farm if you can; even then sometimes you may be wrong, because you are made so by the press of circumstances.

50,612. And reduce the rent permanently to that mark?—I always try to, if I am allowed to, always.

50,613. Are you not allowed a free hand in all these matters?—Certainly, but then one naturally feels all the more sensitive about it. Sir Watkin leaves it to me entirely, and so does my friend Canon Haygarth, in fact, he does not know himself what his rents are.

50,614. I understand that one of your difficulties is this that although you may have had a large reduction at one time there is a further fall of prices and again you are in difficulties?—I am afraid so, very often; you cannot shut your eyes to it.

Position of small owners.

50,615. You have told us so far with regard to the large landowners; what is the case with regard to the small owners?—They are a different class and they have so much less capital and money involved that they are quite a class to themselves. They live in a marvellous way and are content to go on; their losses are not so great.

50,616. Why are their losses less?—They have a small stock, and they can attend to what they have in their own way at home themselves.

50,617. I am speaking of the small owners?—I beg your pardon; I thought you meant the small farmers. It is supposed that they are so over-burdened in every way that they do not thrive. Probably they have borrowed money to help their family out, and so on, and then little places are charged quite hopelessly. They get low and broken-hearted, many of them. On the other hand, others are exactly the reverse.

50,618. Are they in a position to help their tenants by reductions?—Very little.

50,619. Then in the case of the small owners reductions have not been made on so large a scale?—Oh, dear no.

50,620. Do you hear complaints on that point?—Very often.

50,621. And those complaints, within your knowledge, are well founded?—Yes; but of course you never interfere in another man's business. I know of lots of cases where it comes very hard.

Digitized by Google

Lieut.-Col. H. E. Hughes. — 24 May 1895.

50,622. Where they have been obliged to press their tenants for rent?—Yes.

50,623. The occupying owners have been, to a large extent, obliged to get rid of their properties, have they not?—Very often indeed.

Position of occupying owners.

50,624. What is the case with regard to tenant farmers?—In what way?

50,625. What is their condition in consequence of this depression; have they suffered severely?—They are much poorer as a class; they have not the power of spending; you can see that from their way of going on. They have to be very particular. For instance, if you ask medical men and so on, they will tell you this very often, they find out the difficulty these men are in.

50,626. Ask whom?—The medical men, and so on, who go about; they will tell you how hard it is to get their bills paid now. It is very hard for the poor fellows to find the money now.

Large and small farmers compared.

50,627. You state in your paper that the tenant farmers, large, medium, and small, have lost capital in proportion; what do you mean by that?—I know that when men have had money they have had to draw upon their capital; I know of heaps of cases of these men, where they have got a little put by, and they have had to draw upon it. I know that from personal knowledge.

50,628. What do you mean by saying that they have lost heart in their industry? Are they anxious to give up their farms?—When they get a crop home what is it compared with what it used to be? I have myself seen wheat sold at 78*s.*, and now you hear to-day that it has been down to 17*s.* 8*d.* I have actually sold wheat myself at 78*s.*, and now it is down to that. I have none to sell now because it is all ground up. Then I sold wool in 1864 at 2*s.* 6*d.*, the whole clip, and it is now 10½*d.* You cannot face these things.

Lieut.-Col. H. E. Hughes. — 24 May 1895.

50,629. When you say that they have lost heart in their industry altogether, do you mean that if they saw their way to it, they would get out of the business and give up farming?—Many would. Many would say that they are so fond of their places, that they would stick to them, but many would be glad to get out of them.

50,630. If they could see their way to selling their stock and getting out without a heavy loss they would give up their industry?—I know they would. Many would be glad to give up. On the other hand, many, if they can exist, will stick there.

Expenditure on improvements.

50,631. In your paper you ask permission of the Commission to state your views with regard to fixity of tenure; I do not propose to ask you that question myself, but I want to ask you this: I understand that the improvements are all made by the landlords?—Yes.

50,632. That the tenant farmers as a rule are not in a position to make them?—They are certainly not.

50,633. (*Chairman.*) Are you speaking of your own estates now, or generally of the district?—On all good estates it is a recognised thing now that they must be done by the estate.

50,634. (*Mr. Chaplin.*) I am speaking now of the part of Wales with which you are thoroughly well aquainted. From your experience, I understand you to tell the Commissioners, that, as a general rule, the tenant farmers could not make their improvements?—Certainly not.

50,635. It would be impossible?—About all they will do is that they will drain pieces if you give them pipes, because these men have time and they will do that; otherwise there is nothing done.

50,636. I am speaking now of buildings?—We do not think of it.

50,637. They could not do it?—No.

The witness withdrew.

Adjourned.

(*For Col. Hughes' further evidence see page* 270.)

Ninety-seventh Day.

Edinburgh, Tuesday, 4th June 1895.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., *Assistant Secretary.*

Rev. J. Gillespie. — 4 June 1895.

The Rev. John Gillespie called and examined.

50,638. (*Chairman.*) You have been for many years a director of the Highland and Agricultural Society, and are much interested in all questions relating to farming?—Yes.

50,639. You come here, in the first case, to give your evidence on the subject of agricultural education?—Yes.

Agricultural education.

50,640. You consider that the means of agricultural education in Scotland are very inadequate and very much inferior to what exists in other countries?—Very much inferior. The provision is very inadequate at present.

50,641. What do you consider ought to be provided?—My idea is that agricultural education ought to be provided, like ordinary education, in three grades: in parishes or localities, where elementary education should be given; in centres representing wider districts, where a more advanced education should be given than the purely elementary form—say, at secondary or selected schools; and at large centres, such as Edinburgh, Glasgow, and Aberdeen, where advanced education should be given. My idea is that the third, or highest, grade is at present very inadequately provided for. The first and second grades are so far provided for by the county council technical instruction grants. Each county council gets a grant, and although that may not be entirely satisfactory either in amount or in the mode of administration, yet, speaking generally, there is less reason to complain as regards local provision for the first and second grades of agricultural education than for the highest grade.

Rev. J. Gillespie. — 4 June 1895.

School of rural economy.

50,642. Are you a member of the administrative board of the School of Rural Economy in Edinburgh?—Yes. That board is composed of representatives of the University Court, the Highland and Agricultural Society of Scotland, and the Edinburgh Town Council. The only certain and permanent provision made for agricultural education in Scotland until a very recent date was the Chair of Agriculture in Edinburgh University which was endowed at the end of last century by a Scotsman, and lectures have been given there since that time. The endowment was supplemented for a considerable number of years by a grant of 150*l.* a year from the Highland and Agricultural Society, and this led the Government to give an equal

Digitized by Google

Rev. J. Gillespie. 4 June 1895.

grant. It was felt that that was a very inadequate provision with one Chair for Agriculture and Rural Economy strictly so called, but no Chair for the allied sciences. An effort was, therefore, made to set up a School of Rural Economy, and the three bodies I have mentioned administer it through their representatives.

50,643. That is under the third grade?—Yes.

Distribution of grants.

50,644. With regard to the first two heads, is there a uniform system observed by the Scottish county councils in distributing the grants given in aid of agricultural education?—There is almost as much variety as there are counties.

50,645. What is the most general system adopted?—Lectures have been given in some counties; and itinerant dairy instruction has also been very extensively given in some counties.

50,646. Is any portion of the grants given to purely elementary schools?—Yes, in some counties. In Dumfriesshire there are grants given in supplement of the grants under the Code for passes in agriculture.

50,647. And also grants to secondary schools of a higher character?—Yes, in some counties. I am a member both of the technical instruction committee, and of the committee administering the secondary grant in that county, and we are endeavouring to work the two things under the same organisation—that is to say, in the same schools.

50,648. Would you take the county of Dumfries to be an ideal one?—No, but I am speaking of it because I know it well.

50,649. At all events, you consider the county of Dumfries is doing the best they can for the money?—I think so.

50,650. What is the total amount they have to dispose of?—About 1,000*l.* for technical education, which embraces everything.

50,651. And how much of that goes towards agricultural education?—I have not the figures with me.

50,652. Perhaps you could supplement your evidence by supplying us with that information?—Yes, I shall be glad to do so. *The witness subsequently wrote:*—"In "Dumfrieshire, during the year ending 15 May 1894, "there were expended on agriculture and chemistry, "17*l.* 0*s.* 9*d.*; on dairying, 303*l.* 2*s.* 5*d.* For passes in "agriculture and kindred branches in the elementary "schools, 173*l.*

"During 1893–94 the total grants for technical instruc- "tion to county councils in Scotland amounted to "17,822*l.* 16*s.* 4*d*, of which there were expended on "agriculture and chemistry, 1,681*l.* 2*s.* 5*d.*: on dairying, "2,275*l.* 19*s.* 2*d.*; on universities, colleges, and schools, "6,662*l.* 12*s.* 9*d.*; and for lectures in the counties on "veterinary subjects, about 150*l.*"

50,653. In many counties, I suppose, they do not make any grants to elementary schools, but spend the whole of the money in lectures?—I suppose that is so.

50,654. At all events, there is great variety?—Yes, and there are great varieties of industries to be provided for.

50,655. In your opinion, whatever is done in that respect ought to be supplemented under the third head through grants from the Agricultural Department?—Yes, very liberally supplemented. At present only 8,000*l.* is distributed by the Board of Agriculture for the whole of Great Britain.

50,656. (*Mr. Chaplin.*) Can you say how much of that is given to Scotland just now?—No, I cannot.

50,657. Is the grant to Scotland still continued?—Yes. The main grants are given to four bodies: the School of Rural Economy in Edinburgh, the Technical College in Glasgow, and a body in Aberdeen, where efforts are being made by the Marquis of Huntly, Lord Rector of the University of Aberdeen, to set up a system of agricultural education, and the fourth body is the Kilmarnock Dairy School, which is the only dairy school in Scotland. I think 450*l.* comes to Edinburgh.

Kilmarnock Dairy School.

50,658. (*Chairman.*) How long has the Kilmarnock Dairy School been in existence?—I think for six or seven years.

50,659. What number of students does it provide for?—I could not state the number in regular attendance, but I will supplement my evidence in that respect. *The witness subsequently wrote:*—"During the session of six months "ending 30 October 1895, the number of attendances by "students at Kilmarnock Dairy School was 2,602, making "an average of 18 pupils daily. During these six months, "300 individuals from all parts of Great Britain attended "for a longer or shorter period.

"An abstract of the accounts of Kilmarnock Dairy "School of 1894–95 is lodged herewith." (*See* Appendix A. VI.) The school has done extremely good work. It is estimated by practical people that it has so much improved the quality of the cheese made in the county of Ayr that the value has increased from 4*s.* to 6*s.* per cwt.

Rev. J. Gillespie. 4 June 1895.

50,660. Does the school give diplomas?—It does, but they are on an unsatisfactory footing. It is very desirable that there should be uniform dairy diplomas over Great Britain, and I believe the Board of Agriculture have called a conference just now to consider that subject.

50,661. Do you think other schools of the same kind should be established in Scotland?—I think one dairy school is quite sufficient.

50,662. But you think it should be more liberally supported?—Yes. It is supported just now largely by subscriptions from individual proprietors, such as the Duke of Portland, the Duke of Buccleuch, the Earl of Eglinton, and various other noblemen and gentlemen.

50,663. (*Mr. Chaplin.*) What method do they adopt?—They send an instructor through to Dumfriesshire and Galloway to give instruction in cheesemaking. One drawback to the school is the uncertainty of the funds they have. The grant may stop at any moment. It ought to be put on a permanent basis, so that the managers could set up a good system of instruction to be depended on from year to year. Public funds are therefore necessary for that purpose.

Board of Agriculture grant.

50,664. (*Chairman.*) Do you know what funds it has in the way of subscriptions just now?—No. The same remark as to uncertainty applies to the Rural School in Edinburgh as regards the third grade. When we get a grant from the Board of Agriculture, if it is not stated in exact terms, you can read between the lines that there is a warning that it may not be repeated, and you have no confidence to set up a scheme with any resonable guarantee that it will be continued in future years.

50,665. (*Mr. Chaplin.*) At the same time, I think you will agree that the Board of Agriculture should have some reasonable guarantee that the work will be well done?—I think they should have every guarantee. But, in my opinion, there should be a small advising board in Scotland, which should be empowered to give grants to local organisations, provided satisfactory approved work is done. I would give them no further power than that.

50,666. (*Chairman.*) I suppose it comes very much to this, that the Board of Agriculture makes its grant, not in a permanent form, so as to give an absolute certainty that it will be continued, but that it will be dependent on the work done?—Yes, but it is also dependent on the will of Parliament.

50,667. Of course, every grant is in that position; but, subject to that the grant will be continued to this school so long as it does good work?—Their communication to us rather amounted to a warning that they might not be continued. We have a feeling of uncertainty and a want of confidence in proceeding without any guarantee.

50,668. But when there is a vote of this kind from Parliament, it very seldom gets off again, and all persons may feel confident that it will be continued year by year when good work is done. Could you have any greater assurance than that with regard to the future?—Well, I do not know. I am not acquainted with parliamentary promises.

50,669. (*Mr. Chaplin.*) Do you find some practical inconvenience from the uncertainty now?—I know the board does.

State subsidies to dairy schools.

50,670. (*Sir Nigel Kingscote.*) You have one of those dairy schools for Scotland. Would you treat the rest of Great Britain in the same way, and have the Government to subsidise dairy schools in England and Ireland?—Yes.

50,671. It would, therefore, become a considerable charge on the State?—I do not think it would be very much.

50,672. You do not think it might be left to local organisations, such as county councils?—The county councils are not willing to spend much money out of their own jurisdiction. The dairy districts of Scotland, strictly so-called, are confined to the south-west; and this dairy school is located in the very best centre of these dairy districts.

50,673. Your remarks only apply to dairy education?—Yes. I think three large centres for the higher grade would be sufficient—in Edinburgh, Glasgow, and Aberdeen.

50,674. For teaching farming generally—the cultivation of soil and all pertaining to it?—Yes. For the elementary and the stage above the elementary you must take the education to the people. They will not go to these centres, and you must take the education down to them.

Rev. J. Gillespie. 4 June 1895.

50,675. Are they to get it gratis?—There should be fees, but they should be small.

50,676. Then that, again, would want subsidising by the Board of Agriculture or the State?—The local provision is, so far, found in the county technical grants, which I think meets it largely.

Agricultural colleges.

50,677. (*Mr. Clay.*) What is your opinion with regard to an agricultural college?—Personally, I am very strongly in favour of an agricultural college on the lines of the Ontario College at Guelph. I gave evidence on this subject before the Duke of Richmond's Commission; but it would be difficult to find the money to carry it out, as it requires much capital.

50,678. I think you gave very valuable evidence with regard to that college, and you found it to work well?—The pupils get their education, both theoretical and practical, and also their board for a very small sum. The Provincial Government of Ontario subsidises the College liberally, and this enables the managers to give an all-round education at a sum within the reach of the pupils.

50,679. And are the young men paid for any extra work on the farm?—Yes; they work on the farm, and are allowed time payment per hour. That goes considerably to reduce their board, and it also gives them valuable practical knowledge.

Method of agricultural education.

50,680. (*Mr. Gilmour.*) Taking for granted that we have to rely for money for agricultural education upon the technical grant, what is your opinion as to how the most benefit can be got for the money we have to spend in the advancement of agriculture?—I think the principles of agriculture should be taught in the elementary schools and in the secondary and selected schools, and especially that dairy instruction should be given by itinerant instructors. I am very strongly in favour of experiments being carried on largely in each county, as well as in some centres where original research could be carried on. The experiments in each county are not only valuable as experiments to show what kind of manures and treatment are suitable for particular soils and climate, but they have also a high educational value. They draw the attention of farmers to such things, and I know from observation and mingling freely with farmers that they do a great deal of good.

Board of Agriculture grant.

50,681. (*Mr. Chaplin.*) The grant at present given by the Board of Agriculture is 8,000*l.* for the whole of Great Britain, and you consider that inadequate?—Very inadequate.

50,682. Have you considered what would be sufficient as regards Scotland alone?—No; I have not.

50,683. Have you formed no opinion on the subject at all?—I would rather not say, off hand, but I will supplement my evidence on the point. *The witness subsequently wrote:*—"I think an annual grant of 10,000*l.* "would be required at first to be increased to from 15,000*l.* "to 20,000*l.* when the scheme has been fully developed."

50,684. When you have got a sum that is considered adequate and sufficient, how do you propose to dispense it?—I think it should be almost entirely given to the advanced schools in the three centres I have mentioned, and to the Kilmarnock Dairy School.

Objects of agricultural schools.

50,685. Their object would be principally to supply teachers of agriculture?—Yes; and to teach young farmers who want an advanced education. Before the agricultural depression set in, a large number of the sons of the larger farmers came to Edinburgh and got an agricultural education; and I think they would still be disposed to do that, if their means permitted and they could get education on reasonable terms.

50,686. The main object of this advanced education, I take it, would be to give this advanced education to young men and supply teachers to go about the country?—Yes.

50,687. With regard to the second class, what is to be their special teaching?—The principles of agriculture, and chemistry, botany, and the allied sciences.

50,688. And is it by these schools that the experiments you contemplate are to be made?—No. I do not think they are capable of it.

50,689. These experiments would be carried out by the higher schools?—Yes.

Higher schools.

50,690. Then, the higher schools would have to be provided with land and opportunities for making research?—As regards research, one must distinguish between original research and ordinary farm experiments. The research part should be under these central boards, and the experiments should be conducted near these schools or in the different localities, as might be thought desirable; but the ordinary experiments, strictly so called, would be conducted on ordinary farms.

50,691. But would they be carried out by the advanced schools or the secondary schools?—The advanced schools.

Rev. J. Gillespie. 4 June 1895.

50,692. Then, what is to be the work of the secondary schools?—To give teaching in the principles of agriculture proper and the allied sciences up to a certain grade.

Secondary schools.

50,693. With regard to the parishes and the localities, you do not mean separate schools?—No.

50,694. But that in the existing schools there are to be means afforded for agricultural education?—Yes.

50,695. With regard to dairy education, I suppose there is a greater opening for that than in any other direction?—There is a large opening, but I would not say a greater.

Kilmarnock Dairy School.

50,696. How do you propose to carry it out?—By subsidising the Kilmarnock Dairy School.

50,697. And allow them to undertake arrangements for itinerant teaching all over Scotland?—Yes, that has been done already, with very good results.

50,698. And you will be good enough to let us know what sum will be necessary to carry out this scheme of education in Scotland?—I will. (*See* Question 50,683.)

50,699. (*Mr. Dalton.*) Do you consider that you have sufficient funds for the first two grades of this instruction?—I would not go so far as that, but I do not think we have much reason to complain.

Grants supplemented by rates.

50,700. Are these funds supplemented by rates?—No.

50,701. Is there in Scotland, as in England, power to raise money for that purpose by rates?—Under the Technical Schools Act there is, but it is a voluntary Act, and I think only three parishes have adopted it.

50,702. Is there any necessity for altering the law in regard to that?—I do not think so. I am in favour of a Bill now before Parliament to administer the technical instruction grant by the same body that administers the secondary education grant.

50,703. May county councils do it?—Yes, they may do so. Most of these bodies in the south-west of Scotland give grants to the Kilmarnock Dairy School. One of them—Midlothian—gives a grant to the School of Rural Economy, but that is a school in its own district. The Town Council of Edinburgh give that school a liberal grant, and they have four representatives on the administrative board. I think they give us 500*l.* or 600*l.*

50,704. Then, on the whole, you might get from these sources larger grants than from the Board of Agriculture?—No, I do not think so. There is an indisposition on the part of county councils to give grants outside their own area, because they seem to think that the money has been given for administration within their own jurisdiction.

50,705. But there is no legal objection to their giving it?—There was one, I believe, but it was avoided by a supplementary Act.

Kilmarnock Dairy School.

50,706. (*Captain Thomas.*) What is the size of the dairy school at Kilmarnock?—It was started on a farm belonging to Lady Ossington, near Kilmarnock. She gave the use of the farm buildings, and entirely remodelled them at her own expense. An arrangement was made with the agricultural tenant for the use of the milk from his dairy, and the work is carried on at the very lowest cost.

50,707. What do the pupils pay?—A merely nominal fee, they have to board in the town of Kilmarnock.

Income tax.

50,708. (*Chairman.*) Coming to the question of the income tax, you have studied the question in all its bearings?—For a quarter of a century I have had considerable experience in assisting farmers to get redress for overcharges, and I am the author of a pamphlet on the subject. During that period I have been instrumental in getting thousands of pounds backs to farmers.

50,709. What is complained of?—Many farmers are over-charged for income tax, many people pay who ought to be exempted, and others do not get the benefit of the abatement who are entitled to it. That proceeds almost entirely from the mode of assessing farmers for income tax.

Mode of assessing farmers.

50,710. What is the mode?—The principle embodied in various Acts of Parliament is that one-third of the rent is assumed to be the profit of the farmer. That proportion is now the law for the whole of the three divisions of the kingdom, since the Budget of a year ago. But although that is the principle, the assessment is not laid on in that way. Instead of one-third of the rent being taken as the basis of assessment, and that charged under the usual rate under Schedules A., D., and E., the whole rent is taken and charged at a rate under Schedule B., which is a smal

Digitized by Google

Rev. J. Gillespie.

4 June 1895.

fraction over the usual income-tax rate for the year. It is because of that that the confusion arises.

50,711. (*Mr. Everett.*) When the income tax was at 6*d.*, the farmers were charged 2*d.*?—No, 2¼*d.* In England just now the rate is 3*d.*, but one-eighth is taken off before it is levied.

50,712. (*Chairman.*) Assuming the rent is 300*l.* a year, I understand that, instead of being assessed at 100*l.* a year and income tax charged on that sum, the farmer is assessed upon 300*l.* and the income tax is charged at one-third rate upon that amount?—Rather over one-third.

50,713. One does not at first sight see the difference between the two?—They are the same, except that it confuses the farmer, and he does not see that he should be exempted. He is charged, say, upon 300*l.* He does not understand the principle upon which the income tax is levied, and he does not distinguish between the 300*l.* of his rent and the 300*l.* of income.

50,714. Are you now speaking of his right to get exemption if his income does not exceed 160*l.*?—Yes.

50,715. So that if his assessment is maintained at 300*l.*, he does not get the exemption for being under 160*l.*?—Unless he understands the principle. I think that farmers, on the merits of the income tax, have no reason to complain, because they are charged in principle on one-third of their rent. The farmer can never be charged more than that. If within two months of the end of the financial year he presents a balance-sheet, showing that he made less profit, or no profit at all, he gets back the difference on what he has paid. But I submit that, according to the mode in which the income tax is levied, in practice it leads to over-charges, and not only to financial over-charge, but to great irritation in the minds of farmers.

50,716. If a farmer has no other source of income than his farm, his rent must be 480*l.* before he pays income tax?—Yes, before he is liable to pay, but many of them do pay notwithstanding.

50,717. But if they make application they will get it back?—Yes, if they are guided in making the application, but they do not understand it.

Suggested alteration in mode of assessment.

50,718. You recommend that, instead of being assessed on the full rent, and income tax levied at one-third of the rate, the assessment should be at the full rate on one-third of the rent, and that would *ipso facto* carry exemption?—Yes; it would lead to the same result and simplify the procedure. It is more striking in the abatement than the exemption. If the rent is, say, 600*l.*, 480*l.* is taken off, and that confuses the farmer. Within the last few weeks cases have passed through my hands in a friendly way, in one of which 43*l.* had been repaid, and in another case 23*l.* had been recovered. In very many instances since 1st January I have passed through my hands papers for repayment for four years.

Importation of foreign milk.

50,719. As to the importation of foreign milk, what is your opinion?—I have a strong opinion that it ought to be entirely prohibited. It is the only kind of foreign produce regarding which I have that opinion.

50,720. On what grounds would you prohibit its importation?—First, in consideration of the public health. We have no knowledge or control of the conditions under which milk is produced abroad. Although it is frozen, the process of freezing does not destroy the germs or make them innocuous. I therefore think there is the greatest possible danger that infectious diseases may be brought with the milk to this country. Producers of milk here are placed under the local authority's regulations, and quite fairly so. They feel the regulations very exacting, but they submit to them, at considerable inconvenience and expense.

Inspection of dairies

50,721. Is there a local inspection of the dairies?—Yes, a very careful inspection, and yet fever has been conveyed to the towns.

50,722. To what district are you referring?—To Dumfriesshire, where I am chairman of the District Committee.

50,723. Does the sanitary inspector visit the dairies?—Yes, regularly, and gives periodical reports. The cowsheds have to fulfil certain very exacting conditions. The utensils have to be treated in a particular way. If an infectious disease breaks out among the farmer's or dairyman's children, the sale of milk is stopped. If all that is necessary in this country in the interests of public health, it is most unfair to the home producer, as well as to the consumer, that foreign milk, which is not subjected to any such precautions, should be admitted.

50,724. In the case of condensed milk, I understand that is subjected to the process of boiling?—I understand so.

50,725. And that would destroy the germs?—I understand it does.

Rev. J. Gillespie.

4 June 1895.

The Agricultural Holdings Act.

Private contracts.

50,726. Coming to the Agricultural Holdings Act, have you acted as arbiter under that measure?—Yes, and I have taken a considerable interest in it.

50,727. What amendments do you consider desirable?—One point on which I wish to express my views is that no discouragement ought to be given to private contracts between landlord and tenant in substitution of the compensation provided for in the Act so long as these private contracts are equitable.

50,728. So far as they give advantages equal to those conferred by the Act?—I think they give better advantages.

50,729. Is there any alteration of the law you would suggest?—No, but I have observed in the Sub-Commissioners' reports and in various other ways that private contracts have been pretty strongly condemned. I do not agree with that view. I think private contracts keep down expense in settling claims. When private contracts are made it is a mere matter of accounting at the end of a tenancy what compensation is due, and no doubt the very heavy expenses of arbitrations have gone far to nullify the benefits of the Act.

Custom as between outgoing and incoming tenant.

50,730. What is the general rule in Scotland—are the settlements for improvements under the Act generally between the outgoing and the incoming tenant, or between landlord and tenant?—Between landlord and tenant at the end of the lease. It is very seldom between the outgoing and incoming tenants.

50,731. (*Mr. Everett.*) Who is the compensation paid to?—It is paid by the landlord to the outgoing tenant. I have heard of isolated cases where the landlord has bound the incoming tenant to repay him, but they are very few. The landlord pays the compensation out of his own pocket, and expects to get it back in rent.

50,732. (*Mr. Chaplin.*) Are the farms sometimes let on a yearly tenure with six months' notice to quit?—They are but very seldom.

50,733. Is there any distinction then between landlord and tenant or outgoing and incoming tenant?—Not that I am aware of. As far as I have observed the matter is always between landlord and tenant. Five years' tenancies are getting common, especially in the south-west of Scotland, but I do not think they are growing in favour. Some people take advantage of them to reduce the condition of the farm, and they are rather going out of favour.

50,734. (*Chairman.*) But where the landlord has to pay the outgoing tenant for unexhausted manures, he must get it from the incoming tenant?—The theory is that he gets it from the rent.

50,735. (*Mr. Chaplin.*) What is the usual period of entry?—There is an entry at Candlemas in February. In these circumstances the incoming tenant has the next year's crop. Then there is the Whit-Sunday entry in which the outgoing tenant has the grain crop of that year. Then there are Martinmas entries where the incoming tenant enters upon everything, including the houses, with the exception perhaps of the turnips or green crop.

50,736. (*Chairman.*) From your experience what would you say the landlord has to pay on the average to an outgoing tenant at the end of a lease?—I could not say.

Private contracts.

50,737. But it must often be a considerable sum?—No, the claims have not been numerous. The number of claims, in proportion to the number of farms in the country, or changes of tenancy, have not been numerous. That has been largely due to a want of confidence on the part of tenants that they would not get much when they went out, and therefore they did not farm so liberally. If a man makes a private contract he can make an approximate estimate of what he has to get at the end of a lease and he farms accordingly. I submit, therefore, that private contracts, if liberally constructed in the interest of the tenants, will give them confidence to go on and farm liberally.

50,738. (*Mr. Everett.*) There will be more certainty and less expense?—Yes, these are the two elements.

50,739. (*Chairman.*) If the tenant renews his lease there is nothing payable between him and the landlord—he farms with that object?—Not always.

50,740. But if he does not intend to take the farm on again he farms towards the end of his lease with that intention?—He could do it, but it is very undesirable that he should.

50,741. What do you recommend in the way of keeping down the cost of arbitration?—I do not know anything, except private contracts.

Digitized by Google

Method of arbitration in Scotland.

50,742. What is the usual method of arbitration in Scotland?—The landlord and tenant each name an arbiter, and then an umpire is selected between them.

50,743. So that practically three people are engaged?—Yes.

50,744. Which means three fees?—Yes.

50,745. Could that not be reduced to one?—I am in favour of single arbiters.

50,746. You have generally acted as an umpire?—I have acted in both ways.

50,747. Could you suggest any method of converting the three arbiters into one?—Under the Act of 1889 either party can, by applying to the sheriff of the county, compel the appointment of a single arbiter to dispose of the reference.

50,748. But they do not do it?—In some instances, but not in the majority of cases.

50,749. (*Mr. Everett.*) Is it not the case that by a trades union arrangement among valuers if you have a single valuator he charges a double fee?—Not in Scotland. A good many of the valuations are given gratuitously. I do not think we have anything to complain of.

50,750. (*Mr. Lambert.*) If there is no cause of complaint against the valuations, why complain of the expense?—I do not complain of the expense, because you cannot compel a farmer to take a single arbiter.

Appointment of arbiters.

50,751. (*Chairman.*) Would you approve of arbiters being selected by an official body, and the parties being compelled to accept the names?—That would be a very strong step, but it is the only way I can see to keep down the expense. I think the present plan meets the case very fairly.

State loans.

50,752. You have an opinion on the subject of Government loans?—I think it would be very advantageous if Government money could be got at a small rate of interest for buildings and drainage.

50,753. Do the tenants under leases in Scotland spend much money on permanent improvements?—Yes, a good deal.

50,754. In the way of cottages or buildings?—Not much in that way.

50,755. Speaking generally, they do not?—No.

50,756. Do they in drainage?—Yes, some of them. But in Scotland the maxim generally acted upon is that drainage is a landlord's operation.

50,757. Do you say that, generally speaking, the landlord effects the permanent improvements in Scotland?—Yes; but there are a good many cases in which the tenants do it.

50,758. Should the State loans you suggest be advanced to the landlord or the tenant?—I think to the landlord. I do not think that in the case of the tenant you could get a sufficient tangible security.

Depression in Scotland.

50,759. (*Mr. Everett.*) How long has the depression in agriculture existed in Scotland?—I think about 15 years. It existed very acutely in the dairy districts about 1882 and 1883, when the price of dairy produce fell to a very low point. Then the dairy districts recovered, but the prices of grain and meat affected many farms where mixed farming is followed.

50,760. And it is this fall in prices which is the main cause of the depression?—Yes.

50,761. (*Mr. Dalton.*) Is there much depression now in Scotland?—Yes.

50,762. Is it getting worse?—No, not in the general farming, because both sheep and cattle are bringing a better price than for years past, especially lean cattle.

Length of leases.

50,763. If the depression has been getting worse, how is it that the tenants are anxious to have these long leases?—I cannot explain that. It seems very mysterious that they should, in the face of the present condition of matters, offer large sums for land; but they do.

50,764. Is it a matter of fact that farmers do not like the annual tenancy, but prefer a long lease?—They do; but in point of fact the lease is very largely a one-sided bargain. That is to say, the tenant in practice can and does keep the landlord to his bargain, but if the tenant throws up the lease it is very difficult for the landlord to insist upon his continuing his tenancy on the old terms.

50,765. Have many of these leases been thrown up?—Yes, a good many.

50,766. And notwithstanding these leases, the reductions of rent have been given?—Yes; they were largely given after the depression first set in.

Income tax.

50,767. With respect to your objections regarding the income tax, is any alteration of the law necessary to do away with them?—I suppose it would be necessary in each year's finance Act to say that the mode of levying would be a literal carrying out of the principle, and I think that is absolutely necessary to prevent farmers being overcharged.

50,768. There is no explanation given in the demand note of the cases in which the farmer should claim exemption or abatement?—No.

50,769. Is there any reason why that explanation should not be given?—There is no reason why it should not be given, but it would be most difficult to explain it to the farmer.

50,770. You think that some explanation should be given?—Yes, if the mode is not entirely changed.

Cost of arbitration.

50,771. (*Mr. Channing.*) Do you not think that if there was a fixed scale of fees and official valuators appointed, the cost of arbitration would be materially reduced?—It might be so, but it is not so much the charges of the valuators as the leading of evidence. Where you have two valuers and an oversman, one or other of the parties proposes to lead evidence, and with three men it is more difficult to repress that evidence than if you had only one arbiter.

50,772. Could you not bring the leading of unnecessary evidence within bounds by arranging it in the cost?—That is done.

50,773. And it is not sufficient?—No. I think it should be inserted in the Act that the arbiter or arbiters have it in their discretion to refuse evidence if they think it unnecessary.

50,774. As to placing compensation cases in the hands of one man, could that not be done by making it the law, unless the two parties agreed to have two arbiters and an oversman?—There could be no objection to that.

50,775. It would put the pressure upon the parties to elect one man, unless they were agreed?—That would be very desirable.

Length of leases.

50,776. As to the leases—the tendency is rather to take the long lease again?—Yes, I think it is. People are getting dissatified with the five years' lease.

50,777. The five years' break is not so popular?—Not so much as it was five years ago.

50,778. On the side of the landlord or of the tenant?—I think on the landlord's side.

50,779. Of course it would be less to his advantage to have a five years' break?—Yes.

Private contracts.

50,780. About the contracts for substituted compensation—in the Act the words are "fair and reasonable compensation"—how is that interpreted in Scotland?—It is a legal question, and the determining of it does not commonly come under arbiters at all. Where there is a private accounting, it is generally a matter of adjusting.

50,781. What is the practice of gentlemen like yourself in regard to the interpretation?—I have not known it gone into in my experience.

50,782. It is not desirable that the words "fair and reasonable compensation" should be interpreted in the case of contracts entered into which might not be fair and reasonable?—I think so.

50,782*a*. (*Mr. Lambert.*) Is there much competition for farms?—Very much in my district.

50,783. What is the usual size of farms?—Mixed arable farms vary from 100 to 300 imperial acres.

50,784. How much rent do they command?—From 100*l*. to 450*l*.

50,785. How many applicants would you expect to get for a farm of 200*l*. rent?—I should expect from six to ten offerers.

50,786. How are the farms let—in what way are the rents fixed?—The landlord or his agent fixes it by determining who is to be accepted.

50,787. Are farms let by tender?—Yes, written offers are almost the invariable practice.

50,788. Would a farmer in that position be a free agent in bargaining with his landlord, with six or ten men offering for a single farm?—I think he would.

59,789. Is not his anxiety to get into the farm so great that he would not be quite so free as bargaining with an

Digitized by Google

Rev. J. Gillespie.

4 June 1895.

outside person?—Just the same as in any other business where there is keen competition.

50,790. Keen competition naturally tends to force up prices arbitrarily?—It does.

Length of leases.

50,791. Do tenants prefer long leases?—Yes, they seem to do.

50,792. For what reason?—The reason used to be that they had security for their improvements. They could go on farming liberally and getting the benefit of their own expenditure, and I think it is the reason still.

50,793. You think they have not sufficient security under the Agricultural Holdings Act?—In some respects they have not. There are features which could be amended with advantage.

Reduction of rents.

50,794. How much have rents been reduced in your part of the country?—The Chairman of the Finance Committee of Dumfriesshire made a most elaborate calculation for a period of 15 years of the rents of the agricultural subjects in the whole county, comprising 42 parishes, with a valuation of from 500,000*l.* to 600,000*l.*, and the conclusion he came to was that rents have fallen 16 per cent.

50,795. (*Mr. Everett.*) Would there be abatements outside that?—Oh, yes; because abatements are given privately.

50,796. (*Mr. Dalton.*) Was that for arable or pastoral land?—For both classes.

50,797. (*Mr. Lambert.*) Do you hear many complaints as to the insufficient reductions of rent in the case of sitting tenants?—Yes, I hear more or less complaints and there will be as long as agricultural depression is as severe as it is.

Security of tenure.

50,798. Do you imagine security of tenure is conducive to good farming?—Oh, yes, it is.

Importation of milk.

50,799. What amount of milk is imported from abroad?—I am not aware, but one learns from the usual sources of information that very elaborate preparations are being made to increase it.

50,800. Have you any evidence to offer as to any disease that has occurred through the importation of foreign milk?—No; but we prevent the importation of foreign cattle lest disease should be conveyed to our cattle, and there is stronger reason for preventing the importation of foreign milk lest it conveys disease to human beings.

50,801. But you only prevent the importation of foreign cattle when there is disease in the country from which they come?—I suppose there is disease in Norway and Holland which might be conveyed to human beings.

50,802. (*Mr. Chaplin.*) Do you propose to prohibit milk only from Norway and Holland, or from all countries?—From all countries which do not take means to destroy the germs by boiling, or some such process.

50,803. Is it a danger to public health when nearly all the countries on the Continent have animals suffering from disease?—That is certainly an aggravation.

50,804. What is the special danger arising from fever?—Scarlet-fever, for example. We had an instance in the local authority of which I am chairman. Scarlet-fever broke out in a dairyman's family. The milk was being taken to the county town of Dumfries, and 10 or a dozen cases of scarlet-fever broke out, five of which proved fatal. And we thought we were administering the Act with as much care as could be exercised.

50,805. And I understand you are not satisfied that sufficient precautions are being taken to guard against a similar danger in foreign countries?—That is so.

Reduction of rents.

50,806. With regard to the 16 per cent. reduction of rent you were speaking of, is that a dairy district?—Partly dairy, but more mixed farming.

50,807. Would that represent the average reduction throughout the whole of that county?—I think it would be larger than 16, because it does not take into account the voluntary reductions made by landlords, and which do not appear in the valuation roll.

Private contracts.

50,808. I understood you to say there is nothing, in your opinion, now to prevent farmers making private contracts on equitable terms as regards the Agricultural Holdings Act?—I know of nothing to prevent it. And I know a good many large estates in the county I live in where such contracts exist, and they work very satisfactorily.

Letting by tender.

50,809. Are farms in Scotland let by tender?—Yes generally.

50,810. To the highest bidder?—I do not know that I am not a landlord or factor,

50,811. Is it commonly the case or not that a rent is taken much less than the highest rent offered?—Yes, I suppose that is so.

Rev. J. Gillespie.

4 June 1895.

Private contracts.

50,812. (*Mr. Gilmour.*) You approve very highly of these private contracts, such as exist on the Richmond and Dalhousie estates. These are based entirely on certain proportions of the manures supplied within the last years?—They are based on scales as regards lime, manures, and feeding stuffs.

50,813. Although they may not have perhaps increased the fertility of the soil to any great extent? It is presumed that they must have increased the fertility of the soil since they have been applied.

50,814. But there is a possibility of applying such things without increasing the fertility of the soil?—I do not know that there is. The fertility of the soil must be increased compared to what it would have been if these things had not been applied.

50,815. When you spoke of the lease being a one-sided arrangement, you meant that in bad times the bargain was broken by the landlord having to give deductions in rent, which is a breaking of the bargain?—That is so.

Rates

50,816. Is there much complaint made in your part of the country as to the mode in which agricultural subjects are rated?—Yes, a good deal.

50,817. And have you looked into that question closely?—Not very closely. I have a general idea of it. There is a very strong feeling that land pays an undue proportion of rates as compared with other sources of income.

50,818. Have you considered any scheme whereby that can be made more fair to the agriculturist?—No, I am not prepared to submit anything

Custom between outgoing and incoming tenant.

50,819. In reference to the question which has been dealt with, in regard to the person who has to pay the compensation for improvements, you hold that it must be the landlord, under the first section of the Act?—I suppose it could be either the landlord or the incoming tenant. I was testifying to what I knew of the practice. The difficulty as to the tenant being legally bound to pay compensation is that he is not in a good position to know what has been expended. When he examines the farm he sees the condition it is in, but he is not in a position to know what portion of the expenditure that brought it into that condition would come under the Agricultural Holdings Act.

50,820. In practice of late, where rents have been falling, is it the case that the landlord has been paying considerable sums to the out-going tenant and accepting lower rents?—Such cases have occurred; but there have been very few cases of compensation in my part of the country.

50,821. (*Mr. Clay.*) You hold that the landlord and the out-going tenant are the only two contracting parties?—I do not see how the incoming tenant is in a position to judge.

50,822. The incoming tenant bids a rent according to the look of the farm?—I presume so.

50,823. And he is perhaps paying a few shillings per acre more because there has been a liberal use of cakes and manures on that farm?—I presume so.

50,824. And, therefore, the landlord is reaping the benefit, and is entitled to pay the out-going tenant for that improvement?—Yes.

Private contracts.

50,825. Regarding these private arrangements, have you seen many of them?—Yes.

50,826. Are they fair?—Yes, I think they are fair and equitable. I am not at liberty to give names, but on several large estates in the south-west of Scotland my opinion and assistance were asked in framing them, and I think them quite equitable as far as they go, but if there is anything over and above the improvements particularised that would come under the Act.

50,827. These improvements only deal with cakes, lime, &c. within the last few years of the lease?—Yes.

50,828. But if a farmer has been going ahead right through the lease he would get no compensation except for the last few years?—That is in his own hands in making the private contract.

50,829. Is there any increased fertility in cakes and manures?—Cakes and manures do not go very far back—perhaps four years.

50,830. Is there not a great deal of fertility not covered by these private contracts?—I think there might be a case where providing compensation for only three years or so would not give adequate compensation.

Digitized by Google

Rev. J. Gillespie. 4 June 1895.

50,831. Is not the Act weak in that point?—I think the Act gives ample power to the arbiter to take into account fertility so long as the farm has been occupied.

50,832. Do arbiters usually act on that principle?—As a rule, they have not gone very far back.

50,833. Who is to be the judge of the term "fair and reasonable" in private contracts?—At present I suppose the court would be the judge.

50,834. It would be pretty expensive?—No doubt; but it would be a very good plan to insert in the Act words giving power to the arbiter to say whether it was fair and reasonable.

Competition for farms and high rents.

50,835. Is the tenant, where there is so much competition, a free agent?—I have no further answer than that which I have already given, that he is as much a free agent as in any other keenly competed trade.

50,836. But if he gets into a factor's office he may be screwed up to make disadvantageous arrangements?—As far as my knowledge goes in the case of vacant farms the arrangements are made, not by screwing people in factors' offices, but by written offers.

50,837. Are they bound to take the highest offers?—I do not know about that.

50,838. Perhaps people with deeply-mortgaged estates, getting into the hands of Edinburgh lawyers, would take the highest offer?—I do not know, and I would not like to give an opinion on what I do not know from personal knowledge. In a friendly way, and not for payment, I have acted as factor on one or two small estates, and I had one instance where 30 per cent. more was offered for a farm. I never looked at the offer, because I thought it was far too much.

50,839. (*Mr. Lambert.*) What makes a man offer 30 per cent. more than the value of a farm?—I think ignorance.

50,840. Are many farmers ignorant in that respect in Scotland?—If a man goes 50 miles from his own country, as in our district many have done, I do not think he is a good judge of the value of that land. Their experience has been drawn from an individual farm, say, in Ayrshire, and unless they are well advised they do not know the value of the land in Dumfriesshire.

50,841. Do you imagine there are many such cases of farmers offering so much more than the value of the farms?—I think there are.

50,842. They would not be all ignorant men?—They are ignorant of the value of that particular subject, but they may not be ignorant in their own sphere.

50,843. Do you imagine that there might be some landlords who would accept these very high rents?—I think there are.

50,844. They are not all animated by the spirit of philanthropy of some landlords?—You must bear in mind that a landlord is not always a judge of what his subject is worth. He gets it valued by the public, and he presumes that these practical men know their business, and he takes their offer.

50,845. (*Mr. Channing.*) We have had evidence regarding the Duke of Richmond's and Lord Aberdeen's estates that they are only desirous of letting their land at its fair value, and that these excessive offers are not accepted. Do not you think that system should be adopted?—I believe it is largely adopted.

50,846. (*Mr. Everett.*) And is inquiry made usually as to the means of the tenant?—Yes.

50,847. Have you the law of distress in Scotland?—Not now. Landlords and other creditors are on the same footing.

50,848. Has that led to rents being asked for in advance?—In some instances, but not many.

50,849. (*Mr. Clay.*) In the report of Mr. Speir on your county he gives a table showing that out of 172 farms let in Nithsdale only 90 were let to *bonâ fide* farmers, 82 being let to agricultural students, bankers, merchants, and others entirely unconnected with agriculture. That may account for these men not having sufficient knowledge of the farms to guide them when offering these high rents?—That may be. I noticed that statement in the Sub-Commissioner's report, and I was astonished at it. But there has been a great change in my district. I live further south than Nithsdale. It used to be a very common thing before the agricultural depression set in for men who had not spent the previous part of their lives in farming to offer for farms, but that has been very much reduced. Men went to England to what was called the "Scotch trade," and on their return offered high rents for farms, but they got their fingers burned.

Rev. J. Gillespie. 4 June 1895.

50,850. Do you think it wise in landlords to take these high rents from men of inexperience?—It is not what I would do.

50,851. Do you think the sitting tenant has ever been rented on his improvements?—I have no doubt he has.

50,852. Could you devise any means to have a certain per-centage deducted from the rents of these men?—It may be desirable, but I think it is impracticable, so far as I can see.

Reported prices of live stock.

50,853. (*Sir Nigel Kingscote.*) You suggest that the reports of prices given for live stock throughout the country are very unreliable?—Very unreliable. The most of the live stock at present is sold in auction marts, and the material for the reports in a great many cases is supplied by auctioneers, and it is very often coloured.

50,854. Who would you have to supply the official report?—I think that under the Intelligence Department of the Board of Agriculture a man might be got in each district to give a reliable report of the principal markets, say one for each county. I think that could be done at comparatively little expense.

Prices of grain.

50,855. Would you apply that to grain also?—No, I think the reports of the prices of grain are more reliable. In Edinburgh I think they are perfectly reliable.

50,856. Why should not live stock or dead meat be treated in the same way by an official reporter?—I think they should be, and that there should be a speedy publication of whatever is given.

Selling by live weight.

50,857. Are you an advocate of selling by weight?—I am in favour of selling by live weight, but I do not know that I would go in for compulsory live weight.

50,858. But you think every auction mart should have a weighbridge?—Oh, yes.

Income tax.

50,859. To enable farmers to get back their income tax they would be compelled to keep accounts?—Yes, if under Schedule D., and I do not think it would work. If put on the same footing as other tradespeople in the country I think it would lead to endless friction. I think they would rather go on their old way and pay income tax than be compelled to keep accounts.

Demand for farms.

50,860. (*Chairman.*) Can farms be let easily in your district?—Oh, yes.

50,861. Are there many applications for vacant farms?—There seem to be a good many.

50,862. Within the last year or so has there been a tendency for rents to rise?—I would not say that, but they have not fallen as compared with the previous years.

50,863. The fall has been arrested?—I think it has.

50,864. And still there is a demand for farms?—Yes.

Length of leases.

50,865. You say that the leases are still maintained with a break of five years?—The leases used to be for 19 years, but they are now for 15 years, with a break at five years. When I say the fall of rent is stopped, I mean as compared with a few years ago, but not with the period at the commencement of the lease.

Prices of dairy produce.

50,866. You say the prices of dairy produce fell very low in 1882?—Yes.

50,867. And then rose?—Yes.

50,868. How do they stand now?—The price of cheese is lower than ever. Last week in Glasgow it was only bringing about 32*s.* per cwt.

50,869. Taking an average of the last few years, what would the reduction in prices be?—They were 12 per cent. less than in the good years, when prices were 60*s.* to 65*s.* per cwt.

50,870. And butter?—Butter has been rather low.

50,871. Taking the last few years?—I have not the same knowledge of butter as of cheese.

Length of leases.

50,872. You would consider it rather a misfortune if the old system of long leases should be superseded by these breaks of five years?—If I were taking land I would prefer to take it on a yearly tenancy, with two years' notice. I do not think any injury could arise to either party. I do not approve of 15 years' leases, for I think whatever bargain is made it should be fulfilled. I think non-fulfilment of bargains has had the effect of keeping up rents, for no doubt many tenants offer rents in the expectation of getting an abatement afterwards.

50,873. In the time of depression landlords were compelled to make large abatements in spite of the fact that tenants were bound under these long leases?—Yes.

Digitized by Google

Rev. J. Gillespie. — 4 June 1896.

50,874. Then the practice began of tenants contracting for higher rents, believing they would get abatements?—Some of them did.

50,875. In other words, the tendency has been not to hold men to their bargains, and the leases have been to a great extent broken?—Yes, in many instances.

50,876. (*Mr. Everett.*) I think 1893 was a season above the average with you?—It varied a good deal in different districts.

50,877. And 1894 was a very good season?—Yes.

50,878. (*Chairman.*) Have you been called in as an arbiter by tenants as well as by landlords?—Yes, sometimes by one and sometimes by another. Very often I was the sole arbiter in a friendly way.

50,879. Have you been nominated under the Act of 1889?—No.

50,880. Do you consider the cost of arbitration has been less where you have acted singly?—Yes.

Judicial rents.

50,881. From your experience, has there been any demand in your district for a judicial determination of rent?—Not much.

50,882. There is some?—Very seldom.

50,883. Would the tenants desire to have their rents fixed for five or seven years by an independent arbitrator?—I have not met with that demand.

50,884. (*Mr. Lambert.*) Have you met with any demand?—In conversation I have heard of it.

50,885. (*Mr. Channing.*) Is it the general opinion that two years' notice would be sufficient?—I do not think so. It is my own opinion.

Management of estates.

50,886. (*Captain Thomas.*) Are estates well managed in Scotland?—Yes.

50,887. Are there not a good many lawyer factors?—Yes.

50,888. Have they any practical experience?—As a rule, no.

50,889. How are those estates managed?—In some instances they have a sub-factor, who resides on the estate and administers the practical working of it.

Rev. J. Gillespie. — 4 June 1896.

50,890. (*Mr. Everett.*) Have you formed any opinion as to the cause of this depression?—It is largely due to the large production and cheap conveyance of foreign produce.

Length of leases.

50,891. (*Mr. Dalton.*) Do you think these short tenancies would be to the advantage of the landlord as well as of the tenant?—I think so. If I were a tenant I think I could farm as well under a short lease as a long one.

Wages.

50,892. (*Chairman.*) Have labourers' wages been maintained in your district?—Yes.

50,893. There has been no reduction?—Well, there has been a slight reduction from the highest figure at which they stood, but it is very small.

50,894. At what period were they highest?—About 1880. Throughout Dumfriesshire generally and the south of Scotland labour is rather scarce in the rural districts. It is difficult to get occasional persons to work on farms. Migration into the towns is taking place pretty extensively.

50,895. (*Mr. Chaplin.*) And that accounts for the wages being maintained?—Yes.

50,896. (*Chairman.*) What is the average rate of wages in Dumfriesshire?—For a ploughman engaged for the year, from 39*l.* to 42*l.*, with free house and garden.

50,897. (*Mr. Chaplin.*) Your view is that this great migration into towns has caused less labour to be available in the country?—There is less labour, owing to machinery being more largely employed and there being few permanent improvements executed.

50,898. (*Mr. Clay.*) What do they get in wages besides the house?—As a rule, with us it is all a money wage, except the house and coals and peat led.

50,899. Do they get sufficient time to cut the peats?—Yes, where it is available.

Witness then withdrew.

Mr. J. B. Kinnear.

Mr. John Boyd Kinnear called in and examined.

Mr. J. B. Kinnear.

50,900. (*Chairman.*) You are a member of the Scottish Bar, a landowner in Scotland, and were formerly a member of Parliament for East Fife?—Yes; I may add that I am also a member of the English bar, and have lived in England a great part of my life.

50,901. And you have given a great deal of attention to agricultural matters?—Yes, in both countries.

Low prices.

50,902. To what do you attribute the recent depression?—Undoubtedly to the fall in prices.

Agricultural education.

50,903. What do you consider should be done to improve the state of things?—I agree very much with what I gathered are Mr. Gillespie's views in regard to education. That is very important. Without going further into these points I should like to add that I think it would be of

Research stations.

very great importance if in this country we had research stations such as exist in Germany, the United States, and Canada.

50,904. You think that much might be done by giving greater inducements for agricultural education?—Undoubtedly; not merely in aiding the higher schools in which farmers should be taught, but by giving instruction in the elementary schools, in which the labourers could be taught.

50,905. And also by assisting scientific research?—I feel that very strongly. We are placed at a very considerable disadvantage in competing with America in that respect.

State loans.

50,906. As regards loans by the State, do you agree with Mr. Gillespie?—Yes, as to loans to landlords; and I should further advocate loans to tenants. I may point out with regard to the landlords that one difficulty in the way of their increasing the number of small holdings is their want of capital to erect the necessary buildings.

50,907. You think if money was lent by the State at a low rate of interest many landlords would be induced to break up large farms into small ones?—I am confident they would in frequent instances.

Small farms.

50,908. Have the small farms gone through the depression better than the large ones?—As a rule they have.

50,909. What do you consider a small farm?—Those cultivated by the tenant and his family.

50,910. Are they dairy farms?—In my county of Fife there is little or no dairy farming.

50,911. What is the size of the small farms there?—They vary exceedingly. Very often a farmer with a very small farm has some other vocation, such as employing his horses in carting, so that a small farm might be anything between 5 and 50 acres, or up to 100 acres.

50,912. You are speaking then of encouragement being given to persons who have some other vocation than farming?—I would begin with these.

50,913. Are there many such farms in Fife?—A good many.

50,914. And you consider they ought to be increased in number?—They are most useful as stepping stones for the rise of the labourer to the position of a comfortable farmer.

50,915. You would make these farms steps by which the labourer should rise gradually in the social scale?—Yes, and I think it would be attended with profit to both landlord and tenant.

50,916. And you think the number of these farms should be increased by the State advancing money at a low rate of interest?—Yes.

Reduction of rents.

50,917. What has been the average reduction of rent in your district?—Speaking roughly, I should say about 33 per cent., and considerably more on some of the largest farms, but less than that on the smaller.

Demand for farms.

50,918. Is there any difficulty in getting tenants when farms are vacant?—No; there are always a large number of applicants.

50,919. Then at the present reduction of 33 per cent. there is a demand for farms?—Undoubtedly, a good demand.

50,920. More demand for the smaller than the larger farms?—No, unless you come to the very large farms of say 500*l.* and upwards of rental, when the number of applicants is smaller.

50,921. But up to that there is a fair number of applicants?—Yes.

50,922. Of men with sufficient capital to farm the land?—Yes.

Digitized by Google

Mr. J. B. Kinnear.
4 June 1895.
Farming to a profit.

50,923. How do you account for the fact that there are men ready to embark in a business that has been unprofitable of late years?—My impression is that since the reduction in rents the business has not been a bad one. I think farmers have made a very comfortable rate of interest on their capital, both in the case of small farmers and in the case of larger ones where they have had ample capital.

50,924. What is the ample capital in your district?—Not less than 10*l.* an acre.

50,925. Where he has that capital, at the present reduction of rent, he can make a good return?—I think with skill, intelligence, and prudence he can make about 10 per cent. on his capital on an average.

State loans.

50,926. In the case of the smaller farmer, if he works himself as well as his family, that conduces to a good return?—That is so, it is putting capital into the farm in a different shape. I should now like to say that, in addition to what Mr. Gillespie proposes in the way of loans to landlords, advances might be made with great advantage by the State to the farmers. There are many very excellent farmers, who lost so much capital when the depression began, and before rents were adequately reduced, that they have not now the means to farm as well as they could, nor to set up their sons in farms. An advance by the State on moderate terms would be very valuable to such men, and to the country, in enabling them to farm more highly.

50,927. How would you do that?—My proposal would be that a tenant desiring such an advance should make application to a Government inspector, stating the amount and the purposes to which it would be devoted. The inspector would then examine the farm and consider the proposal, and if he considered it in all the circumstances safe and reasonable and proper, the State should make the advance to the tenant in the same way as to the landlord, and by making it a prior charge to all other charges, including rent, on the year's crop, the security would be equally good, and the rate of interest might be equally low.

50,928. For what improvements would you make such advances?—Not for permanent improvements, but for higher farming in the shape of the use of artificial manures and feeding stuffs and labour.

50,929. Do you think it would be a safe thing for the State to advance money to tenants for the application of artificial manures to the farm?—I have no doubt it would, if the farm were first inspected by a competent man, just as for permanent improvements. The loan should only be made after the inspector had reported that it was reasonable and likely to be applied with advantage, and that it would return the outlay, with interest, within the year.

50,930. Over how many years would you spread the repayment?—I would make the advance repayable each year, but of course with liberty to the tenant after repayment of each year's advance to apply for another on similar conditions.

50,931. (*Mr. Lambert.*) What army of inspectors would you set up for this purpose?—An excellent proposal was made by Mr. Hope, one of the Assistant Commissioners, that there should be official arbiters in connection with compensation for improvements. Those gentlemen would form a sufficient army for the purpose I indicate.

50,932. (*Chairman.*) Do I understand that the loan is only to be for one year?—Yes.

50,933. What advantage would the tenant get by that?—He would gain the profit of the increased crop. As a rule, these forms of expenditure are paid by crop or stock during the year.

50,934. (*Mr. Chaplin.*) But supposing there is a bad season, what is it to be paid out of?—I never knew a season so bad that there was no crop.

50,935. Have you never known a case in Scotland when there was no profit on the year's farming?—The repayment would be antecedent to profits. It would be a prior charge on the crop.

50,936. And would take precedence of the rent?—Yes.

50,937. And of every debt which the farmer owed?—Yes, except the wages, which are paid currently.

50,938. (*Mr. Gilmour.*) Would this not affect the position of the tenants with the banks, who assist at present?—It would obviate the necessity of their applying to the banks. The banks charge very high—5 or 6 per cent.—and they require additional names. I therefore propose that the Government should make the grant at a low rate of interest, which would obviate the necessity of applying to the banks.

50,939. (*Mr. Chaplin.*) Would you take a bill for artificial manures and feeding stuffs?—There would be no bill, because the loan would be spent in paying for these in ready money, which would effect a very great saving to the tenants.

Mr. J. B. Kinnear.
4 June 1895.

50,940. (*Mr. Lambert.*) Would you contemplate the advisibility of making loans to every class who are short of money?—I am suggesting the making of loans only to a specific class which has good security to offer.

50,941. Would you apply it to every class with good security to offer?—I am not capable of answering speculative questions, unless the class is specified and the particular circumstances stated.

50,942. Would you extend the same privileges to other classes, such as merchants and manufacturers?—I should like the nature of the proposal put before me in a definite shape before I can give a definite answer.

Research stations.

50,943. (*Mr. Chaplin.*) You are of opinion that Canada, Germany, and the United States have a great advantage over us by their scientific research?—Yes.

50,944. But is it not the fact that they are suffering from depression, notwithstanding this advantage?—They are suffering from the fall in prices, but they are with that aid making a stronger fight against it, and we should meet their competition on more equal terms if we had the same advantages.

50,945. Have they ever been successful in growing as much an acre as we have?—In America and our colonies, where labour is dear and land is cheap, it would not be profitable for them to do so. It is more profitable to raise a moderate crop with little labour.

Depression in Scotland.

50,946. Is there considerable depression in Scotland?—There has been.

50,947. Is it still continuing?—Yes.

50,947*a*. And is due to the fall in prices?—Yes.

Farming to a profit.

50,948. How do you reconcile the fact of continued depression with the fact that tenants make, and expect to make, 10 per cent. interest on their capital?—The depression fell, in the first instance, upon the tenants. Undoubtedly, until rents were reduced, they lost very heavily. But as leases have gradually fallen in, the rents have been reduced, and it is the landlords who now suffer from the depression, and the tenants at these reduced rents are able to make a fair living.

Wages.

50,949. (*Chairman.*) Have wages been maintained in your district?—Yes; if anything, they have rather risen.

50,950. The tenants have got no advantage by the fall in the price of labour?—Not the slightest. Wages have risen rather within the last 10 years.

50,951. (*Mr. Lambert.*) Have you any figures to put before the Commission as to the reduction of 33 per cent. on rents?—No, I have no figures, but it is my estimate as an average; I know several cases in which rents have fallen a half.

Farming to a profit.

50,952. Have you anything more than an estimate as to the 10 per cent. the tenants are now making on their capital?—No; my estimate is founded on my own observation and knowledge, and on information I have obtained, partly from the tenants themselves.

50,953. Have you found many tenants willing to admit that?—I have never had occasion to put the question. I speak merely of matters discussed in conversation.

50,954. Do the tenants in Scotland usually go about saying they are making 10 per cent. on their capital, without being asked?—I have not said they do. I have stated the grounds on which my own opinion is formed.

50,955. (*Mr. Channing.*) Since what date do you suppose tenants have been making a profit on their farms—when did these reductions come into operation?—They began 10 years ago or more and they have gradually become extended from year to year. At first the reduction was a small amount, because the fall in prices was believed to be a temporary matter. The remissions so given were very inadequate, and undoubtedly tenants then lost heavily, but as farms fell out the rents offered were reduced.

State loans.

50,956. As to loans, you advocate the extension of the Scottish banking system, with State aid?—And subject to State inspection, and with this difference, that the State would have a priority which bankers do not enjoy, and the absence of which compels them to demand a higher rate of interest.

Average rents.

50,957. (*Mr. Dalton.*) Have the reductions on small farms been as great as on the larger farms?—Not in the same proportion.

Digitized by Google

Mr. J. B. Kinnear. — 4 June 1895.

50,958. Can you give any estimate of the average rent per acre of the large and small farms?—It is scarcely possible; the variation in the quality of land and other circumstances is so great.

50,959. What does it vary from?—From a few shillings to 2*l.* or 3*l.* In my own district from perhaps 15*s.* to 30*s.*

50,960. Is it higher per acre for the small farm than for the large one?—Rather higher for the small farm.

Farming to a profit.

50,961. (*Captain Thomas.*) Do you farm yourself?—Yes.

50,962. What size is your farm?—Above 500 acres.

50,963. Do you keep accounts?—Yes.

50,964. Have you made profits during the last few years?—Yes.

50,965. 10 per cent.?—I have made more than 10 per cent.

50,966. And paying yourself rent?—Yes, the current rent.

50,967-8. How much does it amount to per acre?—I have several small farms, and I cannot exactly say, but I think from 10*s.* to 30*s.* Some of my land is very poor indeed.

50,969. And on your capital you have made something more than 10 per cent. for the last two or three years?—Yes.

50,970. Is it an arable or mixed farm?—It was a mixed farm, but I have been gradually converting it into a dairy farm.

50,971. You are of opinion that farmers with the reduction of 33 per cent. are making a profit?—They are making a fair living, where they have adequate capital. Where they have inadequate capital they are in difficulties. They pay heavy interest either to banks or to manure merchants, or to dealers in stock, or being unable to obtain capital, their crops are not so good.

Fall in prices and reduction in rents.

50,972. What would be the average fall in prices of farm produce, as compared with 15 years ago?—If you limit the question to grain, one might give an average, but stock may be bought very cheaply one year and meet a good market when sold fat, while another year potatoes may be selling high, as compared with other times; so that it is extremely difficult to give any idea of the general price of produce.

50,973. Would 33 per cent. be far wrong as the general average of the fall?—I estimate rents as having fallen to that extent, and perhaps that would be a reasonable figure to set the general fall of produce at. You must remember that one advantage farmers have had in recent years has been the great fall in expenses for manures and feeding stuffs, which have decreased from 30 to 50 per cent.

50,974. What proportion would you say that rent bears to the farmer's liability; has a farmer to make three times his rent, or more or less, to clear everything?—That used to be a very common estimate, that the rent is one-third of his gross receipts, his outlays another third, his profits the remaining third.

50,975. Then he has had a reduction of 33 per cent. on one-third of his liability?—Yes, but that is including his profits in his liabilities.

50,976. What about the other two-thirds?—Labour and rates have not gone down at all, but manures and feeding stuffs have.

50,977. (*Chairman.*) Has there been any displacement of labour?—A little land has been laid down to grass, but I think there has been scarcely any displacement of labour by machinery, except during harvest.

Mr. J. B. Kinnear. — 4 June 1895.

50,978. (*Capt. Thomas.*) Are the farmers satisfied with the reduction they have obtained?—I think they are. In most of the existing tenancies the rent has been fixed by the farmer himself.

50,979. (*Chairman.*) You mean that the leases have been entered into since the depression began?—Yes.

50,980. And that therefore the farmer entered into the contract knowing the position of affairs?—Yes; and while some things have fallen, others have risen. I have not heard of any complaints of too high rents of late years.

The seasons.

50,981. (*Mr. Everett.*) And the last two years in Scotland have been years of plenty rather than trying seasons?—They have been favourable on the whole—not large crops, but good crops.

50,982. You had a fine harvest in 1894?—Fairly good.

50,983. You were able to sell your corn uninjured and in a sound condition?—Reasonably sound. It was not an excellent harvest, but a fairly good one.

50,984. Do you grow barley?—Yes.

Prices of corn.

50,985. What price per quarter did you make?—Very little. Last year it was not of very good quality, and at the best it was only 26*s.*, and it has now fallen to 20*s.* and 22*s.*

50,986. And oats?—They are also low—from 16*s.* to 17*s.* and 18*s.*

50,987. Do you grow wheat?—A little, but a large portion of it is consumed by stock.

Price of potatoes.

50,988. Are potatoes a considerable item in your district?—Yes, very considerable, and this last year has been remarkably favourable. The prices have been high, and many farmers must have paid their rent out of potatoes alone.

50,989. Potatoes and live stock would enable you to be paid 10 per cent. during the last few years?—Yes, but potatoes vary very much, and the year before last they were scarcely saleable at all.

Assessment to rates.

50,990. Have assessments on land been reduced in proportion to rent?—Yes, the rating is based on the rent.

50,991. Does the rate per 1*l.* remain about the same?—Yes, there has been no great change.

50,992. Then the tenants have had the advantage of the reduction of the assessment?—Yes.

50,993. So that it is not quite accurate to say that the assessment has not been reduced?—No, the assessment is redueed, although the rate may remain the same, but on the other hand there are new rates in addition, for sanitary purposes, roads, and so on.

Farming capital.

50,994. Smaller capital is required now than it was a few years ago?—Yes, less is employed, but it would be much better if it were larger.

50,995. Looking at the reduction in price, would 7*l.* now go as far as 10*l.* of capital would a few years ago?—I am afraid you must look at labour in connection with that, and I do not think it would. If you have regard only to feeding stuffs and manures it might go as far, but labour has risen, and stock is dearer to buy.

50,996-7. What would you say is an equivalent in capital compared with a few years ago, would 8*l.* go as far as 10*l.*?—Yes, perhaps it might, but it is to be remembered that to make up for the drop in price a farmer must endeavour to produce larger crops, and that demands more capital.

Witness then withdrew.

Mr. J. I. Davidson.

Mr. James Inglis Davidson called in and examined.

Mr. J. I. Davidson.

50,998. (*Chairman.*) You are a farmer and land valuator and an Inspector of Estate Improvements under the Board of Agriculture?—I am.

50,999. What part of Scotland do you live in?—Saughton Mains, about two miles from Edinburgh.

51,000. Is your business mainly in that district?—No, it extends over the whole of Scotland, but is mainly in the southern and middle districts.

51,001. You have had considerable experience in different parts of the country?—Yes.

The Agricultural Holdings Act.

51,002. You wish to give evidence mainly as to the working of the Agricultural Holdings Act?—I was desired to do so.

51,003. Have you been engaged in a good many arbitrations arising under the Act?—Yes.

51,004. And have you advised in settlements effected without the necessity of arbitration?—Yes.

51,005. Have you acted for tenants as well as owners?—Roughly speaking, I have acted about equally often for each, but in recent years I have been oftener sole arbiter.

51,006. You have been personally interested in claims under the Act?—Yes, in two claims.

51,007. Is it within your knowledge that there has been a good deal of dissatisfaction with the working out of the details of the Act?—Yes, there has been. I speak from what one sees in the public prints and also from what one hears.

Digitized by Google

Mr. J. I. Davidson. 4 June 1895.

Measure of compensation.

51,008. The principle of the Act is that the value of the improvement to an incoming tenant ought to be the measure of the compensation?—So far as my experience goes, that is generally admitted to be a sound principle.

51,009. Then the difficulty is mainly one of detail in working out that principle?—That is so.

51,010. Has that been largely due to the exaggerated claims and counter-claims lodged under the Act?—That is one reason. The expenses have been very large in proportion to the awards. In the earlier cases under the Act these were to a large extent experimental, and both parties stated their claims very fully, and fought them very keenly often at unnecessary expense.

Method of arbitration.

51,011. What has been the course adopted of late years—three arbiters or a single arbiter?—Since 1889 I think there have been more frequently sole arbiters.

51,012. Mr. Gillespie says that under the Act of 1889 either party can require the sheriff of the county to appoint a single arbiter—is that the case?—That is so, and it has been done; but I think in most cases the parties have agreed to a single arbiter without applying to the sheriff.

51,013. In cases where they have agreed to a single arbiter, has that course resulted in the expenditure being considerably less?—There is only one arbiter to pay, instead of three; but I think it right to point out that as a general rule the arbiters' fees are a comparatively small proportion of the whole expenses in those cases in which there has been complaint as to the great amount of expense. In one instance I know of, where an award of 200*l.* was given, it cost 150*l.* for the expenses incident to the arbitration. I was an arbiter in that case, and as far as my memory serves me I received 15 guineas. Recently I determined a case as sole arbiter, and received about the same amount; so that it does not make much difference to the arbiters. The parties in the case referred to agreed to make it an informal arbitration, and they appointed me sole arbiter. I acted without agents and with my own clerk, and the whole expenses incurred were my own fees and outlays, and any trouble which my clerk took. In the other case there were agents on both sides, a clerk to the reference, and skilled witnesses on each side, and I think at the end we were as wise as at the beginning. I may say that in that case the landlord was a corporation, and it was their agents who insisted on a proof.

51,014. Is it common in cases of this kind to employ counsel?—In a few of the more important cases I have been connected with counsel have been employed, and in one or two cases legitimately employed, where new principles, which had not previously been settled, were discussed. In two cases I know of I would say the proofs were justifiable.

51,015. (*Mr. Chaplin.*) They were test cases?—Yes, to settle questions of principle.

51,016. (*Chairman.*) And since then the costs have not been so great?—No.

Custom as between landlord and outgoing tenant.

51,017. Do you agree with Mr. Gillespie that in all these cases the dispute is between the landlord and the outgoing tenant?—I think that has been invariably the case in those arbitrations with which I have been connected. I have known a bargain in which the incoming tenant had to make good the compensation to the landlord, but offerers knew of that condition when tendering for the farm.

51,018. Would not the landlord pay the value of the unexhausted improvements?—The valuation of unexhausted improvements under the Agricultural Holdings Act, and of growing crops, is always a separate matter. The two things are never mixed up together.

51,019. They are made separate claims?—Yes. If at the expiry of a lease an outgoing tenant is entitled to have his crop taken over at valuation, that is expressed in the lease, and it is a matter between the tenants. A claim under the Agricultural Holdings Act, however, is a matter between the outgoing tenant and the proprietor.

51,020. Where the landlord is under an award to pay to the outgoing tenant a considerable amount for unexhausted manures, does he not, as a rule, make an arrangement with the incoming tenant to pay for it?—I have had no such cases, but I have heard of them where there was a stipulation in the letting.

51,021. Have you known many cases in which considerable sums have been recovered under counter-claims by the landlords?—I know of one case where a very large sum was recovered—where the landlord put in a claim for loss on re-letting a farm. He made that an element of his counter-claim against the tenant, who had got into difficulties, and appointed a trustee on his estate. The trustee declined to carry on the farm, and made a claim against the landlord. The landlord would not relieve him, but said he would let the farm and charge him with any loss. It turned out that he was sound in law in that arrangement. As arbiter, I consulted the Professor of Scotch law, who said the landlord was right, and I was bound to give effect to it, with the result that the landlord received a considerable sum as the difference between the rent received from the new tenant and the rent which the old tenant was bound to pay. But that is an exceptional case in my experience. I remember a case where a landlord claimed 1,200*l.* as a counter-claim. I ventured to suggest 25*l.* as a proper sum, and I think 30*l.* was the award.

Mr. J. I. Davidson. 4 June 1895.

51,022. Does it often happen that counter-claims are put forward as not being *bonâ fide* but exaggerated?—In the earlier working of the Act there was a good deal of that, but the salutary lessons of expenses have modified that practice, because the arbiter has power to modify expenses, and where excessive claims have been put in and not sustained, the party making them has much the largest proportion of the expenses to pay, and the tendency has been to modify the claims on both sides.

Restrictions in leases.

51,023. Has there been a tendency to relax the conditions of tenancy?—Yes; in regard to freedom of sale and rotation of cropping. The old stereotyped conditions have been modified; but restrictions as to cropping still exist, and, I think, quite properly; but with regard to freedom of sale I have a different view, and I think that privilege might be extended.

51,024. (*Mr. Chaplin.*) What do you mean by freedom of sale?—Free sale of produce. In old leases straw and turnips had to be consumed on the holding, but they frequently rose in price far above their consuming value. Under these circumstances it is absolute folly to bind a man to consume them on the farm if he can sell them and bring back an equivalent which will do the land an equal amount of good. I am a strong advocate of that.

51,025. (*Chairman.*) Is it your opinion that these restrictions should be made illegal?—My opinion is, that landlords and tenants have come to see for themselves that these privileges are of mutual benefit; and I would certainly go the length of saying, that if landlords are so foolish as not to agree to freedom of sale under fair conditions, I do not think it would do harm to make it statutory.

51,026. As regards freedom of cropping, do you not think it would be an advantage to the tenant to be free?—I have rather a strong opinion that it would do positive harm, from the point of view of both the landlord and the good tenant. If freedom of cropping were introduced to-morrow, I think it would not appreciably alter or affect the course of cropping followed at present by our best tenant farmers. From the landlord's point of view, assume that he gets an indifferent tenant, or that friction arises, the farm could be very soon absolutely spoiled. From the point of view of the good farmer, I thing the disadvantage would come in this way: at present, under new leases with breaks of five years, there are a number of men who offer for farms in good condition on the chance of leaving them at the end of five years and taking all they can out of them. These men compete with good farmers, and offer rents which the latter cannot pay. If you remove the restrictions on cropping you increase the number of these men and increase the competition which these men bring to men who wish to farm well and honestly.

51,027. It would tend to raise the rent?—Yes; unfairly. No doubt, if a landlord knew that a man was offering for his farm with the intention of leaving it at the end of five years he would probably not take him; but in all cases he does not know it.

Length of leases.

51,028. Is it your experience that there is a tendency of late years to introduce this break at the end of five years?—Yes; it has become much more common of late years.

51,029. Is it generally the case?—It is very common now.

51,030. I suppose that has been brought about by the uncertainty as to the future?—That is so. I quite assent to what Mr. Gillespie stated, that landlords discovered, prior to the recent readjustment of rents, that leases in the case of bad times proved very one-sided bargains. If a farmer wanted the landlord had simply to let him go or alter his conditions.

51,031. Where there was a reduction of 30 per cent., it was impossible for the landlord to do otherwise?—It was a matter of prudence to accept a considerably reduced rent rather than throw the farm on the market at the time.

Digitized by Google

Mr. J. I. Davidson. 4 June 1895.

51,032. Is it your experience that through the depression landlords, where leases existed, felt themselves bound to make great reductions?—Yes; both permanent and temporary reductions.

51,033. They practically make their leases?—Yes. I was employed for a good many years in saying what reduction should be given.

51,034. For the same reason they have been unwilling to bind themselves again for so long as 19 years?—I think it was a mutual arrangement. Both parties agreed to make the experiment.

51,035. But there is an inducement for tenants to come in and work out the farm in five years and then leave it?—One finds, when a good farm comes into the market, there is an element, though not a large element, of that kind that enters into the competition; and I think that element would be increased with freedom of cropping.

Restrictions in leases.

51,036. Therefore you think it is undesirable to relax any of those conditions about cropping?—Yes, and also because I do not think it would appreciably affect our best farmers.

Compensation for cumulative fertility.

51,037. Coming to the second ground of dissatisfaction, the absence of compensation for cumulative fertility, what is your opinion of that?—It is perfectly true that the best farmers have been relatively less fairly compensated that the moderately good farmers in most of the decisions that have been given, but I am not altogether sure that the Act is to blame for that. After the Act was passed most farmers' clubs framed scales of compensation, and I rather think there has been a too general tendency to accept these scales in a cast-iron, stereotyped fashion, rather than to consider the whole circumstances of the particular cases. For instance, I see nothing in the Act to prevent an arbiter, in considering that a farm has been well farmed through a sequence of years, from applying an appropriate scale to the circumstances. It is obvious if a farm is in high condition, and receives in the last years of the lease the same fertilisers in the shape of feeding stuffs, there must be a larger residue, because, presumably, the crops would draw on the old reserves and what had since been applied, whereas if the farm is in low condition and you only apply sufficient to grow the crops you desire to grow in the last years of the lease, less compensation should be given than in the other case. If a claimant comes before me and says, "During the last five years of "the lease I have spent 500*l.* a year in cakes and 500*l.* a "a year in manures, but I will also prove that I have "done that during the previous 10 years," then there is nothing in the Act to prevent me awarding him considerably more compensation than if he had only begun five years from the end of his lease and spent his 1,000*l.* a year.

51,038. (*Mr. Chaplin.*) Is that done in practice?—It has been done by me.

51,039. (*Chairman.*) Is it the case that tenants make claims of that kind?—I think in recent years an indication has been given of previous treatment without exactly founding on the particular years.

51,040. (*Mr. Chaplin.*) And in those cases where you say you have adopted this practice yourself, have your valuations been accepted without demur?—There has been no appeal against any award I have given.

51,041. (*Chairman.*) Could there be an appeal?—In every case where the award has been carried out on the strictly statutory lines there could be an appeal if any decision was contrary to the letter of the Act.

51,042. If, in this case you speak of, you had clearly stated in your award that you had taken into account the fact that manure had been expended on this land for a stated time?—If I had gone over 10 years and given a proportion for 10 years that award could not have been overturned; but what I said was "in respect of the im-"provement made on the holding by the consumption on "the farm of certain feeding stuffs," I awarded a certain sum, and in respect of the manures I awarded a certain sum.

51,043. Does the Act give sufficient power?—Mr. Drennan, in connexion with the recent Corsehope case, allowed 300*l.* for cumulative fertility, and the award was maintained on appeal by the sheriff. I have my doubts as to whether the sheriff was right. But I do not think Mr. Drennan should have made the award in that way. If, however, it is thought that the statute as it stands does not give sufficient latitude to valuators in this matter I think it should be amended, as the case of a high farmer is one which ought to be fairly met and encouraged.

51,044. Would you take reasonable safeguards in such a case to prevent undue awards being given?—There would need to be most careful safeguards, because if you award compensation for cumulative fertility on general grounds three might be grave abuses. There should be specific outlays, or you will have a class of expert witnesses arising who would no doubt differ very widely as to the value of the cumulative fertility or general improvement. That should be discouraged.

Mr. J. I. Davidson. 4 June 1895.

51,045. Do you think the fact of leaving the land clean should form matter for compensation?—Not of itself, because I think it is only in accordance with the ordinary rules of good husbandry that this should be done. The amount of compensation awarded in respect of manures and feeding stuffs ought, however, to vary according to the cleanness or otherwise of the land to which these have been applied.

Compensation for consumption of home-grown corn.

51,046. Should there be compensation for grain grown and consumed on the holding?—Yes. I think it is an anomaly that a man can purchase his neighbour's grain and obtain compensation, but if he consumes his own he gets nothing. But there is a difficulty there also, as many farmers are very indifferent book-keepers. They ought to measure and keep a record of what quantity they do consume, and not simply say they have consumed the whole crop on the holding. There should be exact and conclusive evidence of the consumption.

51,047. (*Mr. Chaplin.*) That would be rather difficult?—If a tenant wishes to make a claim for it, he should be in a position to prove it. But probably it should be made clear in the statute that such proof is absolutely necessary.

51,048. (*Chairman.*) Another matter which has given rise to controversy is the manurial value of the feeding stuffs consumed on the holding after the last crop has been sown?—As a general rule the manure made on the holding after the sowing of the last green crop passes to the incoming tenant by valuation under the lease. I refer to the manure made in the steading, and presumably the incoming tenant pays the full value of the manure. In the case of "steelbow" manure, which passes to the proprietor without payment, it is quite equitable that the landlord should pay for the cake in the "steelbow" straw.

Notice of claims and counter-claims.

51,049. It has been further suggested that the claims and counter-claims should be lodged by both parties at the same time?—I cannot see how that could be done, because as matters stand at present there cannot be a counter-claim until there is a claim.

51,050. (*Mr. Lambert.*) Would you not give the landlord the right to make a claim?—He has it if there is any breach of the stipulations in his lease.

51,051. If there is no lease and the landlord had a right to make a claim for the deterioration of the holding, would he be able to make his claim at the same time as the tenant?—There is one practical difficulty if notice is given. The landlord cannot tell four months before the end of the lease in what state the fences and buildings will be. I had an instance of that in Caithnesshire where a claim of 500*l.* was put in for disrepair and deterioration. In the interval the tenant applied himself assiduously to put things right, and when I went there as the landlord's arbiter I could not find more than 15*l.* damage.

51,052. Could you not have a shorter term than four months, and then insert a proviso that any deterioration after the date of the claim should be taken into account by the arbiter?—That could be done, but I see no hardship in the notice that is to be given. I do not see that it would cause much harm to ask the tenant to give six months' notice. The landlord has to pay out value to the incoming tenant. Farms are generally let six months prior to the ish of the lease, and if the landlord had the claim of the outgoing tenant he could say to the new offerers:—"Here is a claim upon me for what has been done to "improve the farm, and you can judge for yourselves." At present the landlord is not in a fair position. He receives the claim four months before the end of his lease, and presumably he has let the farm two months earlier at the public value.

51,053. (*Mr. Channing.*) You would not make the overrent the measure of compensation?—Certainly not. The landlord says:—"I am bound to pay the value of the "improvement to the outgoing tenant. If this is a sound "principle of valuation, I should get it back in the shape "of increased rental. How am I to do so unless the "incoming tenant, who has to pay me the additional rent, "knows what I am paying to the outgoing tenant."?

51,054. (*Mr. Lambert.*) But you could not award the compensation six or four months before the end of the lease?—That is clear.

Digitized by Google

Mr. J. I. Davidson. 4 June 1895.

51,055. Well, it would be impossible to take a claim as being the amount of a reasonable award?—That is true, but you could have notice of the claim, and every offerer could exercise his own judgment as to what the improvements were worth to him.

51,056. But would the incoming tenant not have to make an estimate and the landlord to make his?—It would be a safer guide to an incoming tenant that a claim should be lodged.

51,057. What about the outgoing tenant?—I see no hardship to him. If it is an honest claim it can stand investigation.

51,058. Would you put the landlord in the same position as that?—Certainly.

51,059. That he should give six months' notice of any claim?—That he should give sufficient notice in order that his claim might be fairly investigated. The landlord should give six months' notice of his claim for miscropping or deterioration, subject to this, that if in the interval anything of a remedial nature was adopted, the claim should be modified.

51,060. You would put them in exactly the same position?—I would.

Breaches of lease and receipts for rent.

51,061. (*Chairman.*) Is it your opinion that technical breaches of the lease have been put forward merely to raise counter-claims?—No doubt that is so.

51,062. Breaches that have been practically acquiesced in?—Yes.

51,063. By giving a receipt?—Yes; but I think more recently landlords have come to the conclusion that the rent receipt bars these claims for breaches of the lease. It has been held, and I have held it also, that a rent receipt, without reservation, is a bar to going back.

51,064. As a matter of law or of practice?—As a matter of law.

51,065. Is that the state of the law now?—I have given two or three decisions to that effect, and they have not been contested.

51,066. You think that ought to be made clear in any amendment of the Act?—I think so. If a landlord objects to a particular course being pursued he ought to state so at the time. Of course, there should be reasonable latitude, for on large estates the landlord is not a detective; but I do not believe in bottling up these claims for three or four years and then springing them on the tenant if he has a fair claim under the Act.

Claims and counter-claims.

51,067. In cases where there are claims and counter-claims, and the counter-claim results in a larger amount being found due to the landlord than to the tenant, can the arbiter award it?—I believe he cannot by law do so; but it is not common sense. It involves the landlord, if he wants effect given to the judgment, in taking up other legal proceedings. I think the arbiter should have the power to decern in favour of either party, as the case may be.

51,068. You admit it is the law that the excess of the counter-claim over the tenant's claim cannot be recovered?—That is my understanding. The reason is that it is stated a counter-claim cannot arise under this Act unless there is a claim, and that the effect of that is that you can wipe out a claim by a counter-claim, but you cannot have a balance emerging in favour of the counter-claim.

Official valuators.

51,069. With regard to the appointment of official valuators, are you in favour of that?—I would rather have an official valuator than a casual appointment by a sheriff or sheriff clerk, provided the official valuators are thoroughly good men. But I think the parties should have the option of agreeing upon a man before necessarily going to an official valuator.

51,070. What is the case at present under the Act of 1889—does the sheriff appoint any person he thinks fit?—Yes, and, presumably, he tries to make an impartial appointment.

51,071. Do you think there should be an official list of persons who might be appointed by the sheriff?—My impression is that there is generally a list of professional gentlemen who act in these capacities, and a man is selected from them.

51,072. (*Mr. Channing.*) Do you not think such a list should be sanctioned by a public department, such as the Board of Agriculture?—There could be no harm in that.

51,073. And published, so that all might know it?—When one has occasion to employ men in that capacity they know who are on the list, but I see no objection to such a regulation.

51,074. Although there was a class of official valuators you would not prevent parties selecting another person?—Certainly not.

Mr. J. I. Davidson. 4 June 1895.

51,075. But in applying to the sheriff the selection should be limited to the official list?—I think that would be a proper thing.

The Agricultural Holdings Act.

51,076. In your experience, have you had any claims for compensation under Part I. of the Schedule?—I have had none.

51,077. Or under Part II.?—I have had none.

51,078. Do you consider, then, that tenants have not availed themselves of Part II. to drain their land?—So far as my memory serves me, I have not had a single case of arbitration for drainage.

Tenants' improvements.

51,079. Do you think it desirable to extend the procedure under Part II. of the Act, and to include in it other works than drainage—for instance, the erection of buildings?—Well, in the districts with which I am best acquainted I think these things are generally carried out by agreement without any practical difficulty.

51,080. Although there may have been no case to claim for compensation, it may be that the existence of that power has strengthened the hands of the tenant as against his landlord?—There may be something in that.

51,081. And, therefore, it may be desirable to extend the provision to other things?—There is, no doubt, something to be said for that. Another thing is that by the existing provision the farmers get their drainage done for 5 per cent. interest, which is a great and just boon to tenants, who had formerly to pay the whole rentcharge of 6*l.* 13*s.* 4*d.* That is a very considerable relief, and an encouragement to drain. I understand that in the north of Scotland the condition of matters is different, and if the burden of these improvements falls upon the tenant in any of these districts, he should receive compensation under reasonable safeguards. But I would not allow the tenant to build at his own sweet will.

51,082. (*Mr. Lambert.*) How would you get over the difficulty?—At present under the Drainage and Improvement Company's Acts the Board of Agriculture do not sanction the cost of permanent improvements as a first charge upon property unless under the certificate of an inspector that the proposed improvement outlay will increase the letting value of the holding by more than the rentcharge thereon, and some such similar precaution would be necessary in any amendment of the Act in this direction.

51,083. (*Mr. Chaplin.*) Would it not hold good if there was no increase of rent?—It might. But the inspector goes there, and considers the whole improvement and reports whether it is a legitimate charge. But after it is erected the effect will be to increase the letting value by more than the rentcharge.

Cost of drainage.

51,084. (*Chairman.*) Do you think that, looking to the general form of the rate of interest, the charge of 5 per cent. for drainage might not be further reduced?—I think it might, as there has been a material fall in interest.

51,085. It might be reduced to 4 per cent.?—I think so; because the landlord can now borrow on a first mortgage at 3 per cent.

State loans.

51,086. Are you in favour of the Government advancing money for agricultural improvements?—I think the Government might very well do so, at moderate rates of interest.

51,087. (*Mr. Everett.*) What was the ordinary rate of interest on mortgages on land in Scotland till 10 years ago?—3½ per cent. was common.

51,088. Not up to 4 per cent.?—Yes, as high as 4.

51,089. And if the security is good, it can now be had at 3 per cent.?—Yes, 3 and 3½.

Law of hypothec.

51,090. In regard to the abolition of the law of hypothec, have you noticed any difference in the handling of estates since then—are rents asked for more peremptorily?—In a good many cases the contract to pay them is put forward six months earlier than it used to be.

51,091. When the rents fall due, is three months' grace usually given?—Some people pay on the term day, but as a general rule rents are paid within a month.

51,092. There has not been much change in that respect then?—Not very much, but that is a matter of estate mangement.

51,093. Would it commend itself to you that there should be a full description of the state of the farm at the beginning of the lease, to be kept for comparison at the

Digitized by Google

Mr. J. I. Davidson. 4 June 1895.

close, and compensation to be paid accordingly when the tenant goes out?—That would be instructive, but I think it might be better to keep a record of the award and its grounds. When a tenant goes out he makes a claim, which is adjudicated upon. That could be kept, and would be a far more accurate record of the state of the farm than any skilled reporter could give on the general aspect.

51,094. (*Mr. Channing.*) Would it not be a good thing that the award should contain an inventory such as Mr. Everett suggests?—That is so.

51,095. (*Mr. Everett.*) Is it not more frequently the case that the landlord receives his farm back deteriorated rather than improved?—Well, in recent years, where times have been bad and capital short, there has been very little general improvement in condition.

Fall in prices.

51,096. Have you formed any opinion as to the cause of the great fall in prices?—Just the general opinion that it is due to over-production, cheap carriage, and large imports.

51,097. (*Mr. Dalton.*) Do you agree generally with Mr. Gillespie's evidence as to the depression in Scotland?—I do.

Length of leases.

51,098. Do you believe that it would be desirable to have short tenancies, with two years' notice?—I do not think that is the prevalent opinion in Scotland. I have just taken a new lease myself for 17 years, without any breaks at all; although, no doubt, five years' breaks are more in favour.

51,099. In the striking illustration of a counter-claim which you gave, what were the principal items?—Alleged miscropping, poverty of manuring, and disrepair of houses and fences.

51,100. They were not larger claims under penal clauses?—I forget whether any of the claims for miscropping came under the penal clauses.

Breaches of lease and receipts for rent.

51,101. With regard to your proposal that the receipt for rent should be a bar to the landlord's claim for breach of contract, would that not be rather hard on him, and force him to make an inquisitorial investigation over the farm every year?—It is open to that objection, and there certainly ought to be safeguards. But towards the end of a lease, where it is known there is going to be a change, I do not think it is asking too much that the landlord should have a reasonable regard to what is being done.

51,102. (*Mr. Lambert.*) If any clause of that nature were put into an Act of Parliament, do not you think there would be a stereotyped rent receipt?—That did not occur to me.

51,103. (*Mr. Dalton.*) Your object is to prevent stale claims?—Yes, to prevent claims where a landlord has acquiesced in a state of cropping or otherwise that might not technically be quite within the four corners of the lease.

51,104. (*Mr. Channing.*) How do you reconcile the receipt for rent with the Act of Parliament, which limits to four years the power of the landlord to claim for deterioration?—One cannot reconcile it with that. But my view is that if a landlord, four years before the end of the lease, acquiesced in the state of cropping which then exists, I do not think it is right to bring it up at the end of a lease against any claim by the tenant.

51,105. Your suggestion is to see the land thoroughly cultivated by the landlord as well as the tenant?—Certainly.

Restrictions in leases.

51,106. Would you limit the penalty in respect to restrictive covenants?—It is generally the amount of damage and not the penal clauses that influence the arbiter.

51,107. If a man knew that by law his payment to the landlord would be limited to the actual loss sustained, he would be in a stronger position?—That is so, but I have known a case where the penal clause was so stated that it would actually pay a tenant to miscrop. You must therefore be careful not to encourage that.

51,108. But if the Legislature gave the right to exact the full measure of deterioration caused, but no more, that would be fair to both sides?—I am not quite sure of that. If a man in the last year of his lease took two white crops, instead of a white and a green crop, it would be very difficult to decide.

51,109. Could not the valuer decide whether the outgoing tenant was really running his farm out of all fertility?—No doubt, if he got all the facts put before him, he would be in a position to say so.

51,110. But as to the restrictions on cropping and so on, does it not practically come to mean this, the allowing of two or three years of temporary pasture instead of rotation?—I do not think any reasonable landlord would stand in the way of that. But if you had freedom of cropping you could miscrop as you liked.

Mr. J. I. Davidson. 4 June 1895.

Compensation for cumulative fertility.

51,111. About the question of cumulative fertility. Any compensation for this must bear a direct relation to the specified outlay. Do you not think that evidence as to the carrying power and the productive power of a farm should be quite as valuable as the bills produced by the tenant?—No doubt; but these things vary very much, from different causes, one season with another. The actual and judicious outlays should settle the whole thing.

51,112. But if the tenant has exceptional skill and makes successful experiments, would you not give him the full result of that?—I would give him compensation for what he leaves, I do not think there would be anything left further than residual value.

51,113. But you admit, as to the cleanliness of the land, that you would classify the improvements and give higher compensation for good husbandry than for the same outlay with slovenly husbandry?—I would give more for residual products left on clean land than on dirty land.

51,114. (*Mr. Chaplin.*) That is to say, you would penalise the man who left the land dirty?—Quite so; and I have given an order against a man for that.

51,115. (*Mr. Channing.*) You would have regard not merely to the sum expended, but to the whole effect on the condition of the holding?—I do not think that in so far as the cleanliness of the earlier years is concerned, one would be justified in giving much or anything of a cumulative nature at the end of the lease.

51,116. If the same outlay on one farm ten or twelve years back had produced a much better condition than on another farm, owing to greater skill having been brought to bear, would you not take that into account?—It is just a little vague and general to allow compensation for a thing of that kind. If the outgoing tenant had farmed well throughout and was able to show me definitely what he had laid out, and if the land was clean at the end, I would allow him higher compensation than if he had merely farmed well during the last few years of his lease.

Notice claims and counter-claims.

51,117. Do you think it would be practicable that notice should be given by both parties twenty-eight days before the end of a tenancy?—It might be done if you amend the Act. But I think my period of six months would be more suitable.

51,118. But that gives the landlord this advantage, that he can look round and see what rent he is likely to get for his land, and there would be no impediment to him whittling down the tenant's claim to meet the incoming tenant?—Both claims would be lodged six months before, and there would be a proviso that if anything was done in the interval, the landlord's claim would be modified.

51,119. Would it not be better to have it nearer the termination of the tenancy, when the landlord could see exactly the amount of damage done to him?—No doubt. But the principle of the Act is that the landlord has to pay to the outgoing tenant the value of the improvement to the incoming tenant. The presumption is that the landlord in respect of making such a payment, receives a slightly increased rent, because of the improved condition of the land, and I say it is fair to the proprietor to let him know about that time what the outgoing tenant is going to claim, and he can then say to the incoming tenant:—"There it is; you can judge for yourself what it is worth."

51,120. Take the case in which you say 1,200*l.* was claimed, and only 25*l.* awarded?—That was an exceptional case, advised by a most exceptional man. I do not think any honest claim will suffer from investigation, and if a tenant has a just and sound claim against his proprietor, I do not see any hardship in giving notice of it, so that it may be investigated, and, where practicable, I would have the same notice from the landlord.

Tenant's improvements.

51,121. Would you give the tenant a right to make improvements, subject to their being pronounced suitable to the holding and likely to add to its value?—As far as my experience goes, these things appear to be settled between landlord and tenant without apparent intervention, but if there are districts where the burden of these matters rests with the tenant, it is fair that he should have some remedy.

51,122. As long as the matter is within the scope of the tenancy?—Yes. But any improvement clearly contemplated in the contract of tenancy would be an improvement that the landlord had assented to, and compensation for it would be recoverable under the Act as it stands.

Digitized by Google

Mr. J. I. Davidson. 4 June 1895.

51,123. Not under the first part?—Yes; if you state that the tenant undertakes to construct certain improvements, I take it that the landlord has given his consent.

51,124. But I am speaking of a general agricultural tenancy, where you would give the tenant the right to carry out improvements useful for the holding against the will of the landlord?—I think you would require to be extremely careful in that matter. You would have to be perfectly sure the improvements were absolutely useful.

51,125. Would you give the tenant power of reference as to whether they were useful and consistent with the purposes of his holding?—I think that would be reasonable; but I would prefer that landlord and tenant should agree upon these things. Possibly the effect of a clause of that kind would be that they would agree the more readily rather than risk the expense.

Interest charged on improvements.

51,126. In Scotland interest is charged for improvements?—That is a matter for agreement. It is generally stipulated that a certain sum is to be expended without interest, and that above a certain sum interest is to be charged.

51,127. I suppose that since the depression all improvements have had interest charged on them?—Not on those executed under agreement at the beginning of the tenancy. If in the course of the lease the necessity or desirability for improvements arose, these were generally matters for interest.

51,128. But where the tenant has been paying interest in some form of sinking fund on the improvements, he has really been carrying out the improvements himself with the use of the landlord's capital?—Yes, as regards drainage. In some cases there was drainage outlay made without interest, but in most cases the rentcharge was made to the tenant.

51,129. Do you think that allowance has been sufficiently made in the renewal of a lease in respect that the payments have practically paid off the drainage?—Well, in the old days I think the interest on drainage was regarded as so much rent when you came to renew your lease, but since the depression the state of affairs has been very different, and large reductions have been made.

Basis of compensation.

51,130. (*Mr. Lambert.*) How would you value the compensation upon the money outlay?—I do not go the length of saying that it should be exactly put upon the money outlay, but it ought to be the basis. If you make this general compensation for cumulative fertility, you will get the vaguest and widest testimony in regard to it.

51,131. But suppose a man laid out 100*l.* skilfully and it was worth 150*l.* to the farm, and another laid out 100*l.* unskilfully and it was worth only 50*l.* to the farm, would you not award the skilful man 150*l.* and the unskilful 50*l.*?—I would give them compensation, as far as possible, according to the cleanliness of the land held to be improved, but it is extremely difficult to see how a man could spend 100*l.* which would be worth 150*l.* to the incoming tenant.

Freedom of cropping.

51,132. You do not favour freedom of cropping?—No.

51,133. What is the present system as regards restrictions on cropping?—There is no absolutely stereotyped system. It depends on the locality and character of the farm, situation, and many other things, but as a general rule the kind of rotation stipulated is that most suitable for the district.

51,134. Why should the tenant not be allowed freedom of cropping, provided he does not deteriorate the fertility of the holding?—I do not say he should not be allowed, but I say it would be no benefit to the good farmer.

51,135. Is it not the case that the tenant is precluded from taking two white crops from the farm?—In many cases.

51,136. Well, if there was a drought and the corn crop failed, would you prevent him sowing a second straw crop?—No, in circumstances of that kind we do not adhere to the letter of the law. The freedom of cropping to which I object would be to give a man the farm and a blank lease and tell him to farm as he likes. But I do not believe it would affect the good farmer.

51,137. Have you ever put in two crops in opposition to the covenants in your lease?—I have.

51,138. And you have not been penalised?—No.

51,139. Would you have thought it a hardship?—If I had thought I was to be penalised, I would not have done it, but there were circumstances which justified it, viz., a failure of grass seeds owing to excessive condition of the land.

51,140. And would circumstances not justify every man in having that same freedom you can enjoy?—No sane landlord would object to it.

Mr. J. I Davidson. 4 June 1895.

51,141. But supposing you have an insane landlord?—All I can say is that if he took a case of that kind into court he would not succeed.

51,142. Would the court uphold a man in breaking his agreement?—I think it would.

Valuation of growing crops.

51,143. That would be a rather strange course, would it not?—The man could do nothing else. But I have no objection to putting in a clause that if, from causes over which the tenant has no control—such as drought or frost as you suggest—the crop fails, he is at liberty to take a second crop off the land. That is very different, however, from allowing a man to scourge the land.

51,144. (*Mr. Chaplin.*) With regard to the growing crops, which I understand you to say are always matters of arrangement between the outgoing and the incoming tenants, how are they valued?—By cost of production or their value on the ground.

51,145. Take the case of a barley crop and a Lady-day (6th April) entry, the barley might just have been sown before the tenant entered—how would you value that?—We would value it in the month of August.

51,146. You would wait till it had grown?—Yes.

51,147. (*Mr. Dalton.*) If there is no incoming tenant?—The landlord takes his place.

51,148. (*Mr. Gilmour.*) Have you anything to guide you as to the system of breaks in leases, which have lately become the fashion, tending to the good of agriculture or otherwise?—It is so comparatively recent that I could not say.

Notice of claims.

51,149. In regard to sending in the claim six months before, there would be a reservation as to the buildings?—Yes.

Compensation for consumption of home-grown corn.

51,150. In regard to compensation for the consumption of home-grown produce, how do you propose to deal with the corn consumed by the work horses?—That would be excluded. In any future amendment of the Act the reference to horses should be made more specific, because some arbiters take the view that by an old Act of Parliament horses are included under the term cattle, and in one case compensation was actually awarded for corn consumed by horses. I think it was a bad judgment, but the proprietor did not appeal.

51,151. Would you treat young horse stock in the same way?—With reference to stud farms, where horses take the place of cattle and really consume the fodder, it would be a hardship to exclude from compensation all feeding stuffs consumed by them.

51,152. You would exclude the work horse because it is part of the machinery of the farm?—Yes, horses used for agricultural purposes.

51,153. And you hold that cleanliness really means good husbandry?—That is so.

51,154. (*Mr. Clay.*) Do you agree generally with the recommendations contained in Mr. Hope's report?—I think so.

51,155. About this six months' notice, neither tenant nor landlord can make up a claim sufficiently until near the expiry of the lease?—Not absolutely.

Custom as between landlord and incoming tenant.

51,156. And the landlord's property might be deteriorated?—I would like to explain my position. I merely stated as a general proposition that if the principle of the Act is sound, the value to be paid by the proprietor is the value to an incoming tenant, and that it would not be inequitable that the landlord should be in a position to say, when letting his farm, to the incoming tenant, "There is "what I am charged; make up your mind what you think "the farm is worth."

51,157. What has the incoming tenant to do with that? It is the landlord who is the party to pay, and he has to deal with the incoming tenant?—If the landlord is paying a sound compensation, the incoming tenant is presumably paying a little more rent. Otherwise the principle is wrong altogether.

51,158. But all these cases are settled after the outgoing tenant is away and the incoming tenant has come in?—That is so, and I do not say the case could be adjudicated on till after the outgoing tenant was away, but the claim of the outgoing tenant could be shown to the incoming tenant and the landlord, who could judge what it was worth.

Cost of procedure.

51,159. As to the expenses?—No doubt the expenses incident to the working of the Act are far too great.

Digitized by Google

Mr. J. J. Davidson. 4 June 1895.

51,160. You know that a rich landlord can drag a tenant a long distance?—I have known both rich tenants and rich landlords engaged in these cases.

51,161. You want to simplify the procedure and save expense in carrying out the Act?—That is most desirable, so long as you have just adjudication.

Compensation for consumption of home-grown corn.

51,162. (*Sir Nigel Kingscote.*) Should there be compensation for corn grown on the farm and consumed by cattle and sheep?—I think so.

51,163. Would there be no difficulty in taking account of it?—The outgoing tenant would need to preserve specific evidence to show what he had done.

Particulars of witness' farm.

51,164. (*Chairman.*) What is the extent of your farm?—330 acres.

51,165. How long have you taken it for?—Eighteen years.

51,166. What is the rent?—About 4*l.* 10*s.* an acre; but it is partly payable in wheat, which at the present low price brings the rent down to 4*l.* 5*s.* an acre, but if wheat rises the rent may go up to 4*l.* 15*s.*

51,167. Is it valuable land?—Yes, being near Edinburgh. The local advantages we have arise mainly from the selling of grass, green crops, and straw. Everything is sold off the farm, and manure is purchased in the town and driven back. The fact is that for the price of the straw one is able to drive back twice as much manure as if the straw was consumed on the farm.

51,168. How is your rent compared with a few years ago?—It is slightly higher.

51,169. (*Mr. Lambert.*) There is no depression, then, in your case?—No doubt we have not in our district been suffering so much as elsewhere, but the margin of profit is not so great as it was.

51,170. (*Chairman.*) Is it an average rent?—Yes, about an average rent for land so near Edinburgh.

51,171. Is it similar to land in the neighbourhood of other large towns in Scotland?—It is not the same in Glasgow. The milk for Edinburgh is largely supplied by cow-keepers, who have premises in the outskirts of the city, and not farms, and they purchase our produce. In Glasgow, on the other hand, the milk comes from dairy farmers.

Demand for farms.

51,172. Do you agree with the last two witnesses that there is a demand for farms in Scotland?—Yes, especially for the better class of farms.

51,173. When did the improved demand begin?—About four years ago.

51,174. (*Mr. Dalton.*) Is that for arable or sheep farms?—Both.

51,175. (*Chairman.*) Since then have rents been maintained?—Yes.

51,176. And there is still a demand for farms?—Yes; there was one let in East Lothian the other day, and I understand the rent is 200*l.* a year higher than before.

51,177. What is the size of the farm?—Between 500 and 600 acres.

51,178. How do you account for the fact of so many people with capital coming forward to take these farms?—I think in this particular case the landlord had dealt very kindly with the previous tenant, who was unfortunate and died recently, and I think he gave him the farm at less than he would have got for it in the market. I doubt if he has even yet taken the highest offerer.

51,179. But apart from this case, how do you account for this demand in the south of Scotland?—It is very difficult to account for it. No doubt land is a limited commodity, and that may be one reason. But after the recent depression set in a good many farmers got very dispirited about farming, and a number went out of the business, and have been idle for some years. They now find that their neighbours who remained in were doing fairly well, and they are coming back to farming.

Demand for farms.

51,180. Are the bulk of these offerers farmers?—Oh, yes; but there are a few from other avocations. I agree with Mr. Gillespie that 20 years ago there was a large class of other offerers, but they disappeared with the depression. Of late years they have been coming in again. I think the difficulty of investing money is also another reason for the demand for farms. Take the case of a man who may have gone out of a farm with a capital of 2,000*l.* He cannot make certain of getting more than 3½ per cent. In farming he gets the house to live in, food for his family, who also find employment on the farm, and with that moderate return for his money he is better off than by investing it at 3½ per cent.

Mr. J. J. Davidson. 4 June 1895.

51,181. Then, they can make a higher rate of interest in farming than in some other businesses?—Well, better than in doing nothing.

Wages.

51,182. Have the wages of labourers been fully maintained?—Yes, I think so.

51,183. I suppose the result of your views is that rents have been reduced, manures and feeding stuffs have been reduced, and the assessment has been reduced according to the rental?—Yes, but the tendency of the county councils has been to raise the rates.

51,184. Taking it altogether, there has been a good deal of adjustment?—Yes.

51,185. And taking that into account and the lower rate of profit in all trade, there is a demand for farms?—There is no doubt as to existence of the demand. The reasons I have given are speculative, but possibly they account for part of the demand.

Rent on a sliding scale.

51,186. (*Mr. Lambert.*) You have your rent fixed upon a sliding scale as regards the price of wheat?—Of wheat, barley, and oats.

51,187. Can you give us an idea how it is arranged?—What is done is this. A slump money rent is fixed as representing what is thought to be the fair value of the farm. The average fairs' prices of the previous three or five years are taken, and half the money rent is converted into grain. At the average of these rates so much wheat, barley, and oats bring out half of the rent. The lease starts on that ground. If these prices drop the rent falls, and if the prices rise the rent also increases.

51,188. You think that is a very fair system?—I do.

51,189. And that it should be extended?—I think so. The difficulty is that it only extends to half of the rent and to grain crops.

51,189*a*. (*Mr. Dalton.*) You could not extend it to other produce?—It might be found applicable, but it would be difficult to get the fixed prices of potatoes, meat, and other produce.

51,190. (*Mr. Gilmour.*) As a general rule, the system was given up all over Scotland?—Yes, and at the instigation of the farmers.

Italian rye-grass.

51,191. What produce per acre do you get from that Italian rye-grass which you grow for the cow-feeders?—It is sown in autumn after early potatoes and germinates in a few weeks, and in an average season it is ready to cut about the 20th April by dint of a liberal application of nitrate of soda. On my farm part of it is ready to be cut a second time. It realised about 22*l.* an acre this year.

51,192. For how many crops?—They cut as many as they can. I have known them take five, but three is the average.

51,193. (*Mr. Everett.*) You sell it by the acre?—Yes, and the purchasers cut it and top dress the land. Of course, that only applies to about 10 acres. Last year I had 12 acres, and this year I have 9.

Freedom of sale.

51,194. (*Mr. Channing.*) Do you object to freedom of sale where you have an agreement to return an equivalent?—No, I rather approve of that.

51,195. Is there any objection to putting it in the statute?—No, but the custom is so general that I do not think it is necessary. I do not think the landlord will suffer from freedom of sale if there is a fair equivalent stated in the contract.

Witness then withdrew.

Adjourned.

Ninety-eighth Day.

Edinburgh, Wednesday, 5th June 1895.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. J. M. Hannah.
5 June 1895.

Mr. J. M. HANNAH called in and examined.

Mr. J. M. Hannah.
5 June 1895.

51,196. (*Chairman.*) You are a tenant farmer residing at Girvan Mains?—I am.

51,197. You have come here to speak mainly on the subject of the Agricultural Holdings Act of 1883?—I have.

The Agricultural Holdings Act.

51,198. Has that Act, in your opinion, been rendered nugatory by the insertion in leases of clauses in many cases binding the tenants to observe impossible conditions for the purpose of annulling the benefits conferred by the Act?—It has.

Evasive clauses in leases.

51,199. Have the tenants, in your opinion, in their anxiety to secure farms, not sufficiently studied these clauses to realise the consequences of them?—Yes, that is so.

51,200. Do they often show great indifference to the terms of their leases, trusting rather to the verbal terms in which these agreements have been arrived at?—Very frequently.

51,201. Can you give us any specimens of evasive clauses of this kind in leases?—Yes, I can give you some. Here is one: "the said tenant and his foresaids shall not "be entitled without consent of the proprietrix in writing, "to apply any chemical or other artificial manures to said "lands."

51,202. (*Mr. Chaplin.*) Is that all?—No. Here is another, "declaring that notwithstanding the provisions "of the Agricultural Holdings (Scotland) Act, 1883, "section 30, the tenant shall not on quitting the holding, "or during the currency of his tenancy, without the con- "sent in writing of the proprietrix remove any engine, "machinery, fencing, or other fixture affixed by him to "the holding or any building erected by him thereon, and "in the event of such compensation being refused the "tenant shall have no claim to compensation other than "what the proprietrix may agree to pay in respect of the "same."

51,203. (*Mr. Chaplin.*) Surely that is a contravention of the Act, about manures?

51,204. (*Mr. Clay.*) What is the clause regarding the manures?—That no chemical manure whatever shall be allowed to be applied to the farm.

51,205. When you talk of chemical manures, do you mean manures containing sulphuric acid?—All kinds of artificial manure, dissolved bones, sulphate of ammonia, nitrate of potash.

51,206. Anything that has been in contact with sulphuric acid, say dissolved bones?—I think the phrase would hold good even as regards ground bones.

51,207. (*Mr. Chaplin.*) Are there other clauses of this kind?—A common clause is to this effect:—"And the "lessee shall in each year, thoroughly work and clear the "whole fallow and green crop lands, and shall manure "the same with solid, good, and well-prepared farmyard "or town's dung, at the following rates per Imperial acre, "viz., land for potato crop with at least 70 cubic yards," &c.

51,208. (*Mr. Clay.*) I suppose it would be nearly impossible to give such a quantity?—It is impossible in every case.

51,209. (*Mr. Chaplin.*) What is the object of their insisting upon something that it is impossible to do?—To nullify the Act, by enabling them to raise a counter-claim for not fulfilling the terms of the lease.

51,210. What is the use of making the tenant enter into such an agreement?—The conditions have never been enforced.

51,211. (*Mr. Gilmour.*) This is dealing with some particular quality of soil, I take it? Are you referring to the early ground down in the Girvan district especially?—Not specially. These apply to the whole of Ayrshire.

51,212. (*Mr. Clay.*) To all kinds of land in Ayrshire?—Yes.

51,213. (*Mr. Chaplin.*) Do you mean to say that they are common?—Yes.

Contracting out of the Act.

51,214. (*Chairman.*) I see you say in your brief that a gentleman, an advocate in Edinburgh, has devoted considerable attention to framing clauses "to exclude certain provisions of the Act," and that these are largely taken advantage of in drafting current leases, and that a copy of this work can be produced. Is that a published book?—Yes.

51,215. Can you give us an illustration of the kind of clauses you refer to?—I have the book here, and here is a quotation which may answer:—"Of course the landlord "cannot compel the tenant to enter into an agreement, "but in the course of leases of ordinary duration, it seldom "happens but that on some occasion during its currency, "the tenant has a favour to ask of his landlord. That "will be the landlord's opportunity to insist upon some "understanding that shall be arrived at as to the amount "or the scale of compensation to be allowed."

51,216. Is it your experience that tenants have practically made agreements in many cases inconsistent with the Act, under the advice of this book, or otherwise?—That is so.

51,217. What remedy do you suggest to meet that?—Unless it be penal to contract out of the Act, I do not see any other remedy.

51,218. That is already the case. The 36th clause of the Act says, "Any contract or agreement made by a "tenant by virtue of which he is deprived of his right to "claim compensation under this Act in respect of im- "provement specified in the schedule thereto (except an "agreement providing such compensation as is by this "Act permitted to be substituted for compensation under "this Act), shall, so far as it deprives him of such right, "be void." Cannot you suggest any stronger clause than that for the protection of the tenant?—As I understand that, any agreement can supersede the Act.

51,219. Provided it be fair and reasonable?—Well, fair and reasonable.

51,220. And provided it gives compensation at least as much as provided under the Act. Can you suggest any mode of strengthening the Act in the interests of the tenant?—I do not think I can make any suggestion.

51,221. Possibly it may come to this, that a certain number of tenants are not aware altogether of the provisions of the Act in their interest, and are induced by

Digitized by Google

Mr. J. M. Hannah. 5 June 1895.

their landlords to enter into agreements which endeavour to set aside the benefits of the Act, and are, I suppose, damaged to some extent thereby, and that they do not avail themselves of the provisions of the Act to make such agreements void and illegal?—Yes, that is so. Of course, Scotch leases, so far as I have seen them, have always been one-sided documents.

51,222. One would like to know what you suggest by way of remedy, to give greater security to the tenants, that advantage shall not be taken of their weakness by landlords inclined to do so?—It could be done by framing a schedule firm and fast for compensation, which would be binding on all tenants.

51,223. (*Mr. Chaplin.*) You say those clauses have never been enforced?—No.

51,224. But they are made use of for the purpose of counter-claims?—The opportunity has never arisen. These leases run for 19 years, and if at the end of that time the tenant sought to establish a claim for unexhausted manures, he would at once be met by a counter-claim to nullify it.

51,225. Has that counter-claim ever been tried at law?—I do not know that any claim has been established by a tenant.

Claims and counter-claims.

51,226. For anything you know to the contrary, those counter-claims and those clauses would be held to be perfectly invalid under the existing law?—Some of them would.

51,227. (*Chairman.*) In your immediate district are great quantities of imported manure annually used in the growth of potatoes?—That is so.

51,228. Costing in some cases 10*l.* an acre?—Yes.

51,229. Does the liberal treatment, continued year after year for in some cases ten years, very much increase the fertility of the soil?—Certainly.

51,230. In spite of this, are tenant farmers unable to obtain any compensation on quitting their farms on account of counter-claims which may be made by the landlord for deviation from the terms of their leases?—Yes, that is my case.

51,231. The only recourse that tenants have in such cases is to exhaust their land during the latter years of their lease, in order to recoup themselves for their outlay?—That is so.

51,232. I presume you would consider it very desirable to give every encouragement to tenants to farm well up to the very end of their leases?—Yes.

51,233. What suggestions have you to make with the view of meeting the case?—If they could get compensation for the amount of manure that had been applied to the end of the lease, it would be all in their favour to farm well up to the very last day of their tenancy.

Contracting out of the Act.

51,234. One wishes to know what practical recommendations you have to make for meeting the cases you have named?—If we had such an Agricultural Holdings Act that it would not be possible to contract out of it.

51,235. That is the case already under the Act, that it cannot be contracted out of, except for the purpose of securing to the tenant compensation at least as good as that provided under the Act. Can you suggest any other way of meeting the case?—That is just a matter of opinion as to the possibility of contracting out of the Act. If I may be allowed to quote Mr. Johnston again, he has quite a different opinion.

51,236. Will you quote what he says on that point?—He says:—"The fact should not be lost sight of, that it is "in the power of parties to contract themselves out of all or "any one of the provisions of the Act other than that which "provides compensation for unexhausted improvements."

51,237. Yes, but that is only possible if they provide for the tenant compensation at least as good as that which the Act gives him. It cannot be contracted out of, unless more favourable terms can be contracted for to the tenant?—I do not understand it in that light.

Evasive clauses in leases.

51,238. (*Mr. Clay.*) You have read from two leases. Have you come across other leases where the landlords and their factors are trying to evade the Act?—I can give you one or two more if you wish them.

51,239. Let us have them?—Here is one:—"Further, "in respect of the outlays agreed to be made by the first "party as above mentioned, and that the second party "shall not be charged, at his entry to the farm, for the "value of unexhausted manures, in consideration whereof, "and of the terms of this lease, the said second party "hereby renounces and discharges any claims for compensation that may otherwise be competent under the "Agricultural Holdings (Scotland) Act, 1883."

Mr. J. M. Hannah. 5 June 1895.

51,240. (*Captain Thomas.*) Is that a 19 years' lease that you have read?—Yes.

51,241. (*Mr. Clay.*) Can you give us other clauses?—"And it is hereby further declared that notices in terms "of section 4 of the said Agricultural Holdings (Scotland) "Act, 1883, are hereby expressly dispensed with, and "declared to be of no force or effect as between the parties hereto throughout the currency of this lease; and "in lieu of the provisions of said Act and section, it is "hereby agreed that no drainage except what is hereby "specially stipulated to be executed, shall, throughout "the currency of this lease, be undertaken by the tenant "or his foresaids, without the consent in writing of the "proprietor, and upon such terms as may be agreed to "between the parties when such consent is given."

51,242-3. You consider that goes dead against the spirit of the Act?—Yes. Here is another extract:—"And it is "hereby expressly, and without prejudice to the foresaid "obligation to remove without notice or warning, declared, that notices under section 28 of the said Agri"cultural Holdings Act, 1883, are hereby dispensed "with under this lease, and neither party hereto shall be "entitled to found to any effect upon the failure of the "other party to give the notice required by the said Act "and section. These clauses occur in agreements made in the county of Ayr.

51,244. So it must be a general plan or scheme laid by land agents and factors, or by land lawyers like Mr. Johnston, laying their heads together to burke or damage the working of the Act?—I do not say that it is adopted in every case, but it is very generally adopted.

51,245. Regarding what you say about the removal of buildings which the tenant puts up, is the law of Scotland not very clear on that point, that the tenant shall take away any buildings that he has put up himself and that do not damage the landlord's property?—The Agricultural Holdings Act gives the tenant that right. I am not of opinion that that clause would have any effect whatever. The tenant could remove any building or machinery independent of that clause. I read these to show what a tenant will actually sign.

51,246. And what the landlord will actually put before him?—Yes.

51,247. In regard to what you say about manure which has gone through a scientific process, do you consider that that is dead against the spirit of the Act?—Certainly.

51,248. And so landlords have no right to put that into their leases?—No.

Estate rules.

51,249. I think you have said that a number of leases which you have seen in Ayrshire are considerably one-sided?—Almost entirely.

51,250. That means that large properties have their estate rules and regulations laid down, and when tenants come to make arrangements about a lease, they are told that if they do not sign the rules of the estate, they may give up the idea of occupying the farm?—That is so. Most of the regulations are printed and submitted to a tenant, or offerer for a farm. If he does not subscribe, he is set aside in place of some other one.

51,251. Those treated in that way when offering for farms, are not free agents in making a bargain?—No, they are not.

Claims and counter-claims.

51,252. As far as the facts of the case go, the tenants, you say, are unable to obtain compensation on quitting their farms?—Yes, through the possibility of counter-claims arising.

51,253. These counter-claims are strengthened by all these absurd restrictions put in the lease?—That is so.

51,254. And that itself has frightened tenants from going to law with their landlords in the endeavour to get justice in such cases?—That is so.

51,255. And if a tenant has to do that and get no compensation, they will rather fall back upon the old plan of running down their farms and taking out of it all they can get?—They invariably do so, and that neither pays the tenant nor the landlord.

51,256. The Agricultural Holdings Act was framed with the object of keeping the land up to the mark up to the last year of the lease?—Yes.

Demand for farms.

51,257. (*Sir Nigel Kingscote.*) Are there any farms in landlords' hands in your district?—No; there are none.

Digitized by Google

Mr. J. M. Hannah. 5 June 1895.

51,258. When one becomes vacant are there many applicants?—Usually there are a great many.

51,259. How is it that you expressly say that all the agreements are one-sided as against the tenant? How are Scotch gentlemen, who are generally regarded as very astute, so anxious to take the farms with agreements so very one-sided?—The land is very limited in comparison with the number of people who want to occupy it.

51,260. That may be, but I wanted to know your opinion as to how it is with agreements so very one-sided, they have all these applicants?—One who is not willing to subscribe to the agreements is just set aside, and another is taken in his stead. There is always someone willing to subscribe.

51,261. You tell us that there are tenants who are perfectly ready to sign any agreement put before them, without even reading it?—I have known of cases.

Evasive clauses in leases.

51,262. (*Mr. Whitehead.*) How recently have any of these evasive clauses been signed?—Those I have quoted were made in 1884 and 1887. There is one dated 1893.

51,263. Are such leases being signed now to your knowledge?—Certainly.

51,264. To this day?—Certainly.

Contracting out of the Act.

51,265. (*Mr. Gilmour.*) Your strong point is that there should be no way of making an arrangement between landlord and tenant to keep out of the Act?—That is so.

51,266. Is one reason of its not being taken advantage of in Scotland to the extent that might have been expected, the expense of carrying out everything in connection with the Act?—That is partly so.

51,267. Is it one of the very strongest reasons why it has not been taken advantage of?—I do not think so.

51,268. Do you know the schedules that are in vogue on some very well-managed properties in Scotland?—I have seen several of them.

51,269. On such as the Dalhousie, Richmond, and other properties are those schedules not fair and reasonable as between landlord and tenant?—Perfectly.

51,270. As you admit that they are fair and reasonable, can they not be carried out at very much less expense than references under the Act?—Yes, that is so.

51,271. In spite of that you would make it a provision that there should be none of those arrangements carried out between man and man?—No; I would not do that, but there ought to be some law in force to prevent some landlords who would seek to evade the provisions of the Act, from making the tenants worse than the Act made them.

51,272. I understood you started at first with the clear statement that you would not allow any contracting out in the way of making any fair and reasonable arrangement?—In looking to those agreements I have mentioned, I certainly said that.

51,273. Those schedules that have been worked upon several well-managed properties in Scotland, lay down certain per-centages for which vouchers have only to be produced, without any extreme to either party. In spite of that you still hold the opinion that they should not be allowed?—I have not been able to find any such agreements in the west of Scotland. I have seen the Dalhousie, Fife, and other estate regulations in the north and east of Scotland, which I consider perfectly fair and reasonable. I question if I have seen one such that is applicable to the west of Scotland, to the district I represent. I can only speak to that.

51,274. Is there any reason why the west of Scotland men should not be able to come to a fair and reasonable agreement as those in any other part of Scotland?—The application for land has been much keener in the west than in the other parts of Scotland.

Depression in the west of Scotland.

51,275. Is there any depression in your part at all?—Not much.

51,276. Yours' is chiefly early land?—For the most part, in my own immediate neighbourhood. In other parts of Ayrshire there are later lands, in Kilmarnock and that neighbourhood.

Contracting out of the Act.

51,277. (*Mr. Lambert.*) As regards that question of contracting out, would this meet your views, that if a tenant was not satisfied with the provisions that he had signed in his lease or in any other agreement, he should be at liberty to go out under the provisions of the Agricultural Holdings Act?—That would meet my case exactly.

51,278. You would in that way have the tenant backed up, at all events, by being able to quit his holding under the terms of the Agricultural Holdings Act?—Or no worse than the Act would have him.

Mr. J. M. Hannah. 5 June 1895.

51,279. That would meet your views?—Yes.

51,280. That would not affect those fair and equitable landlords who are ready to treat their tenants in a fair and reasonable manner?—No, it would not.

Reduction of rents and prices.

51,281. About what reduction of rents has taken place in your district?—I could not put a figure on the per-centage that has taken place, but I would think that 5 per cent. would recover the reductions of rent within the last twenty years.

51,282. Has agricultural produce depreciated much in that time?—Certain kinds of agricultural produce have depreciated from 20 to 40 per cent. Others again have not depreciated to such an extent.

51,283. Has labour decreased in value?—It has increased about 10 to 15 per cent.

51,284 So the tenant farmers have had to bear practically the whole of the present depression, with the exception of a decrease of 5 per cent. in their rents?—Yes.

Evasive clauses in leases.

51,285. Would you mind reading out the clause in one of the leases from which you have quoted under which the tenant has to take a pew in the parish kirk with his farm?—"And the pew or seat in the parish kirk of Stewarton "he now occupies, and that for the space of 19 years from "and after the terms following, namely, Martinmas, "1887."

51,286. And will you read that clause in which the landlord endeavours to contract himself out of the Ground Game Act?—"Also power to enter upon the said farm at "all times, and also the whole game and fishing, including "hares and rabbits, with the exclusive privilege of fowling, "hunting, fishing and sporting."

51,287. Will you kindly read the provision in which the pew is included in the rent?—"For which causes the said "—— binds and obliges himself, and his heirs, successors, "and representatives to make payment to the said —— "and his heirs, successors, or assignees, or to her or their "factors, yearly for the said land and farm of —— and "said pew in the parish kirk of Stewartson, of the sum "of 128*l.* 6*s.* 11*d.*, in the name of rent, payable half-"yearly at Martinmas and Whitsunday."

51,288. Has the tenant to pay for that pew?—I am not aware that he is.

51,289. Is he bound in any way to attend the parish church?—No; it is optional on his part entirely.

51,290. Will you also read that clause in which it is provided that the tenants' improvements shall be deemed to be exhausted within four years after they are made?—"No counter-claim in respect of deterioration or breach of "covenant shall be barred in respect of such breach of "covenant or deterioration occurred more than four years "before the determination of the tenancy."

51,291. I suppose the reason they sign such agreements is that there is an enormous competition for farms? The landlords are not the purely philanthropic individuals we are sometimes led to suppose?—Not in every case.

51,292. Good landlords do not need to be bound with law; it is the bad landlords who require the more stringent provisions of the law in order to keep them from doing injustice to their tenants?—That is so.

51,293. (*Mr. Dalton.*) You have said that having signed such conditions as are to be found in nearly all leases, tenants are not sufficiently independent of their landlord and his factor. Do you mean to imply that these conditions are found in nearly all leases?—In the great majority of them that I have perused.

51,294. You have produced five or six leases. Have you any general acquaintance with the terms of others?—I have perused as many more.

51,295. On many estates?—They are all on different estates, all in Ayrshire.

51,296. You are merely speaking of that part of Scotland?—I am not making a statement for the whole of Scotland. What I have said applies only to the district I represent.

51,297. Is that the whole of Ayrshire?—Yes.

51,298. Would it not be natural that your attention should be drawn to leases that contain those covenants, rather than to those which do not?—I asked for leases on different farms, not knowing what the terms of them were before I asked for them.

Digitized by Google

Mr. J. M. Hannah.

5 June 1895.

51,299. You did not ask them for the purpose of finding out cases in which there were agreements?—I did.

51,300. You asked generally. You did not select your tenants to whom you made those applications?—No.

51,301. Do you think there would be any advantage in having a statutory form of lease, in the same way as a statutory form of mortgage?—It would be better than the leases that we have to submit to at present. It could not certainly be any worse.

51,302. In one of those leases it is stated that on any breach of the covenant, there shall be an additional rent of 10*l.* per acre paid which is not to be regarded as a penal but as a pactional rent Have you ever known a case where additional rent has been paid for the breach of any one of those covenants?—I have, but I do not know that it has amounted to 10*l.* I know a case where a penal rent was enforced.

51,303. For breach of what covenant?—For not cropping according to the terms of the lease.

51,304. I suppose that would be a very rare case?—Well, the clause is inserted pretty generally in all leases.

51,305. I understand that one of the covenants about manure is impossible to fulfil. It is never enforced in such a case as that?—No. I know a case where it was enforced, when a counter-claim was raised by the landlord against a claim made by the tenant.

51,306. I understood that the time had not come for enforcing most of these claims?—Most of them.

51,307. That claim you speak of was enforced successfully?—It was.

51,308. Before the arbitrator?—Yes.

51,309. What was the clause?—I do not remember exactly the particulars, but the tenant had broken up a field contrary to the terms of his lease, and the arbitrator, in making his award, took that into consideration in enforcing the penalty.

51,310. But damage had been done, I suppose?—I do not know that that was proved.

51,311. (*Captain Thomas.*) How many acres of land do you farm?—320.

51,312. Do you hold on a lease?—Yes.

51,313. How does it compare with those you have read?—They are a little better. I made an effort to get them a little better, but it was after a struggle I managed it.

51,314. (*Mr. Everett.*) The competition for farms is very keen in your county?—That is so.

51,315. Even at present rents?—Yes.

51,316. So that the farmer may be assumed to be getting a living?—They must be getting some living, else they would not compete as they do.

51,317. Looking at the way in which they are willing to sign agreements which are illegal agreements it looks very much as if, when there is a keen competition for farms, no legislation can prevent the landlord being master of the situation?—It does not seem as if it were possible.

51,318. Neither the Ground Game Act nor this Act, which it is illegal to evade appear to have saved tenants from the domination of landlords, so to speak?—That is so.

Migration of farmers.

51,319. A good many farmers have migrated out of your county southwards?—They have.

51,320. I suppose it is the severity of the competition at home that has tempted them southwards?—Partly that, and partly because the farmers are of moderate size, and farmers' sons employed on the holding have had to strike out for themselves. The young men who were brought up to farming were far in excess of the farms that they could get within the county.

Dairying.

51,321. Is dairying the chief branch of farming within your county?—Chiefly so.

Mr. J. M. Hannah.

5 June 1895.

51,322. (*Mr. Chaplin.*) Do you make cheese in your district?—Not in my immediate district, but in Ayrshire generally they do.

Size of farms.

51,323. To what size do the farms run?—From 150 to 250 acres generally.

51,324. Do you call these small farms?—Yes.

51,325. Does a man and his family generally work them?—Yes, without much labour, but he works harder than any servant in the country.

Migration of farmers.

51,326. Do these young men take capital with them?—As much as they can get.

51,327. They would not be admitted as tenants elsewhere if they did not bring some capital with them?—Some of them struggle away for years, and do not get as much as if they were in farm service elsewhere.

51,328. But they would not be admitted as tenants if they did not bring capital with them?—In some parts of England they are very glad to see them, even supposing they have not much capital. They do not go so much to other parts of Scotland.

Demand for farms.

51,329. Has that competition prevailed during the last fifteen years, or has it only come to that point quite lately?—It has prevailed all along for twenty years.

51,330. When a farm is vacant are there a great number of applicants?—Probably from ten to thirty.

Reduction of rents.

51,331. You said, I think, that in your immediate district rents have only been reduced on an average about 5 per cent?—I think that will cover it.

51,332. In other parts of Ayrshire?—From ten to 15 per cent, and in some cases 20 per cent.

Fall of prices.

51,333. You said some kinds of produce had been reduced, whilst others had maintained their price. What articles have maintained their price?—Early potatoes have maintained their price throughout all the depression.

51,334. What else?—That is about all.

51,335. Has dairy produce maintained its price?—It has not.

51,336. What has been the fall in dairy produce?—I suppose about 10 per cent. within these last three months.

51,337. Take an average of years, because we must be guided by that?—The fall has been greater within the last three months. Dairy produce has pretty well kept its price up to a short while ago.

51,338. The fall has only been in the last few months?—Yes.

Leases.

51,339. (*Mr. Lambert.*) Who pays for the drafting and the writing of these leases?—The tenant pays one-half and the landlord the other half.

51,340. (*Captain Thomas.*) Are copies furnished to tenants?—Not in every case.

51,341. (*Mr. Chaplin.*) Do leases generally prevail in your district?—Mostly nineteen years.

51,342. There has been no change in that respect?—Usually there is a break made after five years in recently drafted leases.

Remissions of rent.

51,343. Have landlords made remissions of rent as well as permanent reductions?—They have.

51,344. What have they made in the case of leases?—From 5 to in some instances 20 per cent. in the case of sheep farmers.

51,345. Is that the average?—That would not represent the average; 20 per cent. might represent the average. Of course in leases that have been renewed within recent years, there has not been that.

51,346. But in old leases while the old rent was maintained?—15 per cent. would represent the average I think.

51,347. Every year, or in exceptionally bad years?—Mostly every year.

Witness then withdrew.

Mr. W. Munro.

Mr. William Munro, called in and examined.

Mr. W. Munro.

51,348. (*Chairman.*) Mr. Munro, from 1858 until 1877 you were Government assessor of lands and heritages for the first district of the county of Lanark?—I was.

51,349. In 1877 you were promoted to the office of Inspector of Stamps and Taxes for the northern division of Scotland, which you held until 1879?—Yes.

51,350. In which latter year you were selected to fill the office of assessor of railways and canals for Scotland, vacant by the death of Mr. George Dods?—Yes.

51,351. This appointment is held under the Act for the Valuation of Lands and Heritages in Scotland, 1854?—It is.

Procedure before the assessor of railways.

51,352. The law in Scotland differs in this respect from that in England, in that the valuation of railways for the purposes of local rates is made by an officer appointed under the Act 17 & 18 Victoria, chapter 91?—Yes.

51,353. It rests with you to assess the value of railways all over the country?—I do, all over Scotland.

Digitized by Google

Mr. W. Munro. 5 June 1895.

51,354. Have you any aid in that respect, or does it rest solely with yourself? Have you any assessors to help you? —None. I have several clerks, two being specially skilled.

51,355. When there is a dispute do the parties come before you and argue the case?—Frequently they do.

51,356. Do they appear by counsel?—No. This is before the valuation is finally made up. I invite the railway company or whatever party it is, to a conference with me. We meet and discuss the points on which we differ. If we agree that settles the matter. If we cannot, I make out the valuation, and they have the power to appeal against my decision to one of the judges of the Court of Session, who is known as the Lord Ordinary on the bills. The case is heard before that judge. The railway companies have counsel, and invariably the best to be found in Scotland. I have none.

51,357. Do the local authorities appear occasionally in answer to the railway companies, or do you have to defend your case?—I have to defend my case; but usually I am assisted by the local authorities. They come and appear in their own interest, and they have counsel and also witnesses. The great difficulty is with expert witnesses. The railway companies have them in large numbers whenever they require them, and the judge has more or less to decide upon the evidence led; while I have no power to call witnesses, at least I have no fund to pay them out of.

51,358. How is a case initiated? Do the local authorities in the first place come before you and claim that the railway shall be assessed at a particular amount?—No. I take the accounts of last year of any railway, and find out what the gross earnings were. Then I make the deductions which are allowed, and arrive at a sum which is the gross valuation of the railway.

51,359. You communicate your decision to the local authorities and to the railway companies?—I communicate it first to the railway companies.

51,360. Then the dispute is between you and the railway companies in the first place?—Yes.

51,361. You have a conference on the subject?—Frequently.

51,362. And you finally give your decision?—Yes.

51,363. You communicate that in due time to the local authorities?—Yes.

Appeal from decision of assessor.

51,364. Suppose the local authorities are dissatisfied, what happens?—They have the power to appear before the judge, and they do so.

51,365. On the other hand, if the railway company is dissatisfied, it can appeal against you?—Yes.

51,366. And finally the case comes before a Judge of the Supreme Court?—Yes.

51,367. Are there many such appeals?—There have been fewer of late years, because a great many of the points have been settled. And we also found that it is really hopeless to attempt to open the same point, because the judge naturally decides as his predecessor has done, to a large extent—at least that is really the rule. I may say that the reason why these cases—which are certainly the most important in Scotland—are decided before one judge is that at the time of year when these valuations were completed, the Court of Session was not sitting, and there is only one judge.

51,368. (*Sir Nigel Kingscote.*) What court do they go before?—The Court of Session.

51,369. Always the same court?—Always the same court. It is the Supreme Court of Scotland. They depute one of their number, who is Lord Ordinary on the bills, who is always sitting during the recess. Other cases such as the valuation of a house or a farm, are heard at a different time of the year, and two judges sit upon them, which is an anomaly no doubt.

51,370. (*Chairman.*) All the cases of rating of railways throughout the whole of Scotland come before you?—Yes.

51,371. That is the only way in which the assessment is made?—Yes.

Mode of assessment of railways.

51,372. Apparently the mode in which you assess the railway is, you do not merely take into account the value of the land and buildings which they possess in a particular district, but you take the whole gross revenue of the year for the railway, and take into account the working expenses and the plant; and after making certain allowances of from 20 to 25 per cent. on the valuation of the plant, and so forth, you arrive at the amount at which you assess the railway?—The gross valuation. Of the two principal railways in Scotland the gross valuation amounts to something over half a million annually. I proceed to check what portion of that belongs to the stations and the balance is apportioned equally per mile along the line.

Mr. W. Munro. 5 June 1895.

51,373. Apparently under Act 30 & 31 Victoria, chapter 80 you deduct "one half of the expenses incurred "in maintaining or repairing the permanent way?"—Yes.

51,374. And further you make a deduction upon the estimated present value of the working stock and plant, said value being taken at 75 per cent. of the original cost?—Yes.

51,375. That 25 per cent. deduction upon the valuation of the plant is made up as follows:—12 per cent. for tenant's profits, 5 per cent. for depreciation, 5 per cent. for interest, and 3 per cent. for accidents and incidents?—Yes.

51,376. (*Mr. Gilmour.*) Have you to do with nothing but railways?—Railways, waterworks, gasworks, canals, and tramways. The Scotch judges have held that railways and tramways are one and the same thing.

51,377. (*Chairman.*) Previous to 1876 no allowance was made to railway companies for floating capital?—No.

51,378. But the late assessor, in making up the valuation for the year ending Whit Sunday 1877, for the first time made an allowance in respect of floating capital?—Yes.

51,379. The effect of the arrangements in Scotland over which you preside is that one uniform system prevails over the whole of Scotland for the rating of railways?—That is a great benefit.

51,380. Whatever rules you lay down for one district apply equally to the whole of Scotland?—Yes.

Mode of assessing in England and Scotland compared.

51,381. Therefore there is uniformity throughout the whole of Scotland in respect of the assessment of railways?—Yes.

51,382. Whereas in England each local authority is compelled to have a separate dispute with the railway company in respect of the railways within its own district?—Yes.

51,383. And there is no general rule applicable to the whole?—That is so. I have always understood that the difficulty in England was, that while the railways had always highly skilled people to meet such cases, the local authorities had frequently men not exactly trained to the work.

51,384. In England it would go to the assessment committee of the county, and if their decision was disputed it would go before the magistrates?—Yes.

51,385. Subject to an appeal to the courts on a question of law?—Yes.

51,386. Whereas with you the whole subject is dealt with in your office by yourself, with appeal to the judges on fact as well as on law?—On fact as well as on law, or the interpretation of law.

51,387. But on a question of fact?—Yes, there are witnesses examined as to questions of fact, but it is generally more upon law, and what the law includes.

Appeal.

51,388. Supposing a particular railway disputed your method of calculation, or thought you had hardly deducted sufficient in respect of these allowances, not on the question of law, but on the question of fact and amount, they might appeal against your decision to this judge?—They might, and do.

Basis of valuation of railways.

51,389. The general result of the assessment of railways in Scotland seems to imply, that to that extent personal property is rated, because you take into account the plant of the company, including the valuation of its carriages, and so forth, as well as the valuation of the land and buildings?—I do not take into account the value of the land. The basis of the whole valuation is the gross earnings of the company.

51,390. The gross annual receipts?—Yes.

51,391. These gross annual receipts would be based not only upon the valuation of the land and buildings, but also upon the floating capital of the company?—Yes.

51,392. Including its waggons, engines, and so forth, which are personal property?—Yes.

51,393. Therefore *pro tanto* in Scotland, personal property in respect of railways is to some extent rated?—Yes. The profits could not be earned without the plant. I think in England what they attempt to do is to ascertain the earnings, the receipts, in each parish or for each mile. Of course they make many deductions from these gross earnings, just as I do to some extent.

51,394. (*Mr. Chaplin.*) Only in a different way?—Yes. The difficulty is to ascertain how much is owing to each parish. Perhaps what many consider the fault of the

Digitized by Google

Mr. W. Munro. — 5 June 1895.

Scotch system, is that to the mile coming into such a town as Glasgow, you have to give just the same rate as a mile-length twenty miles away, where the actual receipts are not and cannot be the same.

Method of estimating railway valuation.

51,395. (*Sir Nigel Kingscote.*) Do you reckon the mileage according to rails?—According to the running track, which, I think, is another difficulty. I proposed some years ago that the rating should be upon each single line, that there might be a difference.

51,396. On the double line would you rate on both lines?—Yes; and on the single only one.

51,397. At the present moment, whether single or double, or quadruple, it is all the same?—Yes.

51,398. (*Chairman.*) Having based your estimate as you have explained, you then divide it among the parishes in proportion to the length of line?—I first check off the valuation of the stations, ascertaining their gross cost as nearly as possible, and take 5 per cent. on that, which may make up two-thirds or thereby of the whole valuation of, say, half-a-million, for a large railway.

51,399. Having made that deduction, you divide the balance between the different parishes through which the railway passes?—Yes.

Rating on single and double lines.

51,400. Making a distinction between those parishes where there is a single line or a double line?—No; I make no distinction. I think there ought to be.

51,401. At present you make no distinction whether a line is single, or double, or quadruple?—No.

51,402. The poor districts rather gain?—Very much. In some parishes the valuation of the railways is a very important thing. Among the poor agricultural population in the Highlands, it is often a very important matter.

51,403. In your opinion there ought to be some change in that respect?—I think so.

51,404. That it is hardly fair to the districts which a railway with quadruple lines passes through?—That is my opinion clearly. I ventured to suggest that to the Lord Advocate some years ago, but he never acted upon the suggestion.

51,405. Has the question never been raised before the judges?—No.

Right of appeal against assessment.

51,406. I presume that any parish which thought itself aggrieved by this method might appeal against the decision to the judges?—They might, and raise that very question.

51,407. Take the question as between a parish where there is a line of railway with four lines passing through it, and a very poor district with only one line of rails passing through it. The one parish might contend that the assessment was unfair as between the two?—They might.

51,408. And they might raise the question before the judges?—Raise it before this one judge in the recess season. The experience we have had is that it would be utterly hopeless to get into a question of that kind. There are only a few days to decide the question.

51,409. Why is that?—The Act of Parliament has fixed it so. The 30th September is the last day when the judge can sit. Within 20 days the appeal is heard. It is almost invariably within a very few days of the expiration of the period when the case is heard.

51,410. Do you mean to say that the time given for the appeal is so short that the judge would not be able to determine this important question?—Yes. In the last appeal we had only a few days given us before one of the judges. He expressed his regret pretty strongly that he had so little time to deal with it.

51,411. I presume, inasmuch as your own opinion is, that the system is not altogether fair as between two parishes, in the way you have explained, you might yourself give a decision upon the point?—I might, but it would be opposed by the railways probably, and it would certainly be upset.

51,412. If you took your decision, there would be an appeal against you?—There might.

51,413. On the part of the one parish or the other, and then the judge would have to decide it?—The judge would have to decide it, but in the case of a poor parish, they would never dare to incur the cost of such an appeal. A rich parish, such as some of the Glasgow parishes often do fight these points; but a poor parish through which a single line passes would scarcely do it. It would, perhaps, involve a loss to them as much as all their rates for the year.

51,414. But you express the opinion that the system is not altogether fair?—Yes.

Mr. W. Munro. — 5 June 1895.

51,415. It would seem that it would rest with you to alter it, leaving it to the particular parish to appeal against you?—It would be very difficult to upset the practice of 40 years.

51,416. You would hesitate?—I know what the result would be pretty well beforehand, that I, without counsel, without the power to pay witnesses, would be beaten by the railway companies.

51,417. It seems to me that it would not be a question involving any very great amount of evidence, because it would be on a question of fact, easily ascertainable—namely that the one parish has a railway with four lines and the other has a railway with only one, and the question is, how to divide the rate between the two?—Quite true.

51,418. That is a question of principle rather than of fact?—Yes.

51,419. And it would not involve a great amount of evidence. It would only involve a decision of principle?—There is no doubt of that.

51,420. At all events, you have not thought of disturbing to practice of the last 40 years?—I have not. A Committee of the House of Commons sat upon railway valuations some years ago—in 1888—and they recommended that the appeals should be heard before at least three judges. It has been found in the case of other property that occasionally the judges differed when there were only two, and that the appeal fell in consequence.

Present valuation of railways compared with 20 years.

51,421. Have you any return in your office, showing the valuation for each parish in Scotland or each union in Scotland, as compared with 25 years ago, showing the gradual increase of valuation?—Yes. I made up this morning a comparison between now and 20 years ago. The increase is not so large as might be expected, considering that the railway valuations of the present day contain the valuations of large extensions on the part of the railways. Twenty years ago, the gross valuation of all the railways was 1,400,000*l.*; last year it was 1,800,000*l.*, showing an increase of 400,000*l.*

51,422. Not a very great one?—No; considering the extensions particularly.

Assessment of union 1870 and 1894.

51,423. I do not know whether you have seen a return recently laid before Parliament showing the increase in assessments not only of railways, but of all other properties, in each union in England, for the last four-and-twenty years, 1870 as compared with 1894?—Yes, I think I have.

51,424. That shows a very enormous increase in the assessment of railways?—Yes, I have that return.

51,425. Would it be possible to get a return of the same kind for Scotland?—I have no doubt it would. I could furnish any information of that kind as regards the railways. In fact, I think I have draft copies of all the valuations. That would be easily furnished. Of course, from 1870 to 1880 the extensions of railways were very considerable.

Increased assessment of railways.

51,426. But still, as that return shows, the increased assessment is far beyond the increase in mileage of the railways?—Yes.

51,427. Showing that the railways in England must have been assessed at very much below their value 25 years ago, and that the assessments have been gradually increased. I apprehend in Scotland the same system has prevailed during the whole of that time?—Yes, and long before.

51,428. What increase there has been has been due mainly to increased mileage?—Yes. In fact, the Act of 1868, giving the deduction for half the maintenance has of course, reduced the valuation very considerably compared with what it otherwise would have been.

Annual valuation.

51,429. (*Captain Thomas.*) At whose request do you value these railways?—I am appointed by Government.

51,430. But you are asked by somebody to value a certain railway?—I do it every year.

51,431. All the railways throughout Scotland?—Yes, every railway throughout Scotland.

51,432. (*Mr. Dalton.*) Is the local assessment for railways the same as the income tax assesament?—The income tax is on the profits. This is on the supposed rental. They are not on the same principle.

51,433. Which is the higher?—The company pay income tax, as I understand, on a much higher amount, but I really could not say.

Digitized by Google

Mr. W. Munro. 5 June 1895.

Income tax and local valuations.

51,434. You do not know what the relative proportions in Scotland are of the income tax valuation, and the local valuation of railways? Could you put in the income tax valuation for this year and the local valuation?—I have no access to these papers.

51,435. You could put in your local valuation?—Yes.

51,436. Because then we could see whether the proportions were much the same as in England?—Yes.

Deductions from gross valuations.

51,437. I take it from what you say that some of these deductions which you are compelled to allow, partly by statute and partly by custom, are larger than they ought to be. Take the deduction that you are required to allow on account of railway stations?—Of course, that would not lessen the gross valuation of a railway. That is only a proportion.

51,438. It would lessen the valuation of the railways in parishes where there are no stations?—If you gave less to the stations it would increase the valuations along the country.

Per-centage on stations.

51,439. Do you think that per-centage should be reduced?—I think it is too high. When the original Act of 1854 was passed only 3 per cent. was allowed on the cost of the stations. Then, by the Act of 1868, the same year as half the maintenance was allowed to the railways the per-centage on stations was raised to 5.

51,440. The effect would be that towns in which there are stations get too high a valuation of the railway, and rural districts through which lines run get too low a share?—That would be the result, that they would get more. It is certainly more that the Act contemplated originally.

51,441. Then the agricultural interest would be benefited, if this rate of interest, which was fixed at 3 per cent. in 1854, were reduced now?—It certainly would.

51,442. Do you think it should be reduced?—I think there are even additional reasons for it now, seeing the value of money is different from what it was in 1868.

51,443. To that extent you would consider the rural districts are unfairly treated at present in the valuations of railways?—I have always thought so.

Deductions from gross valuations.

51,444. Are these various deductions that are allowed in getting at the gross valuation the result of statute or of practice?—Practice.

51,445. I see they are totally different from the deductions that are allowed in case of gasworks, waterworks, and so forth. Are those also the result of practice?—Very much the result of decisions by the judges.

51,446. Is that also the case with the railways?—To a certain extent. Gasworks and waterworks, which are held by a corporation for the public good, are not allowed to claim tenants' profits. Therefore the judge said that, seeing that is the case, they should be entitled to the whole expenses of maintenance.

Assessment of gas works and water works.

51,447. Are these gasworks and waterworks in Scotland all in the hands of local authorities? Are none of them in the hands of companies?—There are some. I only deal with a certain number of the gasworks; the Act of 1854 makes it imperative on me to deal with all railways and canals. As regards gasworks and waterworks, the corporation or whoever have charge of the concern must apply to the sheriff and get an order from him that I am to deal with them, when the pipes run through more than one parish.

51,448. When you have an assessment of waterworks, how do you divide that among the different parishes?—It is according to the structural cost in each parish.

51,449. When water is brought from a large lake or reservoir, do you value that part of the undertaking as a rule?—Yes; we make up an estimate of the structural cost in each parish.

51,450. As to structural cost, if you take it from a lake, it need not be necessarily high?—No.

51,451. But you take it simply on structural cost?—That is a decision of the court also.

51,452. Is there any work that you could refer us to, upon the valuation of railways, gasworks, and waterworks in Scotland?—Here is a small work which I myself prepared on the subject, if you will allow me to present it.

51,453. You are generally acquainted with the valuation of these properties in Scotland?—Roughly.

Valuation of railways in England and Scotland compared.

51,454. Should you say that in Scotland a higher valuation is placed upon them than in England, or the reverse?—Our impression is that the Scotch railways are quite as highly valued; but the English railways are really so enormously greater that we can hardly compare them. I was just looking at some of the statistics in one of the Board of Trade returns. The capital expenditure in England is 800,000,000*l.* odd, the capital expenditure in Scotland is 131,000,000*l.* odd, and in Ireland the capital expenditure is 38,000,000*l.* In England the miles open are 14,000, and in Scotland 3,000.

Mr. W. Munro. 5 June 1895.

51,455. You cannot say whether, having regard to the expenditure upon the railways in each case, the valuation in England is higher or lower than the valuation in Scotland, proportionately?—I could only give it as a matter of opinion, which probably I am not entitled to form.

51,456. The striking difference between your evidence and that in the English return is that whereas the valuations of railways in England have increased so enormously during the last 20 years, in Scotland they appear to have stood tolerably still?—Tolerably still.

51,457. I think you say that the deductions in respect of plant are always tending to increase, which, with the large percentages given, have the effect of diminishing the valuation of the railways?—Certainly.

51,458. Is that at all a reason why the Scotch valuations have not increased to the extent the English have?—To a certain extent it is. And I do not think that until more recent years, when the rates were becoming higher, the railways made such large demands as to the valuation of plant at stations. There was just a small sum, less than one-half, and I said, "I cannot allow that until you show "me a list of every article at every station, so that I may "have an opportunity of testing. We got lists of barrows "and desks and everything else, and a value put upon "them; and it was in that way seen that they had claimed "less than they might have claimed."

51,459. You do not think that they claim too big a sum now?—I do not think that the sums are too large. Whether the deductions are too large or too small is another question, whether 5 per cent. prior to 1860 should be 5 per cent. now.

51,460. Have you a free hand with reference to the other deductions in respect to plant, or are you tied by statute?—I am tied by the practice of 40 years, and by the concurrence, repeated, of the judges.

51,461. Have the decisions of the judges been constantly becoming more in favour of the companies?—No, I cannot say.

51,462. Or have the companies become more alive to their power of getting reductions?—I think the companies fight much harder than they did originally.

Deductions in estimating railway valuation.

51,463. In getting at the valuation of a line you first of all deduct the valuation of the stations?—I first of all ascertain the gross receipts, then deduct 5 per cent. upon the cost of the stations. At first we get those costs by taking the actual expenditure.

51,564. What do you deduct next—the plant?—Upon plant, 25 per cent.

51,465. How do you get at the value of the plant? do you take the expenditure?—We take the original estimate of the value of the plant, made up by my predecessor, with the assistance of experts, less 25 per cent. They are put in at 75 per cent. of the actual cost. That is a point that the railways think their plant is worth more than 75 per cent.

51,466. What other deductions do you make, speaking generally?—25 per cent. upon the value of workshop tools, office and station furniture, horsing and carting plant, &c.

51,467. That would be all plant?—Yes. I also allow 5 per cent. on floating capital.

51,468. Is that too high a per-centage?—That has been decided by the Railway Commissioners. It was merely as to the amount.

Per-centage deduction on floating capital.

51,469. When was the per-centage on floating capital determined?—Previous to 1876 no allowance was granted to the railway companies in Scotland for floating capital, but the late Assessor, in making up the valuation for the year ending Whitsunday, 1877, following probably the decision (December 1874) of the Railway Commissioners in the Manchester, Sheffield, and Lincolnshire Railway case, gave to the Scotch companies an abatement in this respect. The annual allowance on these sums is 5 per cent.

51,470. Has it always been 5 per cent.?—Since 1855.

51,471. Is not that a case where the per-centage might fairly be reduced?—I suppose money is much more easily got now.

Digitized by Google

Mr. W. Munro. 5 June 1895.

51,472. In another case you recommend that the 5 per cent. should be reduced to 3 or 4 per cent. Would not the same recommendation apply to floating capital?—If done on one per-centage it would follow almost that it might be done on the other.

Scotch and English system of valuation compared.

51,473. Do you find that the Scotch system of valuation gives satisfaction to the railway companies as well as to the local authorities?—I think the Scotch system gives the railway companies the benefit of dealing with one man and one office, while in England they are harrassed, they say, by every little parish or large parish, attacking them occasionally when they think they least require it.

51,474. The expenditure is enormously reduced by having one office?—Enormously. In one case I was asked to give evidence in the valuation of the Crewe Works. That went on for many years, and cost thousands and thousands of pounds, whereas here in no case would the cost be above a few hundreds.

Cost of valuation.

51,475. Could you state the total cost of the valuation of the railways in the several years, including the cost incurred by the companies in appeals?—I could not tell what the companies incur. We had only one case last year. Some years we have none at all. Not more than a few hundreds.

51,476. The cost of your office is very moderate?—2,000*l.* a year. That cost is borne by the railway and other companies. There is no cost to the local authorities. That is where the English local authorities would certainly benefit, because they would not have to pay the expense.

Assessment before 1854.

51,477. Prior to 1854 you had the same system in Scotland practically that you have now in England?—I suppose we had. The Scotch Poor Law Act of 1845 made some change.

51,478. You had no central assessment prior to 1854? No, none.

51,479. You had that reform in consequence of the trouble that you had in these local assessments?—I suppose so. Of course we had almost no railways as early as 1845. I have no doubt that is the cause why referring these matters to the Lord Ordinary arose. The questions then were of very small account compared with what they have now grown to.

Assessors of lands.

51,480. Before you held your present appointment you were Government assessor of lands in the county of Lanark?—The greater part of Lanark.

51,481. Were you also local assessor?—In most counties the Government assessor and the local assessor are the same—I was one and the same there.

51,482. What is the reason why that system is not universally adopted in Scotland? Why do some counties prefer to have different assessors for local and for Imperial purposes?—I know of no other reason, except this, that in some counties the authorities desire to have, as they think, more power in their own hands—the power of dismissing a man.

Imperial and local assessments.

51,483. In cases where they have a different assessment for local and Imperial purposes, which assessment is usually the higher in Scotland?—I really could not say.

51,484. Could you tell us where we could ascertain that?—I think they are very much alike now.

51,485. Because in England the Imperial assessment is the higher in a great part of the country?—I could not say that I think you would find any great difference, because there are only a few counties—four, I think—in which there is a local assessor. They go very much together; they are practically one and the same, the only difference being that in the case of these four counties they have to pay all the expenses, whilst in the others the Government pays all the expense.

51,486. But you have a double set of appeals?—You readily might have. In the case of the Government they consider that they have the benefit of having the income tax made up from those returns from their own officials.

51,487. When you were local as well as government assessor, did you get any information as to the working of the classification system?—That is the Poor Law Act. I had nothing to do with that. I merely got at the gross valuation as the Government Assessor. I handed copies of my valuation to the county clerk, and he distributed them over the parishes.

Per-centage deduction on floating capital.

51,488. (*Mr. Channing.*) About the determination of the floating capital allowance. I see the principle of it is that 3 per cent. is taken on the total receipts?—That is the result, it is not the principle. The average is that. These are the two most important companies we have.

51,489. So that you do not estimate what amount of allowance floating capital should have put upon it? You take it from the companies' returns?—It is really more an estimate than anything else.

Mr. W. Munro. 5 June 1895.

51,490. Do you form the estimate, or does it come from companies?—It was arrived at many years ago; it is not enquired into annually. We assume it is much the same. It is all in favour of the companies to increase it, and their floating capital cannot be deminishing.

Increased assessment of stations.

51,491. You draw attention in your brief to the great increase in the proportion assessed on stations?—Yes.

51,492. It has in 20 years increased nearly threefold?—Yes.

51,493. On the Caledonian Railway from 14·5 per cent. to 38·1 per cent.; on the North British Railway from 16·8 per cent. to 29·2 per cent.; and on the Glasgow and South-Western Railway from 14·6 per cent. to 42 per cent. Do you think that produces a disproportion?—It certainly tends that way. Of course the cause is that instead of renewing old stations, they find themselves able to put up new and very expensive stations.

51,494. Have you stated what appears in your brief as the allowance in respect of traffic carried in traders' waggons?—I do not think I have.

Assessment in respect of traffic carried in traders' waggons.

51,495. Will you state how the assessment is arrived at on traffic carried in plant belonging to traders?—This plant is composed almost entirely of coal and iron waggons. To arrive at this abatement, efforts were made to get from each company a statement of the revenue derived by them from such traffic; but the companies all aver that it is not in their power to give the required information, or in any case, that the expense of extracting it from their accounts must necessarily be so great that they should not be asked to incur such expense. For a period of years a deduction amounting to 6 per cent. on the estimated value of the traders' plant was allowed, but this being deemed unsatisfactory, within the last four years an estimate of the earnings of each company from such traffic has been made up, and allowances granted thereon. The estimate is made up thus:—To the number of mineral waggons owned by each company, add number of waggons belonging to traders, and used on the companies' lines exclusively, together with one-fifth of the latter number, as being the estimated number of foreign waggons running occasionally on companies' lines. Deduct 15 per cent. from the combined number of the two latter classes of waggons, as the receipts will be so much less than if traffic had been carried in companies' waggons, that being the estimated average saving to traders from using their own waggons. Then divide total mineral receipts of the company by total number of all kinds of waggons employed in earning them, and thereafter take the proportion of revenue accruing to all traders' waggons, as above ascertained, less 15 per cent. in respect of the reduced carriage rates, and allow 10 per cent. on the earnings of waggons running exclusively on the companies' lines, plus one-fifth for foreign traders' waggons.

Total assessment of railways.

51,496. (*Chairman.*) What is the total assessment of railways at this moment in Scotland?—Railways alone, as valued by me, 1,798,623*l.*

51,497. It seems that the capital expended on the railways in Scotland at the present moment is 131 millions, as compared with 800 millions in England; that is, one-sixth?—Yes.

51,498. But if the assessment for rating purposes was in the same proportion, it would be 2,310,000*l.*, whereas it is only 1,800,000*l.*, or slightly under?—Slightly under.

51,499. Therefore the general result is that the aggregate assessment on railways in Scotland bears a smaller proportion to the capital expended upon them than it does in England?—I have remarked that. I do not think, however, that you could compare the enormously rich English traffics with those of Scotland.

51,500. After all, it is mainly based upon the incomes of the railways; but is not the proportional income of the railways as good in Scotland as in England?—I should not think so. There are lots of lines paying not much more than working expenses.

Assessment of railways making no profits.

51,501. Where railways are not doing more than paying working expenses, how do you proceed?—They get the same ratio per mile as those producing large results, if they belong to the same system, or are leased by the same company.

51,502. But supposing it is an independent line?—Then it is made up independently. Each system of railway is made up distinctly.

Digitized by Google

Mr. W. Munro. 5 June 1895.

51,503. Would they be assessed at nothing if making no profits?—Yes, they would. The Caledonian and Crinan Canals are this year assessed at nothing.

51,504. Because they are making no profit?—In some cases, such as Ayrshire and Wigtonshire, we had the figure in for years at 1*l.* per mile.

51,505. That being an independent company?—If that had been leased to one of the wealthier companies, the track through which it runs would get the benefit of the average mileage rate of the company to which it was leased. Some years ago the Highland Railway leased and worked the Skye line, and it was a great benefit to the district rom Dingwall on to Strome Ferry, when amalgamation took place; but it diminished the valuations in other parts of the system. In the same way the Caledonian Railway still works the Oban line, and the Oban line gets, not the same rate at the best part of the Caledonian system, but merely according to its own earnings.

51,506. Where a Scotch company is leased to an English line, what do you do there?—I do not think there is such a case.

Valuation of stations.

51,507. (*Mr. Dalton.*) In the valuation of the stations do you allow for deterioration?—In getting at this 5 per cent. you say you ascertain the capital valuation by finding out what would be required for the acquisition and erection of these. Do you take the original expenditure?—We did that at one time, and if it is a new station we do that still. If it is an old station we go to the ground, look over it, measure it, and put a valuation upon it. Taking the valuation of the *Solum* is always the most difficult part of it. That may be in one place worth a very small sum, and in a town a very large sum.

51,508. Practically you do allow for deterioration?—Certainly.

51,509. What are the dividends paid by the different companies?—I really could not say. Dividends are so very confusing nowadays, with preferred and deferred stock.

Deductions for tenants' profits.

51,510. Do you make the same deductions for tenants' profits from the value of plant in all cases?—Yes.

51,511. You make an annual allowance of 25 per cent. upon the value of the plant, of which 12 per cent. is for tenants' profits?—In all cases.

Assessment of railways making no profits.

51,512. Ultimately, you say, where one of these undertakings is making no profit you have no assessment?—Well, we have no receipts.

51,513. The deductions that you allow counterbalance the receipts?—We cannot make deductions where we start with nothing.

51,514. Your deductions are made upon a fixed system?—Yes.

51,515. You begin by taking the gross receipts?—Gross receipts.

51,516. Do you find that it mathematically works out that when you have made these deductions, the residue is profit?—Profit or value.

Mr. W. Munro. 5 June 189

51,517. Do you find that in no case there would be any valuation of a company that is not making a profit?—I think it is quite possible. We really do not enquire into the actual profits, the income-tax profits, so to speak.

51,518. You might be rating a railway which was not making a profit, and you might be letting off a railway that was making a profit? You might be attributing no valuation at all to a company that was making a profit under this system?—I presume we might; but I think it is practically impossible.

51,519. I think you said, in answer to the Chairman, that if there was no profit there could be no valuation?—I do not think there could.

51,520. Could there, on the other hand, be no valuation where there was a profit?—There might be a dividend, or some preferred stock, or something of that kind. There is one railway in Scotland generally believed to be not much more than paying its expenses, the lately constructed West Highland.

51,521. (*Chairman.*) You have a valuation on it?—It was running for a part of the year. I do not know how it will work out. The Forth Bridge Company is also an independent company.

51,522. It appears that in those cases where companies are just earning a little something and are independent, the parishes where the stations exist have a kind of preferential claim, because they get 5 per cent. before the others get anything?—It was the case with the canals this year, that there was no valuation to distribute among them. They might be paying working expenses and yielding no profit. If they paid 10 or 20 times their land was worth, they would eat up their profits to shareholders.

Valuation of farms.

51,523. (*Captain Thomas.*) When you were assessor of lands, how did you arrive at the valuation of farms?—Of course, as a rule, you get returns from the landlords. That is one enormous advantage we have over England. In England, as I understand the matter, you get the rents from the occupiers. In Scotland we get returns from each landlord or owner of property, with the names of the tenants and the rents they pay every year. That return he is bound to furnish under a penalty, and if he wilfully makes any inaccurate statement he is liable.

51,524. (*Mr. Clay.*) You get that from the valuation roll?—That is what I am talking about. The valuation roll is made up in this way. That is what I am explaining. The valuation roll is composed of those returns. It has nothing to do with profits.

51,525. Is not that a hardship, that a man is paying a rent and is absolutely losing on his farm?—Unless the landlord makes a *bonâ fide* reduction upon the whole rent.

Witness then withdrew.

Mr. J. Black.

JAMES BLACK called in and examined.

Mr. J. Black.

51,526. (*Chairman.*) You reside, Mr. Black, at Sheriffston, in the county of Elgin?—I do.

Particulars of witness's farm.

51,527. And you own land and are also a tenant farmer?—I own Sheriffston, and occupy the whole of it, and I have besides a farm mainly for sheep.

51,528. What extent of land do you own?—220 acres.

51,529. Do you farm it yourself?—Yes. The sheep farm is 172 acres arable, with 70 acres range of keepable pasture, and of hill besides.

Existence of depression.

51,530. Has the depression in agriculture been less felt in the land adjoining the Moray Firth than in other places?—It has.

51,531. Is that a district of good land with good climate?—A large proportion of it is good and the climate is exceptionally good.

51,532. Has depression in spite of that been felt, though not so severely as elsewhere?—It has.

51,533. Especially, I suppose, on the heavy clayey land?—Heavy clayey land has suffered more than anything with us.

Character of cultivation.

51,534. What is generally under cultivation there? Is it an arable district?—Almost wholly.

51,535. What does it produce mainly?—It was a wheat-growing country to a large extent at one time, but that has been mainly given up. It produces, perhaps, the finest barley in Scotland, oats to a considerable extent, potatoes largely, turnips very largely, and hay to a large extent as well.

Reduction of rents.

51,536. Have the rents been considerably reduced there?—They have in a great many cases.

51,537. What should you say has been the reduction there?—It would be a little difficult to define it exactly, but, I should think, perhaps, on the whole, 20 per cent. On some of the larger farms it has been a good deal more than that. Small holdings keep up their value better.

Small holdings.

51,538. What should you say has been the reduction in the case of the smaller holdings?—A good many of them are without any reduction at all almost, except yearly abatements. I should think, perhaps, 10 per cent. would be a fair average.

51,539. What do you consider to be a small holding?—Under 100 or 120 acres.

51,540. I suppose there the tenant works himself?—Yes, and employs very little labour.

Digitized by Google

Mr. J. Black.

5 June 1895.

51,541. They are not crofters, I suppose?—No, they are above that.

Barley growing.

51,542. What do they generally rely upon for their receipts? What do they make their money out of?—Cattle mainly, sheep partly, and the usual grain crops. The staple grain crop is barley, which finds an exceptionally good market in our district in consequence of the very large number of distilleries about. Elgin market is perhaps the best market for barley in Scotland.

51,543. The quality is particularly good?—It is, in the low country.

51,544. I suppose, therefore, the price is better than the average in respect of the higher qualities?—And the amount of barley required in the district. We have nearly 30 distilleries within 30 miles of the capital of Moray.

Price of barley.

51,545. What do they make of their barley?—This year it would be about 24*s.* and 25*s.*, and at one period up to 27*s.* and 28*s.* Within the last two or three years it was 33*s.* Though it goes a little beyond my experience, I think within the last 20 years it was 40*s.* That was before I was a farmer in the low country; I was a farmer up in the Highlands.

51,546. (*Mr. Chaplin.*) What you are speaking of now is the best samples of barley, not the lowest?—The average price.

51,547. (*Mr. Everett.*) You got your barley fairly last harvest?—It was well harvested. It was very much injured by lodging. The crop was far too heavy. It was not of a quality to compare with districts that do not usually grow so good barley as we do.

51,548. (*Mr. Chaplin.*) Was the lower price obtained due to some extent to the inferior quality?—It was. Very often a large proportion goes to England, Glasgow, and Edinburgh for the making of beer when the colour is good and the quality up to a certain point; but last year there was almost none of that.

51,549. All the best quality was kept in the country?—To go to the distilleries.

51,550. What was the best price for the best quality?—In the first part of the year it was 27*s.*, and it came down afterwards to 24*s.* and 23*s.* 6*d.*, and in some cases lower.

51,551. (*Mr. Everett.*) Is that Imperial measure, or is it weight?—Both. We calculate by the quarter weighing 54*s.* per bushel, with 8 bushels to the quarter. It is bought by weight sometimes, as at 448 lbs. to the quarter. You get 27*s.* for 448 lbs., the buyer judging of whether it will be 54 lbs. or 56 lbs. per bushel by the information of the seller, and by his own opinion of the look of the barley.

51,552. And that is about the natural weight of that measure?—The standard weight of the district is 54 lbs., but I should think 56 lbs. is about the figure now, with improved means of agriculture.

51,553. (*Chairman.*) The best samples fetched more than 27*s.* to 24*s.*?—They did.

51,554. Are there many small farmers of the description you speak of?—A good many round the hillsides and up towards Strathspey, on the Seafield estates, which are within the county of Moray, to a large extent.

Reduction of rents.

51,555. With the larger farmers the reductions have been greater?—They have, and the competition less.

51,556. What is the average?—The Morayshire Farmers' Club, of which I am secretary, formulated a statement about 10 years ago, and they claimed that rents should be reduced 33 per cent. That was thought considerably extravagant at the time, but the outcome of it since then has been that a good many of the larger farms, especially those where there is a good proportion of clayey land, have gone down quite as much as that.

51,557. Should you say that the average reduction has been 33 per cent., or is that only in exceptional cases?—Exceptional cases. I do not think the average would be as much as that over the whole.

51,558. What should you say the average was on the larger farms?—25 per cent. perhaps. I should like to say that that refers also to those that have gone out of lease within the last 10 years mainly. A good many large farms continue on lease where there has been no fixed reduction.

51,559. What have the landlords generally done where there were leases and where the value of the land fell? Did they make reductions in respect of leases?—They did, and they have done so as a whole very handsomely.

Mr. J. Black.

5 June 1895.

Temporary abatements and assessments to rates.

51,560. By permanent reduction or temporary abatement?—Temporary abatements largely. I think I ought perhaps to explain that some of these large as well as small farms remain as they were on the valuation roll officially, and taxes are paid both by proprietor and tenant upon the rent that was the rent when the lease began, while year after year reductions have been made upon these rents. At first these reductions were given effect to in the valuation roll, but the assessor objected, and some three years ago all the farms on which temporary reductions were given from year to year had to be put into the valuation roll again at the rent their leases showed.

51,560*a*. So that the tenants have not had the benefits of the reductions in assessments?—No, nor the proprietors either.

51,561. I suppose where the landlord has made a permanent reduction, and has actually broken the lease and made a new rent, the tenant has obtained a reduction of the assessment?—That is so.

51,562. But where the landlord has only made temporary abatements, although year by year, then, I understand neither the landlord nor the tenant have obtained the benefits of the reduced assessments?—Neither.

51,563. That would point to the expediency of these abatements, which you say are made year by year, being converted into permanent reductions?—I think the time has now come when that should certainly be done. At first when the depression came upon us there was a hope that better times might come, that abatements might tide over the difficulty, and that we might get back to the old standard; but I think that hope has all gone.

Demand for farms.

51,564. Where farms become vacant has there been a demand for them?—Yes, especially for the smaller ones, and not very much difficulty in getting tenants for the larger ones, but still a considerable reduction of rent.

51,565. Was there a renewed demand for farms four or five years ago?—There was, and it is manifestly falling off again as people begin to see that the revival of agriculture is not so sure as they hoped it would be.

51,566. How do you account for the revival that took place?—I think a little better prices started up for some things, and people took it into their minds that the worst was past and that better times were in store.

51,567. That prices had reached their bottom?—Yes, and that better things were to come for the future.

51,568. Lately, in consequence of the greater fall in prices, the demand has fallen off?—Yes.

51,569. But still I gather from you that there is a demand for farms even now?—Middle-sized and smaller ones most largely.

51,570. And that with smaller reductions on the smaller farms?—With reductions of not much more than 10 per cent.; in some cases at the old rent.

51,571. And that in spite of the fact that many of the tenants have lost capital?—Many of them have lost capital largely.

51,572. By that you mean that the value of their stock is reduced?—Yes.

51,573. Or that they have got less stock than they had?—The value of their stock is reduced undoubtedly. I do not know that they have less stock in their hands, but they have drawn very largely upon any spare capital that they had in hand to keep their work going, or perhaps if they were borrowing money, going into borrowing a little more deeply.

51,574. How do you account for the fact that in spite of these leases there seem to be persons able to come in?—I think one of the main reasons is farmers' sons grow up who are trained to the work and are not trained to anything else, and the encouragement to them to go abroad is not as it was some time ago. They keep these at home, and they have to find places for them, and as the capital they can spare from their own farms is not equal to taking a large farm, they begin by taking a small one. That, to a certain extent, I think, accounts for the competition.

51,575. They cannot make so large a profit elsewhere as they could formerly, and the general range of profit is reduced?—Reduced.

51,576. These men, finding that, are better disposed to remain at home and accept the lower rate of profit?—Yes. They think there is now risk in going abroad. Young men going abroad have not been succeeding in the world so largely as they did some time ago, and their fathers and themselves prefer to take a holding at home and make the

Digitized by Google

Mr. J. Black. 5 June 1895.

best of it, even though the profits are very small and the work is hard.

51,577. They find that on the whole it is better to to remain at home and to submit to a lower rate of profit than to go abroad and run risks of not succeeding?—Yes. There is another thing that weighs with us very considerably. We have a range of high-lying country between us and the higher Grampians, where there is a large number of industrious farmers and an unfavourable climate. They have been finding the seasons going very badly against them, and they all want to come down to the low country, where they will have a better climate and are surer of a return for their work and toil. Their holdings are not very large, and their capital is in proportion. It is the middle-sized and the smaller holdings that they chiefly run upon.

Labourers' wages.

51,578. Is there a large or a small class of agricultural labourers in the district?—A large class.

51,579. And with regard to their wages, have these been maintained?—Quite.

51,580. As compared with, say, 15 years ago, have they increased in money or remained the same?—As compared with 15 or 12 years ago, I think they are very much about the same. There was a period since then, about six years ago, when they were down a little, but they have got up again.

51,581. They came down about six years ago, and since then wages have risen?—They have.

51,582. I presume, taking into account what they can get for their money, they are a good deal better off than they were 15 years ago?—Yes.

51,583. What s the general rate of wages there?—My foreman, who was a young man last year, got 15*l.* a half-year, or 30*l.* a year. He was boarded with one of the married servants. He got 66 Imperial stones of meal in the year, and some bags of potatoes. I think these were all his perquisites. The perquisites of the married men are much larger.

51,584. What do the married men get?—This man is married this year, and his wages, I should think—I have been in London, and it was my grieve who engaged him—will be about 27*l.* in the year. He has his free house,—ton of coals, a thousand yards of a drill of potatoes, sometimes equal to two or three tons, and his garden plot.

51,585. (*Mr. Gilmour.*) Have you not put the perquisites into money value?—No, with the exception of the milk. I was obliged when I went into farming pretty largely to stop giving them milk, allowing them to buy the milk and get the money. They can buy it anywhere they like. They pay for it.

51,586. What do you pay them for the milk a year?—They get their wages just in a slump. I think they pay for their milk about 15*s.* in the half year.

51,587. (*Mr. Chaplin.*) Do they buy a good deal of milk?—Yes, they do.

51,588. Even though they pay for it?—Yes. One or two have tried to go elsewhere, but they find that they do not get so good measure or so good milk.

51,589. (*Chairman.*) Is there indication from their houses that the labouring people are better off than they were?—They are certainly more comfortable.

Employment of labourers.

51,590. Has there been any reduction in their employment?—I do not think so.

51,591. About the same proportion are employed?—Some of the farms have gone into grass a little more largely, which reduces the number of hands they want; but I do not know of anyone round our neighbourhood who is not fully employed.

51,592. (*Mr. Chaplin.*) Has the population moved at all?—Not much, I think, outside of the towns. In the towns it is increasing. In a few country parishes it has gone down a little; in others it continues going up.

51,593. (*Chairman.*) At all events there is no indication of any considerable reduction in the number of the agricultural labourers?—Oh, no.

Labourers' houses.

51,594. Is the system of bothies still carried on there?—Partially. Considerably less than it was.

51,595. Is there any difficulty in the married men getting houses?—They have been increased in numbers a good deal. The Richmond property, which has lately been referred to prominently throughout the country, has been doing much, and the Duke of Fife has been doing a good deal in that way, and the Earl of Moray has also been providing good buildings for his people. Other proprietors have been doing the same to a large extent. The house accommodation of farm labourers has very much improved and extended within the last 20 years; but there is a good deal to do still. That does not apply to the whole. There are a few labourers' houses in some parts of the country over the north not what they ought to be.

Mr. J. Black. 5 June 1895.

Land laid down to grass.

51,596. Land, you said, has to some extent been laid down in grass?—It has.

51,597. In the main are the farms arable?—Arable almost wholly.

51,598. But still a portion has been laid down in grass?—To give you an illustration. Instead of five-shift courses, or six-shift courses they are taking seven, leaving grass for three and in some cases for four years or more before breaking it up.

51,599. I suppose they make some economy in working by effecting that change?—Yes, and that is one of the main objects of it.

System of manuring.

51,600. Has there been any change in the system of manuring?—A good deal. We are getting to know better the manures that suit different kinds of soil, and have been able, since the pressure of bad times came upon us, so to economise a good deal in artificial manures without doing any injury, I think, to the fertility of the ground.

51,601. Is the expenditure on manure and feeding stuffs large in the districts?—Yes.

51,602. Tenants have derived some advantage from the reduction in the price of manure and feeding stuffs?—Yes, both.

51,603. Have there been many changes of tenancy?—No, not very many. I could not say the proportion, but nothing very noticeable.

Leases.

51,604. Does the system of leases still prevail there?—Yes, pretty largely. But I think all the new ones, or most of them, are having breaks in them at the end of five or seven years as may be arranged.

Estate management.

51,605. Do you consider that on the whole the estates are well managed in the district?—I do.

Restrictive clauses in leases.

51,606. Has there been any change in the system of binding the tenants to fixed systems of rotation?—I am afraid these restrictive clauses are not all out of the leases, as I think, to a large extent, they ought to be. But they are not enforced, they have not been enforced recently—in fact, not since the difficult times of farmers began have we heard much about them. As a matter of fact, farmers have taken the law into their own hands, and are working their land pretty much as they find it profitable.

51,607. Do you think anything can be done in that direction? Should it be left to law, or should it be left to landlord and tenant to make their arrangements in this respect?—Public opinion has been leading to a very considerable modification in that way. Some of these very antiquated clauses—we have heard one or two to-day—are, I think, pretty well out of use with us, but they are very much too restrictive still in most cases. There are portions of them, such as those tying the tenants to a particular rotation in the working of their farms that I think should be done away with at once and for ever. The only obligation upon a tenant should be that he farms according to the rules of good husbandry.

Expenditure on improvements.

51,608. Have the landlords expended much in improvement during the last few years, or have they been unable?—I do not think some of them have been quite so liberal, or inclined to be so liberal, as formerly. The tenants would like them to be a good deal more so than they are.

51,609. Have the tenants themselves expended any money on permanent improvements without the consent of their landlords?—They are not nearly so much inclined to do that as they were in former times. They are all getting to see that they have some difficulty in getting the money back again that they expend, or in getting it reckoned at the renewal of their leases as any claim for moderating the rent; and they take care now that they do not spend their money unless they have some arrangement with the proprietor. Sometimes they carry that out between them; sometimes the one, sometimes the other. There is always the difficulty of getting improvements done at all.

51,610. Do you consider that any greater inducements can be given to tenants to expend money upon permanent improvements?—I think the Agricultural Holdings Act might be modified and improved to a considerable extent, to encourage a man to lay out his money with more confidence and freedom.

Digitized by Google

Mr. J. Black.
5 June 1895.

51,611. Do you think the tenants would expend more money if a change was made?—I think they would more freely than they do at present.

Fixity of tenure and judicial rents.

51,612. Is there any demand in your district for fixity of tenure or for judicial rents?—I think not. Not for fixity of tenure, certainly.

51,613. Or for judicial rents?—I think not. I do not think it amounts to much. No doubt there are people who would like it, and perhaps along the hillsides there may be instances where fixity of tenure would be welcome, but there is no claim for it publicly that I know of very much.

51,614. (*Mr. Chaplin.*) When you say people along the hillsides, to whom do you refer?—Crofters.

51,614*a*. As distinct from farmers?—Yes.

51,615. And it is to that class that whatever claim there is is limited?—Yes. And perhaps there is another reason for it, looking into the matter a little closer. These men plant themselves down upon hillsides, where the land is unreclaimed. In past times they got a certain area of land from the proprietor, on condition that they were allowed to reclaim it, trench it, and make it arable. And they have done it. People doing that sort of work, and getting themselves into a holding in that way, would like fixity of tenure, in order that they should not be removed, and that they might be secured in the benefit of their labour and the outlay of capital.

Local rates.

51,616. (*Chairman.*) Is there much complaint of the increase of local rates?—There is a good deal since the county councils came into operation.

51,617. (*Mr. Chaplin.*) Was there none before?—There was some before, but it has been intensified.

51,618. (*Chairman.*) They have increased as a matter of fact?—Yes, considerably.

51,619. What is your own parish?—St. Andrew's, Llanbryde, in the immediate vicinity of Elgin. My own parish is moderately taxed.

51,620. The poor rate there has remained about stationary?—It has.

51,621. The school rate has somewhat increased?—A little.

51,622. Generally speaking, in Elgin, apparently from this return I have before me, the poor rate has considerably diminished?—Yes, I think so.

51,623. In many parishes it was 1*s*. 8*d*. and 1*s*. 6*d*., and has gone down to 1*s*. 3*d*. and 1*s*.—in one parish from 1*s*. 8*d*. to 1*s*. On the other hand, school rates have increased in the interim. In fact, it is a new rate, apparently averaging from 6*d*. to 10*d*.?—Yes.

51,624. I suppose that besides that there is the new county rate?—It is a separate rate.

51,625. What does that average?—I pay about 17*l*. on a rental of 250*l*.

51,626. I see that over the whole county of Elgin the county rate was 1*s*. in the £ in 1874 and in 1893 10¾*d*.?—Yes. Does that include roads?

51,627. It says county rates. I do not know whether it includes roads or not. But apparently this return gives the aggregate of rates. In 1874, over the whole county of Elgin, they averaged 2*s*. 5¾*d*., and in 1893 exactly the same, which would tend to show that the rates are about maintained?—There is a notion about the county that since the county councils came into operation the rates have increased. It may be produced by the fact that they are all paid in a lump. Formerly the road rates were paid at one place and the other rates at another, and not so much felt through being spread over.

51,628. It gives the impression of the rates being increased, whereas practically they may not be?—I do not think they are much. I do not know the figures so well, as to the whole.

Technical education.

51,629. Have you any suggestions to make as to what should be done?—Not many. But there is one thing I should like to refer to if you would allow me, and that is technical education. We have had a somewhat unusual experience in that matter up in our part of the country. When the residue grant was obtained for technical education and put into the hands of the county and town councils I had an opinion that it was a very excellent arrangement, but experience has changed my mind on that point. Many of the county and town councils were quite at sea as to how to apply the money. Indeed I heard one leading commissioner for a large property say that it was a shame of the Government to pitchfork this money at their heads without giving them some lead or indication what they were to do with it. Itinerant lecturers and teachers were first resorted to and did good up to a certain point. But it is universally acknowledged now that if the full benefit of the money is to be obtained something more permanent and systematic must be resorted to. My opinion is that technical education, including agriculture and the sciences that come into it, must be given through the ordinary schools of the country in an elementary form, and that beyond that there should be in every county or district a fully staffed and equipped science and art school at a convenient centre, and that beyond these centres there should be agricultural and scientific courses in the universities for those who wish to pursue their studies into the more advanced stages. County councils are not acquainted with the machinery required for science classes in the ordinary schools. The Scottish Education Department should, in my opinion, formulate a scheme for working them as they do for other sections of educational work. I know one county where the county council had formulated for them a scheme for the working of technical instruction through the ordinary schools, and where they had a science and art school fully staffed and equipped at the most convenient centre in the county. The scheme was adopted and was actually working for fully a year when the county council found there was so much detail in it, much of which was beyond their experience and knowledge, and when they found that the necessity for an organising secretary led to a certain amount of division of duties among county officials, they came to a resolution one day to sweep the whole thing out of existence. And they did it. Connexion with the Science and Art Department was abandoned completely, the resolution providing that only the technical subjects should be taken up in the county schools which the Scottish Education Department include in their curriculum of an ordinary general education. That is an example that came within my own knowledge, and I think that though it is a little more pronounced than any I could bring before the Commissioners, I know several counties in the same neighbourhood that have been in great perplexity how to use the money, and are so still. I think it would be of the greatest importance to agriculture as to many other interests and industries that the Education Department should take the matter into their own hands and administer it themselves as they do other branches of educational work.

Mr. J. Black.
5 June 1895.

The Agricultural Holdings Act.

51,630. Do you think the Agricultural Holdings Act might be amended with advantage?—I do—simplified very much. The machinery of it is very expensive and cumbrous.

51,631. You have read Mr. Hope's report?—I have.

Official referees.

51,632. (*Mr. Channing.*) Which of them?—The one referring to my own part of the country. I think the one important part of it is the appointment of a referee. He suggests that Scotland should be apportioned out into a certain number of districts. I have heard it argued, and there is a good deal to be said for the contention, that there should be one for each county; but I think Mr. Hope is right in his view, although I believe that the districts he indicates are perhaps a little too large. At any rate, I should be strongly of opinion that whoever is appointed to an office of that sort should be paid for it sufficiently and should not have any other business. I do not think he should be allowed to act either for proprietors or tenants in the way of valuing anything, either as an arbiter or in any other way. I should have him a county official, or an official like Mr. Munro, the valuator of railways.

51,633. Do you mean that where there is a question between landlord and tenant at the end of the lease, any matter in dispute should be settled compulsorily by the official referee?—I think that would be a simpler plan and less expensive and more satisfactory.

51,634. Would you not allow the parties to agree to any other arbiter?—I suppose, if they made a private arrangement between themselves, I do not know that it could or should be prevented.

51,635. It was explained to us yesterday by one of the witnesses, that in Scotland, either party to a dispute has a right to appeal to the Sheriff to name a person to decide a question between them?—That is so.

51,636. And the sheriff, as a rule, names a competent person—some person whom he thinks competent for the purpose?—He does his best. But the sheriff, as a rule, is not an expert in country matters of that sort. I am not very sure that he might come to the wisest decision in picking out the right man. I am still more doubtful whether the right man is there to be picked out. I think

Digitized by Google

Mr. J. Black. 5 June 1895.

we want officials who are officials and nothing else, who are not dependent on either proprietors or tenants for their business otherwise.

51,637. Somebody must appoint this referee. Even under Mr. Hope's or your recommendation the responsibility would have to fall on somebody?—My opinion is, that we should have a permanent one for a defined district of the country.

51,638. By whom should he be appointed?—That is a question about which I would have some difficulty.

51,639. A great deal would depend upon the proper selection of these persons?—It would.

51,640. And these might be selected, perhaps, for political or other reasons, and might not give satisfaction?—Yes.

51,641. When once you had a man appointed of that kind, it would not be easy to get rid of him?—It would not.

51,642. Whereas the sheriff makes a selection from time to time?—I think it would be exceedingly important that a man of the kind I indicate should retire at a certain age when he might not be so alert in keeping in touch with the agricultural interests in the district.

51,643. (*Mr. Clay.*) You think he should be a sufficiently practical man, independent of landlord and tenant?—Yes.

51,644. (*Chairman.*) Apparently the law of Scotland aims at that already, because it gives the right to apply to the sheriff to appoint a referee. The sheriff is a judicial officer, responsible for the selection of a competent person and not justified in appointing a man without agricultural knowledge?—Yes. But a sheriff's substitute, or even sheriffs, are not very competent in these matters as a rule. They have not had experience nor knowledge, nor can they be expected to have it. I doubt if the men are in it to be appointed of the kind that I want—officials who would be arbiters in this matter and have no business to sway them one way or another.

(*Chairman.*) The only difficulty I see in your scheme is whether you can be sure of getting a thoroughly competent man who would give satisfaction to both parties.

51,645-6. (*Mr. Channing.*) Would you be satisfied with a list to be made up by the county council and submitted to the Board of Agriculture?—I should be satisfied, failing anything better, but, whether there is any ground for it or not, there is a suspicion about the country that, like other human beings, they are not above having a leaning towards the people that they are most closely in touch with in business.

State loans.

51,647. Do you think any good could be done by the State advancing money by way of loan at easy rates to landowners?—I do. I can see no possible reason why we should not have the Ashbourne Act in Scotland the same as in Ireland. I think it would do a vast amount of good and cure a good many of the evils with which agriculture is beset.

51,648. Do you think the State should, as in Ireland, advance the whole of the purchase money?—Under certain conditions and securities.

51,649. Would there be any security to the State under such circumstances beyond the amount of the advance?—No, I think there would not; and the character of the men.

51,650. In Ireland there is the security to the State of the value of the tenant's interest. The landlord's interest, which is bought by the tenant, is generally not much more than equal to the tenant's interest. Therefore there remains to the State the security not only of the property, which has been bought by the tenant, but also the interest of the tenant. There is consequently adequate security for advancing the whole of the purchase money; but in Scotland, where the tenant's interest is of no value beyond the actual improvements which he has affected, there could be no such additional security?—If the tenants were in the same favourable position in Scotland as in Ireland, their security would be the same as in Ireland, I suspect.

51,651. Apparently the condition is not the same?—Our tenants are so much "squeezed" in Scotland that their interest in their land is not worth much. It is worth a good deal in Ireland. I think a system could be devised something on these lines—the State could take the security of the holding, not advancing the whole capital, but perhaps three-fourths of it.

51,652. You said the whole?—I think the State in lending money at a low rate of interest is perfectly entitled to save itself by sufficient security, whatever way you take it.

51,653. I understood you to say that the same principle should be adopted as in Ireland, namely, where the State advances the whole of the purchase money. The conditions are not the same, inasmuch as in Ireland there would remain a considerable security beyond the sum advanced?—That is to say the tenant is ready to pay a considerable sum to get possession of the holding. I have known cases of that kind occurring in Scotland, but all proprietors within the last 20 or 30 years or more have prohibited grassums, and will not allow them.

51,654. Are there many occupying owners in Elgin?—A good many round about.

Purchase of small holdings.

51,655. Are estates sometimes broken up and sold to the tenants?—The Duke of Fife has been selling a good many of his farms. I bought Sheriffston from His Grace.

51,656. Have the tenants bought them as a rule?—Almost invariably.

51,657. Do they borrow, or find the money from their own capital?—Some of them are able to find it from their own capital; some have to borrow a good deal.

51,658. (*Captain Thomas.*) Were they sold privately or by auction?—Privately.

51,659. (*Mr. Channing.*) At what sort of prices?—Twenty-five years' purchase has been the rule on the rent, after deduction of public burdens.

51,660. What is the rent?—The rent would vary. I could hardly tell. The rent of my sheep farm is 7*s.* an acre, and when I went to the low country farm in 1882 the rent was 37*s.* an acre. But I got a considerable reduction off 500*l.* of rent. His Grace the Duke of Fife gave me a considerable abatement. His factor and I agreed upon a medium rent, not quite the whole reduction, but a considerable proportion of it. We deducted the public burdens and multiplied the remainder by 25. I think my case is a fair example of what has taken place.

Condition of the agricultural industry.

51,661. The general result in the district is this, that the landlords have had to submit to considerable reductions of rent—very large reductions in the case of large holdings, but smaller in the case of smaller holdings?—That is so.

51,662. Farmers, who have made less profit than they used to, are only just able to make a fair living at the reduced rent?—That is so.

51,663. On the other hand, labourers are very much better off than they have ever been?—I think so.

51,664. That is the condition of the three classes of the agricultural community?—As an instance, I happened to be connected with a mercantile business in the early part of my life, and I have sold sugar at 10*d.* a pound. The same sugar could now be bought at 2½*d.* I do not know that other things have come down quite so much in proportion, but I know that boots, shoes, and nearly everything have come down very largely.

Position of labourers.

51,665. Should you say that, on the average, the labourers get 40 per cent. more for their money than they once could?—I think more than that, I should say 50 per cent.

51,666. Then they must be twice as well off?—Half as well off again I would think. Referring again to my experience as a boy, I have sold tea at 6*s.* a pound, whereas now you can buy very good tea at 1*s.* 6*d.* Four times the quantity can be bought for the money. Meal is not so much down, but it is down considerably. Butter and some other things are not down, and hold their own pretty well; but, then, clothing and shoes are very much down. I should think that 50 per cent. more purchasing power for their money would be a low estimate. I think it is well within the mark.

51,667. Then they must be better off than they were in the past?—Oh, I think they are. So far as I know, they admit it, and are quite content with their lot, as a rule. They are now educating their families very well, and sending a good many of them away into the towns. I think too many go away. We are getting a little scarce of labour, and especially female labour.

51,668. A larger proportion of the share of the produce of the soil goes to the labourers than used to?—Yes.

51,669. And less to the landlord and tenant?—Yes, I think it does; but labourers deserve it, and work well for it.

Reduction of rents.

51,670. (*Mr. Everett.*) You speak with knowledge of an exceptionally fertile district on the Moray Firth, and rents have been reduced about 33 per cent.?—No. You might allow me to explain that that is on large farms with a considerable amount of clay land in them. Tenants for them

Digitized by Google

Mr. J. Black. 5 June 1895.

must be men of considerable capital, and they are not so plentiful as men who are able to take smaller farms.

51,671. In spite of such reductions as have been made, there is no money to be made in farming now?—I think very little—a living, and little more. Sometimes a loss of money even in getting a living.

Low prices.

51,672. The opinion has taken hold of the public mind that the low range of prices will be permanent?—That is much more so within the past two years, and especially this year, than it was two or three, or four or five years ago.

51,673. If prices fall still lower the situation will be aggravated still more?—Yes.

51,674. Those farmers who have been able to do a little better, have done that largely at the expense of their children's advantage?—That is so, undoubtedly.

Prices and wages.

51,675. Agricultural labourers, you say, find plenty of employment and earn good wages?—I do not know a single idle man or woman within reach of me who is unemployed.

51,676. If agriculture itself were a flourishing instead of a failing industry, do not you think the labourer is in the position to get his full share of the more that there would be to divide among the agricultural classes?—I think so.

51,677. His wages would be considerably higher, probably, if prices went up?—Probably they would.

51,678. Would not he like that rather than benefit by the larger purchasing power of his unaltered wages?—I think he appreciates the increased wage more readily; but it is very important for the money to go a good deal further. I think he would more appreciate the larger wages.

51,679. He would rather take his advantage in the shape of higher wages than lower prices?—I think he would.

51,680. (*Chairman.*) What certainty have you that wages would rise?—I hardly said so.

Crofters.

51,681. (*Mr. Everett.*) Do not wages depend largely upon which is master of the situation—the employer or the servant?—It is like other things. It very much depends upon supply and demand. I am in the happy position of having a colony of about a dozen crofters in my immediate neighbourhood. They have families and they are most advantageous to us for a supply of labour. They get good wages from us and steady employment, and they are all comfortable and contented. The difficulty of the crofter problem with us is putting a large number of crofters together in a district where there are no large farms to give employment for the surplus labour. If means could be devised whereby large farms requiring a considerable amount of additional labour could be intermingled with crofting colonies, where the families of the crofters would grow up and supply that labour, it would be a blessing to them for their usefulness in life and for their happiness and welfare.

51,682. It is an advantage to both parties to have a few crofters in a district?—Yes. I may mention that the late Sir George Campbell came up our way some years ago, and I asked him to come out to my place. We drove up together through this colony. He was very much taken with it, but it did not suit his purpose exactly. He would have liked an agitation rather. They were not inclined to make any row.

Law of hypothec.

51,683. You consider hypothec and distraint well away?—I do.

51,684. You have not seen any disadvantages following on the sweeping of them away?—No.

Fixity of tenure.

51,685. Fixity of tenure you speak of as undesirable?—I do not approve of it at all. I think it would be a misfortune.

51,686. Is there any man more fixed in his tenure than the man who buys his farm?—No, if he is able to keep it. I think not. I bought my own farm very much for the purpose of securing my tenure.

51,687. And in the hope that prices would not fall lower?—Well, yes.

51,688. I am afraid your experience has not been of the most pleasant kind?—Not in that way.

51,689. (*Mr. Chaplin.*) When did you buy?—I think in 1891. I have some other occupations that make me a little independent of it, and I can feel all the easier on that account.

Purchase of small holdings.

51,690. (*Mr. Everett.*) If many were to buy under the Ashbourne Act and prices were to go on falling, would not they be likely to find themselves in a difficult place?—Not unless they bought too much beyond their means. If they had a certain amount of capital, and were able to put it into the land, and were capable industrious people able to work it themselves, having no rent to pay, and providing food for their families, I think they would be a happy, contented and vary useful class of the population.

Mr. J. Black. 5 June 1895.

51,691. If that Act were put in operation extensively, most of them would have an annual rent to pay for forty years or so?—Yes.

51,692. Rents which they could not get altered?—That is so. I could easily conceive how it would lead people into difficulties who had not entered upon it wisely.

51,693. In order to make it safe, the stability of prices of produce would be a necessity?—More or less it would be so.

Allotments.

51,694. The Allotments Act in your district has not worked at all?—We advertised as a county council for applications and I think we got two. One was an avowed hoax, and the other was an application from a neighbour of mine who wanted half an acre to put up a place for sheltering a steam thrashing mill, not to cultivate at all.

51,695. Your men have got good gardens, or you give them potato ground?—I do both. I give them 1,000 yards of a drill of potatoes, and as much garden ground as they wish. I have told them I will extend their gardens as much as they like, and they say they do not want any more.

Female labour.

51,696. (*Captain Thomas.*) Is there much female labour in your district?—It is getting less I am sorry to say. If it were not for the crofters' colony, we should have difficulty in finding female labour.

51,697. What do they do mostly?—Hoeing and gathering weeds, sometimes spreading manure, carrying seed, carrying manure to the men who are sowing it, dressing grain in the loft, and all that sort of thing.

51,698. What wages do they get?—1*s.* 6*d.* a day. I give them 9*s.* a week.

51,699. What hours do they work?—Ten hours while there is daylight, but only the short hours of the winter.

51,700. Pretty nearly the same as the men?—Just the same as the men.

Cost of living.

51,701. You have spoken of farmers being able to live. What do you estimate the cost of farmers' living?—Perhaps 200*l.* a year for an ordinary family if he had to pay for all in money.

51,702. If he rented a house, and paid for everything?—200*l.* a year, perhaps.

Farming capital.

51,703. What would be the capital required on a farm of 500 acres in your district?—I was very much surprised at evidence that was given here yesterday by a gentleman who was able to work a 500-acre farm with 3,000*l.* I learned afterwards that it is a dairy farm with Alderney and Ayrshire cows, and all that sort of thing. A farm of 500 acres of anything like fair land cannot be worked on 3,000*l.* nor yet on 4,000*l.*

51,704. (*Chairman.*) I think he admitted that the capital was not large enough, and that he wished he had more?—My own experience when I went into the large farm of 320 acres in 1882 was that it took 5,200*l.*, which is more than 15*l.* an acre.

51,705. (*Mr. Gilmour.*) Purely arable?—Yes. Good land. 37*s.* an acre. I did it perhaps a little too well.

51,706. (*Chairman.*) That must be very far above the average?—Even now, at the reduced rent of from 15*s.* to 30*s.* an acre, my experience is that it cannot be under 10*l.* an acre.

51,707. (*Captain Thomas.*) In that way 2,000*l.* would work a farm of 200 acres? And I think a man would be entitled to 10 per cent. on his capital, and live about the rate I have mentioned. There are farmers paying 200*l.* a year of rent who are living at less than 200*l.* a year, especially recently. I think there is nothing more to the credit of the tenant farmers, than that since the depression came upon them they have given up luxuries, reduced their establishments, and adopted a style of living much more economical altogether, in order to hold their own, to pull through bad times in the hope of something better coming.

51,708. Do you keep a farm account?—I do, carefully.

Results of farming.

51,709. What has your farm done of late?—In the way of profit?

51,710. Yes?—I have never had a loss on my farm from year to year. I had sometimes 300*l.* a year, and sometimes

Digitized by Google

Mr. J. Black. 5 June 1895.

it was down to 100*l*. That is besides supplies from the farm to the house.

51,711. (*Chairman.*) Taking the average of years, after paying yourself, have you made a fair average profit upon your capital?—Yes, from year to year, I have. But there is this misfortune to be taken into account that while it cost me 5,000*l*., if I were to go out of it now, I should be 25 per cent. or more under that, from the reduction in the value of the stock.

51,712. That is in consequence of the shrinkage in value of the stock?—Yes.

51,713. (*Mr. Chaplin.*) But the stock is there?—Sheep are pretty high, and cattle are better within the last month or two.

51,714. (*Captain Thomas.*) I do not think you have stated the average of profit you have?—I am talking of the outgoings and incomings. If I had valued my stock from year to year and taken it in that way—which I did not do, I knew pretty well I had about the same number of them, but I have never done that—I do not think I should have had any profit at all sometimes. The reduction in the value of the stock has taken perhaps the greater part of the profit I have made. In some good years I would have had a fair margin even over the fall in value of the stock.

Existence of depression.

51,715. (*Mr. Dalton.*) How do you account for the labourers' wages having risen during the six years?—The depression, we think, has been rather wearing off during the last six years. The worst of the depression was about 1886 or 1887.

51,716. You do not think there is any depression now, as compared with six years ago?—There is still, and I think it has perhaps taken a turn to the bad again this very year. I have heard a good many people up beside me say that this is the worst year they have had for many years.

Wages.

51,717. How do you account for the fact that wages have risen?—One reason is that the improved education that the young people are getting is taking them away to other occupations; and particularly that is so with female labour. Our girls about the country are all getting an education and finding their way into shops as cashiers and book-keepers and into business.

51,718. There is plenty of occupation for them elsewhere?—Plenty.

51,719. Nobody is out of employment in your district? Nobody I know of.

Evasive clauses in leases.

51,720. As to these antiquated clauses in leases, is it your experience that they are common in your neighbourhood?—Still, but they are modified very largely.

51,721. Do you think it is the lawyers or the landlords who wish to retain these clauses?—Perhaps partly both.

51,722. Is it not in very much the same way that you keep old clauses in conveyances and other deeds, where the owner does not even read the legal document?—I will give you a case in point. Some twenty years ago, perhaps, the Duke of Fife wished new conditions for his farms to be let on. I know that he took the advice on that occasion of professional men. Not only did he consult his factor and his law-agent, but they took into their counsels some farmers, and gave great consideration to the matter. I saw the draft of the document myself, and approved of a great many of the concessions that were made. These were all adjusted and met the approval of his Grace. They are in operation still. While I own the one farm that I bought from the Duke, I occupy the other farm under these very conditions. Some of them are very much modified as compared with the conditions about thirty years ago. We have heard nothing of them for the last ten or twelve years. Since the difficulties came upon farming, factors and officials are glad to let farmers do as they like so long as they are able to make their way.

51,723. Are these leases not longer than English leases?—I know that they are far too long and too technical.

51,724. Are they not kept so intentionally?—I daresay they are kept in for another purpose.

51,725. By the lawyers?—Sometimes by others. Factors and others say that while there may be proprietors who are not all they should be, there are tenants who are not all they should be. While a good man is easy to deal with, they must protect themselves against rogues that they might fall in with.

Local rates.

51,726. I think that in your brief you say that rates and taxes have increased enormously; but I do not think the figures you give would bear that out?—Well, perhaps not enormously.

Mr. J. Black. 5 June 1895.

51,727. You are paying 17*l*. a year on 250*l*. rental which is about 1*s*. 4*d*. in the £?—When I think of it I have the county rates in addition, and they are about the same. I pay about 17*l*. for poor rates, school rates, churchyard, and registration, and all these things. I have county rate, road rate, police rate, equal to about 17*l*. more.

Taxes.

51,728. Have the taxes increased at all in Scotland?—I think they have a little.

51,729. What taxes? Imperial?—How do you distinguish? The income tax has gone up a good deal.

51,730. But the majority of farmers do not pay income tax?—Do not we? We get let in for it, I assure you, the bigger ones, very smartly.

Fixity of tenure

51,731. (*Mr. Channing.*) You object to fixity of tenure on the ground of the constant and rather irregular drop in prices?—I think the main objection to it in our part of the country is that it does not give people, outsiders, who want holdings, a chance of ever obtaining them.

51,732. This objection is taken by those who want farms, and not by those who have them?—That is so.

51,733. You are a member of the Morayshire Farmers' Club?—Yes, I am secretary.

51,734. You said that their recommendations as to the reductions of rent were proved to be accurate?—They have been. I would not say all over, as I have explained; but in some of the larger farms in clayey, stiff, retentive districts, the reduction is quite as much as they estimated would be required.

Produce rents.

51,735. Some years ago I had a very interesting paper sent by the club showing the possible valuation of rents according to fiars prices and similar calculations. I should like to ask you whether this reduction of rent was based upon any calculation of that kind, or upon what basis it rests?—The paper you refer to is the very one I am quoting from, where 33 per cent. reduction was claimed in order to make farming possible. There were people who in the depths of their dismay, would have thankfully welcomed a rising and falling rent in proportion to the average of prices of all farm products; but that would take out of farming a great deal of its charm. A good deal of the charm of farming is its chances and its speculative character, to be able to pull through two or three bad years, expecting a considerable lift in another. There is a little bit of a gamble in it.

51,736. If prices improved, that would affect produce rents?—Yes.

51,737. What is the scheme of produce rents?—I think, so far as I remember it, it went up so many pounds for every 6*d*. on the stone of beef, 1*s*. on the quarter of corn, or something of that sort. It was a sliding scale.

51,738. It took into consideration all articles of agricultural produce?—It did.

51,739. In your opinion is it possible to draw up a scheme of that kind so as to be workable?—I think it is. I am not sure that it would be so much welcomed in our country now, as it would have been at that time.

Official referees.

51,740. How about the official arbiter? I understand your preference would be for something like what we in England should call an agricultural county court judge, a fixed official with a fixed salary, to deal with the district and remain during good behaviour. Is that what you mean?—Yes, up to a certain age.

51,741. How would you provide for the appointment and payment of such an official?—That is a rather difficult question to face. I do not know whether the county council could be called upon to do it. I do not think it would be at all a bad use of money raised by local assessment. The right theory would be for the Government to do it as a national matter.

51,742. It would be more popular for the Government than the county council to do it?—Yes, and I think more independent and efficient.

The Agricultural Holdings Act.

51,743. How about the Agricultural Holdings Act? I understand you generally to support the views embodied in Mr. Hope's report with regard to Banff, Nairn, and Elgin?—I do.

51,744. Do you think there should be compensation for continuous good farming?—To a certain extent.

Compensation to sitting tenants.

51,745. Do you think there should be compensation to the sitting tenant, that is to say, on the renewal of the lease he should have a full allowance for the remaining value of his improvements before the terms of the new tenancy are settled?—I think that is one of the most important parts of the whole arrangement. I think a man renewing his lease is equally entitled to the benefit of anything he has done on the farm, as if he were going away.

Digitized by Google

Mr. J. Black. 5 June 1896.

I think much of the injustice that the tenants feel they have suffered has been by putting a rent upon the tenant at the renewal of the lease, based upon improvements which he has carried out with his own labour and his own money. I think that has been one of the most serious grievances that tenants have had to complain of.

51,746. You know it is argued on behalf of the landlord that in this case the tenant by the fact of renewal will have the enjoyment of his improvements; but is not that argument disposed of by the fact that the rent would be increased in consequence of the improvements?—The rent should be fixed not upon the farm as it is improved by the tenant's labour and outlay, but upon the farm as it would have been without these improvements, or at any rate giving him reasonable and fair consideration for the amount of improvement he has himself effected upon it.

51,747. If the tenant had his improvements assessed in value at the time he was renewing the tenancy, there would be no injustice to the landlord in allowing for the remainder of the improvements?—If you assess the improvements, if you value them and pay the tenant for them, then I think that does away with his claim to have consideration in the fixing of the rent for the coming lease; but if he is not getting payment for them, as is very often the case—I do not know a case where he ever has got payment if he was continuing in the holding—I think he is entitled to consideration, in the fixing of his rent under the new lease.

51,748. An allowance off the rent for the proportionate number of years up to the exhaustion of the improvements?—It might be put in that way. But I think a fairer and more generous and business-like way would be this: supposing the rent for the farm in the improved state were to be 300*l.*, perhaps a fair rent, to give the tenant full consideration for what he has done on the farm, might be 250*l.* I am putting that hypothetically, but it would be an important thing to make some arrangement of that kind.

Reduction of rents.

51,749. (*Mr. Lambert.*) Do you think there has been a sufficient reduction of rent in your district?—Not in all cases. In a good many cases the tenant has been fairly met.

51,750. I see that your club recommended a reduction of 33 per cent. In what proportion of the cases has that been carried out?—I could not say. A fourth or fifth perhaps.

Demand for farms.

51,751. How is it that plenty of candidates appear to be ready to give old rents for farms now?—I am not aware that they do appear ready to give old rents for large farms.

51,752. For smaller and middle-sized farms?—I have explained in my evidence-in-chief that farmers' sons when they grow up are not trained to any other occupation. The colonies do not afford them the encouragement now that they did some years ago, and they prefer, with such capital as they can muster, to take a farm in their own district.

51,753. Can they make a living at the old rents?—In some cases they can perhaps with their own labour and the labour of their families. A man with two or three young sons and some young daughters doing all his work for him, saving his labour bills, may, in spite of the bad times.

51,754. At the old rents?—Yes, but at the sacrifice of his family, who are giving their labour and getting nothing for it.

51,755. Do you attribute the number of applicants to the fact that there are more farmers than farms?—That is so. I attribute what I have said about the applicants for farms also to the fact that away up in the hilly district where the climate is not so good there is a desire to get down to the low ground where the climate is more certain.

Abatements of rent.

51,756. You say, too, that owners of the estates are heavily burdened, and have great difficulty in giving an adequate reduction of rent?—I do not think I said heavily burdened, though I daresay it would be true in some cases. The abatements they have been obliged to make must necessarily encroach upon their revenues, and they cannot possibly in the nature of things have so much money to spare to improve their estates as formerly.

Fixity of tenure.

51,757. You say fixity of tenure would be a misfortune. What kind of fixity of tenure do you allude to?—What I allude to is this: those who had the fixity of tenure might not object to it, but we have a class of well-to-do farm servants who rise to be grieves, and if they have got together a little money they want holdings, and there is great difficulty in getting them. They disapprove very strongly, and very naturally, of fixity of tenure that would fix in their holdings those who have them, and not allow others to get a chance of them.

51,758. The old tenants would die and give up?—But they provide successors, and in that case the fixity of tenure would have to be bought. That would be a very different thing from getting a croft on the Fife, Richmond, or Moray or other estates of that kind. There is no grassum to pay for anything but the valuations of the previous tenant.

51,759. That tends to make the competition for farms more keen?—And keeps up rents. What I would suggest is to increase the number of small holdings; and I think it would be extremely important if we could get advances from the State at moderate interest to put up buildings on them. The buildings are the difficulty.

Ground Game.

51,760. In what way would you advocate the Ground Game Act should be extended?—I would have it extended to do away with all restrictions as to how rabbits should be killed round about the farmer.

51,761. Give them the right to kill rabbits upon their holdings, how, when, and where they liked?—Yes.

51,762. (*Mr. Chaplin.*) Whether that has the effect of destroying all the rest of the game or not?—I do not think it. So far as I remember, there is a provision in the Ground Game Act about going 25 yards into a wood. I would not go the length of allowing tenants to go over a hill or into a wood where there is a preserve of deer or anything of that sort; but I would give them all reasonable facilities for protecting their crops. I would allow a man to set a trap in the mouth of the rabbit hole or outside of it, and I would let him go a certain length into a wood in order to get rid of these troublesome creatures that prey upon his crops.

51,763. Is it a complaint that they suffer from rabbits?—There is a complaint about suffering from rabbits, but it is only upon certain farms that they are troublesome. I have never had much trouble with them, even when I was a tenant.

Price of barley.

51,764. How is it the price of barley has fallen very greatly as compared with 20 years ago? To what do you attribute the fall?—I do not know, except this, that the railway facilities now are very great for taking barley into our country from other parts of Scotland. We get barley up from Berwickshire to Elgin, and largely from Forfarshire. Part comes from Fifeshire and from Kincardineshire, and from Aberdeenshire systematically.

Malt tax.

51,765. Have you ever considered whether it was affected by the repeal of the malt tax?—Not with us, except that we had a better demand for the better class going away to breweries before the repeal of the malt tax than we have now.

51,766. So far that might have affected it. Do you suffer from the climate?—We suffer from the climate occasionally.

51,767. There is a great deal of barley grown in Elginshire, as a rule?—We grow little else.

51,768. Throughout the whole of Scotland?—Barley is a peculiar crop. There is no barley grown at all in the western half of Scotland. Up the eastern coast, coming up the Lothians, part of Fife and Forfar, Kincardine, Aberdeen, and Banff, it is grown. With us it is the staple crop.

51,769. That probably is why your farms still let so readily?—No doubt.

Wages.

51,770. I think you told us that the supply of labour was deficient enough in many places?—It is not overabundant round about my part of the country, although by means of a village near and a colony of crofters we are a little better off than many other parts of the country. But I know many parts of the country where people have been compelled to cut their hay by machinery when they would have very much preferred to cut it by hand labour.

51,771. That has had the effect of keeping up the wages?—Oh, yes.

Compensation to sitting tenants.

51,772. (*Mr. Gilmour.*) In that question about the sitting tenant, is it not the practice that the sitting tenant regulates his offer for the farm so as to cover the compensation that he is entitled to?—A practice very common with us, especially in past times, was for the proprietor to make his own valuations, either through his factor or through a professional valuator, and the new tenant, even on the best properties, was offered the farm at this valuation, and if he did not take it some other one would take it.

51,773. If the sitting tenant did not take it?—Yes.

Leases.

51,774. You spoke about the breaks that are getting common in leases now. Does that not simply mean a

Digitized by Google

Mr. J. Black. 5 June 1895.

new arrangement at the end of five or seven years?—
—Opportunities for it.

51,775. Has not that been the result of it?—I believe it has, in some cases. In some cases they have taken advantage of it, and stopped the occupancy altogether. I think that is perhaps more from changes in their families than from any falling into bad circumstances. I have not known many cases where breaks have been taken advantage of for any reason. They are in nearly all the new leases.

51,776. In your experience do you think that the 19 years' lease has been a great benefit to agriculture in Scotland?—I do, in the past, but I am not sure under new conditions. I think I should prefer year-to-year occupancy, with two years' notice.

Restrictive clauses in leases.

51,777. I think I understood you to say that penal clauses might be done away with, and a simple clause substituted in leases providing that the farm should be cultivated "according to good husbandry"?—I think it might be in the majority of cases.

51,778. Could that not be very liberally translated?—A difficulty might arise there.

51,779. Do you know of those penal clauses being put in operation?—Not very frequently. I happened to be arbiter in a case under the Agricultural Holdings Act last year, and one of the claims which the proprietor set off against the tenant's claim was damage for miscropping the farm. The other arbiter and I could not agree, and it was referred to an oversman. How far he gave effect to the claim for mis-cropping, I do not know.

51,780. But in practice those penal clauses, although kept in the leases, are not taken advantage of?—Not for the last 10 years.

51,781. I suppose you will admit that it is necessary that the landlord should be protected against a bad or designing tenant?—Certainly.

Official referees.

51,782. You have spoken about a special valuator. Is it not a fact that almost all valuations come on at one time of year in a district?—Yes.

51,783. How would this man's time be otherwise occupied during the year?—If he were an official of that sort I think it might very fairly be required of him, according to legislation that has been proposed, if it were adopted, to make estimates, calculations, of the state of farms when tenants went into them, and register it in a book in the sheriff-clerk's office, or anywhere where it could be appealed to, so that he might be the better able to judge if the farm had suffered at the close.

51,784. Would that not be the actual work he would have to do in going over the farms?—I do not think an expert would take very long to do valuations.

51,785. Is it not the fact that valuators who are held as being the best, are local men in all the different parts of the country?—That is so undoubtedly. That has been very forcibly brought under my notice. I think a man who might be a very competent valuator in Aberdeenshire or Banffshire, for instance, would be entirely at sea in the county of Moray.

51,786. Do not you think there would be a very practical difficulty in getting a man who would accept such an appointment as a government official might have to accept, and who would be a thoroughly reliable and good man for the district?—I do not think there would, though I may point out this in reference to Mr. Hope's districts that I think they are if anything too large. Moray, Nairn, Inverness, and Ross might go together; Sutherland and Caithness; Banff, Aberdeen, and Kincardine; Forfar and Fife might go together. You must divide them according to the different kinds of land, the climate, and the systems of farming and not by so many acres and miles. Though Banff and Elgin are divided only by the Spey the conditions of farming and valuation are as different as the poles are wide asunder.

51,787. I want to know whether you think that in practice you would get the benefit of a man's services who would hold the same position in the locality as a man who was working himself upon a farm in that district and therefore knew all about it?—Oh yes, I think you would. A man prefers as a rule, to be an official with a fixed salary even to the chance of making a still bigger salary. I think you would get a man for a reasonable salary. I would not prevent him from taking a farm on his own account. That would not take away his independence or give him any bias.

Mr. J. Black. 5 June 1895.

51,788. (*Mr. Clay.*) You made a reference to the bothy system and you said the bothies are improved?—I think they are, and largely reduced in number.

Bothies.

51,789. But even with that, are they not a disturbance to the social system?—I think they are not desirable where they can be got rid of.

51,790. You would be glad to see them abolished altogether?—I should.

51,791. The same as in the south, where every servant has his own house?—I think that is very desirable.

Management of estates.

51,792. The Duke of Richmond has given evidence before us. I suppose his estate is very well managed, with scarcely ever a change of tenant?—Very seldom.

51,793. The Duke of Fife's property is well managed, and also the Earl of Moray's?—All particularly well managed.

51,794. And the Seafield property?—We have a large amount of well-managed property.

51,795. The way the Duke of Richmond has managed his bothies is a high example to all other landlords—taking the superintendence of his property out of the land agent's hand, before he lets a single farm?—I think it is very commendable.

51,796. He never lets a farm until he knows all its advantages or disadvantages?—Although he perhaps does not go into it so minutely, I think the Duke of Fife does the same. I think all come through his Grace's hands.

51,797. Were all landlords to take the same oversight of their properties when at home, regulate the factors and their tenants' interest, it would be a great deal better for British agriculture?—There can be no doubt about that.

51,798. I suppose you do not care much for the Edinburgh lawyer factors?—Some are willing to be good to the tenants, but they very often do not know how, and they make mistakes. I like a practical man much better.

Compensation to sitting tenants.

51,799. Regarding Mr. Gilmour's question about the sitting tenant, I gathered from your evidence that the sitting tenant is sometimes, perhaps too often, rented upon his own improvements?—Yes, that has been so in the past. I think not so much now.

51,800. Mr. Gilmour put a question indicating that the tenant had something to do with the making of the rent. Is the rent not made by landlord, on the facts put before him?—Yes. That is so. But I think it right to say that if a good tenant were to say he would take the farm if the rent were reduced 20*l.* or 30*l.* from the valuation, and the proprietor were willing to keep him, an arrangement of that kind might be come to.

51,801. That is meeting the tenant in a liberal way?—But as a rule the practice has been that the proprietor, either through his factor or through a professional valuator, has put a rent upon his farm, and the sitting tenant has just the option of taking it at that rent or leaving it.

51,802. Am I not justified in saying that the landlord values the farm as it stands, with its improvements on it?—I expect that is so—too much so.

51,803–4. Is it your opinion, say, for example, if it were a proved fact that there were 500*l.* of compensation of that tenant's money in the farm, and it were valued upon that, might not the landlord, instead of giving the money to be paid down, which may be inconvenient, allow the tenant perhaps 6 or 7 per cent. off his rent—30*l.* or 35*l.* a year off the rent with its improvements? Would that not be a fair and just way of settlement?—The shape of it would be right. The extent of the reduction might be a matter of agreement; but the principle is right.

51,805. You have seen and read Mr. Hope's report?—Yes.

51,806. And consider it is a fair statement?—I do.

51,807. Both towards landlord and tenant, and the general state of agriculture and farming in the part of the country you are in?—Yes. I do not know that I would agree with it in every particular perhaps. But talking generally, I think it is almost wholly all you say.

51,808. It is a very practical working report?—I think so.

Witness then withdrew.

Adjourned.

Ninety-ninth Day.

Edinburgh, Thursday, 6th June 1895.

PRESENT:

VISCOUNT COBHAM IN THE CHAIR.

The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEO. LAMBERT, Esq., M.P.
CHARLES WHITEHEAD, Esq.

HERBERT LYON, *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. A. R. Stuart.

Mr. A. R. STUART called in and examined.

Mr. A. R. Stuart.

6 June 1895.

51,809. (*Lord Cobham.*) You are a tenant farmer holding land from the Duke of Fife?—Yes.

51,810. Where is your farm?—In Banffshire.

Particulars of witness's farm.

51,811. It is a farm consisting of 146 acres arable and 1,200 of hill pasture?—That is so.

51,812. Do you farm any land of your own?—A small acreage adjoining the other farm.

51,813. What is the character of the soil?—Heavy clay land. There is a brick manufactory worked on the farm. It is very heavy land.

51,814. All of it?—About three-fourths of it.

Effect of depression.

51,815. Do you consider the depression in agriculture has affected that class of land more than others?—Yes, I think it has. That class of land requires more extensive labour than others. You require to keep a heavier staff of horses.

Wages.

51,816. How has the depression affected you?—We find that the labour bill has considerably increased.

51,817. How much has it gone up?—Over 30 per cent. in the last 16 years.

51,818. Do wages show any tendency to fall again?—They fell a few years ago but they have gone up again this year in particular. They have risen 10 per cent. simply because we have great difficulty in getting labourers. They are leaving the farm business altogether.

51,819. Are they going into the towns or emigrating?—They are going into the large towns which seem to absorb all labour.

51,820. (*Mr. Lambert.*) Notwithstanding that wages have increased?—Yes.

51,821. (*Mr. Chaplin.*) That is what keeps wages so high?—Yes.

51,822–3. (*Lord Cobham.*) What are the market rates of labourers at present?—I am paying my horsemen 32*l.* in money wages and in kind; well I have not estimated its moneyworth but they get 6½ bolls of meal, 4*l.* a year in milk, and about 3*l.* to 4*l.* a year in potatoes, and they have their lodgings of course, equal to 3*l.* to 4*l.* It would come to about 15*l.* That would bring up the wages to about 47*l.* to 49*l.*

51,824. (*Mr. Channing.*) They have no allotments of land?—They have no land. We have no houses for our labourers.

51,825. (*Lord Cobham.*) The horsemen, I suppose, get the highest wages?—No; our cattlemen get about a couple of pounds more in the year.

51,826. You have ordinary labourers to employ also?—We have men engaged by the six months. I could not get labourers unless I engaged them for six months.

51,827. They get smaller wages?—An ordinary labourer gets from 21*s.* to 22*s.* 6*d.* a week. They get very high wages.

51,828. (*Mr. Lambert.*) That would be exclusive of everything?—Yes, he has to find for himself with that.

51,829. (*Chairman.*) Have you been able to reduce labour to any extent by labour-saving machinery?—I have not. When I entered on my present lease I used to get sufficient female labour; now I cannot get it. They will not work in the fields at all unless at harvest time, and even then it is difficult to get them. They seem to be running away from the land.

Mr. A. R. Stuart.

6 June 1895.

Reduced labour.

51,830. And the result is that your labour bill is up 30 per cent.?—That is so.

Prices.

51,831. You have suffered from the fall in prices of agricultural produce?—Very much.

51,832. To the same extent as English farmers have?—It is chiefly with us on the price of beef. I breed and feed cattle, and use the bulk of the produce on the farm in doing so. In 1876 when I entered on my lease, we got about 84*s.* per cwt. for beef—the finest Banffshire beef. I have frequently since then accepted 56*s.* Just now it is about 60*s.* Over a series of years we have accepted 60*s.* per cwt. for our beef.

51,833. But you have not done so badly in store sheep?—Black-faced sheep have fallen about one-third in selling price.

51,834. At present prices?—Yes. In the eighties I could sell my ewe hoggs at 29*s.* and 30*s.*, and I can only get for them now about 20*s.* to 21*s.*

51,835. For the same class of sheep?—Yes; that is store sheep, black-faced sheep.

51,836. You consume nearly all the produce grown on your farm?—Yes, I sell nothing but barley.

51,837. (*Mr. Chaplin.*) Have not sheep risen lately?—They have; black-faced sheep have risen a bit, three-year old hoggs particularly. But this spring on account of the lack of turnips they did not sell as they would otherwise have done. Those of us who had store sheep and sold early did not get the benefit of the rise of the market.

51,838. (*Lord Cobham.*) Considering the large increase in the labour bill and the depression in value of farm produce, how have you managed to meet the position?—Unfortunately for some years we have been very far from being able to meet it. I have been losing money on my farm for several years.

Reduction of rent.

51,839. Notwithstanding a considerable reduction of rent?—I have never got a reduction of rent from the Duke of Fife. On one occasion he gave a remission of 5 per cent., which I was exceedingly unwilling to accept. However, as they were all getting it the factor thought I should accept it also. After considerable pressure I did so, and that is the only reduction I ever had.

51,840. You have had no temporary remissions of rent? Nothing with the exception already given. You must understand that I have been an "improving tenant." I have built my steading around the land, fenced it, dyked it, erected my own steam-mill and steam-engine, and I consider I have as much value on the land as the Duke of Fife. How could I then accept a reduction of rent? I have got nearly as much value on the farm as he has. The

Digitized by Google

Mr. A. R. Stuart. 6 June 1895.

system on the Duke of Fife's estates in this county is that the tenants have done all the improvements themselves.

51,841. Under a lease?—Yes, under a lease. They have been "improving" tenants. Under the old system the Duke of Fife's tenants were very rarely disturbed, and they went on improving their farm buildings and steadings. In the parish I come from the tenants built every steading in it up till 1886. But he has now sold the parish to Mr. Findley of Aberlour, the proprietor of the "*Scotsman*" newspaper. One reason I have got no reduction of rent is that I have a large sum to get for the meliorations I mentioned—houses, drains, dykes, wire-fencing, steam-engine, and mill, &c.

51,842-3. That would be a reason for keeping you on?—I do not know, I am sure. I do not think I can stay on this farm unless I got such a reduction that I could live on it.

51,844-6. (*Mr. Chaplin.*) What per-centage would induce you to stay?—I should have to sink all my improvements, It would need to be a very small rent. I should not be able to pay half the present rent, if I were to sink the whole of the improvements.

51,847. Do I understand that your rent was reduced permanently 5 per cent.?—Oh no. It was only for one year. It was a bad year, and the other tenants were getting 5 per cent. off. I was very unwilling to accept 5 per cent., but I did it ultimately.

51,848. Will you say what is your rent at present?—127*l.* to the Duke of Fife and my own improvements would come to about 80*l.* a year.

51,849. 127*l.* for a hill farm of 146 acres of arable and 1,200 of hill pasture?—You have to consider the elevation, the farm lies high. It is really a pasture farm.

51,850. (*Mr. Chaplin.*) The interest on your improvements you estimate at 80*l.* a year?—Yes.

Average rents.

51,851. (*Lord Cobham.*) Do you consider that is the average rent of the district?—Yes, seeing the condition of the farm when I entered it. It was a bad farm, or rather it was two farms, the tenants of which both went out bankrupt. I entered the farm at a valuation of 13 bushels of oats and five bushels of barley, and I can grow now five or six quarters of oats and six quarters of barley. I think I paid a large rent, seeing the condition of the farm.

51,852. What do you put down for the rent of the hill land?—We place it at about 6*d.* an acre. It is not of very great value. It is not grass pasture; it is entirely heather land.

51,853. To get the rent of the arable land you still deduct about 30*l.* a year?—I should say about 40*l.* a year for the hill pasture, leaving about 80*l.* to 90*l.* for the arable land.

51,854. That is about 12*s.* an acre?—Rather more, I should think.

Price of cake and manures.

51,855. You have had some set-off against this fall of prices and increase in the labour bill in the cheapness of cake and manure?—Yes, they are cheaper, but I use very little cake. I feed entirely from my own oats, and from the refuse from the distilleries. There is a distillery within 400 yards of my farm, and I have the refuse of the malt, and a refuse that we call "ale" that is run off from the stills; cattle are fed largely. In fact, when our turnip crop fails we are entirely dependent on the produce of these distilleries. We buy very little cake; but we do buy considerable quantities of artificial manures.

51,856. You have very little, then, to set against the increased cost of the farm?—Very little on my own farm.

Changes of tenants.

51,857. Have there been many changes of tenants in your district?—In the larger class of farms, yes. I made up a table of the changes of tenancy in the larger class of farms in my immediate neighbourhood, that is to say, within four miles of my farm. These larger farms have, in many cases, changed three or four times since I took my lease.

51,858. On the same estate?—Not on the same estate. I speak of the larger farms, and I shall explain what we call "large" farms. Banffshire is a county of small holdings. There are only 100 holdings in the county of Banff over 150*l.* of rental. Ordinary farms range from 50*l.* to 60*l.* A number of the larger farms have changed three or four times within 19 years; and the average reduction upon 14 farms is 30 per cent. That is where tenancy has been changed. The total rental in 1878 of these 14 farms was 3,743*l.*, and in 1894 it was 2,477*l.*

51,859. Are these farms held on lease?—All on lease from the Duke of Fife and the Duke of Richmond and large landowners.

51,860. And the reduction took place on the termination of the lease?—On the change of tenancy six of the tenants of these 14 farms became bankrupt. On three tenants of the Duke of Richmond the reductions were from 33 to 36 per cent.

51,861. (*Mr. Channing.*) All these reductions, I understand, were in cases where there was a change of tenant?—That is so.

51,862. Have there been more changes on the large estates than on the small ones?—I do not think so. I think the tenants have been easier rented on the large estates. The Duke of Richmond is one of the best landlords we have, but even on his farms in a change of tenancy there were reductions of 32 to 36 per cent.

51,863. (*Mr. Chaplin.*) When did this occur?—Three of them occurred three years ago, and one four years ago. And there has been a great fall of prices even since then.

51,864. There had been a great fall in prices between the time they took the farm and the time they left?—Yes, as I have said, beef was 84*s.* a cwt.; now it is 60*s.* to 66*s.*

Effect of depression.

51,865-6. (*Lord Cobham.*) Has one of the effects of the depression been a considerable loss of the farmers' capital?—Very much. They have stopped all improvements. The tenants in my district were all improving tenants, adding to the area of their farms and draining their land; but all works of that class have been entirely stopped.

51,867. Is the land going down in condition?—I think it must be going down in condition.

51,868. Do you mean out of cultivation?—Yes. I find from the agricultural returns that in Banffshire there are about 9,000 acres between 1878 and 1893 out of cultivation. That is not, of course, a very large per-centage. It is only about 6 per cent.

51,869. When you say, "Going out of cultivation," Do you mean laid down to grass?—Going back to its natural condition. There are 9,000 acres less on the cultivated area in these 15 years.

51,870. These 9,000 acres would become worthless?—They are worthless now. It is not sown down as permanent pasture. A few cattle and sheep would run over it, but the 9,323 acres represent the difference in the cultivable area since 1882.

Cottages.

51,871. How has the rural population been affected?—We have the greatest difficulty in getting labour. Cottages are very difficult to be had on farms. Many of the married labourers have to live four or five miles away from their farms. I have no cottages on my farms. There are cottages on the estate of Aberlour, belonging to Mr. Findlay. The county is exceedingly in want of houses for labourers.

51,872. Are you able to house a few in your own homestead?—I do not live on my farm, and one of the men lives in the farmhouse. But apart from that I have no houses for labourers. I have compensation for all my buildings on my farm. I made more than one offer to the Duke of Fife's factor to give me compensation in the same way for cottages I might build on the farm, but he would not do that. There is a great lack of accommodation for labourers in our county. It is the greatest grievance that farmers have to contend with. They cannot get skilled labourers, and have to depend on men from the towns who know nothing really about cattle and horses. The class of labourer is deteriorating very much.

51,873. And the supply diminishing?—It is diminishing in this way that we have to pay so much for it. If there was plenty of it we should not have to pay so much for it. I have to complain of the quality of the labour. It is quite distressing. The old nurseries for farm servants and lads, the small holdings, we want them very much. Many of these holdings have been abolished; and we want an increase of accommodation for smaller tenants simply as nurseries for labourers. There is quite an exceptional state of things, however, on the property of Mr Findlay of Aberlour. His factor supplied me with a list of the cottages he has built. The rental of Mr. Findlay's estate, bought nine years ago, was 3,000*l.* He has erected 35 new cottages for farm servants and renewed 12 old cottages. That is 47 cottages in nine years. He has also erected about 20 cottages for workingmen so that Mr. Findlay of Aberlour has actually built 67 cottages in nine years for workmen of this parish on his own estate. The Duke of Fife had never such a thing as a workman's cottage on his property. The tenants were left to do as they liked; the Duke drew the rents. There was not a cottage formerly in the parish built by the landlord.

Mr. A. R. Stuart.
6 June 1895.

51,874. Is this property of the Duke of Fife's now in course of being sold?—It is sold to Mr. Findlay. I think the Duke of Fife has sold out of 14 parishes in Banffshire.

The Agricultural Holdings Act.

51,875. Are you satisfied with the present system of tenure under the Agricultural Holdings Act?—I am not. I object to the present system of tenure.

Compensation for improvements.

51,876. What is the tenure under which you hold?—I simply hold under a lease. I have no means of compensation for the high state of cultivation in which I leave my farm. I have taken my farm from 13 bushels of oats to 6 quarters and from 5 bushels of barley to 5 or 6 quarters of barley. I have no means of obtaining compensation for that increased fertility. Though I pour on tons of manure per acre, I have no means of recovering it under the Act.

51,877. (*Mr. Chaplin.*) You have no clause in your lease for manuring?—No.

51,878. Could you not have stipulated for this also?—If I had made stipulations of that kind I should not possibly have got the farm.

51,879. (*Lord Cobham.*) Are there any conditions respecting cultivation during the last two or three years of the lease?—I must cultivate the farm in a certain rotation during the whole of the lease—the seven-shift rotation.

51,880. Is that enforced?—There is very great latitude allowed to tenants, unless they are bad tenants.

51,881. Are you allowed to sell the hay and straw?—I never do sell hay or straw. I cannot sell straw or turnips.

51,882. It is forbidden in the lease?—Yes.

51,883. At the end of the lease you get paid on tillages?—I get paid for my growing crop and grass.

51,884. But your complaint is that you have no compensation for permanent improvements?—Yes, such as those affecting the letting value of the land through cultivating highly.

51,885. How would you meet this grievance? Is it largely felt by tenant farmers in your neighbourhood?—It is largely felt by "improving" tenant farmers. It is not felt at all by tenant farmers who do not improve their farms, because when the time comes for renewal of lease, there is no competition for such farms. He gets it on his own terms. But the tenant farmer who improves his land, he brings, through that very circumstance, a hornet's nest of competitors about his ears.

Cost of arbitration.

51,886. What suggestions have you to make in regard to this?—I suggest that this Act, the Agricultural Holdings Act, should be improved out of existence. Certainly its principle and intention seems to me to be fairly good; but it utterly fails to secure tenants' improvements. In our part of the country the Act has not been very much brought into use, simply because we have a very small class of holdings, and the machinery is so expensive that it runs away with the whole of the benefits of the Act. I could give you an illustration that occurred last year. Five acres were taken of my neighbour's farm—my brother-in-law's farm—for building a distillery. It was to be feud. The compensation that he was awarded amounted to 35*l.* for his grass and artificial manure; but between arbiters and their clerks and their report the expenses of arbitration were 21*l.*, leaving 16*l.*

51,887. How would you amend the Agricultural Holdings Act?—I do not know, I am sure. All I want is that the improvements of a tenant shall be secured to him.

51,888. Do you consider that the Agricultural Holdings Act has totally failed in that object?—Absolutely; it is worthless.

Counter-claims.

51,889. (*Mr. Chaplin.*) Have you ever tried it?—I have been a valuator on several occasions, and if the tenant has put in his claim, the landlord has put in a counter-claim; and I have advised tenants to abandon their claim rather than go in for an expensive arbitration.

51,890. It is the counter-claim that stands in the way very largely?—Yes.

51,891. (*Lord Cobham.*) Do you say there shall be no counter-claim?—No, certainly. If the tenant has deteriorated his farm there should be a counter-claim. But these counter-claims against tenants are often put in merely for the purpose of defeating the Act.

51,892. You think the counter-claims frighten tenants into withdrawing their claims?—It will in this sense, that if he wished to renew his holding, it would be his interest to keep on as good terms as possible with his landlord. He could not keep on such terms if he prosecuted his claim in the face of a counter-claim.

51,893. But in any circumstances, if the tenant makes a claim, and the landlord answers it with a counter-claim, it produces a certain amount of feeling?—Quite so. The Act would not be necessary if all landlords and tenants were reasonable.

Mr. A. R. Stuart.
6 June 1895.

Compensation for improvements.

51,894. (*Mr. Chaplin.*) Let us make it quite clear. I understand your position is this, that if you were not particularly anxious not to have a difference with your landlord, and if you were not afraid of the counter-claim, then you would get compensation under the Act for all your improvements?—I do not think so; the Act does not secure to an improving tenant the value of his improvements.

51,895. What stands in your way of getting compensation is fear of quarreling with your landlord, and fear of the counter-claim being given against you?—To some extent, yes; but that should be qualified by this, that the machinery of the present Act is so elaborate and expensive to bring into play, in connexion with our small holdings. It may do very well if the compensation I was to get was 2,000*l.* or 3,000*l.*, then the expenses of the arbitration might be a small per-centage; but where we are talking of claims of 150*l.* or thereabouts, the expenses assume a different character.

51,896. Of course, there can be no counter-claim against you where you have done all the improvements?—I cannot say. There could only be a frivolous claim.

51,897. Is there any chance of a counter-claim being lodged against you?—I should hope not.

51,898. Well, then, the only thing that stands in the way of your getting compensation under the Act is that you do not like to have a difference with your landlord?—Oh, I should have no scruples to make my claim. I speak on behalf of the majority of small tenants; I have a large claim to get wiped off.

51,899. Which you will get if you leave?—Of course I have my bargain in regard to all these improvements.

51,900. (*Mr. Channing.*) That is by special agreement?—Yes.

51,901. (*Captain Thomas.*) But not for the increased fertility of the soil?—No, though, as I have said, I have brought my farm up from 13 to 40 bushels.

51,902. That seems to be your greatest grievance?—Yes; that I cannot get compensation for the fertility of the farm over a course of 19 years. My neighbour who, perhaps, has been a bad farmer gets as much compensation as I can get.

51,903. (*Lord Cobham.*) But there is nothing to prevent you taking as much as you can out of the farm for the last few years?—I could never on a clay farm take out of it what I have put into it in the last few years. It would take another 19 years to exhaust it. That is really a great grievance we have to complain of.

51,904. (*Mr. Chaplin.*) Regarding compensation for increased fertility, have you not had compensation in the much better crops you have been growing?—Well, latterly no doubt, but it took a long time to bring it up.

51,905. (*Mr. Dalton.*) Was the rent of the farm lower on account of the bad condition of the farm when you took it?—No doubt it was lower. It was lower on this ground, that I undertook to relieve the landlord of what a landlord usually does. But the Duke of Fife has never built a house on his farms if he could get a tenant to do it for him.

51,906. But it was let at a lower rent in consequence of that?—I fancy it was. But I expect to be paid all the same for these improvements.

51,907. (*Lord Cobham.*) But every farmer who puts up this class of improvements is assured of compensation under the Act?—If he gives notice to the landlord and the landlord approves of it, and all that sort of thing.

51,908. (*Captain Thomas.*) What is the scale for compensation for buildings in your district?—There is no scale. It will be paid under arbitration. The Duke of Fife will appoint an arbitrator; I will appoint an arbitrator, and they will appoint an oversman, and the value will be arrived at in that way.

Valuations.

51,909. (*Lord Cobham.*) Are farmers well satisfied with the valuators?—Well the valuation often proceeds on the idea that you must win by hook or crook for the man who employs you. I myself believe in a single valuator. I think a more just decision would be given.

51,910. How would you have valuators appointed?—I would have valuators appointed by the Crown. I should not like to give the sheriff or sheriff-substitute the appointment. A valuator, I should think, ought to be appointed by the Crown and be free from all local influence.

Digitized by Google

Compensation for cumulative fertility.

51,911. And you consider that compensation should be given for what you call cumulative fertility?—I do.

51,912. How would you carry that out; would there be a valuation at the incoming of the tenant and one at his outgoing?—Yes, that would require to be made; and it might be scheduled what state the farm was in—whether it was free from weeds and all necessary particulars. Then at the termination of the tenancy this record should be referred to, and a comparison made with it. There are difficulties that might crop up, but on the whole I think that might be done with advantage.

51,913. Is it not the tenant farmer's duty under any agreement, and his interest also, to farm as well as possible?—Yes, it would be his interest if he were to get compensation for his improvements at the end of his lease, but not otherwise.

51,914. I am speaking of good farming, pure and simple?—Yes. I can easily see that provisions would not be necessary at all for a good farmer or a good landlord. But what we have to provide against is bad tenants and bad landlords.

Compensation for deterioration.

51,915. As regards bad tenants you would provide that they should pay for deterioration?—Most certainly. There are some tenants who would simply run down the best farm in five years. Then as to bad tenants at the end of a lease they are generally in a better position than good ones, because no one would compete for their farms. That is our difficulty.

51,916. (*Mr. Clay.*) If he is not hopelessly bad he gets a chance again?—Well, he generally does get his farm again. Whereas his neighbour who has been improving has a host of competitors.

51,917. (*Lord Cobham.*) We generally find that a bad farmer in England is ruined before the end of his 19 years?—I do not mean an absolutely reckless farmer. I mean a farmer who simply goes jogging along and takes things easy. That man may get a good farm, and at the end of his lease it is worse than when he got it. He has no difficulty in getting a renewal because nobody wants it. But if I improve my farm and make it worth three times the money then I run a risk of being ruined by my own improvements. That is what I object to.

51,918. But notwithstanding all these improvements the rent is frequently not maintained?—No, it would not under present circumstances, the value of produce has so much fallen.

51,919. So that if the depression continues what fund is the landlord to give you compensation out of?—Oh, I think the depression is quite as bad for the landlord as for the tenant.

Depression in Banffshire.

51,920. Altogether, you consider that the agricultural depression is very strongly marked in Banffshire?—It is very serious.

51,921. More so than in the rest of Scotland?—I do not know that. It is quite as bad in Aberdeenshire. It is better in the lower district of Morayshire, where they have a better chance. We have had really a series of bad years as well as of bad prices. Bad years do not affect so much the coast farms.

51,922. There is still a considerable competition for farms?—Yes, there was three or four years ago. There is not so much now. You could always get a tenant for a farm up to two years ago; this last year it is not quite so easy, possibly on account of the bad year.

51,923. (*Mr. Chaplin.*) Perhaps they are beginning to find out that there is no remedy?—Well I suppose it was thought that things were at the bottom, and would rise. But the price of agricultural produce and cattle is exceedingly low. Then the labour difficulty has got rather worse, and the importation of live cattle has been very much against Banffshire. It reduces the price of live stock and the income of the tenant is very much reduced in consequence.

Importation of foreign cattle.

51,924. What are your opinions on the importation of stock from abroad?—As a breeding country and a feeding country, we do not want Canadian cattle. The outcry for Canadian cattle arises from two or three big farmers who are in a position to make a great noise. Breeding and feeding cattle is the industry of Banffshire, and I do not know that there are thirty or more farmers in the county who want Canadian cattle. We entirely object to our industry being hampered by these restrictions imposed when pleuro-pneumonia is brought into the country from abroad.

51,925. You are not afraid of the importation of disease?—I am very much afraid of the importation of disease. But I object to these store cattle coming in in enormous numbers, bringing disease, and causing prohibitive regulations to be enforced all over the country against the movement of cattle.

51,926. Would you stop it universally?—I would not allow store cattle to come from America at all. We do not want them. It discourages the breeding of cattle in this country.

51,927. (*Mr. Chaplin.*) You are aware that they do not come in just now?—And that is what we want to have maintained. In our small county we were reduced 1,300 cows in one year from the effects of the risks attendant on store cattle coming in from Canada.

51,928. (*Lord Cobham.*) Do you appreciate the objection raised by Norfolk and other non-breeding parts of the country against the stoppage of store cattle?—Well, I do not know the circumstances of Norfolk sufficiently. But all I say is that if they are not breeding and feeding they are not good farmers at all.

51,929. Is it your opinion that breeding can be practised generally?—Yes; I am secretary of our local farmers' club, and we have 21 herds of pedigree polled cattle in my district. I have information here from Sir George Macpherson Grant, who has one of the largest and finest herds with about 240 pedigree cattle on his farm.

51,930. You do not know the difficulties of Norfolk and Suffolk?—I do not, but I should advise them to breed and feed.

51,931. (*Mr. Chaplin.*) You are speaking of Banffshire, Morayshire, and Aberdeenshire. Breeding and feeding are main industries there also?—Yes.

51,932. Does it extend beyond these counties, so far as you know?—They are not so largely breeders in the lower districts of Morayshire. They buy a good many cattle from Inverness-shire.

51,933. Is there anything to prevent the extension of breeding all over to other parts of Scotland?—Nothing whatever.

51,934. If the store cattle of America were permanently kept out you think breeding would be largely developed?—Certainly; we cannot go on breeding cattle with the continuance of risks from America.

51,935. You are aware that we are free now from pleuro?—Yes, and we are going in for increasing cows at this moment.

Cattle breeding in Banffshire.

51,936. (*Mr. Channing.*) Is it the crossed breeds or the polled angus you have in Banffshire?—Chiefly polled Aberdeen angus. There are 24 herds in the upper district of the county, all pedigree cattle. Three are short horn herds and 21 are black-polled cattle, the cattle of the country. The stock bulls from these are distributed all over Scotland and into England. We are practically a county of black-polled cattle. And the commercial stocks of the county are reared from the bulls of these pedigree herds. The prime beef sent up from Banffshire is the result of breeding black-polled bulls with the commercial stock of the county.

51,937. Ordinary mixed cattle?—Yes. There are 24 farmers in the upper district, pedigree breeders.

Tuberculosis.

51,938. (*Lord Cobham.*) In this connexion you wish to say something about tuberculosis?—Yes. Mr. Hope states in his report that tuberculosis is exceedingly prevalent in pedigree herds of cattle, and speaks rather pointedly to the fact, or the alleged fact, that tuberculosis is prevalent in pedigree herds which are closely inbred. Well, we deny it utterly. I have the authority of several of the largest and most important breeders of black-polled stock, Sir George Macpherson Grant, the Dowager Countess of Seafield, and Mr. Findlay, of Aberlour, for stating that it is not the case. Sir George Macpherson Grant has 240 pedigree cattle on his farm, and he invites Mr. Hope to select any animal he chooses from the herd, and if it is affected with tuberculosis he will make him a present of it. The Countess Dowager of Seafield has been making tests for tuberculosis, and in one case they killed a very valuable cow.

51,939–40. (*Mr. Chaplin.*) By the experiment?—No. The experiment showed that possibly the animal was affected with tubercles; she was a two-year-old heifer, but after she was killed there was positively no trace of tuberculosis in her. This cow was the produce of an old cow that died in calving and which was affected with tuberculosis, and the test was made to ascertain whether or not this old cow had transmitted the disease to her calf. But it was not the case. The manager states that he applied the test to his dairy cows, crosses between short horns and Ayrshires, and everyone of them showed signs of being affected

Digitized by Google

Mr. A. R Stuart. 6 June 1895.

according to the test, with tuberculosis. But as I say they killed one, and there was nothing the matter with it.

51,941. Then you do not agree with Mr. Hope?—We strongly disagree with Mr. Hope, and we should like to know where Mr. Hope got his evidence; and we should like to know why he made a report of this kind without making more inquiry.

51,942. (*Mr. Gilmour.*) The cow was killed not because she was affected by the tuberculine test, but because she was the calf of an old cow that had been affected by tuberculosis?—Yes. As I said they applied the test to the dairy cow, and they killed this particular one, and she was absolutely free from the disease.

51,943. Did the test indicate that she had got disease?—Yes. But they found after she was killed that there was no tuberculosis.

Sale foreign meat.

51,944. (*Lord Cobham.*) Do you consider that Scottish farmers lose much by the sale of foreign meat as home produce?—I do. We very much object to having foreign beef marked from Banffshire and Aberdeenshire, and we object to our beef being sold in Smithfield along with foreign meat. I was there last week, and I could not tell the carcase of a sheep from Banffshire and one from New Zealand. I do not think any man could tell the difference between a carcase of mutton grown in New Zealand and one grown in Banffshire.

51,945. If it is equally good why should it not fetch the same price?—I think we should be entitled to protect ourselves against salesmen who sell as best Scotch, foreign beef and mutton.

51,946. You think the buyer should know what he is buying?—Yes.

51,947. (*Mr. Lambert.*) Is not that case met by the Trades Merchandise Marks Act?—It has utterly failed. We have agitated; but the Board of Agriculture have said, "Bring up a test case." We, in Banffshire cannot go to London and watch. If the Board of Agriculture was worth anything at all it would put on detectives to do that.

51,948. (*Mr. Clay.*) Have you made application to the Board of Agriculture?—Yes.

51,949. How long since?—Last year. We were agitating last year through our Member of Parliament, and we were told we should have to get up a test case, and make out a case in London.

51,950. (*Mr. Everett.*) Who is your member?—Sir William Wedderburn.

51,951. (*Mr. Lambert.*) If a test case is brought before the Board they will bring a prosecution. Surely it is reasonable that you should take steps to bring a test case before them. If the grievance is very strong, and if you feel assured that a large number of frauds are being committed, it would be easy enough to bring a test case?—It is not easy for a farmers' club in the north of Scotland to do anything of the kind. It would be easier for the Board of Agriculture to employ detectives. It is absolutely worthless to make concessions of that kind to farmers in the North.

51,952. The Board of Agriculture have not unlimited funds?—Well, we have tried repeatedly to get the Board to take up the matter, but we have always been referred to a test case.

51,953. (*Lord Cobham.*) Did you find it impossible to distinguish between New Zealand and Banffshire mutton?—Well, I never saw New Zealand mutton before in my life. I was in the market, and one of the salesmen there asked me to test which was the Banffshire mutton and which the New Zealand. I confess I could not tell to which department it belonged.

51,954. Are you familiar with the taste?—I am not an expert at all. All I can say is that here the mutton looked as good as the other.

51,955. The buyer of course pays less for New Zealand mutton?—That is the wholesale buyer. But it is sent to the butcher's shop and sold at the same price as home mutton. That is what we object to.

51,956. (*Captain Thomas.*) All New Zealand mutton is frozen. Surely it is perfectly easy to tell that from mutton which has not been frozen?—Well, I could not tell it.

51,957. (*Lord Cobham.*) Can you give us the quoted prices of New Zealand and British mutton?—They were selling the New Zealand mutton at 3½*d.* and 4*d.* per lb.

51,958. (*Mr. Lambert.*) Do you know, of your own knowledge, whether it is possible for any test to be applied between foreign meat and English meat unless of course it has been frozen beforehand?—Well, I should know the difference between a Canadian-fed bullock and a Banffshire-fed bullock.

Mr. A. R. Stuart. 6 June 1895.

51,959. If the carcases were hung up side by side could you tell the difference between a Canadian bullock sent to Glasgow, killed there, and sent to London, and a Banffshire bullock killed in Banffshire and sent to London?—I could tell the carcase of a black polled bullock with my eyes shut.

Railway rates.

51,960. (*Lord Cobham.*) Do you consider that foreign competition bears injuriously on the home producer?—Yes, for instance, railway companies give them preferential rates. They can send meat from Canada to London at about the same rate as I can send it from Banffshire. I object to that very much. I think railway companies have no right to make these preferential rates as against the home producer.

51,961. But you can send beef to London at a lower rate per mile than farmers can between you and London?—Yes; I should not be able to hold my farm unless I could do that. I should not be able to pay my rent at all.

51,962. Do you send any by sea?—Yes, we send it by sea to London from Aberdeen, and at a somewhat lower rate than the railway.

51,963. How long does it take to go?—From Saturday to Monday.

51,964. (*Mr. Chaplin.*) Can you send it in all weathers?—Not very well. It is not so secure.

51,965. (*Lord Cobham.*) Your position is that Irishmen and Scotchmen should have preferential rates but not the foreigner?—I do not say that; I say we should have fair play. We should have equal rates with the Yankees.

51,966. Well you have a preferential rate as against Northampton. You have a lower mileage rate from Banffshire to London than they have from Northampton?—I do not know that of my own knowledge, but I should think it is very possible, that the south of Scotland farmers by prohibitive rates are kept out of the London market.

Ground game.

51,967. Does the Ground Game Act work satisfactorily in Banffshire?—On some farms surrounded by plantations the tenants complain very much that the rabbits come out from the plantations in the morning and night and destroy the crops. Of course if you fire a gun they all scamper off like a flock of sheep. They feel that it is a considerable grievance that there are no means of protection from plantations. I would suggest that the landlords should be asked to fence the plantations with wire netting. Either that or give the tenants right to protect themselves.

51,967*a*. Do you say that is general or exceptional?—In all parts of the county there is a large quantity of wood for shelter and there are many plantations in Banffshire. But the Ground Game Act has been of great value to farmers.

51,968. Do the tenants often shoot?—They do not exercise that right very much. But the landlord keeps the rabbits down. He has more inducement to keep them down since the passing of the Act. It has been of great value to the farmer, and there has never been any feeling about it between landlord and tenant. The Act has worked exceedingly well, but in any further amendment of it provision must be made to meet the case of plantations.

State loans to tenants.

51,969. Do you think State loans could be advantageously made to the tenant?—Yes. I think they could to the class of tenant that is in the habit of improving their farms and doing their own buildings. They might get advances on the security of these buildings from Government just as well as the landlord.

51,970. Do you think that would be sufficient security to protect the State against loss?—I think it would.

51,971. (*Mr. Chaplin.*) How can you give them as security when they belong to somebody else?

51,972. (*Lord Cobham.*) You would pledge the building in security?—Surely.

51,973. Not to the extent of the whole cost?—Possibly three-fourths at the outside.

51,974. Do you think that would be largely taken advantage of in Scotland?—In our part of Scotland it would, for there the tenants really erect the buildings, and do their own drainage.

51,975. It would be necessary then that there should be some State supervision not only at the time of their erection, but to see that the buildings are kept in order?—

Digitized by Google

Mr. A. R. Stuart. 6 June 1895.

I think that the arbitrator under the amended Agricultural Holdings Act might be named as superintendent.

51,976. The rate of interest would have to be low?—Yes.

51,977. But the loan would have to be repayable before the termination of the lease, would it not?—I do not believe in a lease at all. I believe in a two-years' notice to quit on either side as the most satisfactory tenure of all. We have been losing all our money by leases.

51,978. Then the loan, in your view, should attach to the building and not to the tenant?—Yes. It should be attached to improvements on the farm, and the repayment should be spread over a considerable number of years, in order to keep the rate of interest low. Houses are quite good for 30 years; drains are not.

51,979. That would mean something like 4 per cent.?—Yes, to pay up the principal. Drains would not last for more than 20 years unless they are on heavy land.

51,980. The drainage is generally done by the tenant?—As a rule. All the drainage has been stopped by us for the last few years, except by landlords like Mr. Findlay, who can afford to do it for the tenants.

51,981. (*Mr. Clay.*) Does the tenant supply the tiles?—He supplies everything. In some cases, of course, when a bargain is made, the tenant will cut and fill the drains, and the landlord will supply the tiles. Then he has no compensation to pay.

Rates.

51,982. (*Lord Cobham.*) Do you consider that the incidence of local rates should be re-adjusted?—I do not object to the rates. They are not very high with us. I only pay 1*s.* 2*d.* per £ for tenants' rates.

51,983. Have they declined since your lease began?—The poor rate and the school rate are both declining. But what we object to is that in our parish there is a considerable village arising, and the Duke of Fife has feued some 40 acres of land at 8*l.* an acre, and that land is removed from the valuation roll altogether for purposes of local taxation. Yet the Duke or his successor is getting eight times the amount for it that he formerly did.

51,984. How does he escape?—Well, it becomes a ground annual, and is not taxed. This is how it stands. The valuation of that 40 acres formerly say was 40*l.* a year, and we were drawing a yearly assessment upon that 40*l.* But immediately the Duke feus the ground and the value becomes eight times 40, or 320*l.* a year, we get no assessment upon it.

51,985. (*Mr. Gilmour.*) But the houses built on the feu are rated, and to that extent the parish is the gainer?—That is quite true, but the superior escapes scot free without taxation at all.

51,986. (*Mr. Dalton.*) You get increased rates on the additional value of the houses?—Yes.

51,987. (*Mr. Gilmour.*) It is very much increased. The person who feus pays, but the superior escapes all the real taxation?—It is often worse than that, for the feu duty is deducted from the annual value of the house before it is entered on the rolls for assessment purposes. If I paid 6*l.* of feu duty and 24*l.* was the value of the house the 6*l.* would be deducted from the 24*l.*, and 18*l.* entered.

51,988. You do not complain of the taxation but that the burden is put on the wrong shoulder?—Just so.

51,989. (*Mr. Everett.*) 6*l.* is deducted from the value of the house, and to that extent there is a loss to the parish?—Yes. It is a great grievance that the annual feu duty paid to the superior is deducted from the annual value of the house before it is put on the roll for assessment purposes.

51,990. (*Sir Nigel Kingscote.*) Did I understand you to say that since you became a tenant farmer on the Duke of Fife's estate you purchased some land on that estate?—Yes, a small piece of land.

51,991. To what extent?—I think it amounts to about 10 acres. It is good land for feuing purposes at the railway junction which surrounds it. It was desirable for my purpose to get it. I am Chairman of the Auction Mart Company.

51,992. It was not for agricultural purposes?—Not that bit of land. It is of no value for agricultural purposes.

51,993. When you referred to the Duke of Richmond's estate, may I ask if that is the Glenlivet district?—No. It is in the Mortloch district. They define it as being in Glenlivet, but it is not really so. The Glenlivet district proper is a very solitary district, but I think the Duke of Richmond has a very wide country that he calls "the Glenlivet collection."

Mr. A. R. Stuart. 6 June 1895.

51,994. Do I understand you to say that there have been several cases of bankruptcy among the tenants on that estate?—I can give you one case.

Bankrupt tenants.

51,995. I understood you to say there had been several?—I can give you one illustration on the Duke's property.

51,996. I was confining myself to the Duke's property; and I thought you said there were several?—I can only give you one on the Duke's property.

51,997. When did it take place?—The tenant became bankrupt about 1884 I think.

Reduction of rents.

51,998. You said, I believe, that the reduction of rents upon that estate had been something like 30 per cent.?—The reduction of rent on this particular farm was from 317*l.* to 200*l.*, which is the rent at present paid, and there have been four changes of tenants since then. There is a reduction of rent on that farm of 36¾ per cent.

51,999. Is that a singular exception on that estate?—I think the Duke of Richmond is the best landlord in Scotland.

52,000. That is an exceptional case on the Duke's property?—Yes. One of the tenants wrote me a letter complaining of the Duke's action. When the old tenant failed he was taken as a new tenant and he only kept the farm for four years. He wanted 40*l.* as reduction in the rent, but the Duke would not give it to him; but then the Duke let the farm to the next tenant at 70*l.* reduction.

52,001. As a matter of fact in the Glenlivet district the Duke of Richmond's tenants and their families have been there for a great many years?—That is so.

Official referees.

52,002. (*Mr. Everett.*) You stated that you thought the Crown should appoint the valuator between landlord and tenant, and you object to his being a local man. Now do you think it would be possible to bring into your district say a man from near Edinburgh, who knows nothing of the locality, or the soil, or the district?—No, sir. I think you have misunderstood me. I certainly insist that the valuator shall be a man not only known in the county, but in the immediate district. What I wished to say was that the sheriff of the county should not have the appointment of the man.

52,003. But you said you would not have a local man. You would like to correct that?—I would not have the appointment made locally. I wish a local man appointed, but I would not have the appointment in the hands of the sheriff of the county. I should have him appointed by the Board of Agriculture or the Crown.

Exportation of stock.

52,004. (*Mr. Whitehead.*) Is the exportation of pedigree stock a source of profit to the Banffshire farmer?—It is now stopped entirely. The Americans have put a prohibitive duty on the importation of stock into that country, and insist on such quarantine regulations that it is impossible without great sacrifices on the part of the purchaser to get stock into the country. At one time it was a very large business.

52,005. At what time would the exportation cease?—I should think it is two or three years. Six or seven years ago we were getting very large prices for pedigree cattle. They were in great demand. I could get 60*l.* for a two-year-old without much pedigree at all.

52,006. Does that apply to Argentina and other countries?—We never sent many to Argentina. It was principally to the United States.

52,007. Then, practically, there is very little exportation of stock now?—It has ceased to exist at all.

Official referees.

52,008. (*Mr. Clay.*) Your idea of the appointment of an official referee is to have men appointed practically acquainted with the agriculture of the district?—Yes. He must be a practical man, and he must be thoroughly aware of the conditions affecting the agriculture of the district, climate, soil, and such like, and what it is likely to produce. I would not take a man from the lower district of my county to be valuator in the upper district. He would probably know nothing of my conditions at all.

52,009. A man above suspicion who would favour neither landlord nor tenant?—Thoroughly. I was saying that the upper district of my county is very different from the lower, and the same quantity of land would not give the same return at all.

52,010. Who would you have to suggest a man of that kind?—I would suggest practical farmers.

52,011. You say you would not have the sheriff; would it be the county council?—I think it should be left to the Crown as I suggested.

52,012. But who is the Crown to apply to?—Possibly it might be done through the county council.

Digitized by Google

Mr. A. R. Stuart. 6 June 1895.

52,013. If the county council were to suggest the names of a few men and put them before the Board of Agriculture, would that suit you?—Yes. But there is a danger of the county council having the sole appointment in their hands. Possibly two-thirds of the county council have nothing to do with farming at all, and they would appoint men who knew nothing about farming. A large proportion of the county council of Banffshire represent fishing villages; I should never give them power to appoint an arbiter for farm valuations.

52,014. Then who are the people who would suggest men to the Board of Agriculture?—Of course in a good many agricultural counties I should think the county council would be the best body, and the most likely body to appoint the best men. But in a county such as ours I should be slow to give it to the county council, which is dominated to some extent by fishermen.

52,015. Then who would you give it to?—I have some difficulty in suggesting anybody. It might be the agricultural representatives in the county council and not the men drawn from the fishing villages.

52,016. And you would have no objection to have these names sent to the Board of Agriculture?—I approve of that.

52,017. That would be a good safeguard?—Yes.

52,018. Who would pay these men?—I would pay them from national funds, with possibly fees where they had cases of arbitration. But I should pay them, certainly, from the Consolidated Fund, or some national fund. I should not pay them locally.

Importation of foreign cattle.

52,019. As to the breeding of cattle, do you consider that many counties are rather remiss in not keeping up the breeding of cattle?—It must be because we have a clamour from some of the counties in Scotland for store cattle.

52,020. Does not that come from a few individuals?—I understand it comes from a few towns which has a large sum of money invested in cattle wharfs and shedding.

52,021. Like the Dundee Harbour Commissioners?—That is a good illustration.

52,022. The principal cry comes from them?—And some interested parties representing harbour interests.

52,023. And you consider it is only a minority that want the importation of Canadian cattle?—A very insignificant minority of farmers.

52,024. And if they turned their attention to the breeding of cattle there would not be such a dearth of lean cattle to put into the coverts?—Yes, that is so; and we should have a number more of small holdings; because those of us who purchase store cattle in our own country find that the best class of cattle we get from small holdings. They give personal attention to their feeding, and they are the best class of cattle we can get. Big farmers cannot give the same personal attention to the rearing of stock as those small farmers.

52,025. Is it your opinion, from experience, that the fear of imported disease has deterred many small farms, and often large ones, from going more liberally into the rearing of cattle?—No doubt of that whatever.

52,026. And that has been the determination of the country at large?—Yes. To the feeders themselves, because it has increased the price of their stores.

Official referees.

52,027. (*Mr. Gilmour.*) In every county in Scotland we have a local authoity dealing with the Contagious Diseases Animals Act. Would that body not be the best to nominate as valuators or arbiters, a number of well-known men in the district?—Yes.

52,028. Because they are men who are naturally interested in agricultural questions?—Quite so.

Buildings erected by tenants.

52,029. Were there any stipulations laid down in your own case with regard to the class of buildings you were to erect—the substantiality of them—or is anything of that kind required in your district?—In my case I submitted—it was quite optional—my plan to the factor for his approval.

52,030. Is that the usual way in which it is carried out?—No.

52,031. Are these buildings of yours of a substantial nature?—They are of a permanent nature; as permanent as buildings can be.

52,032. In these cases the tenant knows he can get value for them when he goes out?—Just so, if stipulated for specially.

Small holdings.

52,033. You speak of the necessity for having nurseries for farm labourers, and you spoke of small holdings. Do you mean the croft, pure and simple, or something larger than that?—What we want is the small farm that can be worked by a single pair of horses, 60 to 70 acres. Any landlord who has farms of that kind can easily have applications for it.

Mr. A. R. Stuart. 6 June 1895.

52,034. And these men, from your experience, do they make a living?—Yes. On a large farm they have to pay for labourers. Here the whole of the family, his sons and his daughters, and his wife and himself work like slaves.

52,035. And is that a desirable position for a man to be in?—It is, I think, they are the happiest people alive.

52,036. Slaves?—They are practically in the position of working 14 to 16 hours a day, but you will find they are the happiest homes in Scotland. They are reared up together, go into the world, and make the best men and women in the country, because of the training received under their father's eye.

52,037. Do you think you could get sufficient men with that inducement to settle down on the land?—I think I could, 40 offers for every vacant farm.

52,038. Although they would make better wages by working for some other persons?—Yes. They have no comfort as farm servants. They are put up in a bothy and herded like cattle. My horseman, for example, who as a married man, has to walk five or six miles once in three weeks to see his wife and family. There is no accommodation on the farm for him, and really men under such conditions have no comfort, and can exercise no supervision over the up-bringing of their families, and that is the way men are leaving the business.

52,039. (*Mr. Clay.*) If the landlord were to build cottages it would be different?—Very different.

52,040. That is the cure?—That is one cure, and small holdings is the other.

Compensation for improvements.

52,041. (*Mr. Chaplin.*) You have told us that you got, or will get, compensation for improvements under the agreement?—Yes.

52,042. Could not others do the same?—Yes, if they were in the position of dictating terms, but every tenant is not able to make a bargain of that kind.

52,043. Is there some disposition on the part of landowners or agents to refuse to make agreements of that kind?—I find, as a rule, that if I want a farm, and object to the terms or conditions of the lease, I am very likely told, "Well, if you object, do not offer."

52,044. You know of cases then where an agreement has been asked for for this kind of compensation, and where it has been refused?—Oh certainly; it has been refused to myself. I can give you an illustration. My own lease is coming to a close, and the Duke of Fife, or rather his factor, offered me last week a farm that in 1875 I offered 1,000*l.* of a grassum to the tenant for that farm, but he would not accept it. The factor offered me this farm last week at a reduced rent, and I could not accept it.

52,045. Was that because you did not like the terms and conditions of the lease?—I could get that farm now at a reduced rent, and without any grassum or premium whatever.

52,046. In taking that farm you could get terms as regards compensation?—Easy terms.

52,047. If the tenants were to take the same line as you do, they would get compensation by agreement?—This is a farm which would require heavy permanent improvements, but it is in a district that we very much object to; it is in a clay district.

52,048. What I am trying to arrive at is this: what reason is there to prevent tenants from making reasonable arrangements for themselves?—Under the Act?

52,049. With or without the Act. It appears that you are able to do it satisfactorily, and I want to know why any others do not. Is it ignorance, or what?—I do not think so. I think I was able to make a special bargain to get compensation for myself in this way, that the farm I held was in a hopeless condition of deterioration. There was not a building on it. I had to build new houses, and drain the whole land, and there were very few offerers for it.

52,050. You got it practically on your own terms?—I offered a certain rent for it, and I got it. Of course, it was quite clearly seen that I would have to get some compensation.

52,051. (*Mr. Channing.*) What was the date of that?—1876.

Digitized by Google

Mr. A. R. Stuart. 6 June 1895.

52,052. (*Mr. Dalton.*) Did you agree to lay out money on it?—I was told that I would have to provide houses for myself. It was originally two farms; both the tenants of which had become bankrupt.

State loans to tenants.

52,053. (*Mr. Chaplin.*) You told us that all improvements have been stopped in your district by the farmers?—They have.

52,054. You propose that they should begin them again by the help of the State?—To some extent.

52,055. I do not quite follow what security the tenant farmer would have to offer for such a loan?—He would have the buildings themselves.

52,056. How could buildings erected on land which does not belong to him be offered in security for a loan?—I assume that provision is made in the Act we are seeking giving the tenant a right to the buildings he has himself erected.

Dual ownership.

52,057. In fact the result of what you propose would be to create something like dual ownership?—That is the position in our county already. That is practically the position now. Under this agreement of mine, for example, we have practically arrived at dual ownership. I have about as much interest in the land as the Duke of Fife has.

52,058. Do you think that is a desirable system to try and establish, having regard to the fact of what has occurred in Ireland, and that all parties have been engaged for some years in trying to get rid of it?—I think if landlords would make the necessary improvements themselves no tenant would seek to put out his capital on any landlord's farm if he could get the necessary buildings and improvements to carry on his farm. But if the landlord will not make them I think the tenant should have the option of doing so.

52,059. Then may I take it that the drift of your opinion is this—that you do not think a system approaching to dual ownership is desirable if it can be avoided?—Certainly.

52,060. But sooner than not be in the possession of the necessary improvements you would accept a system which would lead to that?—Quite so.

Bankrupt tenants.

52,061. (*Mr. Lambert.*) I think you said just now there were six tenants bankrupt out of 14. I presume they had been paying rent the whole of the time?—Yes.

52,062. And the reduction of rent—33 per cent.—took place when the tenancy changed?—When the new tenant got the farm.

52,063. Did the old tenants get any reduction?—The old tenants were refused a reduction in several of these cases.

52,064. Although by-and-by at that rent they became bankrupt?—They did.

52,065. You made the remark that farmers were losing money by leases. That is, I presume, because they have to pay the rent they have agreed to pay, notwithstanding that agricultural produce has fallen to an enormous extent?—That is so.

52,066. Would you agree to the security that is afforded by lease, provided that a fair rent could be arrived at?—Yes.

Notice to quit.

52,067. Do you think it would be conducive to good farming if farmers were able to turn out at the end of 12 months' or 2 years' notice?—I think it would make no difference if there was a proper Act to give a tenant value for his improvements on quitting his holding or as a sitting tenant. I am quite prepared to leave my farm on a two years' notice if I get full compensation for all the improvements I have effected, and which added to the letting value of the farm. In fact we have practically arrived at that position now, as every 19 years' lease, without exception, has a break at five years.

Demand for small holdings.

52,068. Is there any difficulty in finding tenants?—Not for small holdings.

52,069. How many competitors would there be for a small farm?—For a small farm with a pair of horses you would get 20 or 30 or 40, according to the desirableness of the holding; for a big farm, such as I have, the landlord would be looking about for tenants.

52,070. On these smaller farms are the factors more fastidious in making conditions and do they more strictly adhere to those which are laid down?—No, I do not think that they are particularly onerous in making conditions. Small tenants have made our part of the country; but they have not always been so well protected as the large tenant in making his bargain with the factor. The small tenants have actually made our county what it is. They have improved the whole area of the farms, erected the buildings themselves, and rents have been increased upon them for their own improvements.

Mr. A. R. Stuart. 6 June 1895.

52,071. Does not that rather point to one fact, that small tenants, in consequence of greater competition for farms, are not able to make so good a bargain with the factor?—The protection they need is not against landlord or factor, but against themselves. They must give competitive rents.

52,072. And the competitive rents are alongside of their own improvements?—Certainly. The landlord says, I can get so-and-so for it, and the tenant has to give that or go.

The Agricultural Holdings Act.

52,073. You think tenants are frequently deterred from taking advantage of the Agricultural Holdings Act, by the fact that the landlord comes in with a heavy counterclaim?—Yes.

52,074. And also from the expensive machinery of the Act?—Quite so.

Ground game.

52,075. In the case of the Ground Game Act a grievance exists where farms are surrounded by covers?—Very much so. The tenant has no means of protecting himself against the rabbits which come out from these plantations.

52,076. Would you advocate the tenant having the right to kill ground game where he liked?—I do not think that the tenant wants to kill the ground game himself. He has enough to do to attend to his work.

52,077. He wants to protect himself against damage?—Yes.

52,078. And if he is not protected from damage he should have the right to do so?—Yes. A Scotch tenant is not like an English one. He does not ride about on a horse with a pack of dogs following at his tail. He is a labourer.

Particulars of witness's farm.

52,079. (*Mr. Channing.*) You took your farm in 1876?—Yes.

52,080. Do I understand that the rent at which you took your arable land then would be about 13*s.* an acre?—Yes.

52,081. What would be the rent of similar land in the district at that time?—1*l.* an acre.

52,082. So that you had your land about 7*s.* an acre cheaper. Was that in respect both of the condition of the land and also of your improvements?—No. But solely from the fact that both the tenants who left these farms went out bankrupt, and had reduced the farms to an utterly non-paying condition.

52,083. You gave as the produce of the farm, 13 bushels of oats and 5 bushels of barley—tell us how that is arrived at in Scotland?—The crop of 1876 was valued to me by valuators appointed by the outgoing and the incoming tenant and they put it at 13 bushels of oats to the acre and five bushels of barley. When I threshed that crop out I did not get anything like the estimate of the valuators and the barley was only 43 lbs. instead of 56 lbs. per bushel.

52,084. What time of the year was it?—In September before the crops were removed from the ground. They were valued on the ground by the valuators.

52,085. You took the farms with the standing crops?—I had to pay for the standing crops.

52,086. This 7*s.* an acre—did you take that allowance as an equivalent for the bad condition of the farm without reference to your improvements?—Oh! it was a poor equivalent. It took 10 or 12 years to get the farm into a paying condition.

52,087. So that you think it would be ample allowance if you assigned the whole of the 7*s.* to the restoration of the condition of the farm?—Well it gave me a lesson never to take a farm run down in condition. I would rather pay a big rent and a big grassum for a farm in good order.

52,088. Then 7*s.* an acre in your opinion was not adequate to pay for the restoration of the land?—Quite inadequate.

52,089. Is it your contention that the rent since then has left you no interest whatever on the outlay you made for permanent improvements?—That is so.

52,090. What does your agreement give you—does it give you merely the remaining value of your improvements at the end of the tenancy?—Quite so. They will value the remaining value of the buildings, drains, fences, &c.

52,091. And nothing whatever for the interest of the money during the 19 years?—Nothing whatever.

52,092. And no sinking fund?—Nothing whatever.

52,093. Where landlords have carried out such improvements themselves have they not charged interest on the money and also something for a sinking fund?—Yes.

Digitized by Google

Mr. A. R. Stuart.

6 June 1896.

52,094. He charges the tenant?—Who pays up both principal and interest.

Compensation for improvements.

52,095. Your point is that the tenant does not get interest on his money or any repayment on his outlay, and only gets the remaining value of his improvements at the end of his tenancy, whereas the landlord charges interest and a small sum to repay the outlay, and is consequently in a better position than the incoming tenant?—The landlord certainly is in that position when he gets the tenant to pay for the improvement.

52,096. He charges interest on the borrowed money?—Yes, 6½ per cent. The tenant paid up the capital and interest in the course of a 19 years' lease, and then he was charged a larger rent on these improvements in his next lease.

The letting of farms.

52,097. You say most of the farms are let by competition?—Yes. But not so much on the Duke of Richmond's estate.

52,098. I was just going to say that the Duke stated that he did not put up his farms to competition?—It is the exception for him to do so.

52,099. As a rule the other good landlords in Scotland have preferred to go by valuation?—That is so.

52,100. But in the majority of cases it would be by competition?—Certainly, in the majority of cases. All good landlords should see that the tenant is able to live.

Compensation for diminished value of holding.

52,101. You spoke about five acres of land having been taken off your brother-in-law's farm; in your Scotch Act you have no compensation in cases of the resumption of land by the landlord?—No. He could come in and take all the farm, leaving me only five acres, and I would only get a proportionate reduction of rent.

52,102. You have no compensation as in the English Act for diminished value of the rest of the holding?—None whatever He could take 1,200 acres and leave me with five.

52,103. That is a serious blot on your Scotch Act you would wish to see removed?—Yes.

Farming capital.

52,104. (*Mr. Dalton.*) How much capital have you embarked in your farm in improvements and stock?—I should think about 3,000*l.*

52,105. What proportion do they bear to each other, how much has been invested in improvements, and how much in stock?—I should say about 1,200*l.* in permanent improvements.

52,106. And that 1,200*l.* you will get back when you give up the farm?—That was their cost to me, and I will get value for them.

52,107. That will be your claim for improvements?—And the arbiters will settle what I have to get.

52,108. What capital is required for these small farms?—Not quite so much proportionately as for large ones.

52,109. Not quite so much per acre?—A small tenant can go into a farm at 5*l.*, 6*l.*, or 7*l.* an acre.

52,110. How many acres do you say constitutes a small farm?—From 50 to 70 acres.

52,111. And you have many applicants for that class of farm?—Very many.

52,112. They must have put by a lot of money as labourers to have that capital?—Well, themselves and their families. They work together as a family.

52,113. They would want to have 300*l.* or so?—They easily save the money.

52,114. The increase of wages seems to point that the labourer is in a very good condition?—So far as wages are concerned he is in an exceptional position.

Cottages.

52,115. But the want of cottages is a drawback?—Yes.

52,116. With regard to the lack of cottages, is the Housing of the Working Classes Act in force in Scotland?—No.

52,117. Are you sure?—Well, as local authority under the Public Health Act we may pull down every cottage in Banffshire if it is insanitary, but we may not build one—that is, we cannot ask the landlord to build one.

52,118. There is a part of the English Act which enables local authorities, where there is a deficiency of accommodation for working men, to build?—I never heard of it.

52,119. It has never been put in force?—I should have known of it if it had applied to Scotland.

52,120. Would it answer to have such a law in force?—Very much so.

Mr. A. R. Stuart.

6 June 1896.

52,121. In the case you mentioned, where compensation to the extent of 37*l.* was allowed, and the expenses were 21*l.*, what was the claim made by the tenant?—I am not quite certain. I only know the result of the arbitration.

52,122. Did each have to pay his own expenses?—Yes, half-and-half. It was the arbiters' clerks and agents that brought up the bill.

52,123. Are there many farms unlet in your neighbourhood?—Not one.

52,124. And when your lease comes to an end next year, would you keep your farm on at the same rent?—Certainly not.

Compensation to sitting tenant.

52,125. (*Mr. Clay.*) Suppose you renew the lease, will you be paid for your permanent improvements?—That depends upon the bargain.

52,126. If you renew the lease, the presumption is that you will not receive payment?—It puts the tenant in a very awkward position. We have to fix the value of the improvements, and then we have to arrive at what will be the rent for the next term of years. If I were to insist on getting my valuation, then I could not very well stay on the farm.

Prices.

52,127. (*Mr. Dalton.*) You attribute the depression in your part of the country to the fall of prices?—Yes, chiefly of beef and barley. We have cultivated barley very largely. We have 27 distilleries in my neighbourhood, and in 1876 I was getting 36*s.*, and 37*s.*, and 38*s.* a quarter for my barley, which I could deliver in half-an-hour from the farm.

Rates.

52,128. Have you any system of classification for your local rate, or is all property charged the same?—Railways and householders are charged on a different classification from land.

52,129. A higher classification?—Yes, I think so.

52,130. What is land charged at?—I really am not able to say the per-centage of remission.

52,131. But you pay on a lower classification?—I think so.

52,132. And that gives satisfaction?—We do not complain of the rates at all.

Effect of depression.

52,133. (*Captain Thomas.*) You have already said that farming is not a paying business in Banffshire?—It is not.

52,134. Are farmers able to live without losing capital?—They have not been able to do so for a number of years. Some farmers are, of course, in a better position than others. Profits have fluctuated more with the men who buy store cattle whenever they can get them than with those who are breeding and feeding their cattle.

52,135. Has there been any great change in the system of farming?—No, I think not.

Cattle breeding in Banffshire.

52,136. You said Banffshire was well situated for breeding cattle?—Very well situated.

52,137. Does it pay to breed cattle at present prices?—Yes, it does, but it has not been doing so for some years. If a man is feeding and breeding his own cattle it pays him best.

52,138. Does it pay best to breed or feed?—It depends on the farm you hold. If you farm in an upland district, with a wide stretch of land on a small rent, then it is best to be a breeder, but if you are on better land with a small area, then you would feed and possibly breed.

Store cattle.

52,139. What is the average price you get for store cattle?—We would pay for two-year-old black polled cattle about 17*l.* That is the best class.

52,140. And three-year-olds?—We do not keep them. We feed them all off on the grass as two-year-olds if they are not ready for the butcher when the turnip crop is consumed. We feed off all our cattle at 18 months or two years. A calf dropped now will be sent to the London market at Christmas 1896. You will rarely see a three or a four-year-old in the country.

52,141. What profit do you make on an animal for which you have paid 17*l.*?—Well, if it is a good class of beast, and you sell it in the month of November or early in December when the best prices are going before the Christmas glut, you will get 22*l.* or 24*l.* for it.

Sale by live weight.

52,142. Do you sell by weight?—We are introducing that. The cattle are now all passed over the weighbridge, and the purchaser sees the weight recorded on the dial, but we do not sell at so much per cwt.

52,143. (*Mr. Clay.*) Would it be an advantage to a farmer who fed cattle to sell them by live weight?—That

Digitized by Google

Mr. A. R. Stuart. 6 June 1895.

is my view. Some of the butchers, I believe, did at one time object to the weighbridge; they buy by the eye, but both buyers and sellers are now accepting the guide afforded by the weighbridge.

52,144. Is it not universally the practice in America to sell by live weight?—I believe it is.

52,145. And you would like to see it compulsory here?—I would.

Effect of depression.

52,146. (*Mr. Everett.*) In parts of Banffshire you think there is severe agricultural distress?—Yes.

52,147. And it has been getting worse for the last few years?—Yes. It has not improved.

52,148. Your county adjoins Elgin and Aberdeenshire?—Yes.

52,149. From Elgin we had testimony very different from yours—that the depression had not been severe, and that such depression as there had been was passing away?—You must quite understand that the lower district of Morayshire is like the Lothians, and that they cultivate potatoes largely there. They will have there from 25 to 30 acres of potatoes, whereas we only grow about half an acre for our own use. The cultivation in the lower district of Morayshire is very different from ours, because of the superior climate and the more favourable conditions under which the land is in consequence cultivated.

Bankrupt tenants.

52,150. These bankrupt tenants you speak of were they under lease?—They were all under lease.

52,151. Had they abatements made to them prior to bankruptcy?—Yes, in some cases they had. In all I am not able to say.

Mr. A. R. Stuart. 6 June 1895.

52,152. Do I understand you to say that you fatten the bulk of your beasts on the grass?—I prefer to see them on the grass, because at that season of the year we get the best prices. Next month all the shooting tenants come down to our part of the country, and I can get 5*s.* and 6*s.* a cwt. more then than in London.

Cattle fattening.

52,153. Will your grass fatten them?—It makes the best beef of all.

52,154. Without artificial feeding?—They are fed on distillery grains mixed with crushed oats, and on the refuse "ale" in the fields.

Markets.

52,155. How is the bulk of your meat disposed of?—It is sent to London.

52,156. Do you sell it to people on the spot?—I am within a mile of the only auction mart in the county. The cattle are sent there and there the dealers come and buy.

52,157. Do farmers send meat direct to London?—They do at Christmas time, but they have regretted it the last year or two.

Rates.

52,158. Then as to rates—half the rate is paid by the tenant and half by the landlord?—Yes, it is a very good arrangement. It induces the tenants to assist to keep down the rates.

52,159. What effect has the division of rates on rents in Scotland?—I do not think it has much effect. Where the rates are so low as 1*s.* 2*d.* in the £ I do not think the tenant ever takes it into consideration. If he did of course it would be so much off the rent. But really these small tenants do not consider the rates at all.

The witness then withdrew.

Mr. H. R. B. Peile.

Mr. H. R. B. Peile was called in and examined.

Mr. H. R. B. Peile.

52,160–1. (*Lord Cobham.*) You live in the neighbourhood of Greenock and manage Sir Michael Shaw Stewart's estate?—Yes.

52,162. Your whole time is given to that?—Yes.

52,163. What county is the estate in?—Renfrewshire.

52,164. You are to speak entirely of this district to-day?—Yes.

Cause of depression.

52,165. You come to speak more especially on the causes and remedies of agricultural depression. What do you consider the primary cause of the agricultural depression to be?—I have noted down some remarks here which I should like to read:—"The condition of agriculture in the lower ward of Renfrewshire has been affected alike with all other parts of Scotland in a greater or less degree from one apparent cause, viz., the the importation of agricultural produce, live stock, carcases, and butter. This is the primary cause of the depression. Its effect has been widespreading and it has altered the habits and style of living of the population of the towns. The cheapness of bread enables families in populous places, if not in rural districts, to be fed differently to what formerly was the custom, and the extraordinary cheapness of sugar exported from other countries under a system of high bounties, and the consequent cheapness of fruit-preserves take effect also, by inducing mothers to feed their children on slices of bread covered with sugar or jam. Thus the necessity of keeping the fire alight, and the consequent trouble and expense of cooking porridge or potatoes is obviated, and the demand for oatmeal, milk, and potatoes is materially reduced. The result is that oats, which maintained their price in this country longer than other grains, are now cheaper than they have ever been known to be; the consumption of potatoes is reduced, and they hardly pay the cost of the manure required to grow them successfully; and milk—a commodity which under the former system of household diet was indispensable—is also cut short in consumption by the cheap loaf, cheap sugar, and cheap jam, not to mention the great increase in the use of tea. The dairy districts were longer in feeling the causes of the agricultural depression than other districts, and more particularly those districts which had not recourse from favourable causes to the assistance of the middleman, but the importation of cheese unsettled the cheese-producing districts, and milk from a distance found its way into the towns which had formerly in a great measure been supplied by the farms within short distances, the result being that from the facilities given by the railway companies to long-distance carriage, farmers only eight or ten miles from a town pay as much for the carriage of their milk by rail as those 50 miles away. Milk, therefore, like other farm produce, has been levelled in price in the market, partly by the change in household economy, and partly by the increased facilities given by railways to milk-producing districts at a distance. In so far as the purchase of the animals is concerned, the market price of dairy stock is a matter of considerable importance to an incoming tenant when he enters his farm, as that represents in a great measure his capital, and one man may be more lucky in this respect than another. But in disposing of his cows when their value for milking ceases, they come into competition with animals imported for meat, and then the importation question comes forcibly into effect."

Reduction of rents.

52,166. (*Lord Cobham.*) Is the depression severe in your neighbourhood?—Of course it reached us later than it did others, but the prices of milk and dairy produce have considerably fallen.

52,167. How has that affected rents?—Rents, no doubt, are down. If a farm comes into the market now it does not bring the rent it formerly did.

52,168. How much have they fallen?—10 to 12 per cent. In special cases, more.

52,169. There are still plenty of competitors for farms?—We have fair competition.

52,170. I suppose it is an estate of which the management is very liberal?—Yes. The management is liberal. We do a very great deal in reference to buildings and accommodation generally.

52,171. With a reduction of rental from 10 to 12 per cent. are you able to let farms to good tenants possessed of capital?—Good farms always bring forward a certain amount of tenants. Some, no doubt, are better than others.

52,172. You consider that the fall in rents has met the special causes of depression you have enumerated?—I think that tenants make their own calculations when they enter a farm, and consider carefully what they are able to afford. They take prices into account.

52,173. Do you think the rents are based on present prices, or do you think farmers make terms in the hope of better times?—I think they are based on present prices. I think there are some farmers who compete for farms and hope to get a reduction. But on a generously managed property such a class are not selected as the best tenants.

The Agricultural Holdings Act

52,174. Do you find that the Agricultural Holdings Act is valued by farmers?—I must tell you that, so far as I am concerned, I can only judge of the Agricultural Holdings Act by what I read about it. I have had no experience of the Agricultural Holdings Act myself.

Digitized by Google

Mr. H. R. B. Peile. 6 June 1895.

52,175. Are the agreements under which your tenants hold in substitution of the Agricultural Holdings Act? You state that you have no practical knowledge of the Act? — Simply because we have not had changes of tenants to any great extent. The farms have been descending from father to son.

52,176. When a lease falls in it is generally renewed? —It is generally renewed. We have had no claims under the Act on our estate.

Suggested amendments.

52,177. Have you any strong opinion as to the policy of the suggested amendments of the Act?—I have very strong views indeed.

52,178. Do you think these amendments, as a rule, are in the wrong direction?—I think many of them are.

52,179. What are your views? — I have specially in my paper directed attention to the report of Mr. James Hope, and if I may read now my views in reference to that I shall bring out what I take exception to, and I quote certain portions of Mr. Hope's report to illustrate my argument. I go on to say here:—"The views "advanced for the remedy of agricultural depression by "the amendments suggested on the Agricultural Holdings "(Scotland) Act, 1883, appear to me to be extravagant "and unreasonable. It should not be lost sight of in "considering this matter that since the abolition of "hypothec, landlords are debarred by statute from "demanding any security whatever for the rent stipu- "lated for, which is after all nothing less or more than "the interest of the capital they lend to a tenant to trade "with, and that there is no other commercial enterprise "put under similar restraint; and it would seem to be "very one-sided legislation when the first party to a "contract is debarred from security, and the second party "is to get the whole *corpus* of the first party's estate "as security for what he, the second party, elects to sink "in the first party's property, and that without the latter "being consulted in the matter. It is therefore reason- "able that landlords should emphasise this, and, in the "future amendments of the Act in favour of the tenant, "it is only fair that their interests should be equally "safeguarded. The common law demands that every "man shall cut his coat to his cloth, and if he does not "do so he must take the consequences, but the advocates "for the alteration of the Agricultural Holdings Act "desire to place statutory powers in the hands of the "tenant through the process of arbitration and otherwise "to spend money, his security being the landlord who will "be responsible, and that without any regard as to whether "he can afford it or not. Every conceivable reason for "agricultural depression has been advanced, the remedies "suggested have all, more or less, come to naught, and "the one of all others which remains alive is the Agricul- "tural Holdings Act. It is true that taxation of land has "had some attention as one item of remedy, but even "that is slow to convince, as any relief in this direction "would, in these anti-landlord days, be deemed to be some- "thing in the landlord's pocket, and any remedy having "this effect is condemned in Mr. James Hope's report "(1894 Report, page 8) when dealing with import duties, "where he says, 'The new rents would be based upon "'the increased prices, and thus the benefit of a rise would "'be transferred from the tenant to the landlord in the "'form of an increased rent.' There are four points "which have struck me forcibly in Mr. James Hope's "report and evidence. 1st (1895 Report, page 20).— "The reference to the system adopted in the neighbour- "hood of large towns, especially Edinburgh, as to freedom "of cropping. 2nd (1895 Report, page 40).—The evidence "adduced that certain tenants do, in the latter years of "a lease, manœuvre to get unfair advantages at the land- "lord's expense. 3rd (1895 Report, page 40).—That the "remedy for this is what is termed cumulative fertility. "4th.—That the general view is that the tenant farmers "of the country ought to have the utmost encouragement, "not only in their own interests, but in the *interests of the "nation* to invest their money in developing to the utmost "to the resources of their holdings (1895, page 41)."

Restrictions in leases.

52,180. May I ask, are the restrictions as to cropping strictly maintained on your estate?—We have a rotation of course on the lease, and, as a rule, we expect it to be observed; but these clauses are not rigidly enforced where circumstances warrant and justify a departure from them.

52,181. You exercise your right when damage appears to be done?—Yes.

52,182. (*Captain Thomas.*) Are you a practical farmer? —I am a land agent.

52,183. And not a farmer?—Not a farmer.

Mr. H. R. B. Peile. 6 June 1895.

52,184. You have no knowledge of farming, you let farms?—Letting farms is my principal occupation. I have had the management of home farms, and so forth.

52,185. (*Mr. Clay.*) Do you manage Sir Michael's home farm?—No, there is an overseer.

Suggested amend- ments.

52,186–7. Then you are not a practical farmer?—I have said so. *Continuing the reading of his paper witness said*:—"In reference to these four points (just alluded to) "it may be asked: 1st. Is it to be supposed that if freedom "of cropping was sanctioned by statute an improved "system of high farming would be adopted throughout "the country? It requires no argument to prove that the "localities in the vicinity of towns are exceptionally "favourably situated, and that to hold up the farms so "situated in them as examples for the length and breadth "of Scotland to follow is straining the fad for free cropping "beyond the limits of reason. 2nd. It is remarkable "that when Mr. Hope found from evidence that tenants "did manœuvre during the latter years of a lease to "take an unfair advantage of the landlord that he had "no safeguard or remedy to suggest to meet such tactics. "3rd. In place of any remedy being suggested the landlords' "dilemma is proposed to be intensified, for he is still "not only to be exposed to these manœuvering tenants, "but he is to have a bill run up against him by the "better-behaved tenant who commences his process some "years earlier as it suits his convenience. 4th. That not "only is the tenant to have every facility at the landlord's "expense to advance his own interests, but *the nation* is "also to share the spoil, and if it is of importance to the "nation to encourage tenants to sink capital, surely it is "of equal importance to encourage landlords to do the "same, which they cannot do if too harassed by legislation. "These considerations have a forcible influence on my "mind in viewing the agitation which is being urged "under the cover of this Act, and a danger exists that "legislation may proceed under panic or undue haste, "and grave injustice arise therefrom to the detriment "of all engaged in agriculture."

52,187–8. (*Mr. Chaplin.*) What are your observations based upon?—What the Chamber of Agriculture in Edinburgh have discussed; the proposals that we see in Mr. Hope's report, and the general ideas that have gone forth as to the amendments that should be made upon this Act.

52,189. What you want now is to put before us your opinions or criticisms upon these proposals?—That is so.

52,190. These proposals being contained in Mr. Hope's report?—Some of them are proposals made by the Scottish Chamber of Agriculture.

Compensation for cumulative fertility.

52,191. (*Lord Cobham.*) Take the suggestion that compensation should be granted in respect of high cultivation—cumulative fertility?—I do not see how that is to be fairly and equitably done between landlord and tenant.

52,192. The proposal is that an inspection of the farm should take place when the incoming tenant takes it, and another when he leaves it?—That is to say, in the first year of the 19 years' lease it would be reported on, and at the end of the 19 years it would be reported on. I think the system would be open to grave abuse. I think Mr. Davidson spoke to that, and pointed out that it would be a difficult question to settle between landlord and tenant unless all rights were carefully safeguarded and made statutory as well as having the statutory power to do so.

52,193. You do not think good farming should be a subject of compensation at all?—I think the tenant when he takes his farm makes his calculation on all these points, and, if he is to be paid for everything, that principle of making up his mind as to what he will have to lay out on a farm when he takes it will be all superseded. Surely when a man takes a farm at a certain rent he must make up his calculation as to what his outlay may be.

52,194. (*Mr. Clay.*) How do you know without practice?—It is what a tenant is always supposed to do. They do not take a thing hap-hazard.

52,195. They make a calculation as to the stock and as to the general run of the farm, but he could do that still?—He has to farm according to the rules of good husbandry, and to manage the farm in a fit and proper manner.

52,196. He might be farming according to the rules of good husbandry without doing much for increased fertility?—That is true.

Improvements by tenants.

52,197. (*Lord Cobham.*) Have you a strong objection to the tenant being empowered to force expenditure which you think would be the result of the proposed amendment of

Digitized by Google

Mr. H. E. B. Peile. 6 June 1895.

the Act?—I do think it would be taking away the rights of property altogether. I think the system of arbitration during the currency of a lease would be most arbitrary.

52,198. What would you think would be the effect upon the position of the landlord if the management of his property were practically taken out of his hands?—I think it would be a very disagreeable position to be put in, and one that he should not be called upon to endure. It would be a sort of trusteeship which would never work.

52,199. Do you think the effect would be that the tenants would carry out improvements?—I think it would be a power in the hand of the tenant to force his landlord's hands, which I do not think is fair and reasonable.

52,200. Do you think that under a system of such ownership the landowners would spend little or no capital on their estates?—I think possibly they might not. They would not have the same share in the management of their own estates.

52,201. What interest do you think a landowner gets on the capital outlay on his property?—If he gets his 3 or 4 per cent. he is well off.

52,202. Do you think he gets as much as that?—It depends a little on the estate.

Compensation for unexhausted improvements.

52,203. Do you wish to add anything else as to the suggested amendments of the Agricultural Holdings Act?—I refer here to the works which, I think, should not be taken out of the hand of the proprietor. I should also like to speak of Schedule 3 of the Act for the compensation of artificial manures and feeding stuffs. It has been recognised by law of late that the tenants have been purchasing artificial manures and feeding stuffs which have not had the quality they were represented to have. A law has come into force that analysts appointed by the counties are now at the tenants' request able to check these purchases. I think it would be reasonable that in these claims made against landlords for unexhausted manures and manurial values, which are supposed to be left in the land, they should have a certificate that these articles had been genuine and up to what they were guaranteed.

52,204. Do you consider that under the 19 years' lease system there should be no compensation at all for tenants' outlay?—I think where it is absolutely proved that so much has been left of the manurial value it is fair and reasonable that the tenant should get it back. But then I think the way of arriving at what is left is rather of an indefinite kind; and it certainly cannot absolutely be proved by any data that can brought forward. It is calculated by vouchers produced showing what has been paid for them, but then that is of little good to the landlord if care has not been taken to see that the manures were of genuine quality. That is the risk.

52,205. That is a matter for the valuators themselves. Is there any reason why they should not settle among themselves the principles upon which compensation should be awarded?—They settle it upon the vouchers produced, but they have no guarantee that the manurial value in these vouchers has absolutely been received.

52,206. Do you think that compensation is often unjustly given?—I think there is a fear of it. I do not see that the landlord has any guarantee.

52,207. (*Mr. Clay.*) I think the witness is under a mistake there. Arbiters dealing with cases of this kind have not only the vouchers before them, but the analysis as well?—I do not think the analysis of the merchant is sufficient.

52,208. But we have the Highland Society's vouchers, and vouchers from Dr. Voelcker?—But it is not compulsory to have them.

52,209. (*Lord Cobham.*) You have had no practical experience of the working of the Act yourself?—No, I have not.

52,210. Do you wish to make any other remarks on the subject?—I think it is quite evident from what has been brought out in Mr. Hope's report that it is quite possible for land to be thoroughly exhausted, or to have all in it taken out by the use of worthless artificial manures, and that the landlord may have to pay the tenant for manurial value supposed to be left in the land, and also for unexhausted improvements which are not there.

52,211. Generally you think that there is a great absence of safeguards for the protection of the landlord?—I do.

Co-operation.

52,212. Do you see any remedy for the depression?—No, I do not. I have mentioned that co-operation might be one remedy, by which I mean that a great deal might be saved if farmers co-operated together—the smaller farmers—and bought large quantities under proper guarantees. There might be a considerable saving on the working expenses of the farm.

Mr. H. E. B. Peile. 6 June 1895.

52,213. Is that done in Scotland to a great extent?—I I think it is done largely in the neighbourhood of Dundee. I had some little experience of it myself many years ago. But the difficulty is to get farmers to work together.

52,214. Do you think they will ever be got to co-operate in supplying to the market large quantities of produce, so as to get railway rates on a lower scale?—I think they are a difficult class to get to co-operate together. I do not refer so much to railway rates, although I think the railway rates are certainly a great drawback.

52,215. You are speaking more of co-operation in the purchase of artificial manures and feeding stuffs?—Yes.

Labourers.

52,216. (*Mr. Dalton.*) Has the depression been much felt by the labouring classes in your district?—I am not aware that it has.

52,217. Have the wages gone up or down?—I am not prepared to say; I do not think that they have varied very much of late.

Extent of depression

52,218. And the tenant farmers are not doing badly?—The tenant farmers are doing fairly well, considering the times.

52,219. Then the extent of the depression is measured by this fall of rent of about 10 or 12 per cent.?—I think so.

52,220. That is practically the extent of the depression? I am giving that as a general fall. There are exceptional cases.

52,221. What is the size of the estate for which you act as land agent?—I think we have about 27,000 acres.

52,222. All one estate?—Yes.

Evasive clauses in leases.

52,223. Did you hear the statement made yesterday, that the leases in Scotland nearly always contained provisions over riding the Agricultural Holdings Act?—I have not seen that statement.

52,224. Do you agree with the opinion that these covenants in leases are designed to evade the Act?—I do not know. In my experience they are not to evade the Act; they are merely to get fair play.

52,225. But there were some covenants read out yesterday of that nature?—I did not see them.

52,226. Have you got a copy of the leases you grant on your estate?—(*Witness handed in a copy of the form of the lease asked.*)

52,227. Is there anything of the kind I have referred to in them?—I think we have some provision in reference to artificial manures and feeding stuffs, that if necessary, they should be certified by an analyst.

52,228. But you have none in contravention of the Act?—I do not think so.

52,228*a*. And you do not know of any such cases?—No.

52,229. (*Captain Thomas.*) Were these agreements you speak of made before or after the passing of the Agricultural Holdings Act?—Since the passing of the Agricultural Holdings Act.

52,230. You have not contracted out of the Act in any way?—No.

52,231. You have expressed your opinion on certain points, I should like to ask whether these views of yours are shared by your tenants and by the farmers generally in your district?—I cannot tell you that, I have not called round to consult them.

52,232. You are really speaking for yourself?—Yes.

52,233. And not for any of the farmers, and you have not heard them discussing this subject?—No. We have had discussions at agricultural meetings, but I do not profess to speak for anyone but myself.

52,234. (*Mr. Lambert.*) What is your opinion of the present Agricultural Holdings Act?—In what respect?

Compensation for unexhausted improvements.

52,235. In respect of the compensation for artificial manure under Part 3 of the schedule?—Well, as I have said there should be a check put upon them.

52,236. You think it is too drastic?—I think it is too much in favour of the tenant without a safeguard for the proprietor. I think in connection with these feeding stuffs and artificial manures there should be a security that they are what they are guaranteed to be. That would be fair to the tenant and fair to the landlord also.

Digitized by Google

Mr. H. R. B. Peile. 6 June 1895.

52,237. Can you give any instance of injustice which has been done to the landlord under the present Agricultural Holdings Act?—I told you I had not had experience in it. I am merely judging from what I have read of the efforts to get it amended.

52,238. You are speaking theoretically and not practically?—I have had no practical experience of it.

52,239. You have never had any case in which the landlord had been unjustly dealt with?—I judge from what I have seen, and that there are arbitrators who apparently go on no particular principle.

52,240. Would not these rather point to the fact that the valuators under the Agricultural Holdings Act do not know their business?—I think the idea that there might be a judicial valuator is not a bad one.

52,241. The point is this—you said you thought there was no principle in the award of compensation for artificial manures?—It can only be judged by the amount of money in the voucher.

52,242. Is there no further proof required?—That is what I think ought to be required.

52,243. Is there not? Are vouchers taken as evidence?—I understand so. If there is an analysis it is that given by the manure merchant himself.

52,244. Do you mean to say there is no evidence to prove the appreciation of the manure to the soil?—It can only be taken from what the tenant himself says.

52,245. You say there is no proof of that required by the valuators?—Not that I am aware of.

52,246. One has a difficulty as you have had no practical experience?—I believe the voucher is put before the arbitrator, and he judges according to the amount paid for by the material.

Compensation for consumption of home-grown corn.

52,247. What provisions do you consider unreasonable and extravagant in the proposals that have been brought before the Commission?—There is one I have not touched upon that I think is unreasonable, and that is that produce consumed should be put on the same footing as produce purchased.

52,248. Suppose the tenant sells his produce, and with the result of it buys artificial feeding stuffs, you give him compensation?—I quite see the point. But I think that the Act never contemplated that. It is giving too much licence.

52,249. You think the old Act goes too far?—That is just what Mr. Hope thinks also.

52,250. Wherein do you think the old Agricultural Holdings Act goes too far?—I think that the Agricultural Holdings Act goes too far in this point, the produce consumed.

52,251. But still you do not know of any case in which injustice has been done to the landlord?—I think it is an injustice.

52,252. But you do not know any practical case?—I cannot tell you any specific case.

52,253. (*Mr. Channing.*) Do you represent the expressed opinion of any resolution passed by any body of agents or awyers in Scotland?—No; simply my own opinion.

52,254. (*Lord Cobham.*) How long have you been agent to Sir Michael Shaw Stewart?—Twenty-two years.

52,255. And during all that time you have had no appeal to the Agricultural Holdings Act?—I have not.

Position of tenants.

52,256. (*Mr. Gilmour.*) The tenants on the estate you manage you think are in fairly comfortable circumstances?—I think so.

52,257. Are they able to meet their rents at the proper time?—We have arrears.

52,258. Have they gone into co-operation in regard to their milk in endeavouring to better their circumstances?—No, I do not think so. I am not aware of any co-operation. They all work to their own hand.

52,259. Are the farms on your estate worked by the tenants with the aid of their families to any great extent?—Where the family works they are in a much better position than where they have to employ farm servants. They are a hard-working class altogether. There is no system of farming calls for harder work than dairying.

52,260. Do you lay down in your leases stipulations as to cropping?—We have it really all under the seven years' course. There is a general cropping clause, but we have never had any occasion to deal with tenants for departing from it.

52,261. When you have farms to let do you advertise them?—I have done so; but very often I let a farm without doing so. I know certain men that I can offer them to.

Mr. H. R. B. Peile. 6 June 1895.

Arrears of rent.

52,262. (*Mr. Clay.*) On the estate you manage have you much arrears?—We have suffered from arrears no doubt. I cannot say at the present moment whether we are far back in our arrears or not.

52,263. Would there be two or three years arrears of rent?—Not in all. I may have some farms where they are back two or three years.

52,264. Not more than two or three years?—Really I did not come prepared to answer that. I think I could spot one or two that are exceptionally bad and that have perhaps been treated too leniently.

52,265. Do you consider them too highly rented?—No, I do not consider them too highly rented.

52,266. Where does the deficiency come in, want of capital?—As far as I have seen if they had taken more care they might have made their way better.

The Agricultural Holdings Act.

52,267. You did not finish your paper; but as far as you went I gathered from it that you do not believe in the principle of the 1883 Agricultural Holdings Act?—I do not think I went that length.

52,268. And you do not believe in Mr. James Hope's report regarding the amendments required for the Agricultural Holdings Act?—I do take exception to them.

52,269. To the whole or to a part?—I have tried to point out those that I have taken exception to. I should not like to give a wide answer. I really think I have dealt specifically with those points I have taken objection to.

52,270. I gathered from your examination that you were giving rather a wholesale condemnation to Mr. Hope's report?—I did not go in for a wholesale condemnation so far as I know; I was speaking to special points.

52,271. What are the special points you condemn?—I have enumerated some of them: produce consumed, cumulative fertility, arbitration during the currency of the lease, expenditure for buildings——

52,272. (*Captain Thomas.*) You know Mr. Hope is a large practical farmer?—I am aware of it.

52,273. (*Mr. Clay.*) And, I suppose, he has gathered these opinions from both landlords and tenants in the different counties he has been through?—I cannot tell you. I rather take it that he did not consult many landlords.

52,274. He had a very large body of the tenantry?—I have not the slightest doubt he had a great many witnesses before him.

Buildings erected by tenants.

52,275. Regarding buildings, you take exception to that?—I do.

52,276. But if the tenant put them up unnecessarily or uselessly he would not get compensation for them?—That may be quite possible, but why should the tenant be allowed to pull about a steading that a landlord has built on a plan applicable to the whole of his property. If a tenant wants accommodation for 20 cows or feeding animals, an arbitrator is to come in and say if the tenant is reasonable in his request, if the landlord will not do it the tenant is to build it himself. But who is to look after it; who is to draw the plan and specifications?

52,277. Who draws your plans and specifications?—I do not see that at all. Here you are going to let the tenant come in and upset the whole elevations and plans of his steading. If he is to build an extra byre; he may build it of brick next to a stone building, or he may cover it with corrugated iron next to slate. There is no limit to what a tenant may do under the proposed amendment.

52,278. Would any wise tenant do a thing of that kind?—I do not know what you call "a wise tenant." If the tenant got the power to do as he liked he would do it.

52,279. But if he did wrong he would get no compensation?—I do not value it absolutely in £ *s. d.* I value it as an interference with the landlord's just rights and powers. I do not think that it is fair and reasonable that a tenant should be allowed to pull about the landlord's buildings.

Draining.

52,280. For instance, the landlord might not be able to drain the land—is it to be left undrained?—But the present Act provides for that.

52,281. The landlord may do it himself, and if he does not it falls back upon the tenant. Have you any objections to the tenant draining?—I think the landlord should have the same power as under the present Act.

Digitized by Google

Mr. H. R. Peile. 6 June 1895.

52,282. We want good draining?—I do not approve of your way of getting it.

52,283. Do you not believe that draining is of great value to the land?—I believe in the drainage as provided under the present Act. I think the landlord should be entitled to do it if he likes.

52,284. Is the tenant not a better judge of the draining of land than the landlord?—I do not see that he should be if the land is properly managed. I do not think so at all.

Compensation for unexhausted improvements.

52,285. Regarding manures, you seem to think that there is a doubt as to the value of manures put into a farm?—Yes; I go upon absolute facts.

52,286. What facts, and who has it been proved by?—By analytical societies, by the Royal Agricultural Society, by the Highland and Agricultural Society it has been proved how much money has been thrown away by purchasing useless artificial manures and feeding stuffs.

52,287. If the tenant purchased these useless artificial manures he would be the loser?—But how is the arbitrator to know it? How is he certain that they are what they are represented to be?

52,288. The evidence is the document that the money has been spent. You have the account for the manure bones, or whatever it may be, and the tenant is bound to supply an analysis by the Highland Society's analyst?—He is not bound. That is my point.

52,289. He has to bring that as evidence?—He is not bound to bring it as evidence.

52,290. The valuator would not give him credit if he did not produce an analyst's report?—I am not aware of that. I want it made compulsory.

52,291. You have had no experience?—I have told you that over and over again. I am speaking from the experience I have gained as a land agent.

52,292. You wish that along with the vouchers there should be a proper analysis put before the arbitrator?—I am arguing that along with the vouchers there should be undoubted evidence that the manures are what they are represented to be.

52,293. You quoted Dr. Voelcker. Have you any evidence that he takes that view?—Well, what I have to say about Dr. Voelcker is this, that at a dinner at the Hotel Métropole, on the 12th December 1894, Dr. Voelcker, making reference to the Fertilisers and Feeding Stuffs Act, is reported to have said:—"That this Act, "which at first so greatly alarmed the manufacturers, was "working satisfactorily, and really operated in the interests "of the honest and reputable producers, while it was only "the dishonest and shady manufacturers who were being "legislatively stamped out from the trade, and he said he "had known cases in which what was called 'damaged or "'roasted nitrate of soda' had been sold, which contained "no nitrate of soda at all, and a so-called 'silicate "manure,' which was nothing more than ground flints, "had been put upon the market at a price of 7*l.* per ton, "and he quoted the better knowledge of the German "average farmer, who had better scientific knowledge "than the British farmer, with the result that the German "never ordered fancy fertilisers of mysterious concoction, "but always asked for exactly what he wanted, and saw "that he got so much phosphates, so much nitrates, and "so on." I say that is proof that in Dr. Voelcker's experience a great amount of useless artificial manures had been put upon the market, and that certain occupiers of land buy them. Now I want that checked when it goes before the arbitrator. I want it made compulsory that the tenant should produce a reliable analysis.

Mr. H. R. Peile. 6 June 1895

52,294. (*Mr. Clay.*) I agree with you?—I want it statutory also.

52,295. Do you think that the tenant has been forcing any great expenditure on the landlord by increasing the fertility of the soil by using extra manures?—I do not say that.

52,296. (*Captain Thomas.*) Who pays compensation, the incoming tenant or the landlord, for these artificial manures?—It is the landlord. I do not know of any case when the tenant did so. That is not the system in Scotland. Of course they might make a bargain but I never heard of one.

52,297. Of course it means an increased rent when a farm that has been well manured is relet?—What I understand would be the effect here would be this, if the rent went up that is settled before the claims are settled. When the claims come before the arbitrator the question of the increased rent is brought up as the effect of the tenant's labour, and, no doubt, the price is run up in consequence. If the rent goes down, I am afraid the argument is that if they had not done so much the rent would have been less, so that, again, the landlord has to pay the piper.

The witness then withdrew.

Mr. R. Dickie.

Mr. Robert Dickie called in and examined.

Mr. R. Dickie.

52,298. (*Lord Cobham.*) How long have you been a farmer?—Over 40 years.

Particulars of witness's farm.

52,299. You are the tenant of a mixed farm of 700 acres in Argyllshire, of which one-half is arable and the other pasture?—That is so.

52,300. What stock have you?—My stock consists of 78 milch cows and about 60 young cattle of various ages under three years old, and between 300 and 400 black-faced sheep.

52,301. What labour do you employ?—I employ one dairy maid and two assistants for byre, one shepherd, three ploughmen, two unmarried lads, and in the house a house girl as domestic servant.

Wages.

52,302. What wages are given now?—Married men get about 50*l.* a year.

52,303. (*Mr. Everett.*) Does the wife of the married man give any service also for that money?—Oh, no. That is a married man with a house of his own and who feeds himself. I have, however, always been in the habit, as a dairy farmer, of giving as many of the ploughmen as liked to have it, a cow's grass. It is an inducement to a young man to save if he can have something of that kind of his own. And, of course, on a large dairy farm there are a large number of milkers required, and if you have married men you get assistance from their families.

52,304. (*Lord Cobham.*) What do you give single men?—Single men get 20*l.* to 28*l.*, and they get their board over and above that. Dairymaids get 24*l.* to 28*l.*, and the girl in the house gets 9*l.* to 10*l.* per annum. These figures may be taken as the average wages over the district.

52,305. How would these figures compare with 40 years ago?—They have been gradually going up. When I went to the farm in 1855, the dairymaid got 5*l.* a year with board. That was the highest wages given, and the domestic servant got 4*l.* The single lads who lived in the house would be about 14*l.* a year.

52,306. You say here, dairymaids' wages have increased fully 120 per cent., domestic servants 100 per cent., ploughmen and other farm labourers 50 to 70 per cent.?—That is about it.

Condition of labourers.

52,307. And they have shorter hours of labour now?—Yes.

52,308. Do they work as well as they did then?—There is no improvement on that as far as I can say.

52,309. What is their condition now?—Their condition is much better from a monetary point of view. They have more wages and they have more to spend.

52,310. Do they live in a more comfortable way?—I do not know that. They live in rather a different way. They used to take oatmeal porridge and they have left off that. They go in very much more for tea and live in a more expensive way. But I do not think, as a matter of health and working liability, that they are any better than they were.

52,311. Are they worse for taking tea instead of oatmeal?—I do not think it is good for a family or a working man to live, as it were, on tea. That is my opinion. Of course, it is readier made and saves time in the cooking.

52,312. Are they saving more money?—No, that is not my experience.

Cottages.

52,313. Are you well off for cottages?—We have a good many cottages but they are in bad condition. Last year I got three new cottages built with all sanitary improvements and with water in them. We have been doing what we could to get as many of these as possible, because I think, the country is very much in want of them, that is, for rearing domestic servants and agricultural labourers.

Digitized by Google

Mr. R. Dickie. 6 June 1895.

At one time there were a great many small farms and cottages, but the potato disease in 1845 cleared the country of them. They depended very much on potatoes as an article of food. The cottages these people left were allowed to go down and no new ones were built for many years. Recently the Duke of Argyll has been doing a good deal of building. I am a tenant under him, and I have got two or three new cottages.

52,314. Do the married labourers reside far away from the farm?—Oh, no, not 150 yards from the steading.

Land laid down to grass.

52,315. Has much arable land gone to grass in your neighbourhood?—A very great deal. I can give you some statistics of the position of matters in regard to the population of seven rural parishes of Kintyre, over a period of 60 years. In 1831, in the parish of Southend, the population was 2,120, in 1891, 844. In Killean and Kochnidgie in 1831, 2,866, in 1891, 1,293. In Kilcalmonell, 3,488 in 1831, and in 1890, 890. In Saddell, in 1831, 926, and in 1891, 757.

52,316. (*Lord Cobham.*) Give us the total results, as we do not know the parishes?—Well, it is this: in 1831 the total population of these seven parishes was 13,661, and in 1891, 6,350, a decrease of 7,311.

52,317. You think that this is on account of the farms going into grass?—The people were beat out with bad times, and a great portion of the farms under cultivation were thrown into grass. The people left the place and went into the towns, and abroad.

52,318. Were these farms sown down in grass?—In most cases they were seeded down into grass.

Rural depopulation.

52,319. (*Captain Thomas.*) Is that included in land out of cultivation?—A portion of it was before my time. A good deal of the land has gone out of cultivation in the sense that it has gone into grass. I was going to quote to you in connexion with the last set of figures I gave you as to the rural parishes some figures showing where change had taken place in the two towns in Kintyre, viz., Campbelltown and Tarbert. In Tarbert in 1831 the population was 206; in 1891 it was 2,208. In Campbelltown, in 1831, the population was 6,590; in 1891 it was 8,235. A total increase in these two towns of 3,647. I think that shows the people have gone into the towns from the rural districts. This decrease has gone on gradually from 1831 to 1891.

Potato growing.

52,320. Has the American tariff on potatoes been a main cause of so much land going out of cultivation?—Not at all. It was the potato failure of 1845–46.

52,321. (*Mr. Chaplin.*) But the tariff is doing injury, is it not?—It is doing considerable injury in the meantime. It is now 24*s.* a ton; in 1893–94 it was 40*s.*

52,322. Are potatoes exported from Kintyre to America?—In some years they were, but not this year.

52,323. Under the present tariff?—Oh, yes.

Cost of labour.

52,324. (*Lord Cobham.*) The cost of labour generally has gone up?—Yes; tradesmen, such as saddlers, blacksmiths, and joiners, are up 50 per cent., and in some cases more. I might say that a great many of the people who have left the place were millers. There were a good many meal mills before. Now there is no need for them, at least for only a few of them. Blacksmiths, weavers, and tradespeople who were dependent on the residents of the district, of course when the people left they had to leave also.

Rates.

52,325. You say, notwithstanding the reduced profits on farming, rates and taxes have increased?—Yes. There are four new taxes which have been recently imposed: the Public Health Act, the Education Act, the Local Government Act, and the Parish Councils Act.

52,326. Have you to pay sanitary rates?—Yes. Under this new Bill, the Parish Councils Bill, there have been additional taxes put upon us.

52,327. As compared with 10 or 15 years ago, have the rates increased?—These new rates have increased. The other rates have remained very much as they were.

52,328. You divide the rates with the landlord?—Yes. But I consider that is more than the tenant is entitled to do if you take it on a basis of income or means of subsistence, which I consider is the proper basis for rating. What I mean is that the proprietor has a larger income from the farm than the tenant. Take my own case. From the farm I hold the Duke of Argyle has a very much larger income from it than what I have. I pay him 500*l.* a year, but I have nothing like 500*l.* a year of profit. On that account I think that the rate on the tenant ought to be on the basis of income. The tenant should pay rates only on the value of his stock and on his income derived from the farm. People in towns with large incomes pay only on their house-rents. I hold that the basis of all taxation should be on income, or means and substance, from whatever source derived. Land at present is far too heavily rated compared to other sources of income.

Mr. R. Dickie. 6 June 1895.

52,329. How do you hold your farm?—I have had it on two leases of 19 years. Last year when the lease was out I did not want a lease at all. But I have got a lease now with breaks every five years.

52,330. At the beginning of a new lease when the rent is fixed the amount of rates paid is considered, is it not?—Of course it is. But during the currency of the lease, if there are new taxes, the half of them has to be paid by the tenant.

52,331. (*Mr. Gilmour.*) You cannot call the Education Act rate, which was passed in 1872, a new rate. That was beyond your last lease?—Yes.

52,332. (*Mr. Dalton.*) The Public Health Act was in 1867, was it not?—What I am contending is that the tenants should be rated not equally with the proprietor, but according to their income.

52,333. (*Mr. Dalton.*) Are there any rates the landlord pays entirely?—The county rates.

52,334. These are pretty heavy?—I suppose some of them are.

52,335. These the landlord pays entirely himself?—Up to the passing of the Local Government Act he did. But under that Act if the rates are increased beyond a certain figure half of the increase is borne equally by landlord and tenant.

52,336. But there is a proportion of the rates that the landlord pays himself?—Yes.

Tenure.

52,337. (*Lord Cobham.*) You said you did not want a new lease recently?—No, I wanted to arrange to hold the farm without a lease. In my experience of the past 20 years there have been so many changes and so many reductions that I thought it a very silly thing to bargain for 19 years, particularly seeing the number of cases there have been of people applying for a reduction, and of people who have turned out of the farms from that. I thought it would be better to have a two years' notice to quit and that the tenant shall be compensated by law for any improvements of a permanent nature that he could show if turned out, and that similarly the landlord should get compensation if there had been deterioration.

52,338. But the landlord preferred a lease?—Yes.

52,339. It is the custom of the estate?—I fancy so.

Foreign competition.

52,340. Do you consider the farmers suffer chiefly from foreign competition?—Yes.

"Protection."

52,341. Do you think that this should be met by legislation of a protective character?—Yes, I think it should. The cause of depression is foreign competition to a large extent, aided by a one-sided free trade policy under which all other countries are allowed to send their produce and manufactured goods into this country free of duty; and not only that, the same foreign Governments pay a bounty to their farmers for certain articles they export to Britain in order to enable them to compete with farmers in the United Kingdom. If these articles were dealt with here as in other countries, the Exchequer would be immensely increased and the rates and taxation on the agricultural community could be diminished. I will quote an instance of this one-sided free trade policy. In 1893–4 potatoes in the country were plentiful and cheap and large quantities were exported to America but the tariff was 40*s.* a ton while the potatoes themselves only brought 27*s.* You will see from this that the producer would have got a much greater price for his potatoes had there been no tariff, the same as the Americans get here for their produce. Just in the same way would the producers who send us food from abroad get less for what they sent us if we taxed them here in the same way. So it would not be on the consumer here that the tax fell altogether. In equity I think the farmers here are entitled to get the same treatment as the foreigner gives them.

52,342. How would you deal with that grievance?—Pretty much by taxing them at the same rate as they tax us. I would have free trade all round.

52,343. You mean protection all round?—You would have to begin with that.

52,344. You would tax the foreigner as much as they tax us?—Yes, that is so. I look upon that as the only way to get at them.

52,345. You are speaking the general feeling of the farmers of your district?—I am speaking very much my own; but I find that feeling is getting stronger among farmers and people in towns.

Digitized by Google

Mr. R. Dickie. 6 June 1895.

52,346. That we should go back to some extent to the Corn Laws?—To get Free Trade.

Length of leases.

52,347. Do you think that a 19 years' lease is less advantageous to the farmer now than it was?—I do, for this reason, that so many people have been beat out of their farms for the last 19 years, and because there have been such reductions. I may say that on the Duke of Argyll's estate five or six years ago, he revalued all the farms simply because he found the tenants were going into arrears to a large extent from the depression of the times, and he gave them a reduction of nearly 30 per cent. at that time all over his property. He has a practical factor, and he revalued them, and there was a general reduction of 20 to 30 per cent. That was five years before my lease was out, and I have my new lease with these breaks I mentioned at 40*l.* less again than that reduction.

52,348. Do you thiuk a five years' lease too long?—My objection to a lease altogether is that it is too long to bargain in advance seeing what is taking place. There is nothing more humiliating than for a tenant to go to the factor or landlord on his hands and knees, "greetin'" for a reduction of rent. The fact that this is so, shows that there is something wrong. On the other hand, this could be avoided with a two years' notice to quit. For instance when I took my second lease it was in 1873, and things were in a most inflated state. You had to take the land on lease at the rate that things were going at then; and if things had continued at the 1873 rate I could have done well enough. But things went back. It is very much the same with a proprietor who has to let his farm on a long lease on the prices of a depressed year. He does not get a fair chance either; for before the end of the 19 years, things may be very much better. With a two years' notice to quit, rents could be adjusted according to the times. The landlord would be able to say to the tenant, You are getting better prices and can afford to give me a higher rent; while in depressed years the landlord would have to be content with less rent. The tenant, of course, under such a system would have to be paid for anything he expended in the way of improvements unexhausted.

52,349. (*Mr. Channing.*) You would have a continuous yearly tenancy with two years' notice to quit—is that your idea?—Yes.

The Agricultural Holdings Act.

52,350. (*Lord Cobham.*) Do you think the Agricultural Holdings Act sufficiently effective?—No, not exactly. I think the machinery is very cumbrous. I could give an instance. I was appointed a referee under the Agricultural Holdings Act by the sheriff. I had to appoint a lawyer as clerk, and there was a man of business on the proprietor's side and another on the lawyer's side, and the case was arbited and witnesses heard. I told the parties there if they had appointed one or two practical men to settle it it would have been more to their advantage. I think the claim of the tenant was 60*l.*, and the landlord lodged a counter-claim of 120*l.* I looked upon that 120*l.* claim as an attempt pretty much to block the tenant's claim, and I only awarded the landlord 2*l.* 2*s.* In this case the tenant had to put in his claim in the month of December, and the proprietor was allowed until the month of June, and it looked very like, I say, an attempt to block the tenant's claim. What confirms that is that the proprietor did not appeal.

52,351. Do you think if the machinery of the Act was simplified there would be much to find fault with it?—I think that part should be amended where a tenant cannot get compensation unless he has had the landlord's consent. I think it should be left to the referee to say whether it was a beneficial improvement or not.

Compensation for high farming.

52,352. Are you in favour of paying the tenant for improved fertility of his land by high farming?—Certainly. I think there should be compensation given for that. High farming pays itself pretty well as it goes along, you are repaid in good crops; but at the same time when it comes to the end of the lease that is a very different thing. It is very often the case that a man who is a good farmer has to pay on his own improvements under the new lease. If the farm is put into the market and competition invited the rent is increasing, and the tenant is told that he can either take the farm at the increased rent or leave it.

Sale of adulterated products.

52,353. You think that in regard to the sale of agricultural produce further action should be taken to protect the home producer against adulterated and erroneously named articles?—I think so. There has been a great deal of fraud. I believe, from what I have heard, that the Act is right enough, but that it is difficult to carry it out at the present time.

52,354. (*Mr. Lambert.*) What is margarine cheese?—It is cheese made with milk from which the cream has been taken and a substitute found for it in animal fat.

Mr. R. Dickie. 6 June 1895.

52,355–6. (*Captain Thomas.*) Is that made in England or abroad?—In Scotland—lots of it. There was a case in Glasgow a year or two ago, brought at the instance of the authorities on a report by the city analyst, and it was made out that it was not cheese at all. On the other hand, evidence was led to show that the price charged was not excessive—4*d.* a lb.—and upon that, because the people who bought it were not overcharged, the case was quashed.

State loans.

52,357. Do you advocate State loans for the purpose of agricultural improvements?—Yes, I would, for building better houses for labourers, for example, so as to increase labour in farms and domestic servants. On a great many of these small places where there were steadings it was the custom of the country for the tenant to build the houses. The whole country side met on a certain day—the same as they do yet at hay-stacking—and they build a steading in a day. The proprietor gave them a little lime or wood. But it now comes to be a serious matter for a proprietor to build steadings on land that has been occupied in that sort of way. I suggest the Government shall give loans to proprietors for the purpose of rebuilding these places that are in want of steadings of that sort.

52,358. You do not advocate loans to tenants?—Well, in a case where a proprietor is not willing to make an improvement, the tenant might get the advantage of a loan.

52,359–60. Have you considered what security the tenant could give were he the borrower?—The security would be the houses, I fancy, along with the tenants' security.

Light railways.

52,361. Has anything been done in your district in connection with the extension of light railways?—I have taken the opinion of a good many people of the district. Some advocate it, and some are doubtful as to its success. I am told that in Ireland, where it has been in operation for a number of years, it has done an immense amount of good.

52,362. Who provided these light railways in Ireland?—Oh, the Government.

52,363. You do not think the farmers could provide them out of the rates?—I am afraid it would not be done that way. I was not giving it as a farmer's opinion that light railways would be of great benefit. It was merely the opinion of some people generally.

Dairy instruction.

52,364. Has the county council done much for the improvement of dairy farming?—The county council has been giving a portion of their technical grant for a good many years for that purpose, and that has been very beneficial. We have a dairy school in Kilmarnock to which we send about 70 dairy-maids. The good it does them might be illustrated by this fact, that a girl who went to the school to get instruction took the first prize after she came back at the local cheese show, though before that she had often competed and never got into the prize list. Generally speaking, I have been a member of the committee of the school since it was started. I can say from experience that the school has done an immense amount of good. I think the Government has been rather stingy in giving grants to institutions of that sort, where really a great deal of good is done in improving the quality of produce put upon the market.

Co-operation.

52,365. Have you any co-operative factories or creameries in Kinlyre?—We have not. I am secretary for a co-operative society of farmers which was started about 20 years ago for the purchase of manures. We have nearly 100 members. We get all the manures analysed that come into the district and we took offers for all manures that were required from different manufacturers in England, Ireland, and Scotland. This society has been a remarkable success. We have saved an immense amount of money, and the first year, I think, we got rid of all the bad manure that used to be sent into the district to individual farmers.

52,366. (*Mr. Clay.*) Your analyst very soon drove out the merchant that sold bad manures?—Yes; that is so. Now, dealers of all kinds of high standing are anxious to do business with us.

52,367. That is your only co-operative venture?—Yes.

52,368. (*Lord Cobham.*) Are your objects confined to the purchase of manures or do they extend to other farm requirements?—Nothing but manures.

Dairy produce.

52,369. Do you think that the manufacture of butter could be profitably carried on in co-operative factories?—Well, I cannot speak as to that.

52,370. Have you a market for butter?—It is usually cheese that we make.

52,371. Has that fallen in value?—Very much. When I took my last lease, I could sell cheese at 74*s.* the cwt.; at the present time I do not know that I can get 45*s.*

Digitized by Google

Mr. R. Dickie. 6 June 1895.

52,372. The same quality?—Just the same quality. It is all owing to the fall in prices; and a drop like that is a verg serious thing in a dairy such as I have, where I make from 10 to 12 tons a year.

52,373. What dairy cows do you use?—Ayrshires.

Compensation for permanent improvements.

52,374. (*Sir Nigel Kingscote.*) You told us you advocate a yearly tenancy, with two years' notice to quit and compensation to tenants for improvements of a permanent nature. Do you think that a tenant should be allowed to make these improvements without giving notice and receiving the sanction of the landlord?—I think whatever would be beneficial to the farm could not be prejudicial to the proprietor. There is no reason why a proprietor should object to a thing of that sort. It should not be in the proprietor's power to withhold compensation if the referee says it is an improvement. I should leave it entirely to the referee.

52,375. Supposing there was a tenant who let his farm down very much, would you give compensation to the landlord?—Just on the same basis.

52,376. To be awarded by the referee?—In the same way.

52,377. (*Mr. Clay.*) You would not be afraid of the tenant abusing the privilege and over-building?—That is not a likely thing at all.

52,378. If he built anything that was not good for the farm, he would get no compensation?—No. He should be allowed to remove it.

52,379. (*Mr. Gilmour.*) Do you think the tenant should get the leave of the referee before he built any permanent structure?—No. I think a man of good practical sense would not be so foolish as to expend money that he did not require.

52,380. Have you never seen or heard of farmers perhaps young men commencing a farm—build, say, unnecessary horse-boxes and different things of that kind?—Well, I have no doubt if they did so they thought them necessary. It might be a matter of opinion whether it was practical to do so.

52,381. You would allow this man to put up an erection on the landlord's property, at his own free will, and just run the risk of getting paid for it at the end of the lease?—Or take it away.

52,382. What state would he leave the ground on which it stood if he took it away?—In the same state as he found it.

52,383. Would the result not be a messing of the place?—I do not think so.

Rural depopulation.

52,384. In your country have not a great many people left through the great improvement in facilities for travelling to Glasgow, for instance, where employment can be so readily got?—That is so to a certain extent.

52,385. A large number of your young men get employment on passenger and other steamers and in yachts, do they not?—I cannot exactly say. In large towns they have been able to better their circumstances than if they had remained on the land. Land has been a semi-starvation business for a good while back.

52,386. Did that reduction given on your estate satisfy the great bulk of the tenants?—It did at the time. There is no proprietor, so far as I know, more popular than the Duke of Argyll.

Counter-claims.

52,387. About the counter-claim you told us of—was the 120*l.* for deterioration of buildings?—Yes.

52,388. And you awarded, after personal inspection, I suppose, 2*l.* 2*s.* for deterioration?—I did.

52,389. Did you know the state of the buildings when the tenant entered the farm?—No, I did not.

52,390. How did you decide, then, whether they had deteriorated or not?—They were new buildings altogether, first-rate buildings. There were some broken panes of glass, but the buildings themselves were good.

52,391. Did the counter-claim give details of the deterioration?—No, it was a slump sum. There was a claim in it made for burning heather some years before. The tenant's children had caused the fire, but the young heather grew up, and it was better than it was before. There was another claim for not cutting thistles; but when we went to the part of the farm complained of we found no thistles, and the place was the cleanest and best of the farm. I had no ground at all to give the landlord compensation. I thought of a guinea, but I afterwards made 2*l.* 2*s.*, though I thought that too much.

52,392. What sort of deterioration would you award 2*l.* 2*s.* for?—Well there were some broken panes of glass, as I have said. The opinion I formed was that the counter-claim was got up for a purpose.

Mr. R. Dickie. 6 June 1895.

Malt tax.

52,393. Is there any feeling expressed in your country in regard to the malt tax?—There is this, that since the malt tax was passed the price of barley has gone down most miserably, and an immense amount of foreign barley is imported into Campbelltown for whiskey making purposes?—I used to get 40*s.* a quarter, this year I can only get 21*s.*; about a half.

52,394. Were the samples about the same?—Quite the same. This foreign barley also does not make so good whiskey as home barley. It might be looked at by the country from that point of view also. I am a trustee for one of the distilleries in Campbelltown of which my wife is one of the principal shareholders, and the manager has told me that home grain produces much better whiskey than foreign. The quality is not so good, and they have not the quantity either. I know there is a difficulty about taxing imported grain, they want to get as cheap bread in the towns as possible. But I think that all barley brought in, or grain of other kind, that is to be distilled or brewed should have a tax of 10*s.* a quarter put upon it. That would help the farmer; it would help to give people who drink whiskey, a better quality of liquor. And it would not affect the price of bread stuffs in any way.

52,395. Have you formed any opinion what amount of the fall in barley is due to the repeal of the malt tax?—I have not. But my opinion is that there has been an increased amount of barley coming in since the repeal of the malt tax, owing to an inferior quality of barley being used. As it was on barley of good quality they could afford to pay the tax.

52,396. For distilling and brewing purposes?—Yes.

Importation of foreign cattle.

52,397. Have you formed any views as regards the importation of cattle from other countries?—I think after the amount of money this country has expended in eradicating disease from the country which was imported from abroad, it would be madness to run more risks. In my young days there was no such thing as pleuro-pneumonia. So far as I remember it was introduced from abroad about 1840. And after such sacrifices as have been made to free the country of that disease, and after the great amount of money expended by the Government, now the country is clear it would be a foolish policy to run the risk of having the same thing to do all over again. We do not object to the cattle but we do object to the disease.

52,398. Would you be in favour of making the present prohibition of store stock absolute; you know, I daresay, that the law leaves it with the Board of Agriculture to say whether such cattle shall come into the country or not?—I think the feeling is that if store cattle are kept out a great many more young beasts will be reared in the country both to keep up the stock and to feed. I think the farmers are against the introduction of store cattle.

52,399. There is a proposal made that it shall be made illegal to admit store cattle into the interior of the country, would public opinion favour that proposal?—I think so.

52,400. You say there is a good deal of land gone out of cultivation?—A great deal of land.

Tax on barley.

52,401. Do you think if this tax were put upon barley the effect of it would be to throw land into cultivation again and give more employment?—The tendency would be in that direction.

52,402. Would you begin growing more barley?—Not at present prices. There is a great cry to get people back on the land. In my opinion what has caused people to go off the land is that they cannot live by the cultivation of it. That applies to land of middle class or inferior quality on which a man could not live if he paid no rent at all if he was bound to cultivate it.

52,403. That is to say, in regard to land of the quality you have described, the return at present prices is not sufficient to make it pay even without rent?—Yes, on the best class of land near a town, of course, it is a different thing.

Foreign flour.

52,404. The general drift of your evidence is that there is no real remedy for the depression except a rise of prices?—That is the thing. It is the low prices. A reduction of rent would not be sufficient. Looking at the subject from a national point of view, I do not think it right that the country should be allowed to go out of cultivation, or that we should be so dependent as we are on the foreigner for our bread supplies. I saw it stated recently that in London for every one loaf baked from home flour there are eight

Digitized by Google

Mr. R. Dickie. 6 June 1895.

baked from foreign. I think the Legislature should consider whether some means cannot be adopted whereby the land of our country can be worked at a profit so as to keep people upon it as far as possible.

52,405. (*Mr. Lambert.*) As regards the land that has gone out of cultivation, do you mean that it is growing nothing at all, or that it is laid down in permanent pasture?—The greater part of it no doubt was laid down in permanent pasture, but it has since run wild and grows only coarse grass, sheep and cattle run over it.

Uncultivated land.

52,406. Was it very poor land?—In our district the land is apt to get fogged, and overgrown with water rushes where it is left anytime to itself.

Ground game.

52,407. Have you heard any complaints as to the working of the Ground Game Act of 1880?—The Ground Game Act is one of the best Acts, in my experience, passed by the Legislature. It has done away with a great deal of ill-feeling between gamekeepers and tenants, and it was the case that before it tenants often suffered heavy loss, rather than make complaint. If they did it was "right about face"; they were turned out of their farm. Giving the tenant the joint right with the proprietor had put it in the power of the tenant to protect his crops, and in a great many cases a considerable amount of money had been derived from the sale of the game.

Particulars of witness's farm.

52,408. (*Mr. Dalton.*) You have been a farmer for 43 years; what was the rent of your present farm when you first took it?—500*l.* I may explain that when I took it there was an old steading on it, and I had agreed to drive the material and pay 5 per cent. on the outlay of money, which was fully 1,000*l.* for the new steading. There were about 600*l.* or 700*l.* laid out on draining, and on that I was to pay 6½ per cent. That was in addition to the 500*l.* At the end of the first 19 years' lease I entered, in 1873 or 1874, on a second lease on a rent of 700*l.* Of course it was in the inflated times, and everybody was wanting land at any rent. I am not blaming the proprietor, because he gave me a considerable preference over some of the other offerers.

52,409. What is your rent now?—500*l.*

52,410. It is the same now as it was 40 years ago?—With this difference that on my first lease I paid the interest on the borrowed money.

52,411. It has gone down about 100*l.* in 40 years?—About that, and it will fall more, as of course the steadings are pretty much deteriorated. On the single item of cheese alone I showed the Duke's factor what a difference there was in the prices now as compared with 1873.

52,412. But what I want to know is what was the rent paid by you when you first took the farm?—500*l.* and 100*l.* interest.

52,413. Then there is 100*l.* of difference between now and then?—Yes. I think it was more than 100*l.* Of course wages have got up about 50 per cent.

52,414. What capital did you put into the farm when you went in?—Somewhere about 3,000*l.*

52,415. Have you got 3,000*l.* on it now?—There will be quite as much capital on it now from an increase of stock, the farms being now able to carry more owing to an improved condition of the farm.

52,416. Which were the most prosperous times you had?—From 1872 to 1876 were the inflated times.

52,417. On the whole have you done pretty well upon it?—I have worked 40 years and have not made a shilling. I was as wealthy when I went into the farm as I am to-day.

52,418. And the loss has been mainly during the last few years?—Principally.

52,419. And the result is that the labourers are better off now by 200*l.* a year than they were before?—The labourers are the only class of the three that have to do with the land that has benefitted financially.

52,420. And the owner is worse off by 100*l.*?—That is so.

52,421. And you are no better off than you were 40 years ago?—Yes. I have shown that in one item alone there has been a reduction on the farm produce of 300*l.* or 400*l.* a year, and the labour bill has increased.

52,422. What is the net result?—I could not make a definite statement as to that.

52,423. With regard to rates, you had a classification system in Campbelltown some years ago?—We have so still.

52,424. Has that not been stopped?—No. An attempt was made to do away with an old classification under which tenants of agricultural lands got a reduction of one-fourth. But we protested against it, and we are back again to the one-fourth reduction.

52,425. We were told in London that the owner of the land paid the same as the owner of a house?—That is not the case.

52,426. (*Captain Thomas.*) Did you get a reduction of your rent before the expiry of your lease?—Yes.

52,427. How much?—160*l.* for the last five years of my lease.

52,428. (*Mr. Everett.*) Did you grow wheat at all?—I did for 20 years.

52,429. In what proportion?—I had 20 or 30 acres. But the price fell so low I could not grow it. Besides, the wheat straw was not so good for fodder. I grow barley most now.

Witness then withdrew.

Mr. W. Elliot.

Mr. Walter Elliot called in and examined.

52,430. (*Lord Cobham.*) You are a tenant farmer at Holleybush, Galashiels?—Yes.

52,431. How long have you farmed?—40 years.

52,432. What is the size of your farm?—It is 600 acres. A mixed farm, nearly all arable; but there is a good deal of it in grass now.

Position of farmers.

52,433. How are the farmers faring in your part of Scotland?—Not very well.

52,434. Are they able to maintain their position and pay their rents?—I think that they mostly do that, so far as I know. On a good many farms rents have fallen lately.

52,435. Have the tenants lost money for some time past?—Yes.

52,436–7. When did the bad times begin? A good many years ago?—Then we had better times; perhaps about 10 years ago. But for two or three years they have fallen back, and gone from bad to worse.

52,438. Are the tenants losing their capital?—No doubt about that.

52,439. But farms are still easily let?—There has been less demand perhaps during the last five years.

52,440. What is the fall in rents?—From 20 to 40 per cent.; and in some cases rather over that.

52,441. Is your land heavy or light?—It is partly clay and partly light.

52,442. You do not consider you have been specially affected?—I do not think so.

Wages.

52,443. How are wages in your district; have they a tendency to rise still?—No. They have not risen within the last two or three years.

52,444. Taking the last 15 years, are they much the same?—Much the same.

52,445. And the labourers are able to purchase much more with the wages they get?—Yes. The more industrious of them are in a very thriving condition.

52,445*a*. Do they live in a much more comfortable way?—Yes.

Small holdings.

52,446. Are many of them becoming small farmers?—Very few in our neighbourhood. The farms are, one would not say large, but in size they are beyond the reach of this class. They would not be able to take them.

52,447. Do they go elsewhere and become small farmers?—They do.

52,448. Do you think small farms should succeed in Scotland?—I think they might, but not too small.

52,449. If there were small farms they would be readily taken up by the well-to-do labourer?—They might.

Cause of depression.

52,450. What, in your opinion, is the cause of the prevailing depression?—Well, there is no doubt foreign competition has a great deal to do with it.

Digitized by Google

Mr. W. Elliot. 6 June 1895.

52,451. That has affected profits and frightened capital from the land?—There is no doubt of it.

52,452. How would you encourage capital to come back to agriculture?—Well, I think there would not be much difficulty in capital coming back provided tenants had security for what they invested in the land.

Reduction of rents.

52,453. You still see the possibility of profits being made even at present prices?—I have no doubt of it, but rents would require to go down still further.

52,454. You consider that with a further re-adjustment of rents profits would be made and capital would come back if properly secured?—I have no doubt of it.

Security for compensation

52,455–6. And that existing farmers are prevented from farming well by the uncertainty that they feel as to the compensation they are likely to get?—No doubt they are to a certain extent. They are inclined to take it out when they come to the end of the lease because they have got no security. The Act gives them something but it is not a great deal.

Applicants for farms.

52,457. Are farmers with capital coming forward to take the places of those who are leaving their farms?—In my neighbourhood—within a radius of 15 or 20 miles—the most of the best farms are all taken up by non-practical men within the last five or six years—men who had fathers before them, but men with plenty of capital.

52,458. That does not seem much like discouragement?—Well, they will, perhaps, be in time more discouraged after they have tried it for 10 years.

Reduction of rents.

52,459–60. (*Mr. Channing.*) Have they secured their farms at a great reduction of rent?—At very considerable reductions, and, of course, that will help them.

52,461. (*Mr. Chaplin.*) Is it a reduction to any greater proportion than the fall in prices?—I do not think so.

52,462. So that, practically, they have not got them any cheaper than they were before?—That may be, but the great bulk of the best farms in our neighbourhood have been taken by young men, non-practical.

52,463. (*Chairman.*) I do not see how agriculture has suffered from the prevailing feeling of uncertainty when there are plenty of good applicants for farms, and you say that existing farmers have held their own?—They are holding their own so far as I am able to judge. I know by my own experience it takes me all my time to hold my own.

The Agricultural Holdings Act.

52,464. You are under the Agricultural Holdings Act, I presume?—Everyone is.

52,465. Are you farming under a lease?—I have a 10 years' lease of the farm I live at. But I have others. I hold from year to year.

52,466. The provisions of the Agricultural Holdings Act you think are very illusory?—They are not satisfactory.

52,467. And the machinery is unsatisfactory?—It is.

The schedules.

52,468. In what way do you consider the Act unsatisfactory?—I think the two first schedules in the Act want to be radically amended or else put out altogether.

52,469. What would you substitute for them?—I am not a lawmaker and do not pretend to be able to draw up Acts.

52,470. What are your objections to the schedules at present?—The first schedule as to putting down permanent pasture or making a water meadow is a very important thing.

52,471. Is your chief objection that the consent of the landlord is required?—If we do not get the consent of the landlord you will not get any compensation.

52,472. Then you think that improvements should be allowed to be made without the consent of the landlord being necessary?—Yes.

52,473. You consider that notice should be given to him?—I think that is quite right.

52,474–5. If the landlord prefers it that he should be able to make the improvements himself?—Surely.

52,476. Supposing the schedules were amended as you suggest, do you think fair compensation would be secured?—Well, I must say I got fair enough compensation for making roads when I left one of my places. I had the consent of the landlord for so doing.

52,477. As to drainage, you think tenants should be allowed to do that without notice?—I think they should if the land is wet, and if the work is properly executed.

Mr. W. Elliot. 6 June 1895.

52,478. (*Mr. Chaplin.*) How is the landlord to see that it is properly executed if he does not get notice?—I would give him notice.

52,479. But no consent is required for drainage now?—Well I must have been misinformed. I understood you required the consent of the landlord for drainage.

52,480–1. The consent of the landlord is not required for drainage?—Well I was not aware of that.

52,482. Have you any practical experience in the working of the Act?—I have unfortunately.

Appointment of arbiters.

52,483. (*Lord Cobham.*) From your own experience you think the machinery of the Act is unsatisfactory and should be amended?—I think the appointment of arbiters is not very satisfactory, it appears to me that as they are appointed just now they seem to regard it as a duty to look after the party that employs them and not to administer the Act; I think the county council should appoint the arbiter under the Act. It would be a good deal better.

52,484. The county council or the agricultural department, or some independent body?—Yes.

52,485. Is it in consequence of your belief that the arbiters have not been fair in administering the Act?—I myself have felt it in connexion with one farm I had.

52,486. The landowners have got no special power over the arbiters?—No, certainly not, but the arbiters themselves are to blame because, as I said, they seem to me to think that their whole business is to look after the interests of those who employ them instead of administering the Act.

52,487. Do you think that would be cured by the appointment of arbiters by an independent body of men?—I should think so.

52,488. Would they appoint a different class of men?—I do not say that, but you would have a more even decision.

52,489. Are valuators in your district the leading land agents and surveyors?—Part of them are and sometimes farmers are appointed.

52,490–1. Then the valuators are mostly land agents and practical farmers?—Generally.

52,492. (*Mr. Channing.*) Do you approve of the settlement of these cases by a single arbiter?—Yes, I think a single arbiter would be best.

52,493. You think he would hold the balance impartially as between both parties?—Yes.

Compensation to the sitting tenant.

52,494. Are you of opinion that the sitting tenant should be compensated for his improvements?—Yes, I am of that opinion.

52,495. How would you carry that out in practice?—It could either be carried out by fixing a proportionate rent or by paying in money.

Leases.

52,496. Suppose a man takes his farm on a nineteen years' lease with a five years' break, you would not entitle him to compensation before the five years elapsed?—Certainly not.

52,497. At the end of that period there would be a re-valuation by the arbiter?—There would be a new agreement to go into at the end of the five years if either party wished.

52,498. There would be no essential difference between a five years' lease and a nineteen years' lease with breaks at five years; but if there was no break the termination of the nineteen years would be the time for compensation?—Yes, I should think at the end of the lease.

52,499. (*Mr. Gilmour.*) Breaks would only come in where the landlord or the tenant wanted to take advantage of them, there would be no question raised if neither party wanted a break?—That is so.

52,500. Legally, at the present moment, a tenant can claim compensation at the end of his lease?—Yes.

52,501. There is nothing to prevent him making an agreement for compensation at the end of the lease?—No.

Compensation for improvements.

52,502. I do not know what the exact proposal is which you would make to place the tenant in a better position than he is now?—If the tenant has improved his farm very considerably when he came to the end of his nineteen years' lease he would have to pay rent on his own improvements.

52,503. You mean that he should be compensated for good farming?—I would not compensate a man for good farming. I think every farmer is entitled to be compensated for improved value of his farm, and should get a proportionate rent.

Digitized by Google

Mr. W. Elliot. 6 June 1895.

52,504. The condition of his land should be scheduled at the beginning and end of his tenancy?—Yes.

52,505. (*Mr. Clay.*) The compensation might either be in money or in a lower rent?—Yes. I do not want to pay rent on my own improvements.

52,506. (*Lord Cobham.*) If the contrary was the case and the tenant let the farm down, then he should be fined for that?—Certainly, if he wasted the farm. I think the landlord would be quite justified in not keeping him and in charging him for deterioration.

Clauses in leases.

52,507. Have you any suggestions to make in regard to the Agricultural Holdings Act or tenure of land?—At present, as a rule, leases are drawn in a way no man can understand. I think one clause in a lease is perfectly sufficient—the "Good husbandry" clause; but to bind men down to this, and to that, and to the other thing, a man cannot fulfil half of his lease as it is drawn up in Scotland.

52,508. What do you think a good lease in point of duration?—The usual time is 19 or 21 years. I have had that myself. I would not take a long lease now. I farm the great bulk of my land from year to year.

52,509. (*Mr. Chaplin.*) With a 12 months' notice to quit?—Yes.

52,510. (*Lord Cobham.*) Have you an agreement?—I have an agreement.

52,511. Do you consider that most agreements have a good many oppressive and vexatious covenants?—Yes.

52,512. And you would reduce all agreements to a simple undertaking to farm well, leaving it to the arbitrators to decide what good farming is?—Yes; I think that would do.

Restrictions.

52,513. Are you kept closely to a given system of cropping?—Yes.

52,514. And if you sold hay or straw, would you be pulled up at once?—I have liberty to sell.

52,515. But you are tied down closely to cropping?—I am not tied down, but most people are.

52,516. Would you give absolute freedom of cropping?—I would.

52,517. Have you not got in Scotland any adventurers who take farms to run them out?—I have no doubt they could be found; but landlords would be foolish to let their land to such men as that.

Yearly agreements.

52,518-9. You prefer to go on from year to year with a one year's notice to quit?—A one year's notice to quit, and to have freedom of cropping and liberty to sell all the produce?—Yes.

52,520. With compensation for cumulated fertility, and at the same time with compensation to the landowners for waste?—Yes.

52,521. Do you think a farmer, farming badly through a long course of years, would be able to pay the landlord damages for letting down the farm?—Yes, if he had the farm well stocked; but surely the landlord might reserve the right to give him notice if he did not farm the land up to the mark.

52,522. You would give the landlord complete freedom to get rid of a bad tenant?—I think that would be very wise.

Restrictions.

52,523. (*Mr. Channing.*) Are you under no agreement to put your farm in a specified course of cultivation towards the end of the tenancy?—On the farm where I stay I am; on the others I am not.

25,524. Do I understand you to say that you are free to farm as you like?—Yes. Well, now that I think of it I cannot take off two white crops in succession without the landlord's permission.

52,525. Is your farm one of the arable farms on lower Gala side, or is it a sheep farm?—It is principally arable, but there is a very considerable portion of it now under grass.

Permanent pasture.

52,526. Would you like to be able to lay down permanent pasture without notice?—If I were to lay down the whole farm I should consult the proprietor.

52,527. You think that it would be better to give the proprietor notice?—If you go into it to a large extent.

52,528. You think that he ought to have a chance of saying how it should be done?—I think that would be right.

Compensation to the sitting tenant.

52,529. About the sitting tenant, I suppose your view is this that when the new rent is fixed the remaining value of the tenant's improvement should be determined?—Certainly.

Mr. W. Elliot. 6 June 1895.

52,530. And that he should be allowed a sum down or else a deduction from the total letting value of the farm proportionate to the value of his improvements?—Yes, that is what I mean. I think it would likely be a deduction.

52,531. How would you meet the case of a rent being demanded above the letting value which would be fixed for the tenant's improvement?—I do not see how you could meet it except by agreement of some kind.

52,532. You think that in practice a landlord to anticipate the tenant's claim would not add to the rent beforehand in order to meet it?—He might.

52,533. You do not anticipate that he would?—Farms are generally valued at what they are considered worth at the moment without taking into consideration the tenant's claim, and that is what I want to prevent.

52,534. You mean that the farm is let at its letting value irrespective of whether that letting value is made up of part of the tenant's claim for improvements, and that is what you want to obviate?—Yes.

The schedules.

52,535. You said you would give notice to the landlord and then have a reference. What is your scheme under the first schedule?—If I was not going into a large scheme, I should not think of giving notice to the landlord, but I think it would be quite necessary to give notice if I were to spend a great deal of money.

52,536. In giving notice to the landlord, would you think it right to take a decision by an arbiter or valuator as to whether the improvement contemplated was useful or not?—No, that would be seen at the end of the tenancy.

52,537. You would simply give notice and have the valuation at the end of the tenancy?—You are bound to give the landlord notice.

52,538. You would put all improvements on exactly the same footing as drainage?—Yes.

52,539. And simply give notice to the landlord?—Yes.

Compensation for good farming.

52,540. I understand you to lay a good deal of stress on a specific allowance for the results of continuous good farming?—Yes.

52,541. I think you had some experience of a farm treated in that way in your own neighbourhood—the Corsehope Farm?—I have.

52,542. I will not go into the details of that case, but in your opinion was the compensation awarded adequate for the 10 or 12 years of high farming?—I think it was not adequate. I had a case the same myself, in which I got very inadequate compensation.

52,543. Is it your opinion that continuous high cultivation, thoroughly good feeding of the land with feeding stuffs and so on, does produce a condition of things which ought to be compensated for independently of the narrower estimate of the bill?—There is no doubt of it.

52,544. Is it not true that many of the farms in your neighbourhood did fall greatly in value?—They did.

52,545. (*Mr. Chaplin.*) You have got a good deal of capital in your farm?—Yes.

Low prices.

52,546. And you farm it well?—I try my best.

52,547. And yet I understood you to say that in these days you find it impossible to make money?—I cannot.

52,548. What is the reason of that? Are the crops not as good as they could be?—We had lately bad seasons, and the crops did not turn out well. Last year was a disappointing season; the crops looked well, but they were not good, and the prices were very low.

52,549. It is because the prices are so low that you do not get a return?—Yes. The price of beef was bad; mutton was a little better.

52,550. Then the reason why you cannot make it pay is that the price is so low; but I understood you to state that the real cause of all the trouble was the want of security; how would better security improve your prices?—You might lay out more money on the land.

52,551. But you told me you were farming it as well as you could do it. Now I understand you are not farming it quite as well as you might?—What I mean by farming it well is that you would make more permanent improvements on it.

52,552. Would you lay out more capital?—Yes.

52,553. But if prices do not enable you to get an adequate return now how would you get any better return unless prices improved?—That might be.

Digitized by Google

Mr. W. Elliot. 6 June 1895.

Appointment of arbiters.

52,554. You complain of decisions, I understand, given under the Act. Is that so?—Yes.

52,555. How are referees appointed now under the Act?—One is appointed by the landlord, one by the tenant, and these two appoint an oversman.

52,556. Do they never agree on a single referee?—Sometimes they do. But I would approve of that.

52,557. You think that would be the best mode of settling this difficulty?—Yes, I think one man would be better.

52,558. Would you make it obligatory that there should not be more than one man?—I do not say that

52,559. What do you propose?—I have no particular proposition to make, but I think one man would be better than three.

52,560. But you do not propose to embody that in the Act of Parliament and say there should be only one man?—I do not say whether I would or not.

52,561. I am trying to get from you in what specific ways you would amend the portions of the Act you complain of. That is what we have got to learn?—Well, I would rather have one man than three.

52,562. But you are not prepared to go so far as to say that there should not be more than one man by law if the parties desire it?—That is rather a compulsory power.

Tenure.

52,563. You hold your farm, I understand, on a yearly tenure with a twelvemonths' notice to quit?—I have more farms than one. The one on which I stay I have on a ten years' lease with eight years to run.

52,564. But you prefer a short tenure?—Yes, my other land is all held on short tenure.

The Agricultural Holdings Act.

52,565. When you have it on short tenure you have twelvemonths' notice to quit. Is that under the Agricultural Holdings Act?—I have no agreement.

52,566. You hold it under the Act?—Under the Act.

52,567. And yet you think the Act does not give you sufficient compensation?—I do not think it does.

52,568. In what respect does it fail?—It fails in the arbiters.

52,569. It is in the administration of the Act then?—The administration of the Act is worse than the Act itself.

52,570. That is your main complaint—the administration of it?—That is the main complaint.

52,571. And yet you cannot give us any suggestions that you would like to see made law as to how that administration is to be improved?—I am not a lawmaker.

Appointment of arbiters.

52,572. No, but you are a practical farmer, and you might be able to tell us something which we might then be able to put into the shape of a law, what are the particulars in which it is so wrong and where it might be improved?—If you make it one arbiter there would be more justice done to the case.

52,573. That is your main recommendation for the amendment of the Agricultural Holdings Act, that instead of the present system of arbitration there should never be more than one referee?—I think it would be better.

52,574. But do you think yourself that your recommendation to us should be made absolute by law?—Well, it seems a hard-and-fast line, but I am satisfied in my own mind that one is better than three.

52,575. But you are not prepared that it should be made hard and fast by law?—I do not think I could go that length.

Improvements by tenants.

52,576. I understand you to say that you think the tenant should be allowed to make any improvements he likes without the consent of the landlord?—When they are improvements.

52,577. And to lay out any amount of money upon them?—Yes.

52,578. And the landlord is to be responsible for these in the event of the tenant giving up the farm, and on its being awarded by the referee that they are improvements?—Yes, if they are improvements on the farm.

52,579. And you would make the landlord responsible for them?—He would be.

52,580. Have you ever considered this case: suppose for some reason a tenant having made a large outlay wants to go out of business, and leaves the farm at the end of the lease; the landlord is called upon to pay for this large outlay which has been undertaken without his consent, and he may not have the means of doing so; is not that a hard position for a landlord to be in?—I do not think many people would lay out money on buildings that were not necessary. But I stated in answer to a previous question that the landlord would get notice where the outlay was large.

Mr. W. Elliot. 6 June 1895.

52,581. But that would not get him out of the difficulty. What I want you to consider is that under the scheme you propose a landlord might be called upon to meet a very large expenditure of money that he was absolutely unable to do?—Has the landlord not the power to say that the tenant shall take them away?

52,582–3. But that is not your proposal. You suggest that the tenant should be allowed to make any outlay in the way of what he thinks permanent improvements, and that in the event of him leaving the farm the landlord should be called upon to pay compensation for these improvements provided they were awarded to be so. You do not say anything about the tenant being allowed to take them away. Is that an alternative proposal you wish to submit?—I think I stated I would give the proprietor notice if I was going to lay out money to any extent on buildings, and before commencing the buildings.

52,584. (*Mr. Channing.*) The tenant would receive no compensation except for added letting value, would he; so that the landlord would be able to get the added letting value which had been deducted?

52,585. (*Mr. Chaplin.*) You see no difficulty of getting the compensation he has to pay, in the added letting value?—No.

52,586. But, as I understand it, in all cases there has been a fall in the letting value, and not an increase. Your proposal would be of no value to a tenant where the rent fell. In that case he would get no compensation?—Oh, yes, he would get compensation.

52,587. I thought he was to have no compensation unless there was an addition to the letting value?—But if the buildings had not been there the rent might have been a great deal less. We have known several farms that fell in value, but if it had not been for the tenant's expenditure they would have been less.

52,588. Well, we will take it on that ground; but even in these circumstances you might be placing a landlord in an awkward position by calling upon him to make a heavy payment it is not possible for him to make. Had he been consulted, knowing his own circumstances best he would not have sanctioned the outlay of the tenant. Have you considered that?—That is not a likely case to arise.

52,589. You cannot deny that it is a perfectly possible case?—But if you give a landlord notice that you are to expend a large sum of money, you would naturally come to an understanding with the landlord about it.

52,590. How would that meet the difficulty I have suggested. It would make no difference to him. You do not propose, I understand, to put him in this position, that he can say, "No." The money, I understand, is to be laid out with or without his consent?—I do not see that there would be much difficulty in the way. I do not think the tenant is likely to spend money which is not to improve the farm.

52,591. But the tenant might make improvements which the landlord was not in the position to afford. You have not considered it from that point?—I have not.

52,592. And it is not a point of view from which you see any difficulty?—I see no difficulty.

52,593. At all events, you have not considered it?—I have not considered how to make it into law.

52,594–5. (*Captain Thomas.*) The landlord could mortgage the farm?—Quite easily.

Restrictions.

52,596. (*Mr. Gilmour.*) I understand you to say that you would give all tenants entire freedom of cropping and selling without any safeguard at all?—I do not say no safeguard. I say within the rules of good husbandry.

52,597. Is the only safeguard a landlord would have a year's notice?—Yes.

52,598. In different districts the rules of good husbandry differ, do not they?—They may do. I cannot tell. I thought it was a universal rule to have a good husbandry clause.

52,599. But then who is to decide what good husbandry is?—There would be no difficulty.

52,600. How would you provide for it?—Parties could be put over the farm who would say whether the tenant was farming properly or not.

Digitized by Google

Mr. W. Elliot. — 6 June 1895.

52,601. Who is this practical man to be, and how is he to be appointed?—They might agree upon a man.

52,602. Does not that entail that a standing espionage would be going on?—I do not know.

52,603. Is it a desirable position for a landlord and tenant to be in, that year by year the landlord should be constantly spying what the tenant is doing? Does that add to a good position?—It certainly would not. But I farmed land for 40 years and I never saw anybody looking over me. I wish they would come oftener.

52,604. There are farmers and farmers; and what you have to do is to lay down rules to safeguard the interests of all?—That is so.

Improvements by tenants.

52,605. (*Mr. Clay.*) You think it would be an exceptional thing for the tenant to put up extra buildings?—I do.

52,606. Would it not remove the difficulty and ease this matter greatly if, when you give the landlord notice, an official referee is called in to state whether it would be useful to a farm or holding before the improvement was gone into?—Yes, I think that might be done.

52,607. That would be a certain check against an extreme tenant building what was not useful to the holding?—It would.

52,608. There would not be many tenants foolish enough to build what they would not get compensation for?—There would not be many.

Compensation to sitting tenants.

52,609. Regarding the question of compensation to the sitting tenant, do not you think it would be easier for a landlord to deal with a sitting tenant by paying him a small interest on his improvements during the currency of his lease than by paying him a slump sum?—Surely but if he left he would get more for buildings under the Act as at present.

Mr. W. Elliot. — 6 June 1895.

Compensation for improvements.

52,610. You referred to a case of your own like the Corsehope case; where was it?—It was a farm on Gala Water, called Allanshaws. I got very inadequate compensation. I had the land treated the same way as the Corsehope farm and it is growing grass to-day though it is 25 to 28 years since it was done. Plenty of it was not worth a shilling an acre formerly. It is magnificient pasture to-day.

52,611. What is the rent of it now?—I do not remember. There was a break in the lease, and I think the rent was raised. I proved my case to the satisfaction of the arbiter, but I thought I got very little.

52,612. (*Mr. Channing.*) Did the subsequent tenants keep up the fertility without much outlay?—He has never had any outlay at all. I saw it myself the other year. They let the grass grow so rough, they had to burn it with fire.

52,613. (*Mr. Clay.*) What stock would it keep?—I think it was 30 cattle and 130 sheep extra. Many a time I have put on 60 or 80 cattle extra in the summer time over and above.

52,614. You had kept double the quantity of stock on the farm, but you were allowed very little money for the increased fertility?—I was.

The witness then withdrew.

Mr. Alexander Moreson Gordon called in and examined.

Mr. A. M. Gordon.

52,615. (*Lord Cobham.*) You are the owner of a small agricultural estate in the Garloch?—Yes.

52,616. Have you farmed your property for a considerable number of years?—For the last 25 years. I have farmed about 250 acres of my own land.

52,617. You are well acquainted with local agricultural matters?—In a general way.

52,618. In what capacity?—I am Convener of the County of Aberdeen, Chairman of the Committee of the County Council administering the Contagious Diseases (Animals) Act, Vice-President of the Royal Northern Agricultural Society, and a Director of the Highland and Agricultural Society.

Condition of agriculture.

52,619. What can you tell us with regard to the depression affecting your district?—I have simply to say that the depression seems to be less acute in the north-eastern counties of Scotland than in any other part of the country. So far as I can see there is very little difficulty in letting all good farms, and sometimes even at a considerable rise of rent, even in these present times. Large farms, of course, are always more difficult to let than small farms. But for anything under 100 acres you will find any number of tenants at the present moment.

Characteristics of agriculture.

52,620. What is the prevailing character of the agriculture of the district?—Simply, as a rule, it is the feeding of cattle and of some sheep in the upper districts, for the London and large markets down south.

52,621. What crops are raised?—Oats and turnips, which are consumed on the farm.

Position of landowners.

52,622. As to the owners of land within the last 15 years, have they been materially affected?—In some cases they have, particularly where the land is in any way inferior, or the farms are in bad heart, or the buildings in bad order, they have fallen in amount to one-third of the rent.

52,623. And on better lands?—I think the rent has been fairly well maintained. No doubt the farmer is, to a certain extent, depressed. He does not make the profit that he made in the seventies.

52,624. Is the tenant's capital fairly well maintained?—It is difficult to answer that point. Perhaps I could not.

Stock keeping.

52,625. Judging from the condition of the farms, would you say that the same amount of stock is kept?—I do not think there is any falling off in the amount of stock kept.

52,626. There is no visible indication of any considerable loss of capital?—The only extraneous indication I see is this: for many years farmers in the north have abandoned breeding their own stock and have bought in their cattle. They buy in cattle at two years old, and turn over their money more rapidly than in breeding. That began about the time of the cattle plague in 1866, when, I believe, they got alarmed about the risks of breeding. I put down the giving up of breeding to the fear of disease, and partly to the smaller capital involved in this system of farming.

Mr. A. M. Gordon.

52,627. Where do they buy their cattle?—A good many come from Ireland, some from counties further north, some from Orkney, and a good many were imported from Canada into parts of Aberdeen.

Importation of foreign cattle.

52,628. Do they feel aggrieved by the stoppage of the importation of cattle from Canada?—I do not think most of the people do. There are a few noisy individuals, who say they are aggrieved. They are principally the larger farmers in the vicinity of auction marts.

52,629. Is it your opinion that they had better go back to breeding?—Now that we have got rid of pleuro, I think they will go back to breeding.

Size of farms.

52,630. Have farms been more difficult to let than they were before?—Large farms have been. But Aberdeenshire is a county of small farms—what you would call a small farm. In the eastern division there are a few larger farms; but I doubt whether there is a farm over 500 acres in the whole county.

52,631. What is the average size?—The average would be about 100 acres; what they call a pair-horse farm.

52,632. What is the minimum?—They run down to nothing. They are very mixed in size.

52,633. Have you farms of 15 acres?—Some run down to 5—a cow's keep. They are readily all taken up by the labourers.

52,634. Have the farms been sub-divided to any extent in recent years?—I think not. The tendency is rather to run small farms into larger ones on account of the cost of buildings.

Position of tenants.

52,635. Generally, the occupiers of Aberdeenshire are in receipt of smaller profits; but you do not consider they are crippled in the matter of capital?—There is no outside reason to suppose so; it is very difficult to get at their capital. I observe no difference in their habits. They keep the same number of gigs, the same holidays, and always imbibe a little whiskey on holidays. I do not see much difference.

Position of labourers.

52,636. The position of the farm servant is improved?—It is very materially improved, because the prices of everything have very much fallen, and wages, I will not say they have very much increased, but they have not fallen.

Changes in system of cultivation.

52,637. Has the land been going into grass to any great extent?—No, not in my immediate neighbourhood. There have been, I must say, throughout the county farms turned into sheep runs that used to be cultivated. I think that will be more the case in the future as buildings go down;

Digitized by Google

Mr. A. M. Gordon.
6 June 1895.

because when a man does not get a fair rent for his land he grudges to put on buildings. Not much land has been taken in since the seventies.

52,638. You have no great change to report in the system of farming in the course of the last 30 years?—Except what I have stated, that there are fewer cattle bred in the county and more bought in.

52,639. The land is worked on the six-course shift?—Yes. The only change I notice is that there is more barley grown after turnips with the grass sown out than there used to be. They find that the land is getting a little sick of oats, and is the better of a change.

52,640. Are there many occupying owners in your district?—Very few.

Subdivision of farms.

52,641. I was referring to the yeoman class of farmers?—In Aberdeenshire, in the Turriff district, an estate belonging to the Duke of Fife was broken up lately, and a great many of the farmers have bought their holdings from the Duke of Fife, and I believe at profitable prices in some instances.

52,642. Profitable to him or to them?—For them; at lower rates than he might otherwise have got for the farms.

52,643. Are they doing pretty well, so far as you know?—Some of them.

52,644. Did they pay money down for the farms?—So much of the purchase money, I believe, remained. It had not all to be paid down.

Expenditure on improvements.

52,645. Have the owners maintained the equipment of their farms?—I think there has been more spent in the last 20 years on the improvement of farms than in former years.

52,646. On buildings and drainage?—Buildings principally; drainage came earlier.

Loans.

52,647. Was the money chiefly borrowed from the Land Improvement Companies?—Very few people deal with the Land Improvement Companies: they are too expensive. You do not go to the Land Improvement Companies unless you are shut tight up.

52,648. Do you think that if the conditions of borrowing were easier more money would be borrowed for the improvement of estates?—I do not think any more would have been borrowed than there has been.

52,649. You think there is enough money forthcoming for the purpose?—There is plenty of money to be got just now if you have security.

Foreign competition.

52,650. Are you feeling the pressure of competition in Aberdeenshire?—That, of course, accounts for the fall in prices. We feel the competition in foreign beef, and there is a good deal of grumbling about the sale of meat in the London market.

Cost of production.

52,651. You have had some compensation in the reduced prices of farm requirements?—Of course, feeding stuffs, cake, and artificial manures, and all these things are lower.

52,652. Is machinery largely used on the larger farms?—To a certain extent.

52,653. Has it materially reduced the labour bill?—I do not think much.

52,654. You think there is no reduction in the amount spent on labour?—I think there has rather been an increase. Every farmer tells you his labour bill is larger.

Bad seasons.

52,655. Have you suffered in recent years from bad seasons?—We suffered in 1892 from a wet harvest. We had some rain and hail in the autumn months of that year. I saw with my own eyes people carting some of the stuff away from the fields in the month of March. They had never been able to get it in in the end of November.

Rural depopulation.

52,656. Is labour becoming more difficult to get?—The rural population is declining and going into the towns.

52,657–8. Do they better themselves there, or do they just prefer the life of the towns?—I do not know. One does not follow them very much. They are all getting so well educated that they prefer any sort of employment to manual labour.

52,659. Wages would have a tendency to increase if this goes on?—I think there are signs of that.

52,660. Do you get the same amount of female labour?—It is getting very scarce. Boys also are much more difficult to get, or children for labour work. Since the Education Act was passed they have all to be at school until they are 13 or 14 years of age.

52,661. Labour, in fact, is getting rather a serious difficulty?—It is.

Mr. A. M. Gordon.
6 June 1895.
Rates.

52,662. Have the rates increased or diminished?—The county rates have increased slightly since the passing of the Local Government Act.

52,663. The tenants pay half the rates, do they not?—There was what they call a statutory rate fixed. That was an average for the last 10 years; that is paid by the owners.

52,664. Taking your own position, are the rates heavier on you now than they were 10 years ago?—Slightly so. The fact of the matter is, everything is going up. Labour is going up to a certain extent. Men do not work the same length of hours. And the road rate, for example, does not go over the same extent of roads without any extravagant expenditure.

52,665. The increase has not been a substantial one?—Farmers tell you it has. I do not see anything very material. I find in 1889–90 the county assessment on owners in the county of Aberdeen was a fraction above 7*d.* in the £, viz., 7·268. In 1889–90, speaking from memory, we spent nearly 12,000*l.* for animals slaughtered under the Contagious Diseases Act. That was the reason why the rate was so high. It actually doubled the owners' rates in the county. In 1890 the owners' rate was 5·440*d.*; in 1891–92 the owners' rate was 5·840*d.*—that was a slight rise. In 1892–93 it was 5·585*d.*, and in 1893 6·165*d.* The occupiers' rates were, 1890–91, 3·415*d.*; 1891–92, 3·905*d.*; 1892–93, 3·655*d.*; 1893–94, 4·195*d.* They have risen in four years about 1*d.* in the £.

52,666. Has the poor rate been stationary?—It fluctuates very much in the various parishes according to classification; I am not prepared to give you the poor rate.

52,667. In your own case has it increased very much?—I think it has been stationary.

52,668. What is the amount of it?—10*d.* in the £. That includes registration.

52,669. Is that divided between the owner and occupier?—With certain deductions—a certain per-centage on houses and so much on land—the usual classification.

52,670–2. In Aberdeenshire you think the local taxation grievance is not a very substantial one?—School rates have increased very much. The total school rate is 7*d.* in the £—3½*d.* on the owner and 3½*d.* on the occupier.

Light railways.

52,673. Is there a strong feeling in favour of light railways in Aberdeenshire?—There is; there has been a good deal of agitation about the matter. I think if the Board of Trade would relax their rules a little, the principal local railway companies would construct light railways themselves.

52,674. As feeders of the main lines?—I was talking to the manager of the Great North of Scotland Railway and that was their view.

Rates.

52,675. Have you any definite solution in the direction of relief; do you think the present incidence of rates unjust?—I think that more burdens are thrown on land than on any other class of property.

52,676–7. Do you see how they might be fairly adjusted?—It is difficult to say how it could be done. But I think legislators might devise the means.

52,678. (*Mr. Chaplin.*) There is a little depression with you?—No doubt. But I say it is less than in other places.

Small holdings.

52,679. (*Sir Nigel Kingscote.*) As regards small farms are they all held as tenancies?—Yes, all tenancies.

52,680. What is the smallest size of farm a man can live on with a wife and family?—You mean to devote his attention exclusively to that place, and do no outside work. Well, it depends very much on the district. In some cases he might do it on 30 or 40 acres.

52,681. Smaller than that a man would want outside employment?—He would have to do some work.

52,682. Are there many at that?—Oh, yes. Many of them in my district club together to do the farm with and keep a horse a-piece.

52,683. (*Chairman.*) Are many small tradesmen?—No.

52,684. (*Sir Nigel Kingscote.*) They are men who would hire themselves for piece-work?—Yes.

52,685. Under 30 or 40 acres they must have some outside work to occupy their time?—Yes.

Freedom of sale and cropping.

52,686. (*Mr. Gilmour.*) In regard to that question of freedom of sale and freedom of cultivation—is there any great cry in your county for that?—Probably a little among the worst class of farmers.

Digitized by Google

Mr. A. M. Gordon. 6 June 1895.

52,687. Is it your opinion that the interests of the landlord would require to be safe-guarded in some way before granting any such thing?—Certainly. Without some such safeguard many tenants would run out the land. I have known many cases where men took farms for four or five years for the purpose of running them out. They then threw them up, and left them in a bad state.

52,688. Your leases in Aberdeenshire, I suppose, follow the general run of agricultural covenants and have the usual clause, for instance, against indiscriminate cropping?—I fancy so.

52,689. You do not think that it would be wise to do away with such clauses?—I do not believe there should be any interference with individuals making their own bargains.

The Agricultural Holdings Act.

52,690. About the Agricultural Holdings Act—has it been much put into force in your district?—There have been some cases doubtless, but generally claims have been settled privately. The landlord and tenant at the end of the lease have come to some private arrangement.

52,691. Is it usual to agree upon a certain scale of compensation rather than have any question under the Act at the end of the tenancy?—I do not think there is any scale. I never heard of any.

52,692. But you would be against anything being done to prevent such agreements being entered into between landlord and tenant?—Certainly.

Rates.

52,693. (*Mr. Dalton.*) As regards classification of rates, does the classification apply to the half paid by the owner?—Yes, to houses and lands.

52,694. We were informed in London that the classification only applied to the half paid by occupiers, but the last witness said it applied to the half paid by owners as well?—That is so, to the poor rate and the school rate.

52,695. The classification system—does it give satisfaction?—I could not say. There is a great deal of grumbling about it.

52,696. On the part of householders?—There is a good deal of grumbling so far as the collection of the county rates is concerned, on account of the number of assessments that there are made under the Public Health Act. These must be levied in the same way as the rates are levied in each parish.

52,697. There is no complaint on the part of householders that they pay a higher rate than the occupiers of land?—Not that I ever heard of. But I reside entirely in a rural district.

52,698. It is optional for a district to throw it up, I suppose?—Certainly.

52,699. If the householders thought it unfair they could throw it up?—In suburban districts they would. But I have not heard of them doing it.

52,700. Have you made any reduction or remissions to your tenants?—In individual cases.

52,701. Has there been any general reduction? I know people have given general reductions?—I suppose so, but I have not thought it my duty to do so.

Mr. A. M. Gordon. 6 June 1895.

52,702. Your tenants are pretty well satisfied with the reductions given?—I have no difficulty in letting places.

Reduction of rents.

52,703. Do you build for them and keep the buildings in repair and charge interest on the money spent?—That depends on the bargain.

52,704. What is the average rent per acre?—It is very difficult to say. It would run out to 1*l.* an acre. Some people say that the average rental of the county is 23*s.* an acre, but how they make that out I do not understand.

Average rent.

52,705. (*Mr. Everett.*) While you have a system of classification does the farmhouse pay on the household scale or is it included in the assessment of the farm at the reduced scale?—It is taken on the rental of the farm, they do not separate the house.

Assessment to rates.

52,706. Aberdeenshire is mostly under the plough, is it not? You have very little permanent pasture?—Practically none.

52,707. Practically a half of every arable farm lies in temporary grass?—For three years.

52,708. Do you know the average cost per acre for labour on an average Aberdeenshire farm?—I have not calculated that. It would depend very much on the particular crop over the whole relation.

52,709. Of course half your land requires no labour except the labour of mowing?—There is not much mowing. It is all grazed.

Cattle fattening.

52,710. Is it grazed chiefly with cattle?—Chiefly with cattle. There are a few more sheep than there used to be?—In Aberdeenshire alone we have one-sixth of the whole cattle of Scotland.

52,711. And can you fatten your cattle on these temporary pastures in the summer time?—Yes.

52,712. You give them cake?—It is not the general custom, the principal fattening is done on turnips and straw in the early autumn. They are taken in early, about the end of August or the beginning of September, and finished off in October.

52,713. Your turnips must be specially nutritious?—So they say.

52,714. You can fatten cattle on them without cake?—They always get some to finish off with—those who finish them well.

52,715. (*Mr. Channing.*) We have to give cattle cake for about six weeks. We could not fatten on turnips. Your soil must be singularly suitable for nitrogenous constituents?—It may be so; it does not look like it.

Leases.

52,716. (*Lord Cobham.*) Do you find tenants more reluctant to take 19 years' leases than formerly?—They ask for mutual breaks at 5 or 10 years. A lease with a mutual break really means a lease for that number of years.

The witness then withdrew.

One-Hundredth Day.

Friday, 7th June 1895.

PRESENT:

VISCOUNT COBHAM IN THE CHAIR.

The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLERTON CHANNING, Esq.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. J. FLOCKHART called and examined.

Mr. J. Flockhart.
7 June 1895.

52,717. (*Lord Cobham.*) You are a land agent, and manage several large properties in the Fifeshire district?—Yes, and one in Lanarkshire, and a small estate in Lincolnshire as well.

Reductions in rent.

52,718. What has been the effect of the agricultural depression on the owners of land?—The large proprietors have had to submit to a reduction of from 30 to 35 per cent., consequently some have been obliged to let their mansion houses and live elsewhere, while others have been obliged to reduce their establishments to a minimum.

52,719. When you say 30 or 35 per cent., you mean on the average?—Yes, compared with 20 years ago.

52,720. What would be the maximum reduction?—Possibly 30 per cent. is rather too high for some, and 35 too low for others.

52,721. You would say, perhaps, between 20 and 40 per cent.?—Well, I do not know any cases in which there has not been a reduction of 25 per cent.

52,722. The properties you are connected with are mostly large, I suppose?—Four and five thousand a year, and that sort of thing.

52,723. (*Mr. Chaplin.*) The reduction on bad land has been 40 per cent.?—A little more than 35.

Occupying owners.

52,724. (*Lord Cobham.*) Have occupying owners suffered specially, or the reverse?—Not so much as the other proprietors. They have the control of the management of the farm, and have been more economical with regard to outlay on the land, and also with regard to their household arrangements.

52,725. Are they a large class?—No. I should not say a very large class.

Condition of farmers.

52,726. Has the depression been severely felt by the tenant farmers?—It certainly was. Many of them submitted to severe losses on the faith that possibly better times might come, and, unfortunately, a large number were obliged to succumb after their capital was almost exhausted. Now it is quite different. There is a fair demand for farms at reduced rents, and, instead of cropping to the usual extent, a larger proportion has been put on grass, and the tenants appear to do fairly well.

52,727. Permanent reductions of rent were not made?—No, not permanent, and the reductions given were too small.

52,728. A considerable number of farmers had to succumb?—Yes.

52,729. To leave their farms after they had lost their capital?—Yes.

52,730. Do you think that now the reduction of rents has met the requirements of the case and the farmers are doing pretty well?—I do. Any farm in good condition, although large, will readily find a tenant at something like the reductions I have mentioned. There is not the same difficulty in letting farms there was 10 years ago.

52,731. Is there still a considerable number of the old tenants hanging on and recovering their position?—Well, at Leuchars, where there are four large farms, they did not take advantage of the breaks in their leases. Kelmeny is something the same. Yes; I should say a good many.

Mr. J. Flockhart.
7 June 1895.

52,732. They are altering the system of cultivation to a great extent?—Yes.

52,733. They are reducing the labour bill?—Yes.

Small holders.

52,734. How are the smaller tenants of 100 acres or so doing?—That class of men are thriving. Their household expenses are very limited, and their families, in most cases, assist in the working of the farm. I can give instances where tenants of this class, that is to say, paying rents of three to four hundred pounds, have been increasing their capital; and so soon as they do that, they take another holding. These men are to be trusted, and do not incur any obligation unless they see their way to fulfil it.

52,735. Do you class such men as small farmers?—I do not class them exactly as small farmers. A man with 100 acres can employ two pair of horses. I put them rather in the medium list. The small tenants I refer to are men who do not keep more than one pair of horses, if even that.

52,736. That would be a 70-acre farm or less?—Yes; possibly 60.

52,737. They attend to the rearing of cattle?—That is so. It is the cattle, principally, and the sheep they trust to. But these small tenants with 30 to 60 acres cannot keep a flock of sheep, because their holdings are too small.

52,738. These tenants can afford to pay a better proportionate rent than large farmers?—If they are near a large town or large villages where there is plenty of hiring, this class can thrive fairly well and even pay a larger rent than the large and medium tenant farmers. They get 15*s.* a day for the hire of a pair of horses.

52,739. When an opportunity arises, they let out their own labour and that of their horses advantageously?—Yes; but sometimes they hire too much and lose the season of their own land.

Condition of labourers.

52,740. The wages of agricultural labourers have been well maintained?—Yes.

52,741. And their hours of labour have been reduced?—Yes.

52,742. You would say that the general condition of the agricultural labourer has been decidedly improved?—Yes, certainly; very materially improved. With very few exceptions they are now very comfortably housed, and they never fail to find employment. As a class they are very contented.

Quality of labour.

52,743. Is the quality of the labour they give as good as it was or better?—I think they are more attentive, and keep things in better order than they used to do.

52,744. Are they better educated?—Yes. Their children have now the means of getting a good education, and the necessaries of life can all be had at a very moderate rate, compared with 20 years ago.

Digitized by Google

Mr. J. Flockhart.
7 June 1895.

52,745. I think the upshot of what you say about the effect of the depression upon the various agricultural classes is that the brunt of it is now borne by the landowners?—Yes.

Effect of depression.

52,746. Who are still suffering from a very substantial reduction of their incomes?—Yes.

Deteriorated cultivation.

52,747. Is farming land in East Fife maintained under good cultivation?—It is not so well cultivated as it used to be.

52,748. How do you arrive at that conclusion?—There is not the same quantity of manure put into it.

52,749. Is the output of the land reduced?—Yes. But that is not universal. There are some cases where the land is as well farmed as it was 20 years ago. There are other cases where it is very much worse farmed. There is not the same amount of manure put into the land, and I do not think it is so well cultivated on the average as it was 20 years ago.

52,750. If that is the case how can the same quantity of stock be maintained on the land?—Possibly there may be more turnips grown. I do not think that in the high lands of Fifeshire there is the same quantity of potatoes grown, because for a great many years the potatoes were low-priced and did not pay at all.

52,751. It must tell in the course of time on the amount of stock kept?—I think that will now improve in so far as rents have been reduced. A tenant has not the same difficulty in paying his rent now as he had several years ago.

Changes of tenancy.

52,752. Changes of tenancy, which were frequent at one time, have ceased to be so?—There are not nearly so many.

52,753. They are now normal?—They are not nearly so frequent. In some cases a tenant may want to have a larger farm, and leaves a smaller one for that purpose. In the event of the death of a tenant, and his estate being divided among several of a family, then practically the tenancy comes to an end.

Management of estates.

52,754. How are large estates generally managed?—There are a good many in the hands of practically trained factors, but in some cases they are managed by lawyers and chartered accountants.

52,755. Is it more the custom to put estates into the hands of trained factors than it was?—I think there are one or two more, but not many. In fact there are not many of us altogether in East Fife.

Rural depopulation.

52,756. Do you find that the rural labouring population is diminishing?—No. Except where a large portion of the farm may have been laid down to pasture.

52,757. Has that affected the rural population to a considerable extent?—Yes, but otherwise there has been no depopulation. Taking Kilconquhar as an instance, I find that the population has rather increased.

52,758. Where there is a good demand for agricultural labour, it is forthcoming?—Yes.

Condition of labourers.

52,759. Labourers, then, are contented and well-to-do?—There is no doubt about that.

52,760. Living more comfortably and saving money?—Yes.

Foreign competition.

52,761. The cause of the depression in your opinion is foreign competition?—Certainly that is the principal cause.

52,762. Do you consider that to some extent the quality of agricultural produce has fallen off?—No, I do not think so. With the exception of butter, and probably cheese, it does not appear that any other articles are of inferior quality. These two articles might be improved.

52,763. So as to displace a considerable proportion of foreign competition?—Yes.

Danish butter.

52,764. You get a great quantity of Danish butter in Scotland?—Yes, even in the villages.

52,765. Selling at equally good prices as the fresh butter produced on the farm?—Yes, I find that now there is little difference in the price of home and Danish butter, but the latter is preferred. Danish butter is now selling at 1*s.* per lb.

52,766. Is 1*s.* 4*d.* the price charged by the grocer?—Yes; and there is a difficulty in selling the home produce.

52,767. The manufacture must be very inferior to the Danish butter, because the Danish is not fresh?—Yes, it is quite fresh.

52,768. Fresh enough to suit the taste of the customer?—I do not think there is any salt in it, but I am not an authority on that point.

Mr. J. Flockhart.
7 June 1895.

52,769. I do not think Danish butter can get to Scotland without salt?—I think that is so.

52,770-1. You say it keeps out the local article?—That is so.

52,772. Do you tell the same story about cheese?—Yes. There is a great deal of very poor cheese in Scotland.

52,773. It is depreciated by foreign competition?—Yes.

Co-operation.

52,774. Are the county councils doing anything to improve the manufacture of those articles?—No. We tried to establish a butter and cheese factory in a central position about two years ago, thinking that possibly 10 or 12 farmers would send in their milk. But somehow or other it failed. They would not agree, and we were obliged to let it drop.

52,775. That was a joint stock affair?—Yes. The difficulty was about carting the milk five or six miles.

Technical instruction.

52,776. Have there been no lectures or instruction given?—Yes, certainly, and in our district it did a great deal of good.

52,777. You think there is an improvement in the make of butter and cheese in consequence?—I have it from a regular dairyman that a good deal of information was obtained from these lectures.

Local rates.

52,778. Has the depression in agriculture been increased by any increase of rates and taxes within the last 15 years?—Not so very much. There is no doubt the taxes are pretty heavy, and we have the road rate in addition.

52,779. Do the farmers complain of the highway rates?—I think they preferred the old toll system. It was paying out money in small sums, whereas, now that they have a good few pounds to pay in a lump sum, they rather grudge it.

52,780. You hold the opinion that the support of the poor should be thrown upon the State?—Yes.

52,781. And the maintenance of roads?—No, but the system ought to be changed, because it is a great grievance that all burghs, whether Royal or parliamentary, or police, are exempt from maintaining country roads which they use to a large extent in the way of carting and for pleasure purposes. In most towns you will see carriages driving all round the places, and they cart building material and do not give one farthing to keep up the roads. Lord Elgin said that was not the intention of the Act.

52,782. In your opinion the schools ought to be supported by the Imperial taxation?—Yes. The Government inspector exercises his right to increase accommodation, which ratepayers in some cases resent as being unnecessary and uncalled for, and it appears to me that the charge for school rates ought to be put on the same footing as poor rates. They both press very heavily.

52,783. Is that the opinion of farmers generally throughout Fife?—They would be glad to get anything in the way of diminution of rates.

52,784. Are they prepared to give up local administration?—I do not think they would make any trouble about that, except a small minority.

52,785. You are prepared to see highly centralised administration from London?—I think it would be better, and the management would be cheaper, and it would be an advantage to us to get quit of poor and school rates. I think that these burghs ought to bear a larger proportion of road rates than they do now.

Tenure.

52,786. Is the old system of letting farms on 19 years' leases still popular with tenants?—It is popular with some tenants, but not with others.

52,787. The break is now pretty nearly universal?—Yes.

52,788. At five and seven years?—Yes. In some cases where there is an improved demand there is a break at 10 in a 19 years' lease.

52,789. (*Mr. Everett.*) Can a landlord alter the terms at a break?—He can.

52,790. (*Mr. Chaplin.*) It is a break for both parties?—Yes.

Digitized by Google

Mr. J. Flockhart. 7 June 1895.

52,791. Each party can terminate the lease?—Yes.

52,792. (*Lord Cobham.*) Do you think that is a bad system?—Yes. I think the land would be put in better condition if the leases were longer than seven years.

52,793. Do you agree with other witnesses in thinking that with a comparatively short term tenants are afraid of farming high?—Yes. I think that is the tendency.

52,794. You think that would be less likely to be the case under the old 19 years' lease?—Yes. There is no doubt then that they can recoup themselves at the end of the lease for any improvements.

52,795. Did the landowners prefer the old 19 years' leases, and has the pressure for the break at five and seven years come from the tenants?—From the tenants. As a factor I should certainly prefer letting from 14 to 19 years without a break.

The Agricultural Holdings Act.

52,796. Do you consider that the Agricultural Holdings Act bears hardly on the landlord?—Yes, I do, because although the intention of the Act was that the in-coming tenant was to pay the out-going tenant for improvements, the landlord has in most cases to pay all the claims which the latter has—at least, it is so in my experience.

52,797. In the ordinary case of the outgoing and in-coming tenant, is payment made by the landowner and got back so far as he can from the in-coming tenant?—There is only one case in which I knew of an in-going tenant settling with an out-going tenant for improvements under the Act.

52,798. Do you know of a case where the out-going tenant got a substantial sum for improvements, and the in-coming tenant did not recoup the landlord either by increased rent or payment down?—I cannot give a case.

52,799. You have not had very much experience of the workings of the Agricultural Holdings Act?—No. In fact, since the passing of the Act, proprietors had to give large abatements, and that was put against any claim under the Holdings Act.

Abatements of rent.

52,800. The abatements of rent were written down as arrears?—The abatement was to clear off any claim under the Holdings Act, and nearly every tenant in the district has got an abatement since the passing of the Act.

52,801. So that in practice that prevented claims being made?—Yes.

52,802. Of course there are no counter-claims in consequence?—No.

52,803. Do you know what the feelings of farmers of your acquaintance are with regard to the Holdings Act? Are they in favour of amendments, and in what direction?—I do not hear tenants say very much about the Holdings Act at all. In any statements I have heard there does not appear to be much grumbling about it. They grumble chiefly about the expense. So long as they have each an agent, with two arbiters, an oversman, and a clerk, heavy expenses cannot be avoided.

Arbitration

52,804. Do you see any objection to the suggestion that there should be only one arbiter nominated by the State or some public body?—No. But the agents will appeal all the same

Compensation.

52,805. You are not averse to the principle of compensation?—Certainly not.

52,806-8. You consider that the Act operates somewhat harshly on the landowners; how would you prevent that? The compensation has to come out of the landlords' pockets in any case?—I believe that is so; but if leases were from 14 to 19 years it would not happen very often, and I see no reason why a landlord should not make an agreement with his tenant what the principle of compensation is to be.

Restrictions in leases.

52,809. Do you think it would not be wise to relax the existing system with regard to cropping?—Certainly there should not be freedom of cropping.

52,810. Would it encourage a low class of tenants to run out farms?—I would not exactly say a low class, but a great many tenants may say, "I take this farm "for five years to make the most of it, not for the "landlord or the general community, but to make the "most of it for myself"; and if he were not bound to a routine of cropping he would run out the farm In Fife district, if the tenant is entitled to have one half of the farm in white crop, and in the higher districts only two-fifths, I do not see what more any tenant can reasonably ask. With freedom of cropping it appears to me that a tenant can make certainly the most of his farm, but it cannot be kept out of view that the may leave his holding at the end of his lease a wilderness.

Mr. J. Flockhart. 7 June 1895.

52,811. Would not a covenant empowering the landowner to enter and dispossess the tenant meet the case?—It is very difficult to prove.

52,812. (*Mr. Chaplin.*) If he is farming wastefully, you mean?—Yes. I think it would be very difficult to get at the tenant.

52,813. (*Lord Cobham.*) As a matter of practice, do you relax these covenants?—Yes, certainly. I never knew a case where, for instance, a tenant had a field of grass not looking very well, and he asked to get another white crop taken off and applied some manure such as bones—I never knew a case where it was refused at all; and plenty of applications have been made.

52,814. Is there a good market for hay and straw in Fife?—Sometimes. Two years ago hay was as high as 6*l.* 10*s.*, but a number of years before it was 50*s.*

52,815. Is it allowed to be sold?—Yes; hay can always be sold.

52,816. That is the general practice in Scotland?—Yes. There is a clause in the leases that manure is to be returned for the hay, but there is no check or supervision kept.

52,817. Do you think the deterioration of the land you speak of has been caused by selling off the hay and straw?—There is no straw sold; that is prohibited by the leases; and there is no demand, except where there are large mansions. But if a tenant farms well I do not see why he should not sell a proportion of his hay crop.

Low prices.

52,818. You say low prices are the main cause of agricultural depression, and you do not think much improvement can be expected until prices rise?—I believe that is about the whole story.

52,819. Do you see any method of hastening that consummation?—I have some idea how it could be done, but I am afraid it would not be agreed to.

"Protection."

52,820. We would like to hear what your opinions are. Are they protectionist?—So far I do not think there is any chance of improvement unless you tax the foreign barley brought here to make into malt, but I do not refer to other grain.

52,821. (*Mr. Chaplin.*) You suggest there should be protective duties?—I am pretty satisfied I will not get them.

52,822. But that is what you would like to see?—I say that if there is an increase in the price of farm produce it will materially help the tenant farmer. I do not give an opinion about protection.

Railway rates.

52,823. (*Lord Cobham.*) Is there any other special grievance to which you can suggest a remedy?—No. There is a good deal of discussion about railway rates. In a good many cases where there is no competition the farmers are overcharged, and where there is plenty of competition I daresay they will not suffer so much.

52,824. Has the upkeep of estates been maintained notwithstanding the great fall in rents?—I think so.

State loans.

52,825. Do you think the granting of State loans at a small rate of interest for the improvement of buildings, drainage, and fencing would still further improve matters?—Yes. There is a large proportion of land either not drained at all or insufficiently drained which might be drained by the aid of such loans if the interest were low, and also there is a considerable extent of land very badly fenced, and if it were better fenced more stock would be kept.

Settled Land Act.

52,826. There is a good deal of money spent under the Settled Land Act for the improvement of estates?—Not for a number of years.

52,827. Under the Settled Land Act is trust money employed for the improvement of estates?—No.

52,828. Probably less money still is being applied for from the private land improvement companies owing to the heavy charge?—Yes, and it is a high charge—about 7 per cent. with expenses.

52,829. That stops the applications?—I see hardly one advertised in Scotland.

52,830. At one time a great deal was done under these Acts?—Yes.

Digitized by Google

Mr. J. Flockhart. 7 June 1895.

52,831. A large amount of land still remains in a comparatively unimproved state?—It certainly could be materially improved.

52,832. If money could be got at 4 per cent., much of this land would be drained and otherwise improved?—I do not think, so far as clay land is concerned, much would be done to it, but the other classes of land would be drained to a much larger extent by the aid of loans at 4 per cent.

Loans to tenants.

52,833. Are you in favour of loans to the tenants?—For stocking the farm.

52,834. For the permanent improvement of farms?—Yes.

Technical education.

52,835. Do you think that in Scotland a good deal can yet be done to promote agricultural education?—So far as my experience goes agricultural classes have not been successful at all.

52,836. You have a high opinion of the natural intelligence of the Scotch farmer?—Yes. I believe it is like everything else—a business that has got to be learned. I do not think any education, except in the fields, is very much use. I do not think lecturers teaching agriculture are successful.

52,837. If it could be provided without encroaching on the practical training of farmers, do you not think some scientific training must be advantageous in such a complex business?—I do not mean to say it does any harm, but I do not think it does a great deal of good.

52,838. Perhaps the proper mode of administering the education has not been discovered?—That may be so. I know that in our district the county council had classes in Colensburgh which were fairly well attended in the first year, but proved a failure in the second.

52,839. Some training should be given in the elementary schools to the children of the labouring classes to give them some knowledge of the principles of the business?—That might be done.

52,840. Do you think it would give them a greater interest in their work?—It would be a start at any rate. They would understand when they commenced to work what had been taught in the school.

52,841. But so far as you have seen at present, agricultural education has not done much for agriculture generally?—That is so.

Nationalisation of poor rate.

52,842. (*Mr. Lambert.*) Did I understand you to say that you preferred the poor should be maintained by the State?—Yes.

52,843. How would you distribute the funds to the aged poor?—An inspector could take six or eight or ten parishes in hand.

52,844. You think it should be done by an inspector?—Yes, appointed by the Government.

52,845. But would you have no local control over him?—No. There might or might not be, but like every other Government official if he were properly looked after he would do his duties properly.

52,846. How would he be properly looked after if his employers were in London?—There could be another inspector over the others. Fife, for instance, might be divided into eastern and western districts, with a chief inspector for each district.

52,847. Would not that be having a large number of inspectors?—There is an inspector now in every parish.

52,848. But he is looked after by local people?—Yes. But all the expenses of collection would be saved which is half the expense of the management.

52,849. Collection of what?—Of the rates.

52,850. But the State would have to collect the money somehow?—Certainly.

52,851. Where would the difference come in between the State collecting it and local collections?—A grant from the State funds.

52,852. Do you mean you would have a subvention from the State for local people to distribute?—For inspectors provided by the State to distribute.

52,853. Do you think that would tend in any way to economy?—I think so

52,854. Are not the present boards economical?—We have 10 inspectors doing the work which possibly one could do, and the expense of collection would be saved.

52,855. Is not that the fault of the local boards that they employ ten men to do the work of one?—Parishes will not agree to amalgamate. Each parish appoints its own inspector and collector, else there would be a saving.

Mr. J. Flockhart. 7 June 1895.

52,856. Do I understand that you advocate this on the ground of economy as regards the distribution of the money? Do you think less money would be spent?—On the ground of economy and fair play as well.

52,857. Where does the fair play come in?—I am of opinion the poor are the property of the State.

52,858. You want to make it a national charge?—Yes.

52,859. That is your principal argument?—Yes. It should be collected and distributed by the Government.

52,860. Then, of course, you would do away with local control?—Yes. The parish councillors might have control so far, though I do not think it is necessary.

Tenure.

52,861. You admit that the desire for the break in the leases came from the tenants?—Yes.

52,862. For what reason was that?—Because they did not like to be tied down to so long a period as 14, 15, or 19 years.

52,863. Was that because they were afraid prices might fall and they would not be able to get a sufficient reduction of rent?—Yes.

The Agricultural Holdings Act.

52,864. You referred to the fact that the Agricultural Holdings Act bore hardly on the landlord. How do you think it does so?—If the landlord in every case has to pay compensation under the Act, I think it does so.

52,865. But he would only pay compensation for improvements that added to the letting value of the farm?—In my experience that is not sufficiently taken into account.

52,866. But that is not the fault of the Act but of those who administer it. Compensation to the outgoing tenant is estimated by the valuator, is it not?—Unless a private agreement is made. The outgoing tenant must be paid by the proprietor or the incoming tenant.

52,867. Do the valuations award anything more than is fair?—I do not think so.

52,868. I think there can be no hardship on the landlord if he only has to pay what is fair?—Yes, but it is paying a lump sum often.

52,869. (*Mr. Chaplin.*) Paying a what?—Paying a lump sum every five or seven years. I do not see how he is recouped.

Competition for farms.

52,870. (*Mr. Lambert.*) Is there any competition for farms in East Fife?—Yes.

52,871. Considerable competition?—It depends on the class of the farm.

52,872. Say an average farm of 150 acres?—You will have six or seven men, or if it were exceptionally good, 15 or 16 men.

52,873. Would it not be natural if you had six or seven men making an offer, that you would get the value of the farm, and even the added value that accrued to it by the improvements of the outgoing tenant?—I am very doubtful of that. There is no doubt you would get a fair rent, but I do not see how the landlord, if he is to pay compensation every five or seven years, can be recouped by additional rent.

52,874. But if he gets more rent it must recoup him for his outlay?—The principle is right but the practice is different.

52,875. But you admit the valuing is fair?—Yes. But I am referring to the landlord paying compensation every five or seven years. How is he to be recouped.

52,876. Is he not recouped out of the added rent?—He ought to be, but so far as I know, that is not the practice.

52,877. If there are six men competing for one farm surely it would be lifted to its proper rental?—Of course, I have nothing to say about the rental. It is the payment made by the proprietor for improvements.

52,878. The farms are rented high enough at present?—Some are, some are the reverse. There are

Digitized by Google

Mr. J. Flockhart.
7 June 1895.

some farms that might bring an increase of rent and others that would not.

52,879. They are not rented high enough?—I would not like to say that. Still an increased rent might be got on some farms and not on others.

52,880. Have tenants who are farming under leases got the same reduction as those who have changed their farms?—In most cases proprietors have done their very utmost to give abatements to industrious tenants who knew their business.

Restrictions in leases.

52,881. You consider it would be injurious to the landlord if the restrictive covenants were done away with altogether?—I decidedly think so.

52,882. But you say that in a large number of cases they are relaxed?—Yes. But these cases are exceptional, in so far as they only happen where a crop fails.

52,883. Why not leave it to the discretion of the tenant instead of having to go to the factor and ask permission?—Because he might miscrop the farm and deteriorate it very materially.

52,884. If you gave the landlord the right to re-enter and dispossess the deteriorating tenant that would be sufficient to protect the landlord?—It would be a very difficult thing to do, and I do not see how it could be done.

52,885. You can resume possession of a farm now if an agreement is broken?—If an agreement about cropping is broken, that is a matter for compensation.

52,886. Why should not the law be enforced as well as a private agreement? Supposing a law were made to give freedom of cropping provided a tenant did not deteriorate, how could it not be enforced as well as a private agreement?—The expenses of witnesses, and arbiters, and oversman, and all the machinery would be so great it would be quite unworkable.

52,887. But it does not require witnesses to walk over a farm to instruct a valuator if the valuator is a practical man. You, yourself, would be able to go over a farm and say, without outside help, whether a field had been miscropped?—It would be all right if you had a practical man for an oversman.

52,888. Do you ever have any other than practical men?—There is no rule to the contrary.

52,889. Surely there is, at any rate, a fixed understanding between valuators that they should only appoint practical men for oversmen?—In railway cases where land is taken for railway purposes, you have the very best counsel for oversmen. There is no reason why they should not also be employed in these cases.

52,890. Are any other than practical men selected as oversmen?—There have been no cases of the kind you suggested.

52,891. (*Mr. Channing.*) Would not the difficulty be met if you had a specified amount of manurial return agreed upon, and the law laid it down that if a tenant made that specified return of manurial matter the farmer should be allowed freedom of sale and freedom of cropping?—You would require to have a great deal of supervision over the tenant, and the majority of tenants would not approve of that.

52,892. Have you never heard of experiences of continuous white cropping?—It is bound to run out the land. You cannot keep it free of weeds. It is bound to run to a wilderness.

Malt tax.

52,893. (*Mr. Chaplin.*) Is much barley grown in Fife?—On good land, a sixth of the farm.

52,894. Have you ever considered whether the repeal of the malt tax has affected the price of barley?—Unquestionably, to a material extent.

52,895. Are you of opinion that if the beer duty could be altered in such a way that the tax would be levied, in the future, on the material instead of on the product on which it is now levied, the effect would be beneficial on the prices of English barley?—I could not say as to that, but there is no doubt that barley fell a long way immediately after the malt tax was repealed.

52,895*a*. I gather from the drift of your evidence that unless there should be a change in the price list in the direction of a rise, you do not see any prospect of a material improvement in the agricultural position?—That is so.

52,896. (*Mr. Lambert.*) The agricultural labourer's position is fairly prosperous at the present moment?—Yes.

Mr. J. Flockhart.
7 June 1895.

Condition of labourers.

52,897. (*Mr. Channing.*) A larger proportion of the land has lately been put down to grass?—Yes, in the higher country. That is to say stiff land 500 feet above sea level.

Land laid down to grass.

52,898. Less labour therefore is employed on the land?—Yes.

Small farmers.

52,899. I observe you say that unless a small farmer can find constant employment on his farm, it is impossible he can make a fair livelihood?—Yes.

52,900. Is that because he finds better employment elsewhere?—Yes, and his horses are standing idle.

52,901. You are speaking then of employment for his horses and not for him?—Well he could go and hoe and improve his land and fences. He can always find employment for himself.

52,902. But can he find employment apart from his own farm?—I do not think so.

52,903. (*Lord Cobham.*) Do not the small holders let their own labour out?—Yes, it is a different thing when it comes to hiring.

52,904. (*Mr. Chaplin.*) I ask the question, because in another question referring to the agricultural labourer you say they never fail to find employment. I want to know why there should be a difficulty in the case of the small tenant when there appears to be no difficulty on the part of the agricultural labourer?—The farm labourer is engaged yearly whereas the small farmer only goes when it suits him, that is to say, when he has no work on his own farm, and the full complement of servants having been engaged he is not required.

Employment of labourers.

52,905. Are any agricultural labourers employed by the week or the fortnight?—There are odd or orra men.

52,906. What is an orra man?—He is paid by the week and does all kinds of work.

52,907. Do they get constant employment too?—Yes.

52,908. Why cannot the small tenant get employment as an orra man?—It would only suit him to go one or two days a week and a farmer could not be expected to take him in on these conditions.

52,909. His services cannot be counted on when they are needed?—That is so.

Nationalisation of poor rate.

52,910. (*Mr. Gilmour.*) Your chief argument in favour of the poor rates being made a national burden is owing to the fact that in many parishes there are populous places that supply the poor and that the up-keep of the poor falls on the land of that parish?—Yes. That is one reason. As a matter of fair play the poor ought to be the property of the State.

Rating.

52,911. You object to different rating in neighbouring parishes?—Yes, I think it is wrong.

State loans.

52,912. You hold that if loans could be got at 3½ per cent. a good deal of advantage would be taken of it for the purpose of improving the cottage accommodation and the steadings?—Yes.

Penal clauses.

52,913. You have been asked about the penal clauses, and you say the necessity for those is to guard against an inferior class of tenant?—Yes, most men would say I have taken this subject for five years and I want to make money for myself.

52,914. These penal clauses are rarely enforced in your experience? I might say almost never. What is the reason for keeping them there?—As a guard against a bad tenant.

Technical instruction.

52,915. Do not you think something further might be done in a more practical way to aid technical education in agriculture if it were managed differently by county councils than in the past?—I do not see very well what could be done.

52,916. Do not you think that in that part of the country where, as you have told us, home butter did not bring anything like the price of Danish butter, they might have some practical teacher—not to lecture, but to go to the farms and show them improved methods? Would not that be a great gain to the people?—It would be a very great improvement, and that is exactly what is wanted.

52,917. That kind of agricultural education would be a great improvement?—Of course I did not look at it in that way. I thought it meant giving lectures.

Digitized by Google

Mr. J. Flockhart. 7 June 1895.

52,918. Another way I take it a good deal might be done would be by having some practical man to explain matters and carry out practical experiments on the different farms in the county?—Yes. That is what I meant. To go to the tenants' farms and teach them how to make butter and cheese.

52,919. In that case you would modify your reply as to technical education being no use. It might be so if properly used?—Yes.

52,920. (*Mr. Clay.*) Do you think the parish schoolmaster being trained in the arts of agriculture could impart a good deal of information to the young lads of 15 and 16?—That is exactly what we had that failed, but the young men were older. Some of them were nearly 30. The parish schoolmaster taught the classes.

52,921. I mean in the elementary schools. We have schoolmasters who go to Kensington to take courses in the arts and sciences, and these men might be able to impart the first principles of agriculture to the boys?—The only drawback is that there are very few lads of 15 at the public schools. The agricultural classes leave school as young as possible in order to earn some wages.

52,922. But you seemed to indicate that scientific training would be beneficial if it were properly carried out. The teaching of these things would be of advantage to the youth whenever you could get it?—It could do no harm, and a little good, but without a practical department it was not of much use.

52,923. If you had a college for young farmers with a farm round about where they could see both the scientific and the practical aspects, would it not be a great advantage?—It might be of some advantage, though, in my opinion, not very much, though I may be wrong.

52,924. You have not studied the case so minutely as to give an opinion?—No. It is just what I myself think, and a great many practical farmers besides.

Management of estates.

52,925. You think that practically trained factors are better to manage estates than the lawyer element in Ednir?—I should not like to give an opinion upon that, because I am a practical trained factor myself.

52,926. Is the practical trained factor not better fitted for it than a man living in a town?—I believe we all tell our own story. A lawyer or chartered accountant would no doubt say they look more sharply after the estates.

Ground game.

52,927. Has the Ground Game Act been working well in Fife?—Yes. I think the bulk of the game is in the hands of the proprietors. In a great many cases tenants do not take advantage of their rights if the rabbits are kept down. The only objection is that there are fewer hares than might be.

52,928. Are the rabbits kept sufficiently down under the Ground Game Act by the tenants?—They can do it if they choose, but if proprietors would keep down the rabbits I do not think tenants would go and hunt and shoot hares and rabbits at all.

52,929. (*Mr. Gilmour.*) Your district is not a great preserving district?—No.

52,930. (*Mr. Clay.*) Not the same as Perthshire?—No.

Small farmers.

52,931. (*Mr. Whitehead.*) Have the class which you term the medium class any special mode of cultivation?—No.

52,932. You think the prosperity of this class is due to the tenants themselves and their families working?—Yes. I have two instances just now where men entered the farms they occupy 10 or 12 years ago with little capital, but owing to their own industry and the industry of their families they now want to take farms for their eldest sons, I suppose.

52,933. Did they grow potatoes?—It is only in the low country near the shore where potatoes are grown. Away in the highlands they ought not to be grown.

Fruit culture.

52,934. It does not appear to you that fruit culture could succeed. Does that apply to Scotland or only to the whole of Fife?—In Perthshire on the banks of the Tay, and on the Fife side as well, it has been cultivated to a small extent, but there have been no new trees planted or anything of that kind. I do not think that it would pay to plant an orchard and cultivate it in Fife.

52,935. Is that because of the climate?—Yes, and the low prices for fruit.

52,936. (*Mr. Gilmour.*) In many of the old gardens in Fife they cannot grow the old dessert apples they used to grow?—They are certainly not planted, and neither are pears.

52,937. (*Mr. Whitehead.*) There are great opportunities of getting rid of fruit for jam making?—There is sometimes difficulty in selling strawberries. Fruit-growing is very uncertain.

Local rates.

52,938. (*Mr. Dalton.*) As regards the charge of the poor, do you get in Scotland any contribution from the Government towards it?—Yes.

52,939. Any substantial contribution?—Yes.

52,940. What proportion?—We get a half for insane paupers.

52,941. Anything beyond that?—Yes.

52,942. Anything for the salaries of the officers?—For the medical officers only.

52,943. Do you see any objection to combining some parishes for the purpose of poor law administration and having a common rate for the whole?—No. But the parish paying no rate, or a very small one, would object to combine with a parish paying much higher.

52,944. But in England they were compulsorily united. Do you see any objection to that being done in Scotland?—That would require careful looking into. Besides, you have to pension off these officers already in existence, which is a great grievance.

52,945. You say you think the charge for school rates ought to be on the same footing as that for the poor rate. In what respect are they on a different footing at present?—I mean by that that the State ought either to pay the whole expense or a very much larger share of the school rate.

52,946. Do not they pay, in Scotland, a larger proportion of the school expenditure than of the poor expenditure?—Yes; I think they do.

52,947. Do you want a larger subvention for the poor rate?—I think the simpler way would be for the Government just to take over both.

52,948. Entirely?—Yes. With the school rate possibly a larger grant would be fair.

52,949. Do you have any classification of the poor rate in your district?—In some parishes.

52,950. Is it popular or unpopular?—It is five and twenty years ago since that was settled, and there is nothing said about it.

52,951. No objection raised to it?—No.

52,952. It is an advantage to the agricultural land to have it?—Yes.

Co-operation

52,953. (*Mr. Channing.*) Do you think that co-operation would be beneficial?—Yes; it would so far as butter and cheese are concerned.

52,954. What was the reason of the failure of the attempt you referred to?—I think the long distance carting. Of course, the place proposed was in a central district.

52,955. Was it a creamery or a factory, or what?—The thing did not go any further. We had some funds subscribed, but we failed to get sufficient to establish either a creamery or a factory.

52,956. It was not taken up?—No; though we tried very hard, and some of the proprietors supported it very heartily.

52,957. Has any information of the great success of agricultural co-operation in Ireland been distributed in Scotland?—No; at least, not in Fife.

State loans.

52,958. At what rate do you suggest State loans might be advantageously made for improvements?—I think that with the low rate of interest on money just now, and deposits in banks only receiving 1 per cent, it should not exceed 3½ per cent. I think the Government might provide it at 3.

52,959. Would you add to that a sinking fund?—If there were a sinking fund, the rate of interest should be 2½, with 1 per cent. added to liquidate the fund advanced.

52,960. Do not you think it would help agriculture if the interest on the sinking fund were slightly higher than 3½ per cent.?—It would be a great advantage to agriculture if an advance could be made at a low rate of interest, whether there was a sinking fund or not.

52,961. What has been the usual rate of interest on sinking funds charged by landlords to tenants in leases for improvements executed by the landlord? We had

Digitized by Google

Mr. J. Flockhart. 7 June 1895.

evidence it was 6½ per cent.?—No; 5 per cent. But the landlords themselves pay 4½ per cent. and 2½ to liquidate in 25 years, which is 6¾ and then there are expenses. It costs the landlord 7 per cent.

52,962. Usually most of that is charged to the tenant?—No.

52,963. Previous to the depression?—It was in my early days; but that is a considerable time ago.

52,964. Your idea is, that if these loans were granted at 3½ per cent. they would be reduced to the tenant also?—Clearly, I do not see why the tenant should pay more than the proprietor does.

Witness then withdrew.

Mr. J. Gilchrist.

Mr. JOHN GILCHRIST called in and examined.

52,965. (*Lord Cobham.*) In what way are you associated with agriculture?—I am a farmer, and a lecturer on agricultural and dairy subjects, and I have done some land valuation work.

52,966. How much land do you farm?—It was about 180 acres to begin with; a few acres have been taken off.

52,967. You are a tenant farmer?—Yes.

The Agricultural Holdings Act.

52,968. A year ago, the Glasgow and West of Scotland Agricultural Discussion Society appointed a committee to suggest amendments on the Agricultural Holdings Act, 1883. How was that committee formed?—It was formed of three factors or land agents, three farmers, and one lawyer.

52,969. Have you any objection to give us the names?—No. The three factors were Mr. Peile, factor for Sir Michael Shaw Stewart, Mr. Ralston, factor for Lady Campbell, and Mr. Murray, factor for the Duke of Montrose, I think. The three farmers were Mr. Findlay, Springhill, Mr. Wilson, and myself. The lawyer was Mr. Duncan, of the firm of Russell and Duncan, Glasgow.

52,970. You were appointed chairman?—Yes.

52,971. You made an exhaustive report, which was presented to the society in January last?—Yes.

Compensation for improvements.

52,972. Take the more important suggestions, and state the nature of the alterations proposed?—The first, with regard to clause 2, is merely a verbal alteration; to insert after landlord "or his duly authorised agent "or factor," and substitute for "consent to the making," at the close of the clause, the word "approval." The force of this amendment will be, that compensation under the Act shall be payable in respect of improvements executed before the commencement of this Act, provided the landlord or his duly authorised agent or factor, within one year after the commencement of the Act, has declared in writing his approval of the improvement.

52,973. Then with regard to clause 3?—With regard to the improvements executed after the commencement of the Act it is proposed to alter as follows: "Compen- "sation under this Act shall not be payable in respect "of any improvement specified in the first part of the "schedule hereto, unless (1) the landlord or his duly "authorised agent or factor has consented in writing "to the execution of such improvement; or (2) failing "such consent in writing being obtained, the improve- "ment has, previously to the execution thereof, been "certified under a reference between the landlord and "the tenant, in terms of section 9 of this Act, as "necessary for the efficient and profitable manage- "ment of the holding, having due regard to the "purpose for which such holding was let." That was one of the principal amendments, and two of the committee dissented therefrom.

52,974. (*Mr. Chaplin.*) How many did the committee consist of?—Seven.

52,975. (*Mr. Clay.*) Who dissented?—Mr. Peile and Mr. Ralston.

52,976–7. (*Lord Cobham.*) All these improvements in Part I. of the schedule may be executed against the wish of the landlord if the referee approves of them? And if he considers that they are necessary for the efficient and proper management of the holding?—Yes.

52,978. Will you now come to clause 4?—It is merely putting in "factor" after "landlord or his duly autho- "rised agent" in sixth line, and in the last sentence of the first paragraph of the clause altering to read as follows: "In default of any such agreement or under- "taking, and also in the event of the landlord failing "to comply with his undertaking within a reasonable "time (not exceeding six months), the tenant may "execute the improvement himself, and shall in "respect thereof be entitled to compensation under "this Act." We thought it advisable to define a reasonable time.

Basis of compensation.

52,979. Now we will take clause 6?—Dealing with the basis of compensation and deductions from the amount of the tenant's claim in sub-section B., delete the words "according to the rules of good husbandry "or according to the terms of any written contract "specifying such rules," and add to this sub-section, "and that whether or not such sale or removal was "contrary to the rules of good husbandry or the "terms of any written contract specifying such "rules."

52,980. Does that come at the end of the sub-section?—Yes. The clause as it at present stands is ambiguous, and this makes the meaning more clear.

52,981–2. Give us your view of the effect of the alteration?—The clause as it stands does not seem to be particularly clear, as if anything was sold off against the rules of good husbandry no deduction might be claimed for it by the proprietor.

Amount of compensation.

52,983. Then regarding the amount of compensation payable to the tenant?—Heads 1 and 2 stand as they are. Head 3 to be altered as follows: "3. For the "breach of any stipulation of the lease or of any "contract relative to the lease committed by the "tenant (which in the opinion of the arbiter has "injuriously affected the value of the holding)."

52,984. You seem to have acted on the principle throughout that a tenant may commit any breach of contract, but so long as it does not affect the value of the holding he is not to be debarred from compensation?—Yes, as far as the Act gives him liberty. It would not free him under common law.

52,985. Was that unanimously agreed to?—One gentleman did not altogether dissent, but he suggested that the breach of any stipulation here referred to should be restricted to breaches of a trivial nature.

52,986. What alterations do you propose on the procedure under the Act?—We left that the same as in the Act of 1889.

Notice of claim.

52,987. But as regards notice?—Regarding notice of intended claim for "four months" substitute "one month" in respect of the tenant's notice, and delete the words "or within fourteen days thereafter" in respect of the landlord's notice of counter-claim.

52,988. Was it the unanimous opinion that four months operates harshly on the tenant?—Yes.

Clauses 9 and 10.

52,989–90. The clauses 9 and 10?—These clauses are deleted altogether as they are rendered invalid by the amending Act, 1889, which should be incorporated.

Clause 17.

52,991. How do you propose to deal with clause 17?—Relative to the giving of particulars in the award, we propose to alter sub-section C as follows:—The award shall specify "the sum awarded in respect of "each improvement, act, matter, or thing (the arbiter "being entitled to award a larger sum than is claimed "in respect of any particular improvement, act, "matter, or thing, provided the aggregate sum "awarded is not more than the aggregate sum origi- "nally claimed").

52,992. At present the arbiter cannot give more in respect of any one claim than the amount actually claimed?—At present he cannot.

52,993. You call on the tenant to specify the amount of each claim. But you give him more than he claims if it does not exceed the aggregate. What is the reason for that?—The tenant in making out his claim may fail to realise that some item has not been sufficiently claimed for, and in that case the arbiter should have the liberty of giving more for any particular item. It leaves the arbiter a freer hand but does not allow him to give more than the total sum on the claim.

52,994. Would it not be simpler for the tenant to make an aggregate claim and not detailed claims?—

Digitized by Google

Mr. J. Gilchrist. 7 June 1895.

It would be simpler but all claims should be definitely stated to assist the arbiter.

52,995. (*Mr. Chaplin.*) Is it a common mistake for a tenant to claim less than he is entitled to?—We thought this would have a good effect in keeping down the amount of the claim on the particular items and in doing away with the absurd claims which are sometimes put forward. That was our main reason for dealing with it in that way.

52,996. (*Mr. Channing.*) Are claims sent in by the tenants in Scotland, detailed claims specifying the amount in respect of each thing?—As far as may reasonably be expected.

52,997. In practice they carry out the provision of clause 7?—Yes, in practice.

52,998. They do not very largely in England?—It is supposed by the tenants that according to the Act they must do so.

Counter-claims.

52,999. Do you apply the same rule to the counter-claim?—We did not as a committee deal with the counter-claim, I expect from the spirit of the meeting they considered what was fair to the claim was fair to the counter-claim.

53,000. (*Mr. Chaplin.*) Do I understand you to say that under sub-section C claims were extravagant, and you want to check the extravagance?—Yes, I want to check the extravagance, because if a tenant knows he cannot get more than he claims on each item, he runs up an extraordinary claim.

53,001. (*Lord Cobham.*) That led to extravagant counter-claims?—Yes.

53,002. (*Mr. Chaplin.*) Was it on the ground that the counter-claims were not extravagant they were not dealt with by your Committee?—The inference is so far correct because the counter-claims were generally made up according to the first claim sent in, but it did not strike the Committee with regard to that or with regard to allowing the same latitude.

53,003. Probably your view was that the landlord could take care of himself?—I think it was because of the weakness of the tenant in having a claim made out.

53,004. All the members agreed in making this recommendation?—Yes.

Agricultural Holdings Act. Clause 19.

53,005. (*Lord Cobham.*) Then as to clause 19?—It reads "The award shall fix a day not sooner than one "month," and we propose to insert there "and not "later than three months," after the delivery of the award.

Clause 28.

53,006. Your next amendment is on clause 28?—Yes. We wish it altered to read "Notice by landlord to the "tenant under this section shall be sufficient if given "by registered letter."

Clause 30.

53,007. How do you amend clause 30?—Clause 30 to be altered to read "Before the removal of any such "fixture or building the tenant shall pay all rent owing "by him and shall perform (or give satisfaction that "all his other obligations to the landlord in respect to "the holding shall be fulfilled)."

53,008-10. Is "satisfaction" a Scotch term for giving adequate guarantee or security?—Yes, it is left to the proprietor to accept it or not.

53,011. (*Mr. Dalton.*) Does it mean a guarantee to the satisfaction of the landowner?—We thought it better just to say "give satisfaction" without mentioning the landowner.

53,012. (*Mr. Chaplin.*) Did you attach much importance to it?—Yes. We thought it might prevent difficulties, and that it would prove very useful.

Clause 35.

53,013. (*Lord Cobham.*) Then as to clause 35?—We considered this clause very ambiguous. It should be shortened so as to read "This Act shall only apply to "a holding that is either wholly agricultural or wholly "pastoral, or a part agricultural, and as to the residue "pastoral, or in whole or in part cultivated as a "market garden."

53,014. That only clears up what you conceive to be the meaning?—Yes.

53,015. Is it the same clause as is in the English Act?—I think so.

53,016. (*Mr. Chaplin.*) Anybody who is the servant of the landlord living in a cottage becomes under this a tenant also?—Yes.

Mr. J. Gilchrist. 7 June 1895. Clause 42.

53,017. (*Lord Cobham.*) Under clause 42 you alter the definition of "determination of tenancy." Is this a technicality?—No. In Scotland we had great difficulty over this, because we have so many different determinations of tenancy in the different districts. We want it altered to read "Determination of tenancy "means the termination of a lease by reason of "effluxion of time or from any other cause the date "of the determination of tenancy being considered "the last ish as regards any part of the lands forming "the holding." The difficulty is that sometimes the houses are held after they are freed of the lands, and *vice versâ*.

53,018. And the difficulty was whether the determination depended on the houses or the lands?—Yes. There is a difficulty in some parts of the north of Scotland in knowing what is meant by the Act.

53,019. You insert the word heirs in the definition of landlord or tenant?—Yes.

The schedules.

53,020. How do you propose to deal with the schedule?—We propose to leave the schedules as they are, because, as you see, the amendment to clause 3 deals with that pretty exhaustively—with one exception, that we transfer the laying down of permanent pasture from Part I. of the Schedule to Part III.

53,021. That is to say, as regards laying down grass, it may be done without notice or consent or without the referee coming in?—Yes.

Permanent pasture.

53,022. (*Mr. Chaplin.*) Is that because laying down permanent pasture has become so much more common of late years and caused depreciation?—No. The main reason is that in Scotland we have 19 years' leases, and during the latter term of the lease, where dairying is carried on especially, old pasture is apt to be broken up, and it would add immensely to the value of the holding if it were not broken up. It was to avoid this as far as possible we proposed this change, and to give encouragement to farmers to leave it in permanent pasture.

53,023. This amendment you propose is to encourage the laying down of permanent pasture. I understood the difficulty was to prevent pasture being broken up?—It is the leaving of the pasture after it is laid down and not breaking it up at the determination of the lease.

53,024. (*Lord Cobham.*) Does not the landlord agree to pay something to the tenant at the end of the lease on condition that he does not break up the grass?—No.

53,025. Is it not in the interest of the landlord to come to such an agreement?—It is in the interest of both parties.

53,026. (*Mr. Clay.*) He seldom does it?—Seldom.

53,027. (*Lord Cobham.*) Would the change you propose make it more easy for a tenant to lay down grass?—It is like this, that where there is a dairy farm with a large extent of pasture near the house it would be better for both that compensation should be paid in order to prevent it being broken up.

53,028. If it is provided for under the Act and not under private agreement?—Yes. If you get compensation for leaving it unbroken you get encouragement to lay it down, and for a dairying district we consider this a great improvement.

Land laid down to grass.

53,029. Do you think that compensation should be provided for by the Act for grass laid down without consent of landlord and that compensation for not ploughing it up should not be left as a matter of private agreement?—Yes. That is so.

53,030. In Part III. you propose to insert the word "horses" before "cattle"?—Yes in Part III. Head 47. There was a difficulty sometimes in "cattle" being made to cover both cattle and horses.

Mortgages.

53,031. Do you have any general recommendations?—We have two. It is the opinion of the committee that a simple mortgage by the landlord over his whole property in favour of the lender should be sufficient protection of the interests of the latter.

State loans for improvement

53,032. It is the opinion of your committee that a great impetus would be given to agriculture if Government would grant facilities to landlords to borrow money for improvements at a cheap rate of interest?—Yes.

53,033. And that no stamp duty should be exigible in regard to any deeds or documents in regard to any portion of the Act?—Yes.

Digitized by Google

Mr. J. Gilchrist. 7 June 1895.

53,034. Who pays for the stamps at present in Scotland?—Half and half. It is equally divided between landlord and tenant.

53,035. The committee were of opinion that if these amendments could be adopted and became law, agriculture would be greatly benefited?—Yes.

The Agricultural Holding Act.

53,036. Is the Act made much use of in your district?—Very little.

53,037. For what reason?—Because the returns for making use of the Act are practically nil, and tenants find it much better either to take no account of the Act or to try and make an agreement without reference to the Act at all.

53,038. Do they fear the cost of the administration of the Act?—Yes.

53,039. Your committee make no suggestions as to this?—Except that one arbiter should be appointed instead of three.

53,040. (*Mr. Channing.*) Would you make the Act compulsory?—Certainly.

53,041. (*Mr. Chaplin.*) What do you mean by compulsory. It is compulsory now, is it not?—I mean in the same way as it is compulsory now, and making it impossible for a proprietor to contract out of it as at present.

Compensation for improvements

53,042. I understand you allow any two parties to come to an agreement between themselves as regards compensation and that that agreement shall hold good and valid provided it did not give less compensation than they would get under the Act?—Yes. In one way. I would agree to that at the end of the lease. At the beginning of the lease it seems to be impossible to have an arrangement that would be satisfactory, as a matter of fact the greatest good of the Act in our part has been to bring about the insertion of clauses giving a little compensation and tenants rather than take advantage of the Act prefer the little that comes to them without trouble. It is difficult to define at the beginning of a lease what would be equivalent to this Act itself.

Substituted agreements.

53,043. (*Mr. Gilmour.*) The Committee do not propose to interfere between landlord and tenant making what is considered to be a fair and reasonable agreement in place of acting at the end of the lease under the Act?—That is so, anything held to be reasonable can be substituted for the Act itself, but I would not agree to any agreement being made compulsory on the tenant to accept it instead of the Act.

53,044. (*Mr. Clay.*) If he can prove the agreement is not fair and reasonable he can go to the Act?—Yes.

53,045. (*Mr. Lambert.*) Would you give the tenant the option of going out under agreement or under the Act as amended by your suggestions?—I would be quite pleased to do so.

53,046. That would obviate any reference. It would give the tenant his choice and he could please himself?—Yes.

53,047. (*Chairman.*) You are speaking for yourself now and not the committee?—Yes.

Tuberculosis.

53,048. As to tuberculosis you think that some system of diagnosis should be applied?—I think we have come to this, that some system should be enforced in regard to it. I speak specially in regard to large dairying districts such as round Glasgow.

53,049. When should the diagnosis be carried out?—According to any arrangement with regard to time that would be suitable to go over a district.

53,050. You mean a whole district should be tested whether there is reason to suppose there is tuberculosis or not?—Yes.

53,051. You are satisfied with the test yourself?—As far as I have applied it.

53,052. You know of no mistakes that have been made under it?—No, I have been at Ottawa and at the college of Minnesota and saw the cattle treated there and the evidence confirmed me in the evidence I had had with a few experiments on my own stock.

Technical instruction

53,053. Have you been engaged in the practical teaching of dairying recently?—I have.

53,054. Under the county councils?—In the West of Scotland Technical College and in connexion with county councils.

53,055. Do you think there is great room for improvement in dairying?—Yes. Very great room.

Mr. J. Gilchrist. 7 June 1895. Dairying.

53,056. You have been in Denmark, Holland, and Belgium and investigated the system?—Yes. Ten years ago, as secretary of the Bothwell Farmers' Club, I was one of a deputation to Denmark, Holland, and Belgium, which gave a report on the advanced system of dairying in these countries. I was so impressed at that time with the great advantages to be derived from technical education in agriculture and dairying that I have since done everything in my power to further its development.

53,057. On what lines do you propose the instruction should be given?—Each district has to be considered according to its wants, and according to the wishes of its inhabitants—of the practical working people within that district, so that it is very difficult to define a hard and fast way, but to have practical dairying taught pupils have to do actual work and have lectures besides, and, if possible, pass examinations from which they could get a certificate.

53,058. Do you think the milch cow in your district of Scotland could be improved?—I think so.

53,059. What is the prevailing breed of dairy cows in Glasgow and the West of Scotland?—Ayrshires.

53,060. What proportion of butter can be made from your milk?—From 25 to 30 lbs. of milk give a lb. of butter. That is two gallons and a half to a pound of butter.

53,061. That ought to be much improved upon?—The improvement is more in the way of quantity, I think.

53,062. Is the quantity given by the Ayrshire cow unsatisfactory?—By many undersized and scrubby cows it is.

53,063. There is great room for improvement in the yield of milk from the Ayrshire cow?—Yes; I think so.

Danish butter.

53,064. Do you agree with the last witness who said that home-made butter was considerably less in price than imported Danish butter?—No, not in our district. The highest prices are given for the best home-made butter. While Danish fresh is being sold at 1*s.*, the best home-made is fetching from 1*s.* 3*d.* to 1*s.* 5*d.* per lb.

53,065. That reverses the statement we had?—That only applies to certain districts. In some the opposite is the case.

53,066. Does the Danish come into the country under the title of English or Scottish butter?—I do not think so. After people have used it for some time they never think about it.

Dairying.

53,067. Have you any further recommendation to make with regard to the improvement of the dairying industry in Scotland?—It would be advisable to have a mode of examination which would be fair, and examiners acting on the same principle at one place as at another. I may say that in some of the counties in which I have lectured they have great difficulty because of not producing a uniform class of butter. That has given the foreign butter a great hold in those districts and the middleman refuses in some cases to sell the home produce which is a great disadvantage to the home-producer.

Co-operation

53,068. Have you any creameries or factories in your district?—Practically none.

53,069. As long as that is the case you will never have uniformity in the make of butter?—Not so readily.

53,070. Is it your opinion that that is a great advantage possessed by the Danes?—Yes; uniformity.

53,071. Owing to the co-operative system?—Yes, but more to the education which the small dairy farmers have received in producing this butter and making it up.

52,072. More or less at the expense of the State?—Yes.

Permanent pasture.

53,073. (*Mr. Clay.*) I suppose there is no doubt one of these amendments bringing the permanent pasture from Schedule I. to Schedule III. will be not only of advantage to the tenant but to agriculture at large?—It is in the interest of all parties that it should be done.

53,074. It is more required when arable land is not paying and when sheep, stock, and cattle land is paying?—Yes.

Substituted agreements.

53,075. You would leave a landlord at liberty to make a private agreement provided it was in accordance with the spirit of the Act?—I would, certainly.

Digitized by Google

Mr. J. Gilchrist. 7 June 1895.

53,076. Are the opinions expressed in those amendments shared by the landlords and tenantry of your district?—They were fully discussed at the meeting of the society, and the Act was subjected to so much ridicule that some members were disposed to think it could not be amended at all.

The Agricultural Holdings Act.

53,077. The costliness of the Act has prevented it being taken advantage of?—Yes. In any cases that have come before me I have uniformly advised farmers to accept a small sum by arrangement rather than go into all the trouble of the Act itself.

53,078. The expense would be remedied by your amendment?—Yes.

53,079. One arbiter you consider would be enough?—Yes.

53,080. Are you of opinion that capital should be brought more largely into play in the land than hitherto?—Yes.

State loans.

53,081. Regarding State loans you think 3½ or 4 per cent. would benefit both landlord and tenant?—Yes. It should be a low per-centage.

53,082. All classes would benefit thereby?—Yes.

Official referees.

53,083. Regarding the appointment of the official referee would it not be well that he should be recommended by a chamber or society and his name sent up for approval to the Agricultural Board in London?—Yes, I would approve of that as a means of simplifying and making decisions more uniform all over. The committee took up that point and then considered the advisability, of such a man being named by the county council, but they were averse to leaving the appointment in the hands of the county councils because of wire-pulling. The name might be suggested by them subject to the approval of the Board of Agriculture or other such Board.

53,084. Have you any other proposal as to naming these men?—No. It might fairly be left with the county councils to suggest them.

53,085. And the Board of Agriculture would be a check?—Yes.

53,086. These men should be throughly practical men engaged in agriculture one way or other?—Yes.

53,087. (*Mr. Gilmour.*) Would it not meet the difficulty put forward in some places where there may be a predominance of non-agricultural members on the county council that the county council should relegate it to the local authority committee?—Practically it would be relegated to a committee to do so, but we can hardly leave it with that committee as it must be subject to the recommendation of the county council itself.

53,088. It must be approved of by the county council?—Yes. I do not see any way of getting it to the Board of Agriculture except through the county council.

53,089. Are you familiar with the schemes of compensation that exist on some estates in Scotland?—No, not very familiar.

53,090. You cannot speak to them as being fairly reasonable?—No.

Substituted agreements.

53,091. In your proposal I understand it is open to the tenant or the landlord at the end of the lease to back out of what they both agreed was a reasonable agreement?—I had not thought of the proprietor backing out because he was the suggester of the agreement, and it never occurred to me that the arrangement suggested by him would be one he wanted to back out of. It was only that the tenant might back out of it if it were not in the spirit of the Act.

53,092. But an arrangement of that kind if it is a fair agreement does not emanate from one side?—That is true, but as farmers, we are accustomed to look to the leases as being principally in favour of the proprietor.

53,093. That would simply mean of course that if the least friction arose at the end of the lease it would make utterly useless any attempt to make a fair agreement?—Where friction was brought about or people were stubborn it would have that effect, but I think the good effects would overbalance that, because it would be more costly to get it in any other way. Then, too, the arbiter who considered a fair thing had been put aside, causing expense, would throw the whole expense on the tenant himself.

53,094. You recommended the tenants to accept what was in their agreement rather than go under the Act?—At the end of the lease.

53,095. Were these cases in which the parties had agreed on a specific per-centage?—Nothing was specified in these cases.

Mr. J. Gilchrist. 7 June 1895.

Permanent pasture.

53,096. Do you consider that the provision about laying down permanent pasture was a wise provision to apply to all parts of Scotland?—I think so, though there are some parts where it might not be wise. The arbiter, however, has the power to consider whether it increases the letting value of the holding.

Letting value and compensation.

53,097. Does that mean that if there is not a rise of rent at the conclusion of the tenancy the farmer would get no compensation?—The want of rise in the rent might be due to altogether outside causes.

53,098. Explain what you mean by the increased letting value if the fact is that in the market it does not bring an increased rent?—The increase would be the increased letting value compared with what would have been drawn had the lands been in a worse condition.

53,099. If there is no rent?—In that case it is not lettable and of course no tenant would have it.

53,100. (*Mr. Chaplin.*) If there is no letting value at all there is no compensation?—That is a point I have not considered.

53,101. (*Mr. Lambert.*) Does that arise in Scotland?—I am not aware of it.

53,102. (*Mr. Chaplin.*) There have been cases in England where the land has gone out of cultivation altogether owing to the great fall in prices. You are not accustomed to that in Scotland?—No.

53,103. Where it has occurred as it has occurred in England your proposal would not work?—No. If it is under letting value our Act would give no compensation to the tenant as far as the spirit of the Act goes.

53,104. (*Lord Cobham.*) A tenant would be very unwise if he spent money on land that commanded no rent?—He would be.

53,105. (*Mr. Chaplin.*) It might occur that when the improvement was made and authorised by the arbiter it had paid a rent, but that owing to a considerable subsequent fall in prices it might have become valueless?—In that case and with these amendments the risk is altogether the tenant's.

Substituted agreements.

53,106. (*Mr. Lambert.*) The Act would affect no fair and reasonable agreement, because if an agreement were fair and reasonable the tenant would be quite willing to go out under the agreement?—Quite so.

53,107. As I understand it, tenants want it made compulsory so that they can fall back upon it if necessary?—That is so.

Letting value.

53,108. (*Mr. Channing.*) You speak of increase in letting value as due to the tenant. In that do you include the prevention of the decrease of letting value? For instance, supposing land had been let at 20*s.* an acre, and supposing, as in the case Mr. Chaplin referred to, it went down to a nominal value of 1*s.* an acre, a man who had kept his farm up to a rent, say, of 10*s.* or 15*s.* an acre would have contributed something to the value of the farm?—Yes, in that case.

53,109. So that the term increase in letting value as compared with the former rent may in times of depression, when all rents are falling, be a fallacious term?—Yes, when compared with what it has been before but not with what it would have been.

Fair rents.

53,110. As to the determination of a fair and reasonable rent, should that be done at common law or under the Act?—It ought to be under the Act.

53,111. You prefer to have it referred to the arbiter?—Yes.

Notice of claims.

53,112. Are you aware that the Central Chamber of Agriculture in England has recommended that the notices of both landlord and tenant should be given on the same day? Is not that a desirable course?—We thought it desirable in the interest of parties coming to agree that there should be an interval between the tenants' notices being given in and the counter notices. It gives the proprietor a little time to meet and discuss with the tenant before he is actually leaving the holding, and we thought it would be better to have that time to come to an agreement without a reference at all under the Act.

53,113. Have you considered the advantage to the landlord of being able to claim under the Act himself without regard to whether the tenant is claiming or

Digitized by Google

Mr. J. Gilchrist.

7 June 1895.

not?—Just now the landlord has no claim unless the tenant makes a claim under the Act.

53,114. Do not you wish him to have equal rights?—It was considered, I believe, that he has his advantages at common law.

53,115. You think that is adequate?—I think so.

Interim awards.

53,116. Do you approve of interim awards by the arbiter in the case of one part of the holding given up at one time and another six months later?—No. We thought that would increase the expense.

The Agricultural Holdings Act.

53,117. (*Mr. Chaplin.*) I think you said that the Act in many cases you are aware of has been subjected to a good deal of ridicule?—Yes, amongst practical farmers.

53,118. Does not that proceed from the fact that they are absolutely ignorant of what the Act contains? We had an instance yesterday of a witness who seemed to be under the impression that the consent of the landlord is required for drainage. Is it not really ignorance of the Act that accounts for the abuse thrown on it?—I believe it is partly so, and by people being disgusted by the attempts to get compensation under the Act as it was.

53,119. In some of the earlier cases?—Yes. We have had no cases recently for a good many miles round our place.

Permanent pasture.

53,120. What would be the cost of laying down permanent pasture? What would be the outlay per acre to convert arable land into pasture in your district?—It depends very much on the land, but, giving a rough estimate, from 4*l.* to 6*l.* or 7*l.* per acre.

53,121. You do not propose to place any limit on the tenant. He may convert as much as he likes into pasture?—The limit is just so far as it adds to the letting value.

53,122. It might involve the landlord in heavy responsibility?—For which, of course, he would be receiving increased rent.

Letting value and compensation.

53,123. Or, rather, increased letting value, because he might be called upon to pay this compensation, although there has been a decrease on the rent?—Yes.

53,124. As a matter of fact, would the permanent improvements you contemplate be made by tenants to any extent?—In some cases they would be.

53,125. In these cases there would be no limit to the extent to which improvements of this kind might be made except from the authority of the arbiter?—Yes, the risk devolving on the tenant at the end of the lease.

53,126. You might involve an impoverished landlord in heavy responsibility?—He might require to borrow money.

Mortgages.

53,127. Take the case of a landlord whose estates are mortgaged up to their full value already, and at the end of the lease you call upon him to find a large sum of money for a vast number of improvements made without his consent and against his will. He has not the means of meeting that liability because although you say it is to be only paid on the increased letting value, you admit that there may be an increased letting value, although an actual decrease in the rent. Consequently the landlord has no improved security on which to borrow. Have you considered that position, and is it quite fair and just towards the landlord?—I think so. I do not see that the man who has the mortgage should have this land made more valuable to him, in consequence of improvements made by the tenant.

Mr. J. Gilchrist.

7 June 1895.

53,128. Do you consider it fair to put a man into such a position that he has to become responsible for a great liability it is not in his power to meet?—I have considered that and there is no honest way out of it that I can bring forward.

53,129. Consistent with your proposal?—No. To me the landlord is practically bankrupt.

53,130. You make him so under your proposal. Is that fair?—Yes.

53,131. (*Mr. Lambert.*) Is it not in the interests of the community that the land should be cultivated to produce as much as possible?—Yes.

53,132. And where a landlord cannot and will not make improvements himself and will keep other people from doing it, is it not in the interest of the community that the sooner he gets rid of it the better?—Yes.

53,133. If the land were mortgaged up to the value of the farm exclusive of the tenant's improvements, then the landlord would have the additional value which the tenant's improvements gave to the land?—Yes.

53,134. If he had mortgaged it up to the hilt with the tenants' improvements, then he would have been mortgaging what he had done nothing to create?—Yes.

53,135. (*Mr. Chaplin.*) I gather it would be perfectly fair in your estimation to involve a man in bankruptcy by imposing on him liabilities entirely against his own will?—I think so, because the bankrupt would have been only the worse had these improvements not been there.

53,136. The improvements you contemplate referring to arbitration are improvements necessary for the purposes for which the holding was let, and were therefore contemplated by the landlord as well as the tenant on entering into the contract of tenancy?—That is so.

Agricultural Holdings Act. Clause 7.

53,137. (*Mr. Gilmour.*) In regard to clause 7, you said that the Committee came to the conclusion that the words in regard to giving notice to the landlord "or within 14 days thereafter" should be omitted?—Yes.

53,138. It should be before the determination of the lease?—Yes.

53,139. Is it possible for the landlord to claim for deterioration of buildings before the determination of the lease? Is it not possible that the tenant on removing his things might damage the buildings?—It was considered that in that case the remedy could be had at common law.

53,140. Would that not add to the expenses?—The offending party would have to pay.

53,141. (*Chairman.*) Was it not your object to bring it as much under the Act as possible?—Yes.

Witness then withdrew.

Mr. H. Elder.

Mr. Hugh Elder called in and examined.

Mr. H. Elder.

53,142. (*Lord Cobham.*) Are you a tenant farmer?—Yes.

53,143. You are President of the Scottish Chamber of Agriculture?—Yes.

The Agricultural Holdings Act.

53,144. In November 1893 it was decided that the directors of the Chamber should bring under the notice of this Commission the views of the Chamber on the subject of agricultural depression generally, and specially the amendment of the Agricultural Holdings Act?—Yes.

53,145. At a conference on the 25th July 1894 the following motion was unanimously passed:—"That the "Agricultural Holdings Act requires thorough amend- "ment in order to secure to the tenant, by simple and "inexpensive procedure, adequate compensation for "improvements effected by him, and remit to the "directors to draw up amendments, and submit them "for approval to the annual meeting of the Chamber "in November"?—That is so.

53,146. And in accordance with that resolution you have to lay before us certain particulars in which the Act should be amended?—Yes.

Consent to improvements.

53,147. Is it the opinion of the Chamber that the provisions affecting the improvements specified in the first part of the schedule to the Act are practically inoperative?—It is.

53,148. In respect that the proprietor has unlimited power to withhold his consent to the execution of such improvements in every case, however necessary they may be, for the proper working of the farm?—Yes. In most cases the proprietors are willing to effect such improvements, but in some cases it is otherwise, and it is to meet cases of that class that it is thought provision requires to be made.

53,149. In the minority of cases the improvements should be effected whether the landlord gives his consent or not?—Yes. Those proprietors who do not do their duty ought to be forced in some way.

Digitized by Google

Mr. H. Elder. 7 June 1895.

53,150. The Chamber proposes to carry this out by providing that where the proprietor fails to effect necessary improvements the tenant should be allowed to call in a properly qualified arbiter to be appointed by the sheriff, and that compensation should be given for such improvements as are certified by such arbiter to be necessary for the proper working of the farm, having regard to the purpose for which it was let?—Yes.

53,151. Was this amendment unanimously passed at a meeting of the Chamber which was attended by several estate factors?—Yes.

Section 4.

53,152. With regard to section 4 of the Act the Chamber were unanimously of opinion that it restrains the tenants unduly by requiring them to give to the landlord "not less than two 'months'" notice before beginning to execute improvements—drainage improvements specified in the second part of the schedule. The Chamber proposes that one month's notice should be substituted?—Yes; that was the Chamber's opinion.

Section 6.

53,153. The Chamber was also of opinion that two years should be substituted for four years in the following clause of section 6 of the Act:—"Nothing in "this section shall enable a landlord to obtain under "this Act compensation in respect of deterioration by "the tenant or of breach of any stipulation by the "tenant committed or permitted in relation to cultivation or management more than four years before "the determination of the tenancy"?—Yes; it was considered that four years was too long a period to go back.

53,154. (*Mr. Clay.*) How far do the common law rights allow the landlord to go back?—At any time, even at the end of the lease. The landlord has his claim under common law whenever he sees his tenant going wrong.

53,155. (*Mr. Whitehead.*) He cannot go back after he has given a receipt for his rent?—Not generally. I am speaking of the practice, not of the law. A full receipt for the rent is held as a discharge.

53,156. (*Mr. Clay.*) That is the general understanding?—Yes, that is the practice. The landlord's common law rights to pursue the tenant for breach of any stipulation in his lease can be put in force at any time during the course of the lease, and the spirit of recent decisions of the court is that if he fails to do so within a reasonable time he should be held to have lost his right by acquiescence. The Chamber, therefore, were of opinion that the Act at present confers too great a privilege on the landlord, and that the proposed amendment under this section should be given effect to.

53,157. Then the landlord has lost his right if he has not made a claim before the last rent is paid?—There is nothing said about rent here.

53,158. If a man gets a full discharge for rent nothing can be raised?—That is so in my experience.

Section 7.

53,159. (*Lord Cobham.*) The chamber is of opinion that section 7 of the Act, by requiring tenants to give four months' notice prior to the determination of a tenancy of their intention to claim compensation, has the effect of placing the tenants unduly at the mercy of their landlords, because by the simple omission inadvertently to give such notice the tenant's right to claim is entirely lost, even where it can be shown the landlord is not prejudiced by the omission?—That is so, as it is necessary by the Act to get the landlord's consent or to give notice to him before the improvements under the first and second parts of the schedule to the Act are made, the Chamber are of opinion that the getting of such consent, or the giving of such notice, implies intention to claim compensation, and dispenses with the necessity for giving notice of such intention, which should not therefore be required.

53,160. Is it proposed that the tenant should send in his intention to make a claim a fortnight before the determination of the tenancy?—Yes.

53,161. And that the detailed statement should be sent in a fortnight after the determination of the tenancy?—Yes.

53,162. As regards improvements specified in the third part of the schedule, the case is different, because they can be made without the knowledge of the proprietor, to whom it is therefore proper that reasonable notice should be given by the tenant if he intends to make a claim for such improvements. The Chamber are of opinion that the time for giving notice of intention to claim by the tenant, and of intention to make a counter-claim by the landlord, should be a fortnight before the determination of the tenancy?—Yes. And in respect that certain otherwise valid claims have been defeated for want of detailed specification within the requisite time, it is thought that it should be competent in cases where such notice has been duly given for the party giving such notice to send in fully detailed statements within a fortnight after determination of tenancy.

Mr. H. Elder. 7 June 1895.

Security for compensation.

53,163. What suggestion has the Chamber to make with regard to security in respect to compensation to tenants?—The Chamber are of opinion that, as most of the improvements under Parts I. and II. of the schedule will form a permanent enhancement of the value of the estate, and therefore afford increased security to bond holders and other heritably secured creditors, the charge for compensation for these improvements, so far, at least, as they are of a permanent nature, shall rank *before* and not as at present *after* the securities of such bondholders and creditors.

State loans.

53,164. What is the suggestion of the Chamber with regard to Government loans?—The Chamber are of opinion that the Government should give more encouragement than they have hitherto done to the effecting of improvements both by landlords and tenants in the shape of giving greater facilities for borrowing money at a low rate of interest wherewith to effect such improvements. At present improvement loans charged upon estates in the shape of rent charges are required to be repaid (principal and interest) within 25 years. In consequence the annual charge, being at the rate of about 6*l.* 10*s.* per cent., forms a heavy drain upon the estate rental, and this makes it difficult, if not impossible, for the proprietor to effect other needful improvements. If the period for repayment were extended to 40 or 50 years, as in the case of loans obtained by school boards and other public bodies, very considerable relief would be given to the landlord, and it is thought in cases where the tenant effects the improvements he should be allowed the same facilities for borrowing on security on his interest in the improvements.

53,165. It is proposed these loans should take priority of existing mortgages?—Yes.

53,166. And that the security of the tenant for his compensation should also be a prior security to that of other incumbrancers?—Yes.

Compensation for buildings.

53,167. Do you propose to enlarge the schedule which at present provides for compensation for the erection and enlargement of buildings?—Yes. As No. 1 of Part I. to the schedule only expressly provides for the erection and enlargement of buildings, it is considered advisable that that number should include the restoration or renewal of buildings where they require restoration or renewal through no fault of the tenant.

Compensation for consumption of home-grown corn.

53,168. What provision is suggested for compensation for consumption of the produce of the holding on the farm?—The Chamber consider that where the produce of the holding, except straw, turnips, and pasture, is consumed thereon, compensation should be given therefor in the same way as if it had been bought and brought on to the holding.

53,169. That is to say, that tenants should be compensated for corn which is grown on the farm, and given to the stock, including horses on the farm?—That is our opinion. I have been an arbiter sometimes under the old Act, and on some occasions have advised the tenant to sell his own oats and buy others.

53,170. Do you recognise the difficulty of ascertaining the actual amount of the produce of the farm consumed on the farm?—The greeve could keep an account of what the horses consumed.

53,171. The compensation would be assessed on the account produced by the tenant?—There is no other way of getting at it if you consume your own produce. In the cases I spoke of where I acted, purchased corn was substituted for the corn grown on the farm, and there was a voucher in that case.

53,172. An arbiter must go on the report of the tenant. Can they be relied upon to be accurate?—It could be managed. You could get the greeve to keep an account.

53,173. In every class of men there are some black sheep?—Yes.

Digitized by Google

Mr. H. Elder.
7 June 1895.

53,174. Is the Chamber of opinion that compensation should be given for cumulative fertility or improving the general condition of the land?—Yes.

Compensation for cumulative fertility.

53,175. Is it held by competent lawyers that this was intended to be given by Section 1?—Yes. Some arbiters have allowed for cumulative fertility, while others have not done so. In these circumstances it is necessary to make a more explicit enactment on the point.

53,176. How is the relative condition of the farm on entry and quitting to be compared in estimating the compensation for cumulative fertility?—You could get it valued as to fertility at the commencement and at the end of the lease.

53,177. If that is done, as it often would be, by two different men you think you could arrive at a fair estimate?—If public arbiters were appointed there would be a regular scale of charges. The Chamber's opinion is that cumulative fertility should be encouraged, because it is desirable for the whole nation that the fertility of the land should be increased.

53,178. And compensation should be provided for this cumulative fertility whether the letting value of the land is increased or not?—I pay no attention to the letting value, because letting value rises and falls like other things. At the end of a lease, instead of land rising in rent, it might fall, but the tenant is not to suffer because he has been unfortunate in his way going.

Procedure.

53,179. You are of opinion that to simplify procedure under the Act a set of notices, claims, counter-claims, &c. should be provided as an appendix to the Statute?—Yes.

53,180. And that they might be advantageously distributed by the Board of Agriculture?—Yes.

Restrictions in leases.

53,181. You consider there is not sufficient freedom to the tenant in disposing of the farm produce?—Hardly. We think he might have greater freedom than at present, subject to his providing and applying an equivalent of manurial value in manure or feeding stuffs.

Cost of procedure.

53,182. Has the Act proved to be expensive and cumbrous in its working?—Materially so. I have acted as arbiter and I have found it extremely so, and many farmers prefer to lose their claims rather than take the trouble and risk the consequences of adopting it.

Mr. H. Elder.
7 June 1895.

53,183. Do you think it could be further simplified?—The Chamber are of opinion that all claims and counter-claims should be dealt with by a sole arbiter as provided by the Agricultural Holdings (Scotland) Act, 1889, but they think the procedure in connexion with the application for the appointment of the arbiter should be simplified and cheapened. This might be done by providing a printed form of application to be signed by landlord or tenant, and lodged with the Sheriff Clerk. Some recent claims have been disposed of under the Act in a comparatively simple and inexpensive way, a fact which indicates that much depends on the disposition and temper of the parties and the qualifications of the arbiter they appoint. No strong feeling has been evinced in favour of the appointment of a *small* number of "official" arbiters, the opinion prevailing that local knowledge on the part of the arbiter is of such primary importance as to make it inexpedient to limit the class from whom arbiters may be drawn.

53,184. I think the remainder of your brief—which we will have printed as an appendix—sets forth in detail the amendments which the Chamber consider necessary?—Yes. (*See Appendix VI.*)

The Scottish Chamber of Agriculture.

53,185. (*Mr. Clay.*) The Chamber has been from its institution a valuable instrument in furthering the interests of agriculture?—Yes.

53,186. All the reforms they have supported have usually been passed into law?—Yes

53,187. (*Mr. Channing.*) Was the draft Bill of 1884 considered with the same care, and did the recommendations it embodied represent the same amount of opinion as you have laid before us now?—I think so, but my memory fails me, and I cannot give a definite answer.

53,188. (*Captain Thomas.*) How many members are there in your Chamber?—I really cannot give you the number.

53,189. Is it one Chamber?—Yes. One Chamber for the whole of Scotland. We have agricultural societies affiliated to us.

53,190. (*Mr. Chaplin.*) Affiliated chambers or societies?—Affiliated societies, and they send delegates to our meetings.

53,191. Is Scotland fairly represented by these delegates?—The delegates are only a new institution, and it is considered such a great success we are going to persevere in that direction.

The witness withdrew.

Mr. J. Dun.

Mr. JOHN DUN called in and examined.

Mr. J. Dun.

53,192. (*Sir Nigel Kingscote.*) You are a wool merchant and tenant farmer?—Up till two years ago I was a tenant farmer.

53,193. A large farm?—About 400 acres arable and 400 hill.

53,194. You are secretary of the Galashiels Farmers' Club?—Yes, and agent for the National Bank.

53,195. Is it a large district covered by the Farmers' Club?—Yes. It has always been considered a prominent club.

Condition of farmers.

53,196. In that district you consider that the tenant farmers have pretty well held their own during the period of depression?—Yes, I do.

53,197. You state that they have not felt the depression like many another district?—They have felt it, but they have not become bankrupt.

53,198. To what do you attribute that?—They have been very well treated by their landlords. On the Stow Estate, Lady Reay was the first to assist her tenantry.

53,199. The landlords have met them by granting reductions?—Until the leases expired, or there was a re-arrangement.

53,200. During the continuation of leases they were also assisted?—Yes.

53,201. When they expired they have been renewed at lower rents?—Yes. On better terms.

53,202. Do you think many tenants in the district have borrowed money to go on with?—Not very many.

Cause of depression.

53,203. You have not told us what you consider the cause of the depression?—Low prices.

53,204. What is that owing to?—Competition from other countries. We are a "free toom" for the whole world.

53,205. Do you think there is less production now in the district than there used to be?—I do.

53,206. What is the cause of that?—A great part of the arable land has been reclaimed within the last 30 years, and too much cropping has exhausted the thin vegetable mould which was the source of its very temporary fertility. We ploughed it and limed it and grew splendid crops, but the vegetable mould is now nearly extinct. We are down to the clay, and, I think, we made a mistake.

53,207. Was it originally stiff clay land?—Part of it was hill land, part low bottom land.

53,208. It was ploughed up then for the first time?—Yes, the first time in the memory of man.

53,209. You think the land is exhausted?—It is.

Changes in system of cultivation.

53,210. What is being done with that land?—It is being rested.

53,211. Laid down to grass?—Yes.

53,212. Will it make pasture?—Yes, if liberally treated.

Wages.

53,213. Have wages of the labourers risen in your neighbourhood?—They have.

53,214. That has been a source of expense to the tenant?—Yes.

53,215. Has that been met by the reduced prices on manures and feeding stuffs?—Yes. I think the one has been a set-off against the other.

Digitized by Google

Quality of labour.

53,216. Is the work as good as it used to be by the labourers?—I hardly think so.

53,217. To what do you attribute that?—I think a lot of the best people have left, and I do not think they live on the same food they used to do.

53,218. They do not eat such nutritious food?—They have given up eating oatmeal.

53,219. What do they live on now?—Wheaten bread and tea.

53,220. (*Mr. Chaplin.*) What did they drink before instead of tea?—Milk.

53,221. (*Sir Nigel Kingscote.*) Is that because they cannot afford milk now, or because they cannot get it?—They have acquired a taste for tea and want to be like their neighbours.

Rural depopulation.

53,222. Has the rural population decreased in your district?—It has.

53,223. Have the young people gone away or whole families?—Whole families. We have not so much draining or work like that now.

53,224. They have gone away because they could not get employment?—Yes.

Small holdings.

53,225. Are there any small holdings in your district?—Very few.

53,226. Are they prosperous?—If they have other sources of income. If they have carting, or keep cows, or have a dairy, they get on very well.

53,227. They want something else to live on besides the small holding?—Yes.

53,228. How many acres do you call a small holding?—We have so few at present I cannot call to mind any. There are the burgess acres in Lauder and Gattonside. They had a strip of the hillside there; but these were weavers.

53,229. Had they to be weavers?—They could not live on the land unless they had some other employment.

53,230. Weaving is over?—Yes.

53,230*a*. Do the fishermen hold small holdings?—We do not have any fishermen, but in the north I think the fishermen are better off to be outside a town.

53,231. So that they might help in the agricultural districts?—Yes. They would have more healthy occupations than living in the slums of a fishing village.

53,232. It is more for their health than your pocket. I think if they resided in the agricultural districts you would get labour cheaper?—It was more for the good of the community I was speaking.

Dairying.

53,233. Are there dairies in your district?—Yes.

53,234. In the rural district or the town?—Some large dairies outside, but 25 in the burgh of Galashiels.

53,235. How are they supplied with food?—They buy from the farmers round about, and have fields from the neighbouring proprietors to graze their cows.

53,236. Is not that a good mode for the farmers getting rid of their produce?—It suits them well enough, but if the dairies could get accommodation outside they could do it much more cheaply and healthily.

53,237. The dairy people?—Yes. What I mean is I am in favour of continuing the rural population and of utilising occupations such as that so that they may be able to live in the suburbs of towns.

53,238. Is this from a philanthropic point of view?—As a patriot and a lover of my country.

53,239. As a payer of rates?—I do not think it would affect rates much.

The Agricultural Holdings Act.

53,240. Give me your opinion as regards the Agricultural Holdings Act. Do you wish to see it amended?—I never cared much about it. I am against farming by Act of Parliament; I am more in favour of making my own bargain.

53,241. You prefer making a bargain between landlord and tenant?—Yes. Still I expect we must have it now, and we better have it right.

53,242. How would you amend it?—I would have it amended so that a tenant who treats his land well right up to the end of his lease should be in as good a position to renew his tack as one who by his system of farming renders the land of less value. I am not so much in favour of the schedule system as of general good cultivation and fertilisation. I would also delete the "notice to quit" clauses of the Act, and would include in the "compensation clauses" permanent pasture laid down by a tenant, and all improvements which tend to increase the fertility of the soil, and consequently to raise the market value of the farm.

Mr. J. Dun. 7 June 1895.

Tenure.

53,243. Are you in favour of 19 years' leases?—I am.

53,244. Without any break?—Yes. I think we have now got to a point when we can safely lease a farm for 19 years.

Compensation for improvements

53,245. Without consent of the landlord you would allow a tenant to make this improvement of laying down permanent pasture, and at the end of the 19 years' lease you would have him compensated?—I prefer to arrange with the landlord with regard to compensation, but failing arrangement I would have it so. I prefer private contract.

53,246. Supposing the landlord refused his consent, do you want the tenant to have the power to carry out the permanent improvement?—Yes.

53,247. Might that not become a very heavy charge on the landlord?—It would improve his property very much.

53,248. How can he find the money for it?—I do not know.

Official valuators.

53,249. Are you in favour of the appointment of public valuators?—I am.

53,250. Who should appoint them?—Some popularly elected body, such as the county council.

53,251. Would you have local men?—I would have men known to the district—men whom we could judge to be proper men.

53,252. A local man appointed by the county council?—Yes.

53,253. You would have one arbiter for both?—Yes.

53,254. And so save expense?—I do not know that it would save very much, but he would be responsible and would be a public man. His doings would be open to every one, and the men who appointed him would not be returned unless they appointed good men.

State loans.

53,255. You say that cheap loans to landlords would be a great aid?—I think so, if they are good enough for the advance

53,256. Who is to lend the money?—I would have the Government lend the money.

53,257. At what rate of interest?—I think they will be able to do it shortly at 2½ per cent. as it is an advantage.

53,258. Would you have a sinking fund to pay the debt off?—At 3½ per cent. it would be paid off in 40 years or thereby.

53,259. What would you apply this to?—Drainage, principally.

53,260. The laying down of pasture?—No. I would not apply public money to that.

53,261. Buildings?—We have plenty buildings in our district.

53,262. Would you lend this money to tenants as well as landlords?—I would lend to the landlord in the first instance and make him responsible for it.

53,263. In the first instance you would keep the tenant out of it altogether?—He would pay the landlord the interest on it.

53,264. You expect the tenant to pay interest on it?—Yes.

53,265. But it is to be borrowed on the security of the land of the landlord?—Yes.

Reductions of rent.

53,266. (*Mr. Whitehead.*) Have rents fallen in your district?—Very much.

53,267. How much?—40 per cent.

53,268. Permanently?—Yes.

53,269. Have there been reductions on leases?—Very liberal reductions.

53,270. At what rate?—On the Stow Estate we got 15 per cent., then 10, then more. I think to the extent of nearly 40 per cent.

Difficulty in letting.

53,271. Is there any difficulty in letting farms?—No.

53,272. Plenty of tenants at the reduction?—Yes. If the farms are not too big.

Digitized by Google

Tenure.

53,273. Do tenants like a system of leases, or do they prefer from year to year?—They are varied in their opinions.

53,274. What is generally preferred?—Leases with five years' break are pretty general, and two years' notice.

Condition of farmers.

53,275. Farmers are in a better position to hold their own through a period of depression than in many other districts you say. Why?—Because the land is stocked with their own money.

53,276. They have capital?—Yes.

53,277. Is it due to any special system of cultivation?—Most of our farmers are smart capable men. They cultivate the land under great difficulties. They have to fight against the depreciation of its fertility on account of the decomposition of the vegetable matter.

53,278. In spite of that they have held their own?—Yes, pretty well.

53,279. Do they work themselves or their families?—I do not think a man who has four to ten thousand invested should work with his hands at all. He should supervise.

Size of farms.

53,280. These are the larger holdings?—Yes. They average from 800 to 1,000 and 2,000 acres.

53,281. Are there any smaller ones?—There are very few 100-acre holdings.

53,282. In that case do the tenants work themselves?—Yes.

Large and small farms compared.

53,283. Are they as well off as the others?—They do not look as if they had the same pleasure in life as the others.

53,284. (*Mr. Clay.*) I suppose the land is greatly improved since you remember?—Yes.

Reductions of rent.

53,285. What proportion of reduction has been made upon the original rent?—Our own farm is more than 50 per cent. down compared with 22 years ago.

53,286. Is that depreciation of produce?—Yes.

53,287. Difficulties of working?—Yes.

Wages.

53,288. The labour question interferes greatly with the rent of the land?—Servants are paid higher wages.

53,289. They are nearly double, are they not?—Yes, women are double. The money part of men's wages is double. The gain is the same as before.

53,290. The gain system has nearly gone out?—I am sorry to say that it has. I would rather see the labourers' ceilings ornamented with a lot of hams than with licensed grocers' calenders.

53,291. Do you think the strength of the population is decreasing?—I think we had better men 40 years ago. I passed through some labourers' cottages yesterday, and saw more pictures than flitches of bacon.

53,292. You say you prefer to make your own private contracts?—Yes.

53,293. Before the Act came in, was there any arrangement for tenants receiving compensation?—No.

The Agricultural Holdings Act.

53,294. The Agricultural Holdings Act made it possible for the tenant getting something?—The only advantage from that legislation is that it helps to bring about what we wish to see—that a man should farm his land up to the end of the lease liberally; that is if he could do it with safety. That is the only thing about the Act I lay stress on at all.

53,295. Is that not of great value to the tenant and the community at large?—Sometimes it is a great loss to the tenant if he has to pay 100*l.* a year more for other 19 years.

53,296. That is what you call a sitting tenant?—Yes. He has got to pay for his improvements. I have noticed in our own district one tenant with his farm run down had no difficulty in taking it again, but the tenant with his farm in a high state of cultivation was not able to renew his lease till within a few months of its expiry. The reason was that plenty men would have given more rent than he was going to give and exhaust the improvements.

53,297. So the good tenant was rather at a disadvantage?—Yes.

53,298. The tenant on the poor land got his rent down and the other did not?—Yes.

53,299. Would you like to see something in the Act to give the tenant proper compensation?—I do not see that we could give him anything down, but if we could so arrange matters that he could take his farm as easily as if he had run his farm down it would be a great advantage to him and to the country.

53,300. It has been laid before us that if the farm were valued the interest of the money laid out on improvements might be allowed him in lieu of the compensation the landlord would have had to pay if he left?—The difficulty there would be carrying forward a valuation for 19 years.

53,301. But the farms are all valued by valuators when the sitting tenant takes them on again?—They have been, but I do not lay much stress on valuation.

53,302. Do not you think the official referee would be a good man to come in between?—Yes.

State loans.

53,303. Do you think the tenant should have money for draining and building at 3½ per cent.?—I have calculated that at 3½ per cent. it would be paid up in 40 years. We would have a good deal of advantage from having more covered courts. If the courts were covered with an opening to the south-west, it would be well spent money. My brother had his courts covered lately—a cheap arrangement of corrugated iron open to the south-west, and he finds it a great advantage.

53,304. Then it would be a great advantage to have these courts put up?—Yes. Even the hens lay better when they get into these courts in the winter.

53,305. The loan of money would be an advantage to both landlord and tenant?—Yes.

Permanent pasture.

53,306. (*Mr. Gilmour.*) One of your proposals is to put permanent pasture into Schedule III. Is there any other item you propose to change?—No.

53,307. Would that be a provision you would apply to the whole of Scotland?—Near towns they would never think of laying down permanent pastures.

Official referees.

53,308. Do I understand you to say that this official referee coming between the sitting tenant and the landlord should have anything to do with the fixing of rent?—I hardly go that length. I do not suppose the official referee would be called in in all cases. We have the fertilisers Act passed the other year and all the tenants have power to have their stuff analysed. It has never been taken advantage of. The referee would now and again be employed but never to a great extent. It would have the effect of making parties agree if there were such a man.

Agreements.

53,309. I judge that you are strongly of opinion that where landlord and tenant can make a fair and reasonable agreement in regard to compensation, it is the best way?—Certainly. The other way is compulsory and the men are often in the dark and do not know what they are doing. I prefer my own to any parliamentary arrangement.

53,310. (*Mr. Chaplin.*) What is to prevent tenants making such arrangements as you are speaking of by which they would get compensation which would give them that inducement to farm well up to the end of the lease? Is it the neglect of the tenants?—Perhaps the intermediate man is not qualified to discuss these matters. A big firm in Edinburgh does not know the requirements of the district.

53,311. Many of the estates are managed by competent factors with practical knowledge?—Yes.

53,312. Have you got such an agreement?—We never referred to the Agricultural Holdings Act at all.

53,313. Have you a private written agreement?—None.

53,314. Nothing but the lease?—No; I was a tenant up till two years ago—a joint tenant with my brother, and he preferred to go on himself.

53,315. When you held a farm had you no agreement?—None.

53,316. Did you ever ask for one?—Never.

53,317. Supposing you had asked, and represented to your landlord that if you had such an agreement you would treat the farms well up to the end of the lease, would you have had any difficulty?—I think both parties would have considered it unnecessary.

53,318. You were content to go on as you were?—Yes, when the lease expired I saw the factor with regard to money expended on drainage and covering courts, &c. We did not agree the very first day. He said, "But "you have not given notice to quit; you are bound for "another year under the Act." I said "No; and you "will wait a good while before you get it."

Digitized by Google

Mr. J. Dun. 7 June 1895.

53,319. You said that a great many of the best of the labouring population have gone?—I did not say a great many, but some.

Rural depopulation.

53,320. Is that what has given an impetus to the rise of wages—the movement of the population away from the country?—I think you may take it so. Our manufacturing towns have been very busy. They have made a great claim on the rural population, especially women. We find the country girls are able to learn weaving even faster than town girls.

53,321. Those that are left, in consequence, are getting higher wages?—They cannot help trying to get higher wages with fellows going round stuffing their heads trying to get into Parliament. I think these fellows ought to be brought up for breach of the peace.

Leases.

53,322. You said just now you thought we had got to a point when we might safely embark on 19 years' leases. Is depression less now than it was, or is it a new thing that you consider it safe to take so long a lease?—I do not think we can get any lower.

53,323. You think we have touched bottom now?—Yes.

53,324. Was not that the opinion some years ago, and it has been found out to be wrong?—Yes.

53,325. You think now the time has really come?—Yes. If we get fair play we can hold our own.

"Protection."

53,326. Do you mean if there is no further fall?—I do not think it fair Canada should pay a bounty for butter exported.

53,327. Do you expect to see measures taken by which bounties will be stopped?—Yes. If we get fair play. I would put the same on, on this side.

53,328. Supposing the policy is not adopted here, should you be equally sanguine about 19 years' leases? Do you think bounties will increase?—I do not think they will last long.

Price of wool.

53,329. You are a wool merchant?—Yes.

53,330. Have you been engaged in that business long?—Twenty years.

53,331. There has been a great fall in the price of wool?—Yes.

53,332. What is the main cause?—Foreign competition. People seem to prefer to wear foreign-made wool.

53,333. From where does the chief competition in wool come?—Australia, New Zealand, and South America.

53,334. As far as your experience of the business is concerned, is that competition likely to remain stationary, or increase, or grow less?—I do not think we will get quit of it for a long time. It is their only source of income out in these countries.

53,335. Do you think the competition will get worse?—I think it will continue.

53,336. What has been the fall in the price of wool during the last 25 years?—In 1872 I paid Thomas Gibson 1,110*l.* 11*s.* 3*d.* for his wool, and in 1894 it brought 410*l.*

Fall in prices.

53,337. (*Mr. Chaplin.*) I take it that the trouble at the root is the fall of prices?—That is so. The land of our district, of course, is not virgin soil. When we began, one field on a farm grew as much itself as will be sold on the whole farm in two years now.

53,338. That is because it has lost its virgin qualities?—It has lost its vegetable mould.

Rents.

53,339. (*Mr. Lambert.*) When a farm is advertised you say a great many young men of means, who have little prospect of doing much good in towns, are attracted by a country life, and not being dependent on the farm for their living, enter into competition with farmers of experience and outbid them. Does that tend to keep rents at too high a level?—Yes.

53,340. Do you think that rents are at this moment too high?—Some of them are, and the men can never pay.

53,341. Do men in the position of 19 years' leases without a break in the tenancy get a reduction of rent in the same way as men who break their leases or whose leases have expired?—It depends. Sometimes they get ruined.

53,342. Do you know of many cases in which men have been paying rent and have been ruined?—I know of some—not many cases.

53,343. There are some?—Yes.

Mr. J. Dun. 7 June 1895.

53,344. (*Mr. Channing.*) You are in favour of 19 years' leases, but against fixity of tenure. In what sense?—In this way: This Hibernian legislation we have had is all aiming at fixity of tenure. You must offer a fixed rent or a fair rent, and thereby you create a monopoly. Men may be fortunate enough to become farmers to the exclusion of the whole community.

Fixity of tenure.

53,345. Your objection is on behalf of the outsiders who want farms?—What I mean is, that a man may have fixity of tenure who is quite incapable of managing the farm, and his fair rent will be all the lower on account of his bad farming; while a man may be breaking stones by the roadside who could farm the farm better for the whole community, but cannot get in.

53,346. You do not object to it because of the fall in prices?—No; it was the principle.

Compensation for improvements.

53,347. You are in favour of striking the schedules out of the Act, and giving compensation for general improvement?—The word schedule I use to mean the table of compensation. What I mean is, that a good farmer who fertilises and keeps a full staff of men and horses and keeps his land clean may grow better crops with a less outlay of fertilisers than a man with no judgment and training.

53,348. You want to give the tenant the full value?—I want to give a capable man full advantage of continuous good farming.

Notices to quit.

53,349. What do you mean by striking out the notice to quit clauses in the Act?—I have seen harm done by that stupid arrangement. It occurs in this way:—A landlord has his tenantry, with whom he has an agreeable connexion, and the connexion has been continued periodically, on the expiry of the lease, from father to son. He gets this Agricultural Holdings Act notice to quit, and immediately he gets this the landlord says: "I am now in a legal position; I am broken off from "the old friendly position, and we must now work "according to the law." I think that is irksome. I would hold the time specified in the lease as sufficient.

53,350. In giving up the schedules of the Act, do you give the tenant freedom to make any improvement suitable to the holding?—No; I did not mean schedules. When I spoke of schedules, I meant tables of compensation—the rates of exhaustion.

53,351. By schedules, you mean tables agreed on for the exhaustion of different manures and feeding stuffs?—Yes.

Rents.

53,352. (*Mr. Dalton.*) Rents in your district have fallen 40 per cent. What are they now on the average per acre?—They run about 10*s.* an acre.

53,353. Can you say how much of this fall of 40 per cent. is due to the exhaustion of this vegetable mould you mention?—20 per cent.

Wages.

53,354. What are the wages of the labourers?—The best men touch 1*l.* a week, all told.

53,355. They have doubled, I think, of late years?—They are the same gains, but the proportion paid in money is double.

53,356. The old farmers have done well?—They have done better than the adventurers.

Farming capital.

53,357. Have they lost much capital?—I think so. They have lost the interest of their money all the time.

53,358. Among the remedies for the depression, you say lower rent stands first; but the landlord has done as badly as the tenant?—Yes, they have come off badly.

53,359. Partly in consequence of too much cropping, this vegetable mould has been taken off?—I do not know that you can put it in that way. That was the natural result of breaking in on such land. In my opinion, if we had looked further forward we would not have cropped so much; we would have laid it down more to grass before it was exhausted.

53,360. It was a wrong form of cultivation?—Yes.

Unemployed labourers.

53,361. When the land is laid down to grass, you say the farm servants go into the towns and increase the number of the unemployed?—Yes.

53,362. Have you many unemployed in Scotland?—Not so many just now; but I have been on the committee for relieving the unemployed, and we have a great many in winter.

53,363. Able-bodied men?—Yes.

Digitized by Google

Mr. J. Dun. 7 June 1895.

53,364. (*Captain Thomas.*) What was the rental value of the land before you broke it up?—2*s.* 6*d.* an acre.

Rents.

53,365. After that, you paid how much?—We did not pay any more, but we were at the expense of breaking it up. It was worth, then, four times as much.

53,366. What is it worth now?—It is worth less than 10*s.* It has depreciated a bit.

Small holdings.

53,367. You do not approve of small holdings in that district?—I do not think small holders could live. I am much in favour of small holders, if they could live.

53,368. How many acres do you think would be necessary for a man to live upon and maintain a small family?—I do not think the thing is practicable in our country at all. I do not think he could cultivate enough to live on.

53,369. Therefore there is no demand for small holdings?—The reason is our land is boulder clay and very bad to cultivate. It is not very fertile unless at great expense.

Tenure.

53,370. (*Mr. Everett.*) In the case of the long leases, where a tenant hopes to go on, do not they try to make arrangements for the next one a year or so before the old one goes out?—Yes; they do so if possible.

53,371. In that case you avoid an exhaustion of the farm in the last year if a man knows he is going on?—My cure is that they should try to arrange five years before, and that would get over the whole difficulty. But they might not be able to do it.

53,372. Two years would do?—No. Five years' rotation. You have to put your land into certain breaks. What I wish to suggest is this: under the Agricultural Holdings Act there is provision made for a landlord terminating the tenancy if the tenant is not able to pay the rent. Could not that be made to apply to the tenant who wishes to be quit on account of the fact that he cannot any longer continue?

Mr. J. Dun. 7 June 1895.

53,373. (*Mr. Clay.*) He should have the liberty to go?—If he cannot go on without breaking bulk or selling stock he should be put into the same position as the landlord. There are often cases where they are spending not only their own but their brothers' and sisters' money.

53,374. (*Mr. Chaplin.*) You mean a tenant under a lease?—Yes.

53,375. Would it not have the effect that at any time a tenant who had taken a farm under a lease and found it unprofitable to go on would be able to break it without paying his rent?—I should hope not. He would be a dishonest man. I should make it in this way, that if it were clearly proved he could not go on, the landlord should not be in a position to keep him in the holding and ruin him.

53,376. If it could be shown he was not able to pay his rent?—Yes.

53,377. (*Mr. Clay.*) The same state of matters arises when a farmer dies and the trustees are held on to the latter end?—Yes.

Witness then withdrew.

Mr. A. Guild.

Mr. Alexander Guild called and examined.

Mr. A. Guild.

53,378. (*Lord Cobham.*) You are a member of the firm of Reid and Guild, W.S., Edinburgh?—I am.

53,379. You are the son of a farmer, and lived constantly on a farm until 18 years of age?—Yes.

53,380-1. You have farmed on your own account since 1883, and have been a tenant of a farm in East Lothian of between 400 and 500 acres arable?—Yes. I have farmed in East Lothian since 1891. Previous to that in Forfarshire.

53,382. Has your firm had under its charge a considerable number of landed properties in various counties in Scotland?—Yes; from Berwick to Dumbarton, large and small estates.

The Agricultural Holdings Act.

53,383. You have come here, however, more particularly to speak as to the Agricultural Holdings Act and the amendments that might be introduced into it?—Yes.

53,384. You consider that in principle the Act is a good one?—Yes.

53,385. Have you had experience of its working?—Yes, both as representing the tenant and the landowner in my professional capacity.

53,386. Have you had many cases brought before the referee?—Yes. Unfortunately, some into the court.

53,387. Do you consider the machinery cumbrous and expensive?—Yes, too cumbrous and expensive.

53,388. So much so as to deprive the smaller class of tenants of its advantages?—Yes, and it has a frightening effect on the landlord. I do not like the prospect of entering on an arbitration which may result in a litigation.

53,389. Have you any suggestions to make with regard to simplifying and cheapening procedure?—I have had the advantage of reading a memorandum prepared by Mr. Hope about the simplification of procedure.

Official valuators.

53,390. Can you give us the gist of it?—It is practically the appointment of official valuators, nominated and holding office under the Crown; that these valuators should decide in cases of dispute; and that their decision should be final. I have one suggestion to make. There are cases when, in the interests of both landlord and tenant, the bench should have legal assistance. In the present case the appeal is to the sheriff. I propose, as various counties have been grouped together, that the senior sheriff in the group should sit as chairman of the Court of Appeal.

Board of Agriculture in Scotland.

53,391-2. Do you think that suggestion of Mr. Hope's would be sufficient to bring the Act within reach of the poor litigant?—I do. The fundamental point is that there should be a branch of the Board of Agriculture opened in Scotland; that claims should be sent there, and that the official valuators should take their instructions from it.

53,393. And that the umpires or referees in the first instance should be nominated by the Board of Agriculture?—Each valuator would have his own district, the claims in which would be dealt with by him.

53,394. We will go through the Act shortly. As regards the principle of it, you consider it to be just?—Yes.

Compensation for improvements.

53,395. The principle of giving a general right of compensation to a tenant for improvements on his holding?—Yes, a general right of compensation for money invested and left beneficially to the landlord. It only secures that the capital which a tenant puts into the land, and cannot gather up and take away with him on his removal, should be paid for by the landlord.

53,396. How do you consider the principle of valuation is fixed in the Act?—The principle is "value of the "improvement to an incoming tenant," and I am not sure that it is a right one. It is a very uncertain principle. The incoming tenant does not pay for the unexhausted improvement because he takes the farm as it stands at his entry, and fixes his rent accordingly. The principle should be the value in so far as the letting or market value of the holding has been thereby increased. The result would be that paying for the improvement would cost the landlord nothing as he would get by increase of rent a return for the capital invested by him in taking over the tenant's improvements. In other words the new tenant would be paying in the shape of rent the interest on the improvement expenditure. The benefit to the landlord supposing him to succeed himself should be the principle of valuation.

53,397. That would apply whether the letting value were actually increased or not?—If the letting value has rather diminished, that should be paid for by the out-going tenant.

53,398. (*Mr. Chaplin.*) Unless there is an actual increase there should be no compensation at all?—The principle of the present Act is—improvement in so far as valuable to the tenant. I would change the word tenant into landlord.

53,399. (*Lord Cobham.*) Supposing the rent has fallen owing to external causes how will the outgoing tenant stand then?—It would require a careful consideration and comparison of the times on which the rent was fixed with the present times. Rents fixed fifteen years ago have now diminished, so you could not go to that standard. You would take the standard arrived

Digitized by Google

Mr. A. Guild.
7 June 1895.

at by the valuator. At present unexhausted improvements are largely regulated by the amount of actual expenditure on manures and feeding stuffs by the tenant. That is always a fair criterion and would continue to be a fair means of judging whether the land had been well or badly treated.

Compensation for cumulative fertility.

53,400. You are in favour of cumulative fertility, and continuous high farming being compensated for?—Yes.

53,401. Whether rent at the end of the tenancy is actually increased or not?—Yes. Rent varies with time, but we have no difficulty in disposing of a farm that has been well managed, and well cultivated. If you have a place badly managed and in a dirty condition, it is next to impossible to get a tenant to take it.

53,402. But on the best managed farm assuming there is to be a continuous fall of rents compensation for high farming will accelerate the ruin of the landlord?—I hope not necessarily.

53,403. If rents are falling, he will have no funds out of which to pay compensation?—I am afraid so.

53,404. (*Mr. Chaplin.*) You acknowledge it would have the effect Lord Cobham points out?—No. I say the diminution in the rental would not be due to high farming but to external causes.

53,405. But Lord Cobham referred to compensation. What of that?—If by skill and industry and a combination of practical knowledge a farmer hands over his holding to his landlord in a much improved condition, I think it would be conceded the landlord has been thereby benefitted.

53,406. (*Mr. Channing.*) And the estate would be of more value?—Yes. There is no doubt about it.

53,407. (*Mr. Clay.*) Even in bad times?—Yes, I can give you a case in point that happened in my own practice last year. We had a farm in East Lothian rented at 600*l.* We had a non-resident tenant and very bad management and when we came to re-let the farm we could only with difficulty get 300*l.* a year. I attribute a very large proportion of that falling off to deterioration on the part of the tenant.

53,408. (*Lord Cobham.*) You can conceive cases where it would be much better for a landlord to take a reduced rent rather than pay a large sum of money down?—Yes.

Restrictions in leases.

53,409. In Scotland, as a rule, at the present day, where a farm has been well cultivated you do not find there has been a fall of rent in re-letting?—I confine that observation to the Lothians pretty much. It is a fact that highly farmed land has been letting well. In those districts very considerable latitude is allowed in cropping. Round Edinburgh, we have practically no conditions of cropping. I let a farm three miles to the west of Edinburgh last year and got an increase of about 30 per cent.

53,410. You consider that in normal times increase of rent would recoup the landlord for any compensation he has to pay to the tenant?—Yes. And unless he gets value no compensation should be paid.

The schedules.

53,411. In regard to the schedules appended to the Act you think they should be abolished?—They serve no good purpose.

53,412. You think the valuator should have absolute freedom in determining what has been done by the tenant to his farm?—Well, I do not think the tenant should be allowed a free hand in buildings and road making.

53,413. Then you will have some schedules?—I would rather put it in the body of the Act that before works of that kind were taken up the matter should be settled by the official valuators.

53,414. In the matter of necessary building, draining, making of roads, and erection of permanent fences and water supplies you say that provision should be made for the landlord to have the option to execute these improvements himself, charging the tenant a fair rate of interest on such outlay; that you would take out of the schedules, and incorporate it in the Act?—Yes.

53,415. With regard to all other improvements you think no consent on the part of the landlord should be required, and that no schedules are necessary?—That is so.

Clause 6, sub-sections 1 and 2.

53,416. As to Clause 6, Sub-sections 1 and 2?—These should be omitted, as the landlord's rights in regard to rent and taxes are already fully provided for at common law. The introduction of these deductions gives rise to unnecessary confusion.

Mr. A. Guild.
7 June 1895.

Compensation for deterioration.

53,417. You think the landlord's claim for deterioration should not be limited to four years?—Yes. If tenants are to get compensation for all improvements, then on the same grounds the landlord should be fully compensated for any and every deterioration whenever committed.

53,418. (*Mr. Chaplin.*) In what way?—His claim is restricted to four years. I should not be inclined to restrict him to that.

53,418*a*. For dilapidation?—Yes.

53,419. (*Lord Cobham.*) That is to say that if a tenant is to be compensated for good farming the landlord should be compensated for bad farming during the whole period?—Yes.

53,420. (*Mr. Chaplin.*) From whom is he to recover compensation?—From the tenant, I hope.

53,421. If the tenant is in a very poor way himself how is the landlord to get compensation?—He is in the same position with his rent. It would make landlords very much more cautious in the class of men they select for tenants.

53,422. At the beginning of the lease?—Yes, you cannot guarantee even in the most prudent selection of a tenant, but the instances in which care has been shown and where a landlord has not had his claims satisfied are very rare indeed.

53,423. Is that so?—Yes, as a matter of practice in Scotland.

Dispossession by landlords.

53,424. Do you give the landlord power to dispossess the tenant?—There is power at common law to order an inspection by the sheriff as to the condition of the farm.

53,425. (*Mr. Channing.*) Would not that be better to be put in the Agricultural Holdings Act as well as the others?—Yes.

53,426. (*Lord Cobham.*) Are these common law provisions found to be workable?—They are not often resorted to.

53,427. (*Mr. Chaplin.*) With regard to what the landlord gets, is it in the way of diminution of the claim of the tenant?—No. He gets it in money, I know of no claims which have not been satisfied.

Claims for dilapidations.

53,428. Are landlords' claims for dilapidation greater than tenants'?—Yes, the landlord has a ready means of satisfying himself from the tenants' crop. I had a case the other day where a tenant became bankrupt, and he had to hand over his turnip crop in satisfaction of the rent. It was more than sufficient.

Claims and counter-claims.

53,429-30. (*Lord Cobham.*) Do you consider that the periods of the various notices in the Act require alteration?—I think a very great deal of hardship and unnecessary complication has arisen in connexion with notices of claim, I see no object to be gained by notices. It is the first signal for war between landlord and tenant. Let them settle between them in the same way as other questions are settled, either at the time of removal or a short time after.

53,431. Are you speaking of improvements of which no notice has been given?—I am speaking of all claims under the Act.

53,432. The land owner would be perfectly in the dark as to the nature of the claim likely to be made?—Yes. But unfortunately that is precisely the position of the tenant in regard to the landlord. He is kept in the dark until 14 days after the determination of the tenancy.

53,433. With regard to the counter-claim you would have that put on the same basis as the claim?—Yes.

53,434. How long before the determination of the tenancy?—I do not say it need be before the determination of the tenancy. I think the tenant's claim and the landlord's claim should both be lodged in neutral hands within 28 days after the determination of the tenancy. In the case where there is more than one ish in the lease the 28 days should run from the last date of removal. In other words it should run from the day on which the tenant has no longer a legal right to be upon the farm.

53,435. You would repeal the whole of the clauses from 9 to 20?—Yes.

Loans to tenants.

53,436. Are you in favour of the tenant being allowed to borrow on the security of his improvements?—Where a tenant after notice and sanction puts up a building I think it would be perfectly fair he should be entitled to

Digitized by Google

Mr. A. Guild. 7 June 1895.

assign his right to recover to a lender on the security of these buildings.

53,437. In the case of the consent of the landlord being withheld, he should be referred to the official referee?—Yes.

53,438. And if he approved the building would be put up and the cost charged upon that improvement?—Yes. It would then be converted into a marketable security.

53,439. (*Mr. Dalton.*) Is there anything to prevent him borrowing on it now?—Certainly.

53,440. (*Mr. Chaplin.*) Is it to over-ride that?—Yes.

53,441. What security would there be?—It would depend on the ability of the landlord to meet his obligations.

53,442. It would be no security at all if the landlords were not in a position to meet it?—No.

Mortgaged estates.

53,443. (*Lord Cobham.*) Upon heavily charged trust estates there would be no security at all?—I know of none so seriously burdened that the tenant would ever be in any jeopardy about getting payment of his claims under the Holdings Act. You can barely burden land to that extent in Scotland.

53,444. Where the land is mortgaged already, and the tenant wishes to put up a new cow-byre, for instance, where is the security?—In Scotland you mortgage an estate generally which includes everything upon it but you have always a margin—the right of reversion.

53,445. It would be a second mortgage, in fact?—Yes; in Scotland that is common.

53,446. Do you not know any case of the margin of the first mortgage running off altogether?—I have heard of instances, but not many.

53,447. (*Mr. Chaplin.*) Where a rental has fallen, as it has in many cases in England, 75 and 80 per cent., that would occur, and you have no security left?—The question would then have to be considered whether the land was worth the improvement contemplated.

Tenants' improvements.

53,448. (*Lord Cobham.*) Where there is not sufficient to repay the tenant, is he to take possession of the improvement?—He should be allowed to remove it if it be movable.

53,449. In all probability it would be a building?—Yes, and that would not be much value to remove. But still his right of property in it should be preserved entire.

53,450. You do not foresee extraordinary complications between owner and tenant?—No; we do not anticipate any serious complication of that kind.

State loans.

53,451. Do you think the Government might be asked to advance money upon such security?—I take it if the Government were to advance money upon a security of that kind they would wish to be put in the position of getting a first charge.

Mr. A. Guild. 7 June 1895.

53,452. That is, a position of priority?—Yes.

53,453. (*Mr. Dalton.*) What is it he is to assign if he borrows money?—His right to recover.

53,454. He might recover such sum as awarded by the valuator?—Yes.

53,455. (*Mr. Chaplin.*) How is the lender to know exactly what the landlord's position amounts to?—He would have to take the usual means to ascertain his financial position.

53,456. But you would be lending money to the tenant. How is the banker to be able to ascertain if the landlord is good security?—He would have to take the usual means.

53,457. What are the usual means?—If I were lending to anyone of whom I had no knowledge, I should ask for a reference to his banker.

53,458. That would not bring you to the landlord?—I should consider the landlord my debtor.

53,459. (*Lord Cobham.*) He stands as collateral security?—Real security.

53,460. Can a tenant's claim be pledged at present?—No. It is one of the assets I know no way of pledging. I should refuse to lend upon it.

53,461. (*Mr. Chaplin.*) If the landlord was a party to the transaction you would have no difficulty in ascertaining his position and how far his security was good, but you are now contemplating an improvement made against the will of the landlord. As security for this improvement, the tenant is to have a certain claim upon the buildings against the landlord. If the landlord is not in a position to meet that claim the security is valueless to you to lend money to the tenant. Then you say you will ascertain what the landlord's position is. How can you obtain a sufficient insight into his position unless he gives you facilities?—In Scotland we can know exactly how his landed property stands to a shilling. We can go to the Register House and see how he stands, and we have his valuation roll as to rental.

Notice of claims.

53,462. (*Lord Cobham.*) You think notice would be sufficient by registered letter?—Yes. In the present Act it provides that notice should be given under an almost obsolete statute of 1853. Procedure has been much simplified since then, and it would be an advantage to both if a registered letter constituted notice of determination of tenancy.

53,463–4. By whom should compensation to the way-going tenant be paid?—That is a charge against the landlord.

The Commission adjourned.

Digitized by Google

One Hundred and first Day.

Edinburgh, Saturday, 8th June 1895.

PRESENT:

VISCOUNT COBHAM IN THE CHAIR.

The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq. } *Assistant*
ALAN MACKINNON, Esq. } *Secretaries.*

Mr. ALEXANDER GUILD re-called and further examined.

Mr. A. Guild.
8 June 1895.

53,465. (*Chairman.*) In addition to the specific recommendations which you made yesterday, you have some general suggestions to make?—That is so.

Compensation for consumption of home-grown corn.

53,466. In regard to compensation for home-grown produce consumed on the holding, you think that should be allowed for?—Yes.

53,467. What is the present practice?—The custom just now is for home-grown produce to be used very largely, but no compensation is allowed. I know that in more than one case in my knowledge the Act has been defeated in this way. The tenant has sold his own produce and received an equal quantity from his neighbour, and compensation has been allowed.

53,468. No money passed?—No; I had a case like that, and was allowed compensation. I think it would be better to recognise it openly. If a farmer converts, say, a hundred quarters of barley into meal and gives it to his stock, it is quite just that he should be allowed for it, as much as if he had bought cake.

53,469-70. Do you see any way of verifying the claim?—Yes; last year I had occasion to settle a claim where the tenant held two farms. From the one farm he sold grain to the other to be consumed by sheep. I was then acting for the landlord and I objected to the item. The arbiter held that the certificate of the farmer, counter-signed by his steward, was sufficient evidence to justify him in awarding compensation, and he did so. I think it was hardly sufficient evidence, and that you should require some better evidence, or the barn book. If that book was signed by the farmer at the time the produce was used, and by his chief man, and any false entry made criminal, I think that would be quite a sufficient check.

53,471. (*Mr. Chaplin.*) When are these entries and signatures to be made?—On the day the produce is used. There would be no difficulty on large farms in carrying out that principle at present. When grain is taken from the granary or barn it is entered in the book at that moment by the steward or the farmer.

53,472. (*Mr. Clay.*) That question is surrounded by a good deal of difficulty?—It is indeed.

53,473. Would it not be another point to strengthen the farmer's case if he were to give notice to the landlord that he had laid aside a certain quantity of produce?—I think that would be of advantage.

53,474. (*Lord Cobham.*) On what footing would you put this produce?—I think you would have to put it on the ordinary footing of in-bought produce consumed on the holding.

53,475. Would that not necessitate a rather vexatious system of supervision?—That is assuming the possibility of fraud. In the case I referred to I am bound to say that I believe it was an honest enough claim, although I did not think it legally vouched.

Compensation for cumulative fertility.

53,476. Do you agree with the London Chamber of Agriculture that the principle of compensation for cumulative fertility during the currency of a lease should be recognised?—I think that is sound. On the other hand, I consider that any reduction in the condition of the land should be paid for as deterioration by the waygoing tenant, and I do not think the landlord's claim should be circumscribed to a four years' limit. I would put him on precisely the same footing as the tenant.

Mr. A. Guild.
8 June 1895.

53,477. You would adopt the procedure suggested, viz., the scheduling of farms on entry and quitting?—That seems the only plan we could adopt. It is done now with the buildings, fences, and drains, and at the termination of the tenancy it is held to be the measure of the rights of parties on both sides.

Official referees.

53,478. You would put a good deal of work on those arbiters—how do you propose they should be paid?—In the same way as sheriffs' substitute, by the Government.

53,479. Not by the job?—No, I think that would not be a sound policy. On the other hand, I suggest that parties employing them should pay a fixed scale of fees into a fee fund, to be used by the Government.

Penal clauses.

53,480. How do penal clauses in leases work in Scotland?—I think, very unfairly. It is usually a haphazard sum fixed by the lease, which the court holds itself unable to deal with in any way. I think leases should be put on the same footing as other contracts, namely, actual damage.

53,481. You think they have often the effect of deterring the tenant from making just claims?—No, but they often defeat just claims. It is a purely technical provision. In the lease it is provided that if the tenant takes two white crops he shall pay penal rent at the rate of 5*l.* an acre, and the question of damage does not arise.

Freedom of cropping.

53,482. Do you think there should be more freedom of cropping?—I do. In the course of my practise I know that my clients are coming very generally to take that view.

53,483. Whatever may be the length of the lease?—That is not an element. We bind them to leave the farm in a certain rotation, and I think that is quite sufficient. We are trying more and more to be careful in the selection of our tenants.

Compensation for deterioration.

53,484. What would your remedy be if, in the course of a long lease, you found the farmer running out the land?—I would have a claim for compensation. Since yesterday I have refreshed my knowledge, and I find that where a farm is being mis-cropped, the landlord has power to apply to the sheriff for judicial inspection, and he has also power to get an order from the court to put his own manager in and have the farm managed according to the lease or to what the judicial adviser says; so that the landlord has control at once.

53,485. (*Mr. Chaplin.*) His remedy, then, is to farm it himself?—To get it farmed under the sanction of the court, according to the rules of good husbandry.

53,486. (*Lord Cobham.*) Is the lease quashed under these circumstances?—No, it is a sharp penalty put by the court on the tenant.

Digitized by Google

Mr. A. Guild. 8 June 1895.

53,487. Have you many cases of that kind?—Not many. At present there is one case in Forfarshire and one in Kirkcudbrightshire.

53,488. (*Mr. Gilmour.*) Has it ever been done?—Yes. The law books contain several cases of the kind. I can give you authorities besides the two current cases I have mentioned.

53,489. (*Mr. Channing.*) Is it ever referred to in the lease?—No, it is part of the common law of the country, and applies to every farm. It is better not to refer to it in leases.

Freedom of sale.

53,490. (*Lord Cobham.*) Do you think there should be equal freedom in regard to sale of produce as to cropping?—On a good deal of land managed by us, close to Edinburgh, we allow free sale, and that land is in the highest state of cultivation.

53,491-3. All the crops are practically sold off the farm?—Yes, and they grow magnificent crops. The tenant, in his own interest, manages the farm well. We have given great relaxations in the letting of land, and allowed free sale of produce.

Quality of cultivation.

53,494. Is it your opinion that the land of the country has been going back in condition to some extent?—Not in the district where I am daily occupied, round about Edinburgh.

Compensation for consumption of home-grown corn.

53,495. (*Mr. Dalton.*) As the law now stands, with regard to the consumption of produce, is there not great danger, when one of these farmers sells to the other without money passing, that there may be fraud or collusion in fixing the price?—I think there is very great danger, mainly due to the fact that the consumption of home-grown produce is not sanctioned.

53,496. If it was sanctioned how would the price be ascertained?—By the market value of the day.

53,497. In the case you mention was there anything wrong in the price?—No, the market price was fairly stated.

Penal clauses.

53,498. With regard to the penal clauses in leases, would they be open to the same abuse if the penalties were reasonable, instead of being enormously high?—I do not think you could possibly get landlord and tenant to agree upon what would be reasonable damage. It would be very much better to leave it in the same way as if a man got hurt in an accident and claimed compensation for his injuries.

53,499. Are the penalties altogether in excess?—They are just now.

Substituted agreements.

53,500. We have heard evidence of the insertion of clauses in leases to evade the Agricultural Holdings Act, and we are told that is very common—is that your opinion?—Not in the east of Scotland. I have been told that it is common in the west, particularly in Ayrshire.

53,501. Have these clauses any practical effect?—They would, certainly, be enforced against any claim under the Holdings Act.

53,502. (*Mr. Channing.*) They could not be enforced at law, if they overrode the Act?—The Act allows private contracts?

53,503. (*Mr. Dalton.*) One lease which we saw practically overrode the Act?—I do not think that would stand discussion.

53,504. Are these clauses common?—No, not within my knowledge.

53,505. And you have had fair experience?—Yes.

53,506. Then you would not agree that they are common throughout the country?—One is bound to speak of his own knowledge, and of the district with which he is acquainted.

53,507. What district is that?—The three Lothians, Berwickshire, Fife, Stirling, and Dumbarton.

Tenure.

53,508. Do you favour a short statutory lease—some of the leases we have seen are very long and full of covenants?—I think the leases in Scotland are scandalously long, as a rule. We should have them written on one page instead of 10.

53,509. Do you think a short statutory lease desirable?—I think it would be an advantage. The essentials of a lease are very short.

Freedom of cropping.

53,510. (*Mr. Channing.*) What is really meant by freedom of cropping?—Freedom of cropping means this, that you would not be bound to adhere rigidly to a prescribed course.

53,511-2. And you would make it a condition that the farm should be left in a fixed rotation at the end of the tenancy?—Yes, I think that would be quite enough.

Mr. A. Guild. 8 June 1895.

54,513. I put to you a proposal made in the House of Commons in regard to England, and which was approved of by the Chamber of Agriculture, that in the case of stipulations regarding the course of cropping and prohibiting freedom of sale, they should be void as regards both, if the tenant has returned an adequate amount of manure of a suitable kind or given security for it?—That would be quite reasonable; but it is rather a long way to put it.

53,514. If a man goes in for what is technically miscropping, and if he makes an adequate return to cover any results from that change, do you not think he should be held free from any liability?—Certainly. The main object is to maintain the land in a fertile condition.

53,515. If that provision could be introduced into an Act, which would secure the landlord against miscropping as well as free sale, you would not disapprove of it?—No.

Compensation for cumulative fertility.

53,516. With regard to cumulative fertility, as a matter of policy is it not better to restrict the landlord to two years for waste, and make it his interest to take steps during the tenancy to restrain the tenant?—I should like very much to see landlord and tenant put as nearly as possible on the same footing.

53,517. The proofs of actual waste may be more difficult than the proofs of actual cultivation and the results?—Not very much. I lately had a case in which there were alleged claims for mismanagement, and the landlord had a good case, and found no difficulty in proving it.

53,518. If the landlord went back many years, would it not place the tenant in a difficult position in proving the results of deterioration?—I do not think so.

53,519. The demand in England is to cut down the four years to two years?—I may be heretical on that point, but I would like to put landlord and tenant on the same footing.

53,520. Is it your opinion that the best form of Agricultural Holdings Act would be one providing that the tenants should claim for increased fertility and the landlord for decreased fertility?—That would be a very sound principle. It contains the whole principle and bones of an equitable Act.

53,521. Do you think it would be workable?—Yes. I hope that when the time comes round to appoint official valuators that men of a high-class and experience will be appointed, and I am sure they will hold the balance evenly between landlord and tenant.

Erection of buildings.

53,522. With regard to the erection of new buildings, you think the landlord should be consulted beforehand?—Yes, I think so.

53,523. Otherwise, except these first-class improvements, you would leave the tenant a free hand?—Yes, I would; and I believe there would be very little difference between a reasonable landlord and tenant at the beginning of the tenancy as to buildings.

Compensation for consumption of home-grown corn.

53,524. Have you sufficient machinery in your Fiars Courts to strike the value of home-grown produce?—Yes, that is an efficient average, but I think a fair way would be to take the market value of the day.

53,525. (*Mr. Dalton.*) How would you test the quality?—That certainly varies. If need be a sample could be sent to the landlord.

53,526. (*Mr. Channing.*) Do you think a system of that kind could be well worked?—Yes, quite well. I know that in a very large proportion of farms south of Edinburgh, towards the Lammermoors, almost the whole of the grain crop is consumed on the land.

53,527. And do they get no compensation?—No; whereas if they sold the grain and bought in cake they would get compensation.

Official referees.

53,528. You think the official valuers should be paid by the State?—Yes.

53,529. And the parties to the case should pay nothing?—Oh, no. I would have a scale of fees fixed by the Board of Agriculture, and these should be paid by both parties into a fee fund.

53,530. A scale of fees by the acreage?—Or it might be on the amount claimed. I think that would be a fair way to prevent an extravagant claim.

Digitized by Google

Mr. A. Guild. June 1895.

53,531. Would you have a list of arbiters, or one official selected for a district?—I think it would work very much better and be more satisfactory to have one for a district, and that he should give his whole time to it.

53,532. You do not think such an arrangement as that would give dissatisfaction?—You have always the corrective of an appeal.

53,533. You would give an appeal?—Yes.

53,534. To what body?—I would constitute the whole arbiters into a court of appeal. I think four or five arbiters would do very well for the whole of Scotland, and if you had them sitting as a court of appeal, with the addition of a sheriff as legal adviser to them, it would be the means of getting a sound and safe judgment.

53,535. Would you reserve some claims without appeal—appeals would lead to increased costs?—You would then tread on small claimants.

53,536. You would only allow appeals on points of law?—Yes; the right of appeal is pretty well defined at present.

Land registration.

53,537. (*Mr. Lambert.*) About the register of charges on land, is there a register kept of all the mortgages on land?—Yes, and of all the conveyances or deeds affecting it.

53,538. Is it compulsory?—In order to get security to the lender it is.

53,539. (*Mr. Chaplin.*) How long has that been the case?—My memory will not carry me back sufficiently far. It has been the system in Scotland for over 200 years.

53,540. (*Mr. Lambert.*) If I wanted to know the charges on any particular estate could I find them out by paying a fee?—Certainly, it is a matter of right.

53,541. Is that objected to very strongly on the part of landowners?—It is very highly approved of.

53,542. There has been no objection to such a course?—Oh, no; we could not do without our system of land registration.

53,543. You find it of immense advantage to the men who want to lend money on land?—Yes, it is their security and protection.

53,544. Is the system of land transfer in Scotland more simple than in England?—I think so. Our deeds are much shorter and more direct in their terms.

53,545. Have you a Land Registry Court in Scotland to register the sales of land?—No.

53,546. So that you do not register the title?—Yes, in the same register that contains the register of mortgages.

53,547. (*Capt. Owen Thomas.*) If the land is not mortgaged, what then?—If there is no mortgage shown on the register, then the land is unencumbered.

53,548. (*Mr. Dalton.*) Do you enter everything upon the register?—Every charge on the land.

53,549. (*Lord Cobham.*) Does the whole of the land in Scotland come into it?—It is all dealt with in the register house. Our system requires the registration of every deed affecting land permanently. Otherwise the title is not complete.

53,550. (*Mr. Lambert.*) Supposing you had a building area outside Edinburgh, and you sold a small part of ground, say, to an artisan, would that be registered?—Yes.

53,551. And there would be no difficulty about it?—Not the slightest.

53,552. If any one says that difficulties occur, you would say he was misinformed?—We could not sympathise with him at all. Our registration system is so thorough that there would be a very strong uprising if it were attempted to be done away with.

53,553. Do frauds ever occur through a man pretending to have a security which he has not?—Oh, no, our registrars take care of that.

Competition for farms.

53,554. Is there a good competition for farms in your district?—Yes, in the Lothians there has been a good competition in the past two years. Outside the Lothians competition is not so keen, except for good arable farms.

Freedom of cropping.

53,555. You imagine that if the tenants had partial freedom of cropping and freedom of sale, the landlords would exercise greater discretion in the selection of tenants?—I think they would, and that they would get better rents. I have advised my landlord clients to give it.

Mr. A Guild. 8 June 1895.

53,556. And it does not injure the landlords?—On the contrary, we find that land round about Edinburgh, with freedom of cropping and free sale, is in the very highest state of cultivation.

53,557. Is it very costly to take steps to prevent the deterioration of the soil?—Not at all.

53,558. Supposing an agreement is made confining the tenant to a certain rotation, and he breaks it, how do you make him keep it?—By applying to the sheriff to appoint a judicial manager to compel him to adhere to his bargain.

53,559. So that if those provisions were embodied in an Act of Parliament it would be as easy to enforce them as an agreement?—I see no difficulty.

Freedom of sale.

53,560. (*Mr. Chaplin.*) I gather from you that it is the case that freedom of sale is common now where farms are close to large towns?—Yes.

53,561. Would it be equally advantageous to make it universal by law where farms are away from the towns?—It might not be equally convenient, but it would be a large concession. For outlying farms many opportunities for selling hay, straw, and turnips present themselves, of which the tenant cannot avail himself.

53,562. The two classes of farmers are on a different footing?—Yes.

53,563. Does it not rather come to this, that where it is of advantage to both parties concerned, freedom of sale is general now?—No. I have clients, whose instructions I am bound to obey, and who stand rigidly by the terms of the lease, and will not allow the sale of hay, straw, or turnips.

53,564. Even against your advice?—Yes; they consider a wrong would be done.

Competition for farms.

53,565. You say that the competition in the Lothians has been very fair for the last two years?—Yes.

53,566. And previous to that?—Until two years ago there was not the keenness which exists to-day.

53,567. What has occurred to restore greater confidence?—We have all tried to discover it and cannot explain it. I think it is a leap in the dark. There is nothing in the agricultural outlook to justify the increase of rent that has taken place within the last two years.

53,568. (*Mr. Channing.*) Is it not because there is plenty of capital lying idle?—Partly so. We have stopped sending capital abroad. For years we poured our invested funds into the Australian banks, but we have tired of that. The sons of our farmers were also sent abroad, but when things got bad there that was stopped.

53,569. (*Mr. Chaplin.*) Apart from these reasons, there are no other grounds on which you can account for the rise in rents and the increased demand for farms?—No. In one or two cases within my own knowledge, I have got increased rents through relaxing conditions as to cropping and sale.

53,570. And, I presume, from men whom you considered reliable, and who would not injure the farm?—From men of capital and character.

Official referees.

53,571. You think four or five valuators would be sufficient for the whole of Scotland?—I think so.

Changes of tenancy.

53,572. How many changes of tenancy occur, on an average, in the course of a year?—I am sorry I could not give an approximate estimate.

53,573. How many occur on the estates with which you are connected?—Very few. I have only one farm this year which I am going to put into the market.

53,574. How many will there be in a county?—Well, take East Lothian, on one estate all the four tenants have been changed, and there is another one I know of, making five in all. These would be all the changes in that county this year.

53,575. There are fewer cases, I suppose, where there are long leases than where farms are held on a yearly tenancy?—In Scotland we do not know much about a yearly tenancy.

53,576. It has occurred to me that the work in Scotland would be too much for four or five valuers?—I think they could easily overtake it if they got three or four counties each.

Digitized by Google

Mr. A. Guild.
8 June 1895.
Scheduling the condition of farms.

53,577. You said you would leave it to the valuator to say whether fertility had increased or decreased. Supposing it was the end of a 19 years' lease and the valuer had not seen the farm at the beginning, how is he to arrive at a comparison of the condition of the farm?—My suggestion presupposed an examination of the farm at the beginning of the tenancy.

53,578. By the same man?—Not necessarily, but such a report could be available at the end of the tenancy, and should be a very valuable guide. There are always avenues open for obtaining reliable information.

53,579. You think, as regards any future proceedings, that it is very desirable there should be a written record of the condition of the farm?—I do.

53,580. And you would leave that to the official valuators?—Yes.

53,581. Where should the record be kept?—In the Board of Agriculture, but it should be left open for inspection.

Compensation for consumption of home-grown corn.

53,582. When you talk of compensation for the consumption of home-grown produce, is that limited to corn?—Not necessarily.

53,583. You would give compensation for all the home-grown produce consumed?—Well, in East Lothian, for example, a very large portion of the rent is made by the growing of hay. Instead of selling that hay the farmer keeps it at home and consumes it, and he should be allowed for it.

53,584. The manurial value of corn is estimated very small?—According to tables it is not very high.

53,585. Are there estimates of the manurial value of all other home-grown produce?—I know there is for straw, as well as for hay.

53,586. And for turnips?—Yes.

53,587. Your guarantee against fraud is to be the testimony of the person interested and perhaps his foreman?—Yes, and if necessary the sending of notice, or, if need be, a sample, to the landlord.

53,588. But the book containing the entries of this home-grown produce is to be signed every day?—Yes.

53,589. And how would it be possible to send that to the landlord or his agent every day?—Well, I am a busy man in Edinburgh, and I manage personally upwards of a thousand arable acres. I do that on Saturday afternoons, and my feeding stuffs are given out weekly. I know many farmers who do exactly the same thing, and there is nothing to hinder an honest entry being made and notice given to the landlord.

53,590. How often are the feeding stuffs given out?—My practice is to give them out every week or every fortnight.

53,591. The guarantee that they have been consumed is to rest upon the testimony of the farmer or his foreman?—Yes, with this condition, that any false entry should be made a criminal offence.

53,592. On a large farm would the farmer or his bailiff be able to see every day that on every part of the farm the produce was actually consumed on the farm?—There would be no difficulty about that. The bailiff on his usual rounds would see that it was consumed.

53,593. But there would be no guarantee that it would be consumed by the stock?—Well, if it was given out and not consumed by the stock it must be stolen by the servants, and I have more confidence in our farm servants than to believe that.

53,594. If the farmer would not have sold the produce in the ordinary way, would you give him compensation for consuming it?—No, I think that would be carrying the principle a little too far.

53,595. It might be that from difficulties of transport a great deal of the produce would not be sold in the case of a farm near a town. Would that not make a great distinction?—I think a great deal of the difficulty has arisen chiefly through the consumption of grain.

53,596. I suppose it has been the case in Scotland as elsewhere, that there has been a greater consumption of home-grown grain on the farm since the fall in prices?—Yes, I believe so, south of the Lothians. In East Lothian we sell all our grain and get very good prices for it.

Mr. A. Guild.
8 June 1895.
Compensation for cumulative fertility.

53,597-8. (*Lord Cobham.*) If a man is paid for the consumption of his home-grown produce and purchased manures and feeding stuffs, and also for the cumulative fertility of his farm, would he not be paid twice over for the same thing?—No, I do not think so. Cumulative fertility is a little different from applying feeding stuffs. In cumulative fertility you should include everything that could be held to be good and progressive farming, such as cleanliness.

53,599. But you must take care to exclude from compensation so much of the cumulative fertility which is brought about by the consumption of cake, or manure, which has already been compensated for?—In the most notable case we have had in Scotland—the Corsehope case—a specific sum was allowed in respect of the long and continuous use of feeding stuffs.

Official referees.

53,600. (*Mr. Gilmour.*) The official valuators are not to be farmers?—They might be farmers, but I think they should not be free to act as arbiters. They should mainly give their time to the duties devolving on them under the Act.

53,601. Their salaries would require to be considerable?—I think so.

53,602. And you think four or five men would be ample for the whole of Scotland?—Yes; I think the fewer you have the better men you will get and the better you will be able to pay them.

Counter-claims.

53,603. You think that 28 days after the termination of a tenancy the counter-claim should be put in?—Yes.

53,604. And there should also be a fixed time in which these matters should be disposed of?—Yes; but the present time limit is just short enough. I think it is 28 days after the arbiter is appointed.

53,605. That would cause the whole of these claims and counter-claims to be dealt with by these officials all over Scotland within a month?—Oh, no. My point is that these claims and counter-claims should be put in within 28 days after the termination of the tenancy. It is a matter for consideration what longer time is required for disposing of them.

53,606. But there must be a limit to the time. I should say two months would be sufficient.

53,607. And these valuers could do all the work in that time?—Yes, because in each district a man would not have more than five or six claims, which he could deal with in a week.

53,608. (*Mr. Clay.*) At present the arbiter is allowed that length of time?—Yes.

53,609. (*Mr. Gilmour.*) Would the lodging of the claim and counter-claim at the same time not be apt to make the parties take a leap in the dark?—Not if it was an honest claim.

53,610. But you must take men as you have them?—My experience shows me that in the present practice, where a farmer lodges a claim four months before the end of his tenancy, all the ingenuity of the advisers of the landlord is put into force to rake up a counter-claim to meet it.

Penal clauses.

53,611. Are these penal clauses put in force to any extent in your district?—Always where we have a claim to meet under the Agricultural Holdings Act. But otherwise they are not enforced.

53,612. Are they founded upon good husbandry?—The penal clauses are a relic of the first lease, drawn by a very eminent man named Cockburn, and we have stuck to them ever since.

Freedom of cropping.

53,613. You think freedom of cropping maintains the fertility of the land?—Yes. I do as I like on farms managed by me for clients farming their own lands, and I do not reduce the fertility.

53,614. In these times, when a tenant wants to do as he pleases and goes to the agent for permission, is it generally refused or granted?—Very often granted, unless there are strong reasons to the contrary.

Claims and counter-claims.

53,615. (*Mr. Clay.*) Do these claims and counter-claims cause friction?—A good many people have represented to me that it is an aid to a landlord in letting his farm if a claim has been lodged. My opinion is that a claim has the opposite effect.

53,616. A witness said that claims should be given in six months before?—I think that would be a retrograde step, and I say so as representing landlords.

Digitized by Google

Mr. A. Guild. 8 June 1895.

53,617. But is it possible for a landlord to give in a claim for dilapidation of buildings six months before? —Certainly not. You do not consider the landlord's claim till the term of expiry has come.

53,618. And as regards the tenant, the later part of his claim is made up of the feeding stuffs for stock that have to be sold?—Yes, between August and November.

53,619. Have you known of rent being raised on the sitting tenant because of the extra condition of the farm?—I have known cases where that was done.

53,620. To a large extent?—To a considerable extent.

53,621. And it comes to this, that the sitting tenant has had his farm valued by a land agent, and he is told that if he cannot pay such and such a rent, they can get another man who will?—Yes, "pay the rent or go."

53,622. What remedy have you for that?—I think that in the case of a sitting tenant who negotiates for a renewal of his lease, due consideration should be made for the claim that would have to be met if he were going away. Last term I had a tenant who sent in a claim. We could not agree upon the rent. I advertised the farm, but rather than compensate the sitting tenant I accepted a rent 50*l.* less from him than I was offered by another tenant.

53,623. I put this case to you. A farm is valued on the increased fertility made by the sitting tenant. After that is done the tenant gives a rough sketch of his claim amounting to, say, 600*l.* Would the landlord deduct 6 or 7 per cent. on that sum from the rent, and accept a rent reduced by 36*l.* rather than pay the compensation?—No doubt it would pay the landlord to accept 6 or 7 per cent. less rather than launch out a capital sum of 600*l.*

Compensation for consumption of home-grown corn.

53,624. You said, regarding this ticklish question of the consumption of home produce, that the checks of the books of the tenant and his steward would be sufficient, and that a sample might be sent to the factor. How would that be done?—It could be quite simply done. We sell all our grain by sample, and it could be consumed by sample in the same way.

53,625. So that there would be no difficulty if all these safeguards were put in force?—None.

53,626. In many cases at present do farmers consume the whole corn on the farm?—That is so.

53,627. So that the value would be easily ascertained by taking the whole crop grown, except what is consumed by the horses?—Yes.

53,628. If a man grows 100 acres of oats at five quarters an acre, he would consume the whole thing on the farm except what was consumed by the horses?—Yes.

53,629. There would be no difficulty about a court of appeal?—None. And you would get something like uniformity in the awards, which is not the case at present.

Mr. A. Guild. 8 June 1895.

The Agricultural Holdings Act.

53,630. You would like to see an Agricultural Holdings Act framed on the lines of the report which has been presented by the sub-Commissioner, Mr. Hope?—I would. I think it is a most admirable report.

Reductions in rent.

53,631. (*Mr. Whitehead.*) What has been the average fall of rents on the acreage under your management?—In one case I have lost 50 per cent. On the neighbouring farm I have gained 20 per cent.

53,632. What is the difference in your rentals, taking the years between 1880 and 1895?—I will supply that information.

53,633. (*Mr. Dalton.*) Can you supply it for any other parts of the country than East Lothian?—Yes, I will give typical estates where I have had personal experience. (*See* Appendix A. VIII.)

53,634. (*Mr. Channing.*) Are there any materials for arriving at a general average for the Lothians?—No, I do not think that could be supplied.

Large and small farms compared.

53,635–6. (*Mr. Whitehead.*) Have large or small farms been most affected by the fall in prices?—I think it has been very equally divided. The small holder has this advantage, that he does a large portion of the work by his own family, and he does not give them a fixed wage, and therefore he gets the benefit of their labour.

53,637. Do you think the tenants on your estates have lost capital?—There is no doubt about that.

53,638. You cannot say to what extent?—No, I have no means of ascertaining that, but I know they have lost; and many rents are not now paid with the same punctuality as previously.

Condition of labourers.

53,639. What is the condition of the labourers on your estates?—It has improved. They are well paid, well-housed, and well cared for, and the relations between master and tenant are of the most cordial kind.

Permanent pasture.

53,640. (*Sir Nigel Kingscote.*) In your brief you say that the tenant may make improvements, including the laying down of permanent pasture. Would you allow the tenant to do that without the consent of his landlord, and then let him claim compensation at the finish of his lease?—Land well laid down to permanent pasture is always an advantage.

53,641. But a very heavy claim might come upon the landlord for compensation?—I do not think the claim would exceed the benefit conferred on the landlord. I do not think there would be any hardship about that.

Witness then withdrew.

Mr. W. H. Gibson.

Mr. Walter H. Gibson called in and examined.

Mr. W. H. Gibson.

53,642. (*Mr. Chaplin.*) You are a tenant farmer in East Lothian?—Yes.

53,643. What is the size of your farm?—426 acres.

53,644. Since when have you held it?—Since 1886.

53,645. Have you had any other experience in farming?—Yes; since 1876 I have assisted my father, who has been tenant of 540 acres in Roxburghshire, and who, previous to 1876, and for some years subsequently, was also tenant of 745 acres in Mid-Lothian, and 830 acres in Selkirkshire.

Bimetallism.

53,646. You come before us as representing the Scottish Chamber of Agriculture to support the petition of the Chamber of 27th June 1894, in favour of international bimetallism?—I do.

53,647. Have you got a copy of that petition?—Yes; the resolution passed at the meeting was as follows:—"That the Chamber is of opinion that the acute depression of agriculture in this country is in large measure due to the appreciation of gold, consequent upon the monetary change which occurred in the year 1872; and resolves to petition Parliament to take immediate steps to secure by international agreement the remonetisation of silver upon a bimetallic basis, which, in the Chamber's opinion, would go far to remedy the evil."

Agriculture since 1877.

53,648. What has been the condition of agriculture since your experience began in assisting your father in 1876?—My experience is that agriculture has been almost continuously in a chronic state of depression since 1877.

53,649. Is that shown by a considerable fall in the rental?—There has been a very great fall in rental.

Reductions of rent.

53,650. What was the rental of the farms with which you are acquainted in 1876 and 1895?—The rental of the farm of 540 acres in Roxburghshire in 1876–77, was 1,865*l.*; of the farm of 745 acres in Mid-Lothian, 818*l.*; and of the farm of 830 acres in Selkirkshire, 1,018*l.* The total rental of these three farms was at that time 3,701*l.*

53,651. What is it now?—For 1894–95 the Roxburghshire farm is rented at 1,000*l.*, the Mid-Lothian farm at 420*l.*, and the Selkirkshire farm at 650*l.*, making a total for the three farms of 2,070*l.* That shows a fall of rental of 1,631*l.*, or 44 per cent.

Cause of depression.

53,652. Do you agree with the evidence given by almost every witness, that the chief cause of the depression has been the fall in prices of farm produce?—That is my firm belief.

53,653. Do you attribute it partly to foreign competition or over-production?—I should say it is partly owing to foreign competition.

Digitized by Google

Mr. W. H. Gibson. 8 June 1893.

53,654. And not to over-production?—I could not say so, though you may have had over-production in certain commodities.

53,655. As far as you are acquainted with the subject, do you find that agricultural depression prevails in other countries?—My belief is, that over the greater part of the civilised world there is depression in agriculture at the present time.

53,656. The fall in the prices of produce has not been limited to agricultural produce?—No, there is a fall in the general level of prices of all kinds of commodities.

53,657. In addition to foreign competition, to what other cause do you trace the depression?—I trace the main cause to the monetary change which has taken place since 1873.

The currency changes 1873–4.

53,658. You are speaking of the great monetary changes which occurred on the continent and in the United States of America during 1873 and 1874?—Yes.

53,659. What do you think has been the consequence of those changes?—I believe the consequence has been that gold has had a greater call upon it, owing to the increased demand for gold as the standard money of these nations.

53,660. Since the mints were closed for silver there has been a greater demand for gold for the work it had to do?—Yes.

53,661. Do you agree with the opinion that has been expressed that there has been considerable divergence between the two metals?—Yes, and it is my opinion that gold has appreciated compared with commodities.

53,662. And that the old relative value has altered very greatly?—Yes, very greatly within the last 20 years.

Increase of money and rise in prices.

53,663. Is it your opinion that when the volume of legal tender money has been increased prices have generally risen and agriculture and commerce have flourished?—I believe so.

53,664. Does the contrary effect hold good, that when supplies of money have been diminishing agriculture and commerce have at all times been depressed?—From my own experience and what I have read that seems to be the result.

53,665. Have you read the evidence given by Mr. Everett on this subject?—Yes.

53,666. Are you familiar with the illustrations he gave in support of his views?—I very much agree with them.

53,667. He gave a good many quotations from historians and others?—Yes, and I concur with him generally.

Remonetisation of silver.

53,668. What you point to as a remedy is that some arrangement should be come to by which there would be a reversion to the system which prevailed before the years you have spoken of?—Yes.

Views of the Scottish Chamber of Agriculture.

53,669. And that represents the wish of the Scottish Chamber of Agriculture as embodied in their petition of 1894?—Yes.

53,670. Did the Chamber also present a petition in 1889?—Yes, this resolution was passed by the Chamber on the 13th November, 1888:—"That Mr. Cross be "heartily thanked for his report; that Mr. Everett be "thanked for his address; and that the meeting remit "this question to the directors to consider the report "of the Royal Commission, and with instructions to "take action for the removal of the disadvantages "under which agriculture suffers owing to the depreciation of silver, and to take all steps, by petition to "Parliament and otherwise, to secure the remonetisation of silver by international agreement."

International conference.

53,671. What do you propose in order to accomplish this—that the English Government should approach foreign nations with a view to an international conference?—Yes, I wish them to approach leading commercial nations to arrange that the monetary standard for the whole world should be joint silver and gold.

53,672. Are you influenced in your views as to the evils which have resulted from the present state of things by the numerous commissions and committees recently appointed by Parliament to inquire into the condition of agriculture and of trade and of the unemployed?—These commissions are strong evidence that the Government realise there is something very far wrong, and that something should be done to remedy the present state of matters.

Mr. W. H. Gibson. 8 June 1893.

53,673. Do you attribute any part of the depression in agriculture to the competition with silver-using countries?—I believe we have a great competition with silver-using countries which prevents prices rising. If prices were rising in gold I believe it would increase the production from these countries under present conditions.

Competition with silver-using countries.

53,674. Do you think that the fact of their possessing an appreciative currency, like the rupee in India and the paper currency in Argentina, enables them to send their produce here cheaper than would otherwise be the case?—I believe that is so. Their expenses being paid in silver are very greatly reduced. The Indian grower, so long as he gets the same number of rupees for his wheat, is as well paid as he was 20 years ago when the price was much greater in the gold-using country than it is now.

53,675. And the capacity for wheat production in India is very great?—Yes. If the price were rising the competition would be very much greater.

53,676. Have the exports of wheat from India not fallen off very much latterly?—I believe that is so. But the fact is wheat has fallen more than silver has fallen compared with gold.

International conference.

53,677. What is your opinion of the probability of foreign nations being at all willing to join in any arrangement of this kind?—From recent events upon the Continent and in America I believe the prospects are very much brighter now for an agreement between the leading commercial nations if an international conference were called together.

Agricultural depression and the monetary changes 1873–4.

53,678. Do I understand that it is the view of the Scottish Chamber of Agriculture, as well as your own view, that very much of the depression from which we are suffering at the present time is to be traced to these great monetary changes of 20 years ago?—That is our belief.

53,679. They wish you to represent that to us?—Yes, I have been asked to speak to that petition which was sent up by the Chamber.

53,680. Is that view of the case supported at all by predictions which were made before these changes occurred—that general depression and trouble would be the consequence of the change?—Yes, many predictions were made before the great change in prices took place.

53,681. Can you refer to any one in particular?—I can refer to Mr. Ernest Seyd, who in 1871 said:—"It is a great mistake to suppose that the adoption of "the gold valuation by other States besides England "will be beneficial. It will only lead to the destruction "of the monetary equilibrium hitherto existing, and "cause a fall in the value of silver, from which England's trade and the Indian silver valuation will "suffer more than all other interests, grevious as the "general decline of prosperity all over the world will "be. The strong doctrinism existing in England as "regards the gold valuation is so blind that when the "time of depression sets in there will be this special "feature—the economical authorities of the country "will refuse to listen to the cause here foreshadowed; "every possible attempt will be made to prove that the "decline of commerce is due to all sorts of causes and "irreconciliable matters. The workman and his strikes "will be the first convenient target, then speculation "and over-trading will have their turn. Many other "allegations will be made totally irrelevant to the real "issue, but satisfactory to the moralising tendency of "financial writers. The great danger of the time will "then be that among all this confusion and strife "England's supremacy in commerce and manufactures "may go backwards to an extent which cannot be "redressed when the real cause becomes recognised "and the natural remedy is applied." I have also quotations from Baron Rothschild, Lord Beaconsfield, Mr. Goschen at the Paris Conference and at Manchester, and Dr. Giffen, who, in a paper on "Recent Changes in Prices and Incomes," read before the Royal Statistical Society on 18th December, 1888, said:—"Where debts "increase fast, and where in addition, as in the case of "France, there is no rapid increase of population, the "problems involved in the appreciation of money may "at any time become serious. I should look for "troublous times, for instance, both for some of our "Australasian Colonies, and for a country like the "Argentine Republic, even if the appreciation does

Digitized by Google

Mr. W. H. Gibson. 8 June 1895.

"not grow more serious than it has been. That the "pile of debts has to be paid, principal and interest, in "appreciating money, even if individual money in- "comes do not diminish, is a most serious consideration. "The increase of the wealth of such borrowers ought to "be enormous to enable them to bear safely the debts "they are incurring."

53,682. (*Mr. Chaplin.*) Your Chamber earnestly desires that such measures should be taken that may lead, if possible, to another international conference to deal with this question?—That is our earnest desire.

53,683. Do they anticipate that it would give great relief to the present depression?—I believe it would, by preventing the continuous fall in prices.

53,684. It is also their view, I suppose, that as long as this fall in prices continues, especially if it should continue to be progressive in the future as in the past, they do not see any prospect of bringing about an improvement in the condition?—We see very little prospect of a permanent improvement. There may be a slight rise for a time, but within the last 20 years we have occasionally had our hopes raised by an increase in prices, but shortly afterwards they have fallen lower and lower. I believe that will be the case from the present time.

53,685. Is it your opinion, or within the knowledge of the Chamber and members of the district they represent, that these views are gaining ground among the farmers of Scotland?—I think so, very greatly.

53,686. And they attach serious importance to them?—Yes.

53,687. Since when have these views prevailed?—The first petition by the Chamber was in 1889.

53,688. The depression in Scotland is not nearly so severe, generally speaking, as in England?—I believe that is the case.

53,689. And yet the farmers in Scotland appear to have turned more attention to this subject than the farmers in England, is that in consequence of their superior intelligence?—I cannot say whether they have given much greater attention to it than the English farmers.

Mr. W. H. Gibson. 8 June 1895.

53,690. Is there anything further you would like to say on this question?—With regard to the rise in prices at the beginning of this century, and the subsequent great fall in prices, I feel inclined to give greater weight than Mr. Everett did to the increase of paper money by other nations as well as our own, which was issued in the early years of the century, and then to the great decrease in the supplies of money which took place from 1810 to about 1830. I rather think Mr. Everett did not lay so much stress as I do on the great decrease in the supplies of standard money, silver and gold. There was a very great decrease during the time of the Revolution in South America, and the volume of silver and gold supplied for the use of the world fell from about eight millions to five millions sterling per annum. The great drop in prices was, perhaps, more attributable to that than to the contraction of paper money in this country alone. The great increase in the volume of standard money in the second half of the century, and the consequent prosperity, and then the terrible depression which has taken place in agriculture and in trade generally since 1873 warn us that these conditions are very likely to continue if the immense quantity of silver should be demonetised entirely.

The rise and fall of prices, 1810-30.

53,691. (*Chairman.*) Are the reasons which you have given us in favour of bimetallism those which have influenced farmers generally in taking up the line they have done in the Scottish Chamber of Agriculture?—I believe so.

Views of the Scottish Chamber of Agriculture.

53,692. Was the resolution of the Chamber arrived at with practical unanimity, or was there a division?—At the last meeting there was an amendment proposed by those who said they had not studied the question sufficiently to express an opinion upon it, and they suggested that the resolution should be delayed.

53,693. Can you give us the numbers voting?—I think about 17 to 9; but the amendment was for delay and was not in direct opposition to the resolution.

53,694. (*Mr. Chaplin.*) Was there any direct opposition?—Some of the speakers put forward arguments opposing our views, but no such amendment was proposed.

Witness handed in a number of quotations from historians and economists supplementary to his evidence. See Appendix A. IX.

Witness then withdrew.

Mr. J. Drew.

Mr. James Drew called in and examined.

Mr. J. Drew.

Estates under management.

53,695. (*Lord Cobham.*) You have been factor on the Galloway estates for the last 30 years?—I have.

53,696. What is the acreage of these estates?—80,000 acres.

53,697. Comprising what kind of land?—Various classes of land, embracing higher lying sheep walks, and sharp turnip land, with a small quantity of wheat-growing land, and a limited portion devoted to dairying.

53,698. What is the present rental?—About 28,000*l.*

53,699. Has that fallen to any considerable extent?—Yes, about 20 per cent.

53,700. For the last 16 years you have felt the depression more or less severely?—We have.

Cause of depression. Over-production.

53,701. To what do you ascribe it?—At first to bad seasons, but gradually to foreign competition. The tendency of prices must be downward while the world's productions continue to exceed the world's requirements.

53,702. Have you studied the question of over-production, or are you assuming it?—We see it. This country, which has a vast population compared with its area, is a large purchasing country.

53,703. Do you consider that the over-production of the ordinary staples of consumption, such as wheat, is still going on?—I do.

53,704. What class of farm has suffered most?—The wheat-growing farms.

53,705. The fall in the value of wheat having been greater than in other products?—Yes, it is down practically to zero, and it is now impossible to grow wheat at a profit at present prices.

Strikes.

53,706. What other factor has contributed to the depression?—Dull trade, and I think strikes have also affected it. In our part of the country we find that when trade is brisk on the Clyde and in the large manufacturing centres we have an assurance of better prices than when trade is dull.

53,707-10. Because there is an increased power of spending among the artisans?—The power of spending has been seriously crippled by strikes. The last strike in the coal trade in Scotland, which paralysed the coal and iron industries, had a very serious effect on our cheese industries.

Prices of cattle and sheep.

53,711. Have you any further causes of the depression to point to?—A short time ago we had a very serious fall in the price of sheep and cattle, which we attributed to the inability of the Englishmen to come forward and buy because of the great drought that had taken place, but this year we are very well satisfied with the prices to which stock have risen.

53,712. (*Mr. Chaplin.*) Are they still showing a tendency to rise, or are they stationary?—The tendency is to rise.

53,713. (*Lord Cobham.*) Do you attribute that to the decrease of foreign imports?—Partly. The imports of cattle have gone down, and the price of beef has increased, while the price of mutton is everything that could be desired, if it is maintained.

53,714. Do ocean freights still keep a low level?—Yes; but I hope that in time the shipowners of the country will not be so thoroughly disinterested as to carry on their trade at a loss. The home producer has also had to incur greater expense in sending his produce to market in the great centres of consumption.

53,715. Has that element of cost increased of late years?—I do not think so; but it has been increased in comparison with the cost of ocean freights.

Competition in dairy produce.

53,716. Have the dairy farmers stood the strain comparatively well?—Yes, till this year, when the prospects are not so bright as they have been.

53,717. What is the cause of that?—It is owing to the enormous imports of both cheese and butter.

53,718. (*Sir Nigel Kingscote.*) Have they reduced the price of the home-made articles?—Most seriously.

Digitized by Google

Mr. J. Drew. 8 June 1895.

53,719. (*Lord Cobham.*) Can your farmers not compete successfully with the foreigners in regard to the quality of the butter?—We make the very best butter. We have the largest creameries in the country, but the fall in butter has been so great that the price of the raw material at the creameries has been reduced almost to vanishing point.

53,720. What price do you get for the best butter, as compared with the price of Danish?—I cannot give you the relative prices, but I should think this year the price will be down at least 30 per cent. for the best butter. All that our creameries are offering for milk is 4*d.* per gallon, and it has also to bear the cost of transport.

53,721. Have the creameries been a great advantage to the farmer?—They were a considerable advantage at first, but with the enormous fall that has taken place in the price of the raw material the people are beginning to change their views on the subject.

53,722. Are they selling more milk?—Our ports being closed to foreign cattle, we are going in more for breeding.

Importation of foreign cattle.

53,723. Your farmers are opposed to the introduction of live cattle from abroad?—All our farmers are opposed to it.

53,724. Is the breeding of cattle largely on the increase?—Yes.

53,725. And with good results?—With very satisfactory results.

53,726. Particularly during the present time?—Yes, I speak of the present time.

Reduction in rents.

53,727. What has been the fall in rents generally in your part of the country?—I put it at 20 per cent. all over, varying according to the different classes of land.

53,728. At that reduction, can farms be easily let?—I have had no difficulty in letting farms.

Permanent pasture.

53,729. Is there more land laid down to grass than used to be the case?—We have had no appreciable change in the management, but I am one of those in favour of increasing the area laid down to permanent pasture.

Labour.

53,730. Is labour abundant in your district?—We have a sparse population, but there is sufficient labour, and all hands are fully employed.

Prices of manures.

53,731. Has the fall in prices for farm produce been at all met by the fall in the price of manures and feeding stuffs?—The fall in the prices of manures and feeding stuffs has helped farmers considerably.

The Agricultural Holdings Act.

53,732. Have you anything to say about the Agricultural Holdings Act?—I have had some experience of it, and I have had no difficulty in adjusting terms mutually. I have also had experience, not as an arbiter, but as an oversman in carrying out the Act, and I think the complaints against it are more imaginary than real. If the Act is fairly administered, there need be no difficulty in arriving at satisfactory conclusions.

Official referees.

53,733-4. Are you in favour of officially appointed arbiters acting solely?—I am in favour of the appointment by some central body of official valuators, so as to have uniformity of decisions; but I do not agree with a previous witness, Mr. Guild, that it would be possible to map out Scotland into four or five districts, and assign a valuator to each. You must have regard to the localities, and the valuator should have some knowledge of the local circumstances. I do not think the East Lothian farmers would have confidence in a Galloway valuator, and it would be the same with us.

53,735. (*Mr. Clay.*) You are in favour of a single arbiter?—Yes.

53,736. You do not require three arbiters to do what one man can do?—No, and it would save expense.

35,737. And you would keep lawyers out as far as possible?—Yes.

35,738. (*Lord Cobham.*) As far as you know, there is no desire to find fault with the Agricultural Holdings Act?—Not in my country.

Farming capital.

53,739. Are farmers making profits now at the reduced rents?—No, I do not think so. But all sections of the community have had to suffer. The man who has his money invested in property has had to take a smaller return, and farmers must do the same. But to say that farmers are going on in smooth water, I do not believe it, except in isolated cases. This year, however, our stock farmers are very well pleased.

53,740. Has there been a considerable loss of farming capital?—I think there has been a very considerable shrinkage.

Mr. J. Drew. 8 June 1895.

53,741. How is that shown?—In diminished bank deposits, and in the reduction of the capital value of stock from what it was in the great years from 1874 to 1879.

Condition of cultivation.

53,742. Has there been any change in the condition of the land?—I do not think there is any very great change. We have endeavoured to maintain the fertility by assisting our farmers with free manures. That has been a very favourite method of giving deductions.

53,743-4. You think that has made up for the effects of the reduction of stock on the land?—I do not think there has been any reduction in the head of stock, but only in their capital value.

State loans.

53,745. Have you anything in the way of remedies to suggest?—I have no heroic remedies. Good steady trade, with freedom from strikes, ought to have a beneficial effect, and, in time, the probable advance in ocean freights ought to help the home producer. But there are two ways in which the Government could give powerful aid to the owners and occupiers of land—first, by the granting of State loans for the purpose of carrying on agricultural improvements, such as the erection of buildings and drainage, at the current low rates of interest, the repayment of the principal being spread over, say, 40 years. This would be a great boon, and need not cost the Government anything, for the due payment of the interest and the repayment of the instalments of principal would become a first charge upon the land.

53,746. You mean that the loans should be to the proprietors?—Yes. I have never yet been able to see how the central Government could, with proper security, give loans to occupying farmers. I believe there is some such system in America, but I have doubts as to its propriety. But if given to the landlords the repayment of principal and interest would become a first charge on the land.

Burdens on the land.

53,747. Would not the other mortgagees object?—I think not, because the value of the estate would be enhanced by the improvements. There is another thing that calls for immediate redress, and that is the reduction of the burdens on land. At present land has not only to bear its full share of Imperial taxation, but also the whole cost of local government, education, maintenance and repair of roads, poor-law administration, the care of lunatics, police, and all the other items of county and parish government, except a small allowance by the Government for lunatics, the repair of roads, and the half of the pay and clothing of the police, and grants for education and medical relief. It is only reasonable and fair that as land now bears its full share of Imperial taxation, all classes of property—personal, as well as fixed—should contribute, according to their respective amounts, towards the cost of local government and local administration.

53,748. Would you shift the whole of the burden to the Imperial Exchequer or re-apportion it?—I am not prepared to say how it should be done—whether by way of increased grants or by some system under which the Government would directly carry on the management of lunatics and pay the whole of the police, or not, I could not say.

53,749. Would you recommend the abandonment of local administration?—I do not think it would be possible to carry on the whole local affairs without local administration; nor do I think it would be desirable that the Government should carry on all local affairs without local administration.

53,750. So that there must be some local taxation?—Certainly.

53,751. You advocate a reduction rather than a complete transfer of the burdens?—I cannot see how a complete transfer could be effected.

53,752. Are your farmers in favour of any stronger remedies than those you suggest?—Well, I have considerable acquaintance with the farmers. There are a few of them who think you can restore farming prosperity by artificial means; but I have no great faith in their views, and do not pay very much attention to them. Some think you can produce a revolution in farming by some extraordinary changes in the Agricultural Holdings Act, but I have never been able to see how that can be brought about.

Digitized by Google

State loans.

53,753. (*Sir Nigel Kingscote.*) You wish to see the State lend money to the landlords at a cheaper rate for improvements. Is there a want of agricultural improvements in your district?—A considerable amount is going on.

53,754. But more are wanted?—We have been keeping well up, but cannot provide the money at such rates as the Government can, with safety to themselves, do.

Permanent pasture.

53,755. You wish to see a larger area laid down to grass—do you look upon that as a tenant's or a landlord's question?—As a joint question I think the tenant has too long to wait in an ordinary time for all the advantages from permanent pasture, and he should have some encouragement from the landlord.

53,756. You wish the landlord to help him?—Yes.

53,757. Would you allow the tenant to lay down permanent pasture without the consent of the landlord?—No, but I have never known any instance in which that consent has been withheld.

Importation of foreign cattle.

53,758. Has your district in former years suffered from cattle disease?—We have had a pretty complete immunity from disease, because we were one of the first counties that went in for the system of compulsory slaughter. When pleuro-pneumonia broke out with us we took immediate steps to stamp out the whole stock.

53,759. You believe that the more farmers breed their own stock the better?—Certainly.

53,760. And you think that, taking Great Britain altogether, stock sufficient for the wants of the people could be raised without foreign imports?—I think so.

53,761. Another objection to the importation of foreign cattle is the risk of disease?—Yes, it paralyses the hands of the home producer, who is afraid to move in case disease comes in, and he is swamped by the enormous production.

Creameries.

53,762. As regards your creameries, are they on the co-operative principle?—They are private joint stock companies.

53,763. And they may come to grief?—Unless they can raise the price of milk above fourpence per gallon I can hold out very little prospect of their success.

53,764. (*Lord Cobham.*) Do the farmers take back the skim milk?—Some of them, but we hope, with an immunity from foreign imports, that we will be able to separate our own milk and use the skim milk for the feeding of stock.

53,765. (*Sir Nigel Kingscote.*) And that will be of advantage to the landlord in keeping up the fertility of the land?—Yes. The theory at present is that everything that goes to the creamery gives nothing for the land.

53,766. (*Mr. Whitehead.*) Do the farmers take shares in the creamery?—Not many. But there is one creamery established by a body of farmers.

53,767. How is it paying?—I am afraid it has not been a great success. The older creameries have up to recently been very successful by taking up the making of margarine, which gave them large profits.

The letting of farms.

53,768. You have no difficulty in letting your farms?—None. We have a pretty good reputation for treating tenants fairly, and I have had no difficulty in getting tenants.

53,769. Does that apply to other estates?—Yes. None of the proprietors have any difficulty in letting their land.

Reduced price of manures.

53,770. You spoke of a reduction of 20 per cent.—does that include manures?—No.

53,771. Manures would be an additional reduction?—Yes.

53,772. Has that been generally given?—No, only in isolated cases.

53,773. What would it amount to—five per cent.?—In some cases.

53,774. Will you supply the rentals in decades for 1875, 1885, and 1895?—Yes, I will put in a statement. *The witness subsequently furnished the following statement:—*

RENTAL of the Estates of The Right Hon. The Earl of Galloway, K.T., situated in the County of Wigtown and Stewartry of Kirkcudbright, for the Years ending 11th November, 1874, 1884, and 1894.

		£	s.	d.
1.	Year to 11th November 1874 -	30,784	0	5
2.	" " 1884 -	32,090	12	3
3.	" " 1894 -	27,725	2	3

Certified correct, JAMES DREW.

Condition of labourers.

53,775. You said all classes had suffered by the depression in agriculture?—Except the labouring class. The price of food which they consume is very low, and they are in receipt of good wages.

53,776. Were they ever in a better position?—Never.

53,777. Have you plenty of houses on your estate?—Yes.

53,778. And plenty of labourers?—Sufficient for our work.

Butter-making.

53,779. Is your butter of good quality?—The very finest.

53,780. So that no additional education or technical teaching is necessary in your district?—We have gone in for the systematic teaching of cheese-making for many years.

53,781. Has it improved your quality of cheese?—Yes, it has made it more uniform.

53,782. The want of uniformity is the fault in butter-making?—Yes.

53,783. Is technical teaching necessary for the private butter-makers?—Yes; we did try it. The county technical education committee promoted a system of teaching in butter-making, but we were rather disappointed at the want of interest taken in it.

53,784. Will that state of matters not improve later on, as they see the necessity for it?—I should hope so. But very little butter is made with us.

Large and small farmers compared.

53,785. Is there any difference in the prosperity of small farmers as compared with large farmers?—I do not think so. The small holder is a man able to do with a very small wage bill, and he does not so very much feel the pinch of reduced prices. And in the general run of cases the small holder works his farm with his own family.

53,786. What is the extent of these small holdings?—On the Galloway estate we have no small holdings. On Lord Stair's estate there is a considerable body of small holders, but as a rule there are not many in Wigtownshire.

53,787. And they are more prosperous because they manage their farms with their families?—Yes.

53,788. (*Mr. Clay.*) Your estates in Galloway are all managed by practical men?—Yes.

The letting of farms.

53,789. And there has been no difficulty in making arrangements with the tenants?—None.

53,790. Do you know that the practice of several estates in Scotland is to advertise the farm and let it by tender?—I have no knowledge of it beyond what I see in the newspapers. We have sometimes what is called an "open" farm, where the tenant dies and leaves no one to carry on the farm. In such a case recently the representatives of the late tenant asked me if I would allow them to quit. I said, "by all means," and I advertised the farm and let it within a week after it had been given up, without by any means taking the highest offerer.

53,791. Was it moderately rented before?—We had largely reduced the rent, and got back very much what was the reduction.

Tenure.

53,792. (*Sir Nigel Kingscote.*) Are your farms let on lease or on a yearly tenancy?—We have all kinds. If a tenant wants a lease he can get it, or he can go on from year to year, or with a two-years' notice.

53,793. What is the usual length of the lease?—19 years.

Price of cattle.

53,794. (*Mr. Clay.*) Has the farmer been getting good remuneration for fat cattle, considering the price of lean stock?—No, he has not. As a rule, our cattle are all fed on roots, and when the root season is over they are turned into the fat market. There might be a fall in prices at that time, and the farmer would have to submit to it.

53,795. Is yours a feeding or a breeding country?—Feeding.

53,796. Do you not think that farmers in Scotland have been remiss in not breeding more cattle?—I do.

Permanent pasture.

53,797. You never refused your tenants permission to lay down more grass?—Never.

53,798. It is a good principle to go upon?—Very.

53,799. And would you not allow the tenant to lay down grass on his sole responsibility?—I do not think any tenant would be in a position to lay it down on his own responsibility in the general run of cases, because I do not think the farming capital of the country is over abundant. It is rather limited; and a man who wishes to lay down his land in pasture must do it well, or it is better in its original state. A large outlay is

Digitized by Google

Mr. J. Drew. — 8 June 1895.

involved in the improvement, and there is no immediate return from it. Everyone knows that for an increased yield there must be high manurial applications.

State loans.

53,800. Is it not more important now that more grass should be laid down, when cereals are not doing so well?—I think so.

53,801. (*Mr. Gilmour.*) You attach great weight to the Government giving advances at a cheap rate to landlords?—I do.

53,802. That question is important in view of the fact that land drained 30 or 40 years ago may soon want it again?—That is so.

53,803. That applies to the whole of Scotland?—To all I know of it.

The letting of farms.

53,804. In regard to the advertising of farms when you want a tenant, is it your opinion that the mode of not doing so would avail on small estates as well as on large?—I am not prepared to say it would. I should rather think it would not. In my experience there is a tendency to prefer a holding on a large estate rather than one on a small estate.

53,805. And you think that on these large estates the sons or other relatives of farmers are anxious to get on the same estate?—Yes, and we generally provide for them if we can.

53,806. Would the county council be a suitable body to draw up a list of official valuers to be approved of?—I think so.

Co-operation.

53,807. Do the tenants in your part of the country co-operate in any other way than in the creameries—for sales, for instance?—Not for sales, but men who can pay cash do co-operate in the purchase of manures.

53,808. (*Mr. Chaplin.*) Scotland is now practically free from contagious disease, such as pleuro-pneumonia and foot-and-mouth?—Completely.

Importation of foreign cattle.

53,809. And to make safe against any re-introduction of those diseases you advocate that the admission of foreign cattle into the interior of the country should be prohibited by law?—I do.

53,810. Is that the view of the majority of farmers in Scotland?—It is in my part of the country, and I believe over the most of Scotland.

53,811. And the demand sometimes made with a good deal of noise for the re-introduction of Canadian cattle has no very wide support?—It has no very wide area of support.

Effect of depression.

53,812. You think the depression is due to the fall in prices?—Yes.

53,813. On your estates there appears to be very little depression?—There has been a large reduction of rental.

53,814. But you say there are no unlet farms, and no land has gone out of cultivation, few changes of tenants take place, and that for any vacant farms there is no difficulty in finding suitable and practical tenants?—Yes, but I also said I did not think farmers were making any profit except a bare living.

53,815. On your estates there has been a general reduction of how much?—20 per cent.

53,816. And the farmer is still only making a bare profit?—Yes.

Condition of labourers.

53,817. Are the labouring population very well off?—Yes.

53,818. Are fewer labourers employed in agriculture than was formerly the case?—I think there will be fewer employed in harvest operations, but not otherwise.

53,819. Then in your district the labourers have not, as in some other parts of the country, left the country and gone to the towns?—We have a reduction in the population, but I think it is as large in the small towns and villages as in the rural districts.

53,820. But the fact is that on your estates there are as many labourers, and they are as much employed as formerly?—That is so.

Margarine.

53,821. (*Mr. Channing.*) Have you formed any opinion about the questions relating to margarine and butter?—We are very strongly of opinion that all these should be distinctly marked, to enable the buyer to know what he is getting.

53,822. Are there large margarine factories in your district?—Yes.

53,823. Are the margarine factories a benefit to the dairy farmers?—They are a decided loss.

53,824. If co-operation was started on other lines, would it develop the butter trade?—Unless we can have a sensible increase in the value of butter, the prospects of making a profit on butter is very shadowy.

Mr. J. Drew. — 8 June 1895.

Creameries.

53,825. (*Lord Cobham.*) Can you give the average price of the butter which the creameries sell?—I cannot say, but the fall has been enormous.

53,826. (*Mr. Lambert.*) Is there any difference in the price of the creamery-made butter and that made at home?—Our home butter is not good.

53,827. But does the creamery butter fetch a higher price than the home-made article?—I think it does.

Rent.

53,828. (*Mr. Dalton.*) The average rental of the whole of your estate works out at 7*s.* an acre?—That includes about 55,000 acres of sheep walks. The arable land in Wigtownshire may be put down at 1*l.* an acre.

53,829. And the sheep walks?—At so much per score of sheep; we do not judge by the acre there.

Wages.

53,830. What is the average money wage of the labouring man?—The average wage, with cottage and perquisites, will run from 18*s.* to 1*l.* a week.

53,831. Has the addition to the farmer's labour bill been larger or smaller than the fall in rents?—I do not think it has been so large as the fall in rents, nothing like it.

53,832. You do not employ a great quantity of labour?—Yes, we do.

53,833. What has been the rise in the wages of labourers for the last 20 years?—About 30 per cent.

53,834. And the fall in the rental has been 20 per cent.?—Yes.

Rates.

53,835. Can you say what the burdens on land amount to on your estate?—About 10 per cent., or 2*s.* in 1*l.* Of course, that is exclusive of the income tax.

53,836. That includes the local rates upon owners and occupiers?—Yes. On the Galloway estates the landlord's proportion is 5·554 as against 3·834 for the tenant.

53,837. (*Lord Cobham.*) Does that include the education rate?—Yes.

53,838. (*Mr. Dalton.*) Is that more or less than you used to pay?—More. The same amount requires to be raised, and if you reduce the rental the per-centage of assessment must be increased.

53,839. Can you give us the figures of the per-centage 10 or 20 years ago?—No. But the road subvention, for example, was reduced 50 per cent. a few years ago.

53,840. Have you a system of classification of poor rate in your district?—There is no classification, except in one or two parishes.

53,841. Does it give satisfaction in those parishes?—Yes.

53,842. Are they partly urban and partly rural?—Yes.

53,843. You do not find that the urban ratepayers object to the classification?—No.

Depression in 1846.

53,844. (*Mr. Everett.*) Do you remember when the corn laws were repealed in 1846, and foreign competition began?—I was very young then.

53,845. Do you say there were no complaints of agricultural depression during the years which followed 1846?—I can remember there were very grievous complaints from 1846 till the Crimean War began.

53,846. And from that time, for the next quarter of a century, there was uninterrupted agricultural prosperity?—That is so.

53,847. And yet it was all under free trade?—Yes, but we had not the new countries which have since been opened up, and are sending in their masses of produce to this country.

53,848. And you had not the new mouths to feed?—But the quantity of foreign produce received is out of all proportion to the increase in the population.

Foreign competition.

53,849. You attribute the fall in prices to foreign competition, with the belief that the world's productions recently have greatly exceeded the world's requirements?—I believe so.

53,850. Can you give us any evidence that it is so?—I think it is the general opinion entertained all over the country, and I think it is a very sound opinion.

53,851. We have been living for 15 years in a period when there has been a continual fall in prices?—We have.

Digitized by Google

Mr. J. Drew. 8 June 1895.

53,852. Would that encourage the holding of large stocks of corn anywhere, or would it not rather make people chary of doing so?—You must look at the various new countries opened up. The Argentine Republic is producing enormous quantities of wheat, and there has been an enormous extension of railways in America, through which wheat is being showered into this country.

Wheat production in Argentina.

53,853. For the last 10 years there has been no increase in the production of wheat in the United States of America, where there has been an enormous increase of population?—That applies to the United States; but if you go to South America you will find a totally different tale. The Italians in South America are growing large areas of wheat, and they live on practically nothing. They are able to send their grain into this and other countries at prices which we cannot fight against.

Mr. J. Drew. 8 June 1895.

53,854. Are you aware that the price they sell it at here is multiplied to them three or four times in their own money?—That is owing to the appreciative currency; but I am not prepared to go into the question of bimetallism. I think you will find that the price of wheat in the Argentine a few years ago was so small, and the quantity was so small, that it would not pay the cost of export, and it had to be used for locomotive purposes.

53,855. (*Lord Cobham.*) Can you refer us to the source of your information?—No; it is private information, communicated by friends to myself, but I have no doubt of its accuracy.

Witness then withdrew.

Adjourned.

One Hundred and Second Day.

Edinburgh, Monday, 10th June 1895.

PRESENT:

VISCOUNT COBHAM IN THE CHAIR.

Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
ALAN MACKINNON, Esq., } *Secretaries.*

Mr. J. Fyshe. 10 June 1895.

Mr. JAMES FYSHE called in and examined.

Mr. J. Fyshe. 10 June 1895.

53,856. (*Lord Cobham.*) I think you are a tenant farmer at Treaton, Markinch, Fifeshire?—I am.

53,857. Farming how many acres?—376.

53,858. What kind of land?—All arable.

53,859. I think you came here wishing to make some suggestions in the nature of remedies or palliations of the present agricultural depression, and to say something about the cause of it?—It is much easier to find the cause than to find a remedy.

The Agricultural Holdings Act.

53,860–2. We will take your suggested alterations on the Agricultural Holdings Act first, and run through the main alterations you would propose?—I think that all improvements of a permanent nature ought to be paid for. And that the basis of the valuation should be what the improvements are worth to the farm merely. I would therefore abolish all schedules appended to the present Act. All improvements should be put on the same footing. All buildings, if not consented to by the landlord, should be erected subject to the decision of an official valuator that they are necessary for the farm. If not found necessary they should not be paid for.

Improvements by tenants.

53,863–4. When you say that schedules ought to be abolished do you mean anything done by the tenant to the farm that adds to the letting value should be taken into consideration by the valuator and become the subject of compensation?

(*Mr. Channing.*) With a reservation as to buildings?—I ask you to recommend that if the landlord declines or is unable to put up the buildings for the tenant the tenant shall be recouped for the expense.

53,865. That is to say, if the buildings are, in the opinion of the valuator, necessary for the farm?—Yes.

53,866. (*Mr. Clay.*) And the official referee is to be judge of that?—Yes.

Compensation for cumulative fertility.

53,867. (*Lord Cobham.*) Do you hold that continuous good farming or cumulative fertility should be a subject of compensation?—Yes. That is a recognised principle already, but the present Act is so cumbersome and so expensive that really it precludes many a tenant from making a claim. We often find that, no matter how absurd a tenant makes his claim, when it gets into his landlord's hands, or those of the landlord's agent—and although it is absurd enough to preclude him going into court, or put him out of court even—the landlord or his agent goes one further, and tops that claim by one quite as absurd, with the result that the litigation and the expense preclude any man of moderate income from prosecuting it.

53,868. How is cumulative fertility recognised under the Act?—We come to that further on: "An inspection of farm to be made by an official valuator at the beginning of the lease, whose report shall be deposited in the Scottish Land Office."

Compensation for consumption of home-grown corn.

53,869. With regard to home-grown produce consumed on the farm, what alteration would you make on the existing law?—I would make compensation there for stuff which might otherwise have been sold. The present law is frequently evaded in this case. It is quite possible for a man to sell his produce, and buy his neighbour's, and get compensation.

53,870. Is that commonly done?—Yes. I have heard that one man sold his hay to his neighbour, and that his neighbour sold it back, without it ever being lifted.

53,871. You think there is much room for fraud?—I think a man who can sell it honestly surely is as much entitled to compensation as the other.

53,872. Have you any suggestion as to safeguards?—Farm books should be attested by the farmer and principal servants, and any false entry should be considered criminal.

53,873. You think that would be a complete safeguard?—I do.

Penal clauses.

53,874. With regard to penal clauses in leases, what do you say?—Anybody who puts his signature to a lease with a penal clause to it can be made to pay, and in any claim for damages outside of agriculture—in the

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

case of any contract not being fulfilled, or anything of that kind—it is necessary to prove that damage has been actually received; whereas in the land the tenant is bound to pay, whether the damage is proved or not.

53,875. Are these clauses used for the purpose of preventing tenants' claims being made?—I do not know, but I do not think it is right.

53,876. Can you quote instances of hardship?—Yes.

53,877. You mean cases where the penal clauses were set up against claims for compensation?—I do.

53,878. Were the penal clauses in those cases of an unjust character? Did the landlord receive no damage?—I do not think any penal clauses do.

Cropping and sale of produce.

53,879. How would you meet the case of mis-cropping?—I would restrict the claims to the actual damage proved to have been done.

53,880. That would come under the amended Act?—Yes; continuous bad cropping must be paid for.

53,881. And any damage produced by mis-cropping, or in any other way, would be a subject of counter-claim?—I do not say about mis-cropping. I do not think any farmer who is a good farmer would hurt his farm. It would be to his own detriment. If you have a bad tenant you may have all the clauses you like in the lease and they will be evaded. A good tenant can do well without the lease, and leave the farm considerably better than he got it.

53,882. You believe, I see, that there should be freedom of cropping and sale of produce, but that at the close of the tenancy, say, during the last three years, a regular course should be followed?—Yes; because a tenant farmer might, through bad temper or ill-feeling, take it upon him to leave his farm all in one crop, which, of course, he would have to pay for.

Length of leases.

53,883. Are you in favour of 19 years' leases?—I think breaks of five years are not desirable from a farming point of view. Some men go into a farm in good condition and wait until the close of the fourth year—do nothing for it—and then give notice to quit. The land is thus deteriorated. I would much rather farm from year to year than have a five years' break. Men will try a farm now for a certain period, and if it is not good give it up. These cautious men try it only to see how it is to work.

53,884. You think if the law was amended as you suggest that they would prefer a 19 years' lease without a break?—Or 15 years.

The Agricultural Holdings Act.

53,885. With regard to the machinery of the Act, is it found to be at present cumbrous and expensive?—It is.

Official valuators.

53,886. Do you suggest any remedy?—I would suggest that so many valuators be appointed by the whole country and paid by Government. They would thus be in a more independent position than if employed by certain parties, and would be more unlikely to do anything unjust—although I do not accuse any of them of being unjust. They may have gone wrong, but I think they only acted according to their ideas.

53,887. How would you appoint them?—Under Government certain valuators would be appointed for certain counties.

53,888. Is it desired that to some extent you should have local valuators?—The very opposite has been acted on. Valuations in Fife have been done by East and West Lothian men. If official valuators were appointed they would soon become acquainted with the ins and outs and customs of a local place.

53,889. Then one of those valuators should be called in whenever the landlord and tenant cannot agree?—If they do not agree about a claim and counter-claim then there is your man to settle it.

53,890. Are the parties to pay any fees at all?—Yes, they should each pay so much.

53,891. You would, I see, give a right of appeal from one valuator to another?—Yes, but I would except the one who made the valuation. I would give an appeal to three other valuators.

53,892. To a court of any three official valuators, who would settle it finally?—Yes.

53,893. Do you consider that a large staff of valuators would be required for the country?—No. I think four or five would cover the whole country of Scotland. In doing so you could select the five men from the portions of the country that would be representative.

53,894. You do not tie yourself down to five?—Certainly not. If three or five were not enough I would say more.

Mr. J. Fyshe. 10 June 1895.

53,895. Would the Act be worked from Edinburgh?—Yes.

53,896. By a branch office of the Agricultural Department?—Yes.

53,897-9. What would be the duties of such branch Agricultural Department?—They would receive all those official reports when a tenant entered a farm; they would receive those awards and issue them; and they would be the party to write to for an arbiter in any valuation.

53,900. Would you give any appeal from official valuators on matters of fact?—If there was any reason for either party being dissatisfied they would require to say on what ground they were dissatisfied.

53,901. That is to say, the appeal would be to the court in Edinburgh?—Yes, and it would be for them to decide whether they would trouble those other valuators or not.

53,902-3. Would you give an appeal to a legal court on points of law?—No; I would give no appeal to a legal court.

Railway rates.

53,904. Is there much feeling as to railway rates in your district?—They want to have the same rate for home as for foreign produce. They have no right to dictate to the railway companies what they should charge, but they think that produce from a foreign country should not be carried cheaper than the produce of this country.

53,905. Would you provide that hundredweights should be charged for at the same rate as a truck load?—If they charged the foreign produce in the same way, I do not care. They carry the foreign produce at a much cheaper rate than the home produce.

53,906. Why has not complaint been made?—Complaint has been made now and again.

53,907. You think the farmers cannot prevent it?—The farmers are of opinion that the railways carry foreign produce at a much lower rate than home produce.

53,908. I wanted to get from you whether you thought the same rates should be charged no matter what the loads?—If it came in in any small quantities it should be charged at the same rate as those large quantities. I want the train loads to be charged the same price per truck.

53,909. The question is whether the foreign traffic would not go round by sea instead of being carried by rail?—That is their look-out.

53,910. If any did, would the farmers get the benefit?—I think they would, because the goods after going so far by sea could not get to the inland towns without railway carriage. They always take the nearest port for the delivery of the stuff. If it is to be delivered in Scotland they generally come to Glasgow and send it from there to other places. Some foreign cattle that come into the North Sea are carried to Norfolk, and carried cheaper.

53,911. Supposing you had British packed in the same way as foreign produce would not you get the same rates?—A man in Aberdeen last December, I believe, wanted a train and could not get it at the same rate.

53,912. (*Mr. Channing.*) Was it packed in the same way?—Yes.

53,913. (*Lord Cobham.*) You have not made the same offer yourself to the railway companies, in order to test the point?—No.

Local rates.

53,914. Would you alter in any way the incidence of local rates?—Yes. I think land is too highly burdened. For instance, a man takes a farm and pays 500*l.* per year rent. He is charged local rates on all that land in the same parish.

53,915. (*Mr. Dalton.*) Is that the general practice?—Others, I believe, are different; but in my parish on the whole rental, with the exception of 10 per cent. off.

(*Witness resuming his reply to Lord Cobham.*)—Another individual may be living in the same parish, with an income of 1,500*l.* from investments, and yet only paying rates on a 19*l.* rental, or only on the rental of his house, whatever that might be.

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

53,916–7. You think all personalty should be taxed?—I think so. A farmer takes a farm for a living, and even in these hard times our local taxation is continually increasing.

Sale of cattle by live-weight.

53,918–20. Are cattle sold largely by live weight in Fifeshire?—They are not sold by live weight at all. The salesmen meet the requirements of the Act of Parliament by erecting a weigh-bridge; but we hold that these weigh-bridges, with a dial showing the weight, are not reliable. There was a question asked some time ago in the House of Commons about a sale-yard in Thornton. Mr. Gardiner said it was found the weights were quite right, and that the fault was with the attendant. To satisfy ourselves upon that point, last Monday we had an inspector of weights and measures to test that weight. It was said to be right enough to begin with, but at the finish it was found to be 3 cwt. in the ton wrong. That was through leakage of water. Those dial weighbridges are regulated through water supply, and (*handing in sketch of one*) they are so liable to go out of order that they cannot be relied upon. I believe it is the case in Haddington, when they are selling cattle there, that the butchers frequently tell the auctioneers—"That weight is not right. You had better get it put right." I am not particularising one auctioneer more than another. In fact, the one man whom the question was asked about in Parliament, namely, Swan, has the most reliable weight of any of them, at Haymarket, and that has given great satisfaction. But these are details. We want it made compulsory that our cattle should be sold at so much a hundredweight; that there should be a sworn weigher to see that the weights are correct, and that no sworn weigher will issue a weight unless he is quite certain that his weights are correct.

53,921. (*Mr. Channing.*) This machine, you have said, was 3 cwt. wrong; was that amount against the farmer?—Yes.

53,922. (*Lord Cobham.*) Are machines inspected at present?—An inspector could go there in the middle of the selling and stop the sale, and find if the weights were correct.

53,923–4. Is there much breeding of cattle in Fifeshire?—A good deal, but not so much as there used to be.

Importation of foreign cattle.

53,925. What has caused the change?—Well, it is due, in one way, to the irregularity of the Government's management, I think. Sometimes we are allowed to get Canadian cattle in, and sometimes not.

53,926. You must have certainty in the matter?—Yes. I think we should allow all Canadian store cattle to come in. At any rate, the county does not object to the fat cattle coming in. They come in great quantity. That cannot prove we have got enough. Canadian store cattle should also be allowed to come in, because some cattle are forced up to a fabulous price, and store cattle coming from the States would lower the prices.

53,927–8. Would it not be better to breed in Fifeshire?—Yes; but probably next year, or during the next six months, they might allow Canadians in.

53,929. Do you think a majority of the Fifeshire farmers hold your view?—Well, I should say, yes.

53,930. And you are not afraid of the importation of disease?—From all that we have seen I think we need not.

Sale of foreign produce.

53,931–2. Do you consider that much foreign produce is sold as home produce?—I should think that most of us are pretty well aware of that, because in Glasgow, and, I believe, in Liverpool and London, if you go into a butcher's shop and ask a supply of anything, it is said to be home-grown and home-fed.

53,933. How would you prevent it?—I would licence certain shops to sell foreign beef and mutton, and foreign produce alone.

53,934. Do you consider that foreign produce should be marked?—Yes; but I do not see how the marking would work with beef and mutton. Other products can easily be marked. Anything in a bag can easily be stamped as foreign produce, or in cases of any kind; but some means should be adopted to have an actual commodity sold for what it is.

53,935. Under heavy penalties?—Yes.

Mr. J. Fyshe. 10 June 1895.

53,936. I think you have some figures to give us as to the beer tax?—Yes. I think these figures will speak for themselves. Before the beer duty was imposed by Mr. Gladstone in 1880 the duty on malt was 2*s.* 7*d.* per bushel, and five per cent. additional, or nearly 22*s.* a quarter. This duty was repealed and one placed on beer equivalent to 25*s.* on each quarter of malt. In 1885 Mr. Childers proposed to add 1*s.* to the duty on each barrel of beer, or 4*s.* on a quarter of malt. That proposal was rejected. In 1889 Mr. Goschen reduced the standard gravity of beer from 57 to 55 degrees, and so, without adding anything, really added another 1*s.* Last year Sir William Harcourt added 6*d.* making the tax 27*s.* a quarter; in short, barley growers find their duty, he believed, more than increased from 22*s.* to 27*s.*, or nearly 30 per cent. in 13 years. Along with the reduction from 57 to 55 degrees, the growers find that the brewers are using much lighter barley, mostly foreign barley, I believe, and forcing down the price of the barley in this country. In addition to that, there is a large quantity of sugar being used. There is an increase of sugar since 1881 of 1,680,688 cwts. used in brewing, or an increased displacement of malt of 534,344 quarters, or roughly speaking, over half a million quarters of malt in 13 years. Last year there was used in brewing 2,194,030 cwts. of sugar, or a displacement of 1,097,015 quarters of malt.

Beer duty.

Tax on barley and sugar.

53,937. Do you suggest that foreign sugar or barley should be taxed, or both?—We are told by societies of philanthropists, local vetoists, &c., that brewing and distilling is a very evil trade, that it is the cause of all our misery, and degradation, fills our gaols, and is the cause of all our crime. We do not object to the taxes, but if this trade is so deleterious to the country and its inhabitants I think the whole of the whisky in the whole country ought to be made from the produce of the country that it so hurts. Sugar is now going down to such a price that it is much cheaper to use. Therefore the foreigner is getting the benefit of all this.

53,938. You would tax all sugar?—I would make it an adulterant and prohibit it in brewing altogether.

53,939. You would make it a criminal offence?—Yes.

53,940. And as to foreign barley?—I would tax it. It is a protected trade already.

53,941. At what stage would you tax it?—In the raw state. There is no barley used for human food in this country. I would tax what goes for whisky and beer.

53,942. That is to say, you would put foreign barley on the same footing as sugar, and so far as it is used for spirits or beer you call it an adulterant, and tax it as such?—Yes. I believe that sugar to a large extent is used in England by some of those brewers who have so many tied houses. The best brewers dare not use sugar, for I believe beer exported will not keep when made with sugar. In order to make the best beer I believe it is thoroughly requisite that the best barley should be used, and hops, of course. The increase of sugar where this is going on speaks for itself. These figures are from Somerset House.

53,943. How do you account for the increase in the use of sugar in brewing?—I believe it is a question of the price of rye. When rye ran up to a large price other ingredients were used.

53,944. Have you anything else to say on that subject?—I believe there is also a large importation of Berlin spirit, which by some authorities is considered pure; but it is well known that it is used for fortifying weak whisky, and we are led to believe that it is greatly used in all our feeing markets, and has the effect of making people nearly mad.

53,945. (*Mr. Gilmour.*) Is there anything to show the importation of it into this country?—I have not looked it up.

Cause of depression.

53,946. (*Lord Cobham.*) What in your opinion is the principal cause of the agricultural depression?—High rents, low prices, foreign competition, and general depression of trade; and of course we cannot blind ourselves to the fact that tenant farmers have themselves to blame for those high rents.

Rents.

53,947. Do you mean the present or former rents?—I think the present rents are too high. But when you find one farm let at 200*l.* of a rise and the other going to be let at 40*s.* an acre, and an offer comes in for 50*s.* an acre, in one week, it is difficult to find a remedy, unless this court is directed to take possession of the

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

liberty of the subject and allow valuators to say, "Well, "Mr. Landlord, there is the value of your land. You "can take what tenant you like."

53,948. Do you say he should fix the rent?—I am only saying that as to the valuation. We have plenty of depression, and the case is, as we all know, what is stated, and yet we have plenty of competition for farms —any amount of competition—and, notwithstanding all that depression and the inquiry you may make, there is the fact.

Farming capital.

53,949. We are told that the land is as well held as in past times. Do you think there is any diminution of the amount of capital in land?—Wherever farmers are hard run it is generally found that their land is not so well farmed and that their stock is reduced in quantity and quality.

53,950. Do you see that in Fifeshire?—My locality is rather celebrated for good stock; but in other places and, in particular, farms where the farmers have gone to the wall, if you attend the sales you generally find the state of matters to be what I state.

53,951. But in your own district your experience hardly bears out what you say?—There is a very good class of stock in it, although I believe the money is not so plentiful in it as it used to be.

53,952. Do Scotch tenant farmers as a rule put all their available capital into their farm?—Those who are farmers have no hesitation in putting all their capital into the farm; also those who have a love for it.

53,953. If there has been a substantial loss of capital it is sure to be shown in the reduced condition of the farm and the stock kept on it?—Generally.

53,954. If we find no great difference the inference is that it is all right?—It may mean that he has not reduced his capital. They are very strong in faith, and always hope for better times.

Fertilizers' Act.

53,955. As to foreign competition, I think you have given your views as to the best way of meeting that as regards barley. Have you any other suggestion to make?—No. It is needless speaking about protection, although it is wanted. I think the farmers would do well to pay strict attention to the Fertilizers Act passed in 1893, and take full advantage of it. I am informed that to a great extent it is not taken advantage of as it ought to be. While I would not like to state that all manure merchants are dishonest, still it is a fact that they are charging too much for their manures.

53,956. Have you tried to meet that by co-operation?—Farmers have attempted co-operation, but I have never been a member of such a body.

53,957. Are you able by strict supervision to keep the merchants up to the mark?—Yes, with a fair profit—or, rather, giving them the profit that the Highland and Agricultural Society fixes every year. It is said they can all sell at that price.

Coal strikes.

53,958–9. Have you suffered from the depression of trade?—I have suffered from coal strikes. The colliers were great beaf-eaters at one time and very ready to spend money. Now they are very short of money. I live in a colliery district. They are not getting full time, and, of course, their money is short. I am surrounded by collieries on one side.

Cost of labour.

53,960. The losses incurred by farmers through the diminution of prices have not at all been made up by diminution in the cost of labour?—No. The cost of labour is rather increasing.

53,961. Is it a substantial difficulty?—It is very difficult to get good servants in Fifeshire. We are not keeping any fewer of the class, but a lot of them are drifted into public works, and coal-pits, and railways, and forcing wages up. I think the farmers round about me are keeping the same staff of men and female workers as they used to have. Female labourers are hard to get.

Condition of labourers.

53,962. Has the condition of agricultural labourers improved?—I think all servants were never better treated or more dissatisfied.

53,963. With their wages or cottages?—They have too many wants foisted on to them by other people who have some extraordinary desire to be philanthropic at other people's expense.

53,964. Are they more particular in their way of living and standard of comfort?—Yes.

53,965. (*Sir Nigel Kingscote.*) You think all tenancies should be from year to year?—Rather than a 15 years' lease.

53,965*a*. And that the tenant should, with the approbation of a valuator, put up buildings on his farm?—Certainly, if that valuator said they were desirable for the working of the farm.

Mr. J. Fyshe. 10 June 1895.

Improvements by tenants.

53,966. You would also enable him to lay down land in permanent pasture without the consent of his landlord?—That would come to be a question to be decided at the end of the lease. I would allow it without the consent of the valuator.

Freedom of cropping.

53,967. Would you have freedom of cropping?—I would have freedom of cropping in those yearly leases.

Importation of foreign cattle.

53,968. You said you thought the importation of Canadian store cattle should be allowed. Did you ever suffer from disease in the locality of Fife?—Yes; but we hold that we got the disease from somewhere else than these cattle. I would like to run the risk of these cattle coming in instead of breeding them here.

53,969–70. You are aware that pleuro-pneumonia may be in animals for a considerable time; they might spread it over many?—We are not satisfied in our own minds that Canadian cattle had pleuro.

Compensation for consumption of home-grown corn.

53,971. (*Mr. Whitehead.*) Would you include oats consumed by the farm horses in the produce to be allowed for?—Yes; I would allow compensation for oats consumed by farm horses.

53,972. Are you not afraid that there would be in these allowances great chances of fraud?—We must act on the basis that the farmers have not a monopoly of the fraudulent spirit.

53,973. Do farmers, as a rule, keep books in Scotland?—Yes; now, I think.

Official valuators.

53,974. That does not hold in the south, I think. With regard to the valuators, must they not be necessarily local men to understand local customs and requirements?—I pointed out to you that in two cases we had decided they were not local men.

53,975. Do you think there would be no difficulty, then, as to locality?—Yes.

53,976. As valuations come on at the same time, do not you think there might not be enough valuators?—There are very few valuations in Scotland for compensation in any one year. You may turn up five or six in one year. Although there were a score of them, what about it?

53,977. Would you require that those valuators engaged in no other business?—Yes.

53,978. That would necessitate high salaries?—Yes.

53,979. What class would you take them from?—From men who had been trained as valuators of farm produce and farm compensation.

Local rates.

53,980. With regard to rates, could you tell me whether rates have increased during the last 10 years?—Yes. The local rates have always a tendency to increase, and they will be increased this year.

53,981. Can you give the rate 10 years ago and now on your farm?—The present rate is 1*s.* 9*d.* a 1*l.* That includes the local rates.

53,982. Ten years ago, what was the rate on the same farm?—I think it would be 2*d.* per 1*l.* less.

53,983. And what has been increased?—Education. Sometimes we have to send a lunatic to the asylum which has the effect of raising the rates. It is a small parish, and 1*d.* per 1*l.* only gets 30*l.* of rates. So that we are liable to be fluctuating.

53,984. You say that on the whole rates have increased?—Yes.

53,985. Half the rates are paid by the landlord?—Yes. That is calculated in the rent to be paid by the tenant.

Barley growing.

53,986. Have you heard that barley is not so good in recent years for brewing purposes?—I have heard it stated, but I do not believe it.

53,987. It is stated that brewers have used foreign barley and sugar for their purposes?—I do not think so.

53,988. Have the crops of barley been less of recent years, so that brewers could not depend on the supply?—I do not think that.

Tax on barley and sugar.

53,989. Suppose you put a tax on sugar and barley in a bad season, would it not raise the price of beer to an alarming extent?—I would be inclined to run the risk.

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

53,990. Is whisky at all made with sugar?—No; but it is largely made from Indian corn. Molasses, I believe, is used for colouring. In many distilleries sugar is used in making whisky, but not in this locality.

53,991. Do you not think it would be sufficient if brewers were obliged to declare that their manufacture was composed of sugar and a substitute for hops?—They are bound now to declare that.

53,992. The brewers do not sell the article?—The seller of the article has no right to tamper with beer after it has left the brewery. The London men got badly fined for that.

Rents.

53,993. As to rents, have they fallen or been raised within the last 10 years?—Fallen.

53,994. To what extent?—I should say 10 per cent.

53,995. Generally throughout your locality?—Yes.

53,996. The actual rent per acre paid on your farm now is how much?—26*s.* 6*d.*

53,997. And 10 years ago what was it?—29*s.*

The Agricultural Holdings Act.

53,998. And the produce 10 years ago?—It was by the fiars prices then. I cannot say.

Permanent pasture.

53,999. (*Mr. Clay.*) I suppose your idea as to the Agricultural Holdings Act in advocating that permanent pastures of land be laid down, is that that is the best means of increasing its fertility?—I have found that out myself by keeping my land lying in grass for three or four years.

54,000. Your experience is that nothing will increase the fertility of the soil more than keeping it in grass, and keeping sheep upon it? You think that is the best way?—Yes, especially in the case of a farm that is a considerable distance from the station, and not suitable for growing potatoes, as some of our Dunbar friends do.

54,001. You think keeping land in grass greatly increases the fertility of the soil, and that is one of the principal reasons why you consider that pasture should have a distinct claim made for it?—It will show that itself. The incoming tenant will discover that it is richer and will afford more cropping.

54,002. And he will have increased the value per acre?—Yes; and in the event of land generally being further depressed, this land will be of more value then.

54,003. That permanent pasture used to be in the old Act of 1883?—Yes.

54,004. You want it to come into the regular work of the arbiter or referee, giving full scope for continuous good farming?—Yes.

Compensation for consumption of home-grown corn.

54,005. I think you advocate also that home-grown corn—what is grown on the land—should be allowed for by the arbiter if consumed on the farm?—Yes.

54,006. You say the farm-book, the steward, and other evidence, should be produced as a safeguard?—That is my opinion.

54,007. Do you know that most farmers that are in high districts never sell corn, and that the whole produced goes into the land?—Yes.

54,008. In that case would it not be very difficult to fix the quarters per acre?—I should think so.

Official referees.

54,009. In regard to the official referees, you would not tie them down to four or five in Scotland if more were required?—No; although my own opinion is that that would be enough to do the work.

54,010. You think those men should be practical men, trained to agriculture—trained men in Scotland, the same as Commissioners chosen by the Government?—Yes.

54,011. And these men would, after experience, you think, give an equal award and, through having no other business to attend to, become familiar with the work?—I hold they would be in a more independent position if appointed by the Government and paid by the Government, and if the parties using them were charged fees.

54,012. You think they should be men above suspicion?—I think there would then be no bias in any way, and that they would be looked upon by the parties employing them with more confidence.

54,013. You would let the expenses go, as in the Court of Session, against the person who failed to make out his case? Or to the person who came first for arbitration?—I would be inclined to charge each alike. If two men make up their mind to make a claim when there is only one arbiter, I think it would do away with the claims made hitherto.

54,014. If the man who made the claim was found to be wrong, do you not think that if he were held in expenses that would be a wholesome deterrent?—I would hold that if the award should be equal, the fee should be equal.

54,015. I agree with you in that. But if the award was not equal?—If the man was making an absurd claim I would then, whether he is landlord or tenant, give the referee the right to issue an award of the expenses, less or more, to either one or other.

54,016. Regarding the appeal, you said you would not allow it to any legal court. Would you allow the arbiter or referee to have the opportunity of consulting counsel to direct them in any point of law?—I think the fewer legal gentlemen you have in connexion with agricultural arbitration the better.

54,017. But many a time legal expenses are incurred in connexion with small leases, when the official referee had the opportunity of going in a case of law, where he is not qualified himself, to lay it before counsel?—I have no objection to him consulting a lawyer.

Tax on barley and sugar.

54,018. You would say that would be advantageous sometimes to save expense?—Yes.

54,019. Regarding the malt tax, you would like to see it brought back to its old place again?—Yes. Although the tendency in this country is to put the tax on the finished article.

54,020. If you could not bring it back, you think a duty might be put on foreign barley used for brewing?—Yes.

54,021. And put a duty on sugar that was used in beer?—Yes. A cwt. of beer is equal to four bushels of malt. The latter will cost 18*s.*, and the cwt. of sugar about 9*s.*

54,022. You are of opinion that if foreign barley used for beer were taxed, it would not be a violation of free trade. You think that such luxuries should be assessed to keep up the revenue of the country?—Yes; I think so.

54,023. Our whisky is assessed, and why should not beer be assessed?—It is in plain terms that it is a luxury and considered a dangerous luxury, and I think it should be made from the products of our own country, and give the country the benefit of the duty.

54,024. When it is coming for the luxury of the general community from abroad you would tax it?—Yes. It is not a question of tenant farmers, because if barley was raised 10*s.* or 5*s.* a quarter in five years, the landlords would have the best of the law.

Rents.

54,025. You said something about the high rents that our own class have been giving for land, and so running it up. Do you think there is anything in the sale of produce to warrant these high rents?—They are strong in hope, I think.

54,026. In a sense, it is what you consider false or unwise competition?—It is certainly unwise.

Importation of foreign cattle.

54,027. (*Mr. Gilmour.*) Have you figures as to how many members of the Windygates took part in this discussion as to the importation of Canadian cattle?—We had a meeting of 23 or 24. That number is representative, as you know, and we were unanimous on that.

54,028. How many members are there in the society?—We have 180 in our society.

54,029. I thought you said you spoke for the whole Society?—I beg your pardon. I am speaking of the people round about me, irrespective of the Windygates Society.

54,030. Since Canadian cattle stopped we have been clear of disease?—Yes, but we were clear of disease before Canadian cattle were stopped.

54,031. For some time?—Yes.

Claims and counter-claims.

54,032. You would allow a landlord to claim whether a tenant makes a claim or not?—Certainly.

54,033. You have not told us your views as to the date of putting in claim and counter-claim?—I would make it compulsory to put it in the same day.

54,034. And prior to or after the termination of the lease?—Within a certain time after the termination of the lease for both.

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

54,035. Would there not be a tendency on the part of the landlord, not knowing what his tenant was to claim, to make larger claims than he might if he knew what his tenant was going to charge?—From what we have seen, the landlord, aided by his agent, has been as big a tra..sgressor in that way as the tenant farmer, and on that account I would say it should be put into the hands of a neutral man on the same day.

The Agricultural Holdings Act.

54,036. Would you allow, as is at present done, a landlord and tenant, at the commencement of the lease making what they call a fair, reasonable agreement, and that being held to come in place of the Act?—Those agreements are easily made on the landlord's side at the beginning of a lease, because if the tenant does not agree to it he is merely told that he can apply elsewhere.

54,037. Is that not a business-like way of doing things?—From the excessive competition for farms, I should say no.

54,038. I suppose you are acquainted with the details of compensation on the most important and best-managed estates in Scotland?—Yes.

54,039. Do you consider these fair agreements?—Yes, to the best of their ability; but when they abolish schedules I would abolish these.

54,040. You make it illegal for a landlord and tenant to come to an agreement at the beginning of the lease?—It is hard to say what would be illegal.

54,041. (*Lord Cobham.*) Do you say that the amended Agricultural Holdings Act should override all agreements made at the instance of either the tenant or the landlord?—I think so. There is an inclination for most people to contract themselves outside these Acts, and I do not think it is right.

54,042. But if there is an agreement and either party finds it suits him to repudiate the agreement and appeal to the Act it should be open to him to do so at the end of the lease?—I would rather not allow the agreement to be made so as to allow people to override it.

54,043. (*Mr. Gilmour.*) You think there should be no opportunity for schedules?—I would say that there should be no right to allow a landlord to contract himself outside of the Act of Parliament, as has been tried in several cases.

54,044. That question virtually carries out the entire question, making it illegal, really, to make an agreement?—Yes.

Freedom of sale.

54,045. In your freedom of sale of produce do you lay down that an equivalent should be brought on to the land?—Yes. No one will sell all his produce without bringing compensation in.

Assessment to rates.

54,046. Do you approve of the mode of classification for assessment in Scotland?—As far as tenant farming is concerned, I object, and consider there should be more equalisation.

Sale of cattle by live-weight.

54,047. About the weight of cattle, would you enable any person who desired to sell his cattle not by weight in those auction marts to do so, or would you make it that every animal to be sold should be weighed?—I was told by an auctioneer the other day that if one man stuck to selling by weight and the other was allowed to depart from it, he would be boycotted.

54,048. (*Mr. Clay.*) Would you have it in the same way as America, and there is no dispute there?—Yes.

54,049. (*Mr. Channing.*) Would you object to the landlord having the right during the tenancy to get an injunction from the Court against bad farming or robbing the land?—I think it would be quite right.

54,050. I think that is when men do not fulfil the agreement made at the beginning?—That is so.

The fixing of rent.

54,051. About rents, I think you said in Fifeshire rents were at one time fixed by fiars prices?—The rent of the farm I am on was, before I took it, fixed by fiars prices as to certain agricultural products.

54,052. Is it your opinion that it would be better to have rents by valuation than competition?—I do not say that, because I fail to see how you can take possession of people's rights and ask them to offer more or less for a farm than what you wish.

54,053. But suppose you could reduce to valuation this productive power of a farm and take that as the basis of a rent at the beginning of a tenancy, would that meet your views?—I do not think that could be done.

54,054. You think there is no way of stopping the extreme competition for farms?—Unless what I must term the punishment that occurs to the individual from loss of money acts as an example to others.

Mr. J. Fyshe. 10 June 1895.

54,055. Would a valuation of the productive power of a farm be approved by any large number of farmers?—I could not say.

54,056. No meetings or resolutions have taken that course?—No. I think the majority of tenant farmers would like to reserve to themselves the amount they would give for a farm.

54,057. There has been no movement in to get rent by a fixed valuation?—Not that I am aware of, unless tenants were willing to allow any competition to value their rents for the next or sitting rent.

54,058. That would be a valuation of tenants' improvements?—Yes.

54,059. When he felt he was too highly rented some landlords have allowed a competent party to value the land, and then he may have made it less; but at the end of the lease it has been left to a valuator to say whether the rent should be increased or not?—That is so.

54,060. (*Captain Thomas.*) Would you make that compulsory?—No.

54,061. You would give a right to make a valuation?—If he is to remain there it is quite possible they might appoint a valuator to say what the continued rent is to be, and he should have the benefit of his own improvements; and that would be put in the valuator's hands; and the tenant would take care that he was not rented upon his own improvements.

54,062. It would suffer payment to expire at the termination of the lease?—If a man is going to sit he should not get compensation, but he should not be rented upon his own improvements.

Farming capital.

54,063. Do you think the capital of the great majority of tenant farmers has been reduced in recent years?—Yes.

54,064. Did they borrow from banks?—I do not think they borrowed from banks, because in Scotland it is a well-known fact that banks will not trust farmers.

54,065. (*Mr. Everett.*) Was that in the old times?—That is of late.

54,066. How about stock on farms?—It is difficult to say whether there is less stock or not on farms, but a lot of the stock belongs to dealers and graziers. They would rather let their grass than be at the expense of stocking it themselves.

Fertilizers' Act.

54,067. About the Fertilisers' Act, you think that would be a satisfactory Act if properly worked?—It would be a very useful Act.

54,068. If the farmers studied the elements of the different manures they would be able to save very much?—If he studied the recommendation put upon manures he would be able to tell the price, and so save himself paying too much. On the other hand, if the seller does not sell according to his analysis, he can be punished, or the tenant can send back the stuff.

54,069. What about feeding stuffs?—Cakes and feeding stuffs have been very useful, and I am informed by the analysts that they are not enough taken advantage of.

54,070. Every man is not an analyst?—But you can ask what the analysis means.

Rates.

54,071. (*Mr. Dalton.*) What amount of rates do you pay on your farm?—25*l.* or 26*l.*

54,072. What is the extent of it?—376 acres.

54,073. Have they gone up in your town of late years?—They have gone up rather than down.

54,074. Have you given the wages of the labourers in your district?—No.

54,075. What are they?—My men are getting 19*s.* a week.

54,076. Is that a considerable rise?—Yes. That is exclusive of house rent and other perquisites, such as garden, nothing for coals or coal-driving, and no rates.

54,077. How much do you think the whole wage comes to in money value?—I should say about 22*s.*

54,078. Do you think the rise in wages is larger than the reduction in your rent?—I think there is a larger increase in the labour bill, and it is still increasing.

Digitized by Google

Mr. J. Fyshe. 10 June 1895.

54,079. Do you think it would be desirable to reduce the labour bill still more?—I do not think it is possible.

54,080. Do you think competition for farms will bring its own remedy for high rents in time?—It is generally considered so.

Changes of tenancy.

54,081. Have there been many changes of tenancies in your district of late years?—The late tenants have stayed on pretty well.

54,082. How many changes have there been?—I think in seven or eight farms during the last ten years there were six farms vacated.

54,082*a*. On account of the tenants losing their capital?—Yes, in one case. In the other cases the farms were too dear, and the farmers were losing money.

54,083. (*Mr. Everett.*) You said one farmer in particular had lost his capital. What kind of farm was it?—The same as mine, arable and feeding.

Store cattle.

54,084. Is there a scarcity of store cattle in your district?—There is a scarcity of cattle.

54,085. Would you say store cattle would pay breeders?—Yes.

54,086. You think store cattle are being sold at fabulous prices as compared to fat cattle?—Yes.

54,087. Are these fabulous prices likely to be maintained?—They are likely to lead to farmers breeding more at home.

54,088. That, of course, would reduce the present prices?—Certainly.

Importation of foreign cattle.

54,089. Would you buy Canadian store cattle in preference to home-bred cattle?—Of late I think I would.

54,090. If a breeder did so you would be hit very hard?—I regret to say there is not enough attention paid to breeding.

54,091. If all the breeders bought Canadian, would not that tend to lower the quality of English and Scotch beef?—I do not think so. I think they are better in quality, in many cases, than imported cattle.

54,092. How long do you keep Canadian cattle before sending them to market?—About six months. There is a better class of cattle there than in many places in Scotland. In many places where they breed calves in Scotland they are not good enough; they are mongrels in many cases.

54,093. (*Mr. Everett.*) Did I understand you, in regard to railway rates, to say that the railway companies carried the Canadian cattle from the Scotch ports to England cheaper than they would carry your local cattle?—Yes.

54,094. That certainly is a remarkable instance of preferential rates. There is no difference in the packing of foreign cattle?—No. But there is a contract with the shippers.

54,095. You would like those Canadian cattle to come in free?—Yes.

54,096. You are a buyer of store cattle and a grazier and the barley you would like to be protected because you grow barley and sell barley?—My proposition is that the country should get the benefit of that trade, seeing that it is a protected and fixed trade already. I do not see what right they have for making beer more than other things.

54,097. You think protection affects that trade differently from others?—Yes.

Tax on barley.

54,098. Was not it the case before the repeal of the malt tax that we sold wheat for more than barley?—Yes.

54,099. Has not wheat gone down more than barley?—Yes.

Mr. J. Fyshe. 10 June 1895.

54,100. Does not that look as if something had forced all things down?—You cannot help yourself in wheat, on account of the extraordinary importation.

54,101. You do not attribute it so much to the change of importation as to the change of the duty as to barley?—I do not.

54,102. We have the natural advantage for barley?—Yes.

Fall in prices.

54,103. Were farmers doing pretty well, generally, in Scotland till 15 or 20 years ago, notwithstanding there was great competition for farms?—Yes. The prices from the various products were so much higher that they could afford to pay more.

54,104. The reduction has been more in the price of produce than land?—Yes.

54,105. Do you know anything about the currency question?—I am not up in it.

Compensation for cumulative fertility.

54,106. (*Lord Cobham.*) I understand you to say that you wish the schedules of the present Act to be abolished, and compensation for accumulated fertility to be paid. Do you mean that the tenants' outlay in feeding stuffs and manures should be considered under the common head of accumulated fertility?—Yes.

The fixing of rent.

54,107. (*Mr. Clay.*) Regarding the sitting tenant, I do not think you made it very clear. You say, I think, that the sitting tenant should not be rented upon his improvements?—I said so.

54,108. You would not say that the farm should be valued as it stands with the improvements, and get a sum on account of the money value of the improvements to be shared, then deduct from the rent put upon the farm the interest of the money for those improvements, instead of asking the landlord to pay them?—I have already said that the state of the farm should be written out by the official valuator at the beginning of the lease, and lodged in its proper office, and that any man valuing a farm at the expiry of the lease would have this report in his hands, and see what state the farm was in then and now. If the farm was better the rent should not be raised on that account.

54,109. (*Lord Cobham.*) You would leave the official valuator to say what the rent should be, having regard to the increased fertility of the farm affected by the tenant?—If the times are the same as they were when the farm was taken, and the farm the same by the report, it is an easy matter to say what the rent is to be, if it is his wish and the landlord's wish that he continue the occupancy. If it is his wish to continue the occupancy, then the report is there, and the value or improved value can be seen.

54,110. (*Sir Nigel Kingscote.*) Then the rent is not to be fixed by the landlord and tenant?—It is only if they cannot agree between themselves that the matter will be left to this valuator, if they wish.

54,111. (*Mr. Clay.*) It would be left by the landlord to the tenant to get the valuation of the farm, less the interest on the improvements?—I mean that the man who is to sit there as tenant should not be rented upon his improvements unless he is to get paid for these improvements at the same time.

54,112. The landlord would be able to take the amount of the improvements until the 19th year?—The rent in that case would be according to the condition of the farm, and the tenant would draw interest for his improvements.

Witness then withdrew.

Mr. J. Ballingall.

Mr. JOHN BALLINGALL called in and examined.

Mr. J. Ballingall.

54,113. (*Lord Cobham.*) You are a farmer at Dunbog?—I am. I have been all my life engaged in agriculture.

Particulars of witness' farm.

54,114. What kind of land do you hold?—I hold about 1,200 acres of arable land, besides hill land and occasional grazings.

54,115. Where is this?—In the eastern division of Fife.

54,116. Your present rent is how much?—It is 1,500*l.* at present.

54,117. How does that compare with 15 years ago?—15 years ago my rent on the books was 2,400*l.*, subject, I believe, to some occasional deductions, by the generosity of the landlord.

54,118. Did your rent fall to that extent on a renewal of your lease?—By an arrangement.

54,119. (*Mr. Everett.*) Is that for the same land?—A little was taken off.

54,120. (*Lord Cobham.*) Have you acted as valuator under the Agricultural Holdings Act on land, farm stock, and crops?—Yes.

54,121. Is there much depression in your district?—Yes.

Digitized by Google

Mr. J. Ballingall.
10 June 1895.
Rents.

54,122. Have rents generally fallen in a similar proportion to your rent?—Yes.

54,123. That is to say, about 40 per cent.?—I think so.

54,124 What is the general value of land in your district?—I should say 20*s.* to 28*s.*

4,125. Has rent fallen on all classes of land?—Yes, but not so much as a whole as for land with some disadvantages.

54,126. And you say that rents have on the average fallen about 40 per cent.?—I think so, and some have fallen more. Some years ago I made up a calculation, and that would very nearly be what it came to.

54,127. That shows rather a special fall of rents as compared with other parts of Scotland we have had evidence from?—The two largest and best farms adjoining mine are 40 per cent.

54,128. Is your farm up to the average of the district?—Thereabout.

Effect of the depression.

53,129. Have the farmers suffered themselves?—Yes, very severely.

54,130. Mainly, I suppose, from the fall in prices?—Yes. At first it was supposed to be bad seasons, and everyone was hopeful, but it became chronic and worse, and I think in that change the farmers' capital was passing out of their hands very quickly.

54,131. Has the land deteriorated in condition?—In a marked way. Anyone who knows the work would observe it in passing along the roads.

54,132. With all this heavy reduction of rent are the farmers now holding their own?—I will not say so much.

54,133. Are there still applications for reduction of rent?—Well, the rent must fall ultimately to what will be taken out of it.

54,134. Has much land gone out of cultivation?—I do not think so.

54,135. Is much going into grass?—Strong lands are going into good grass, but not in hill farms.

Labourers.

54,136. Are the labourers leaving the district to any extent?—To a considerable extent, but there is always abundance of male labourers.

54,137. Have you sufficient cottages?—We have.

Wages.

54,138. What about wages?—Their wages are rising, and, besides, the wage does not represent now as much labour as formerly.

54,139. Is that because hours are less?—Hours are less, and diligence is less. They take it easier nowadays than they used to do.

The Agricultural Holdings Act.

54,140. Have you something to say about the Agricultural Holdings Act? I think you follow the amendments placed before us by the Scottish Chamber of Agriculture?—Yes. I think this must have come before you many times already.

Sale by live-weight.

54,141-2. Is there a strong opinion in your district as to the sale of animals by live weight?—There is a growing opinion that it would be well to sell them by the live weight.

54,143. Has there been any expression of opinion in your district?—I was at a meeting of influential farmers in Cupar, and resolutions were passed unanimously that they thought it desirable to have cattle sold by live weight at a rate per cwt.

Duty on potatoes in America.

54,144. Have you suffered from the importation duty put on potatoes by the United States?—There has been a good deal of complaint in recent seasons. The Americans have not been regular. They can take a great deal of our potatoes. The reduced duty is 23*s.* 4*d.* per ton, and it is virtually prohibitory. Farmers generally considered it unfair.

54,145. What was the duty formerly?—It was nearly 40*s.*

54,146. Is there a considerable importation in any one year?—It seems to be somewhat fitful, but some years they could take a great deal from us. We are prevented in almost any year by that duty.

State loans.

54,147. You wish to see the granting of State loans extended. Do you mean to landlords and tenants?—I do not know what security tenants could give, but I think it is desirable landlords should have loans where they cannot face desirable improvements.

54,148. If the tenants could give good security would you allow them to borrow public money?—I would like the present system of lending public money extended, but at a lower rate of interest, and extending redemption over a longer number of years.

Mr. J. Ballingall.
10 June 1895.

54,149. Do you consider that in your part of the country landlords are a good deal hampered in the provision of improvements on their property for want of money?—I think so.

54,150. Has farming deteriorated in consequence?—In Fife, landlords have maintained their farms up to the mark. When land began to fall out of cultivation they provided fencing; water for fields; improved sanitary accommodation for cottages; and in all these things, I think, have done fair. But in regard to their position, their incomes must be terribly reduced. They have not only the reduced rents, but they have more rates to meet, and so their free income is reduced.

Agricultural Holdings Act.

54,151. Have you had much employment as valuator under the Agricultural Holdings Act?—A few cases. I believe people are deterred from arbitrations very much on account of the expense.

54,152-4. To whom?—To both parties, but particularly to tenants and those whose claims would be only small. I should like to say something about cumulative fertility and the satisfaction the Act has given. The administration of the Act has not given the satisfaction that we expected from it. It has failed particularly in the way it has been carried out, which offers a premium to moderate or inferior farming, while the liberal farmer who supplies large quantities of manure for a long series of years does not perhaps get justice. I think it simply acts as a deterrent against high farming in the way in which it has been administered. In point of fact the man who only gives enough manure to keep the land from poverty gets compensation, and the other man gets his compensation in the same proportion. It seems grossly unfair, because it is plain on the road-side that there is a fertility in some land that will stand for half or more of a long lease, and they get no more, according to the proportion they spend, than another man whose land is poor and gets but little.

Compensation for cumulative fertility.

54,155. How would you provide for the compensation being paid at the end of the lease? In a lump sum?—I think that is the only way.

54,156. How would you calculate it?—I think cumulative fertility should be a calculation from the outlays, at a rate per ton per cwt.—at a higher rate for those who are giving the land the largest quantities of purchased manure.

54,157. The tenant's whole outlay on his land would be brought into consideration?—I understand cumulative fertility may be calculated at a rate, and extending over a long period of time.

54,158. But take the case of an unskilful farmer who spent a large amount of money upon the farm and feeding stuffs without correspondingly adding to its fertility of his farm, you would leave it to the arbiter to estimate the result?—Entirely to the arbiter's opinion. In point of fact the arbiters have not distinguished between the two systems. The liberal farmer has not come off equal or as well as the man who has farmed indifferently.

54,159. Owing to the arbiters going too much upon actual outlay?—Yes; absolutely upon a scale.

54,160. Have the arbiters in Fife agreed as to a scale?—There has been no general agreement. Apparently their awards are irregular.

54,161. Is compensation to be paid in the case of a farmer who wants to continue his tenancy?—In the present system he makes a calculation on the basis that there is no claim. He should get advantage in the rent. The fertility he has in the land should be calculated, and he should get his farm at a smaller rent than an outsider would.

The fixing of rent.

54,162. Would you allow a valuator to fix the rent?—I do not think any public body can interfere between the landlord and his tenant. As a rule, the tenant is treated in his new lease on more favourable terms. That is the system, and I do not see how we can alter it. It appears to be justice that he should say, "This " is my claim," and that the other should say, "This " is mine." He gets a few hundred pounds, but the tenant is no sooner in than he begins spending it, and at the end of the lease he has another claim for an amount.

Digitized by Google

Mr. J. Ballingall. 10 June 1895.

54,163. If the tenant has to get his compensation by a reduction of his new rent, must it not be fixed from outside?—We have already found that. There has been shown much difficulty in landlords and tenants fixing the rent.

Tenants' improvements.

54,164. Any other points in regard to the Holdings Act?—I think the Act should include the improvements that add to the letting value of the farm, so far as they have been made by the tenant, and should be compensated for.

54,165. And that the tenant should have power to carry out improvements?—Except buildings, and so on.

54,166. But the tenant is to be allowed, on the report of an official referee to make even these improvements?—Yes.

Results of farming.

54,167. (*Captain Thomas.*) When did your farm cease to pay?—I have not quite said that, but if I had, I should not have far exceeded the truth. It has not been paying a return upon capital.

54,168. Is your farm paying you now, then?—It is not. This last year there must be a loss.

54,169. Are you spending capital?—I must be spending capital if I do not take the rent out of the land.

Effect of depression.

54,170. Do you think a further reduction would meet the case?—I think we could reduce it, but I think we must go on to pay as much as we can. The landlord's case is very hard indeed. Our business is, however, uncertain, and we may have a change next year.

54,171. Is there much demand for these farms?—Evidently, for some reason or another, there is a greater desire to get occupation of land.

54,172. What is the reason?—I do not know any reason, except that they have a good deal of hope about the recommendations of this Commission resulting in better compensation for improvements.

54,173. If they had better compensation would they improve?—I have no doubt that if they could calculate upon full compensation the cultivation of land would be kept up.

54,174. Do not you think that the occupying class are suffering as much?—I think the tenant-farmers suffered more at first, but the landlords more now.

54,175. The occupying class have no loss, and can compensate themselves?—They are not in the same circumstances, but I do not see that they will suffer any worse.

54,176. You said you depended a good deal upon the amendments. But the landlord is quite clear. He has full value for his outlays?—The landlord can never get away from the property.

54,177. (*Mr. Dalton.*) Fallen rents are, practically, in your district, the strong proof of the agricultural depression?—Yes, so far as they affect the landlords.

Cost of labour.

54,178. Can you say whether on your farm the increase in the labour bill has been as much as the fall in your rent?—I think the increase in the labour bill is not greater—rather less, I should think.

54,179. What was the fall in your rent?—900*l.*

54,180-1. And your labour bill is how much?—The increase in my labour bill is about 250*l.* within 15 years.

54,182. At the present time the tenants are barely holding their own under these conditions?—I do not think they are holding their own under these conditions.

Evasion of claims for compensation.

54,183. (*Mr. Channing.*) In your brief you say that, "in cases where reductions of rent have been granted "during the tenancy of leases the landlord frequently "stipulates that the tenant shall not claim compensa- "tion under the Act." Do I understand that to mean that you know of cases where the landlord has deducted from the compensation due to the tenant for improvements, to cover part of the reduction of rent he has made during the currency of the lease?—I mean to say that has been a distinct stipulation on the part of the landlord—when a remission of rent was made.

54,184. That he is to forego all claim under the Agricultural Holdings Act?—Yes. I know a good many cases where that stipulation has been made before granting the remission of rent.

54,185. You are not referring to cases which occurred on an alternative lease where the landlord lowers the rent on condition of certain improvements being carried out?—No. I believe that the tenant was finding difficulty in paying his rent, but that at the end of his lease he must forego all right to make a claim under the Agricultural Holdings Act.

54,186. I understand you to say that you want the tenant to have freedom to make all improvements, except buildings and certain other permanent improvements, and to get compensation for that?—Yes.

Restrictions.

54,187. You would insist strongly upon freedom of cultivation?—I do not think there has been much cause of complaint from restrictions as to cropping. Occasionally, as to sale of produce, tenant-farmers may feel it a disadvantage, but in almost every case when he applies to his landlord he gets leave to sell stuff which he is bound to use at home on condition of his returning an equivalent as manure to the land.

Compensation to sitting tenants.

54,188. About compensation for tenants on the renewal of a tenancy, you would wish to place the tenant who wishes to renew his lease on the same footing as the out-going tenant, I understand?—It is simply a matter of friendly business arrangement between the landlord and tenant. If he has been an improving tenant, and has added to the value, the landlord should give him the rent cheaper on that account.

54,189. I understand you would make that statutory?—I do not wish to interfere with the law at all. I wish the law to remain as it is at present.

Railway rates.

54,190. About railway rates, has there been any effort in your neighbourhood to meet this difficulty about the preferential rates by combining to collect and forward agricultural produce in truckloads?—No. There has been no attempt in that way. I do not think it could be carried out successfully.

54,191. You know about these preference rates, do you?—We understand that Canadian cattle were being brought about the country from place to place; the railway companies gave preferential rates to foreign cattle. I believe that truck loads of cattle were taken from Glasgow and put into waggons, and after being exposed in the market, and taken to England, were carried at a cheaper rate than Scotch cattle from the same place and for the same destination.

54,192. (*Lord Cobham.*) Are foreign cattle carried at a lower rate than Irish cattle?—At one time they were.

54,193. Are you sure?—I am sure that Irish and foreign cattle went at different rates.

Importation of foreign cattle.

54,194. (*Mr. Gilmour.*) Would you say it is the leading opinion that Canadian cattle should be admitted?—I think the impression is that they should be allowed to come in. I do not think the decision is fair at all.

54,195. What about the disease?—I do not think they are satisfied that contageous disease has ever come from Canada. We do not think the cases we had were perfectly certain.

Letting value and claims for compensation.

54,196. In regard to this increase of the letting value of the farm, if a rent falls considerably, how do you as valuator read that at the expiry?—I would neither see whether it is paying or not. The landlord and tenant at that time have no valuation about improvements. Compensation is not claimed when the tenancy is continued. It is a matter that does not require any arbitration—as to the rise or fall of rent.

54,197. If the compensation is to be given according to increase in the letting value, and the rent falls, where is that increase in letting value?—The price of land may permanently fall. It must be the condition of the land as it augurs, so far as the present value goes, that is considered.

54,198. Can you discriminate near enough to tell the increase?—We must go and see the manure and feeding cake bill as to what has been put into the land.

54,199. You would base your estimate of the value upon the figures the man may produce?—That is a principal element.

Official valuators.

54,200. If you had these official valuators, do you think four or five would do the work for the whole of Scotland?—I should think a good many more would be required.

54,201. Do you say there should be a list of men named in every county by the county council and approved by the Board of Agriculture, and that parties must agree upon any man in a dispute?—I think if it

Digitized by Google

Mr J. Ballingall. 10 June 1895.

is to be an official appointment it should be official all through, and that parties should not be allowed to nominate him, because that allows in the end of the wedge of friendship or partisanship.

54,202. You think he should be chosen and paid a salary, and not follow out any other business?—I cannot say about following out any other business, but I think he should be a man in such an independent position that he has no chance of being influenced by either party.

54,202*a*. Would not the appointment of that man or men as official valuators lead to a unanimity of decisions and to a man taking more trouble almost than at present to see that decisions were given without variation?—I think it would tend to greater uniformity of valuation.

54,203. And that no man could value these things better than a man engaged in agriculture himself?—I think he should be a man of agricultural training, and of independence, and capable, above all things, of independence of position and character.

54,204. Would he give an opinion on questions of law?—I think he might make mistakes in law.

Agreements between landlords and tenants.

54,205. As regards landlords and tenants to make agreements that would come in place of the Agricultural Holdings Act, what do you think?—I do not think at the beginning an agreement could be come to that would cover every point. Supposing the time is agreed for the tenant, there are circumstances that might modify it. The land might be thoroughly well cleaned and ploughed, or might have been roughly treated. I do not think an agreement made at the beginning of a lease can be made to cover equitably either case.

54,206. Is it the case in your experience that much has been saved to landlord and tenant by agreeing to a certain scale?—I have no objection to it, but I do not think it would be thoroughly equal. Certainly it is a great saving of expense.

54,207. You would not make it illegal to have such an agreement between landlord and tenant?—I think it would save expense.

Compensation for improvements.

54,208. (*Mr. Clay.*) A farm might at valuation be worth 100*l*. more of rent, through natural consequences, if it had been well managed; but if it had not been well managed, and no improvement came to it, it might have fallen 200*l*.?—Certainly. There might have been a rise and, along with it, an additional claim for outlays. It may have gone down, and the same claim might have been made. It should have been taken at the current value of land at the time.

54,209. A man who has been farming liberally with cakes and manures is entitled to the compensation that is left in the land?—Certainly; it does not matter whether land on the whole has been rising or falling.

Official valuators.

54,210. Regarding the appointment of this official referee, if they were men of experience and general knowledge would they not be largely used by landlords and tenants, and even be called in to settle rent sometimes?—I believe it fully.

54,211. Would it not have a great moral effect if the landlord and tenant simply said, "Here we have a man "recommended as an official referee?" Would it not be a strong moral power to bring tenants and landlords together in fixing rent?—Yes.

Compensation to sitting tenants.

54,212. With regard to sitting tenants, we are a little at cross purposes; but does not it strike you that if a tenant has been farming his land very highly with improved cakes and manures and other things, the valuator would value the land as it stood?—Certainly. What is this land worth as it stands for a given time, he would consider.

54,213. If a man's rent was, say, 600*l*., and you found 50*l*. compensation was due to him, you might, I suppose, not take the money from the landlord, but the interest, and make it less value through the lease?—The official valuator would have instructions to that effect, that the value he had put to it should be deducted from the other value.

54,214. Is the tenant not entitled to have that deducted off the valuation?—He is entitled to have it at the 50*l*. less.

54,215. You would bring in a valuator; do you think anyone would take the farm by the increased fertility?—I understand you to ask this question: a friendly reference is made to the official valuator, and he goes over the land and values it in its present high state, and then he is told the outlays that have been made upon this; the valuator says the farm is 50*l*. better for these, therefore he takes that off his valuation and says, "That is the valuation I think you should pay." It would be the interest of the compensation the landlord would have had to pay if the tenant left.

54,216. You know that if a man sees a good security he generally pays a little for it?—Certainly.

54,217. Do you not think that the value of this increased capital would be a security, and that he would be inclined to pay a little more rent?—It would be a great encouragement to tenant farmers to have that security.

54,218. He might be inclined to pay a little more to get under a good landlord?—Certainly. I think a landlord is a fool to part with a tenant who keeps the land in good condition. Good lands I have known gone down almost to wreck from the system of taking the highest rent. In former times it was not unusual for unfair means to be used when an estate was to let, to induce just one offer and then another to get the highest possible. There was more security then, and on those estates, which I could mention, the land has gone down.

54,219. We have had evidence from the Duke of Richmond and Mr. Drew, his agent. They say they have asked no more for the land than got a tenant of real worth and paid expenses, and they have had no difficulties?—I believe in time that no more will be got for land than can be got out of it. By rack-renting you take away a man's hope. The first thing that suffers is the land, and it goes on until the land is very much reduced in value.

54,220. You think there should be good security and farming?—I think the land will never fail to pay rent if we have good security and farming.

54,221. (*Mr. Whitehead.*) Have you had many cases under the Act?—I have had six or eight.

54,222. That would be in the county of Fife?—Yes, and elsewhere.

Demand for farms.

54,223. You say there is still a demand for farms in spite of the depression?—There is now more demand for land in the county of Fife than there has been for some time past.

54,224. Of what class are those who seek farms?—There is always a few of a class whom the landlord would select.

54,225. Are they local men?—They are mostly local and practical men.

54,226. Are there men from a distance—from Ireland and England—coming in?—Very few. There is an inroad from the south of Scotland. A good few have come from there, and a few from further away.

54,227. Have they taken them mostly on lease?—Mostly.

Restrictions in leases.

54,228. What restrictions as to cropping do you mean?—I mean in regard to the practice. In the first place, they are restricted as to the amount of white crop. Frequently they are prevented from taking white crops in succession, and must have a certain amount in grass, and that certain products—straw and turnips—shall not be sold off the farm. These are the usual restrictions.

54,229. What alteration do you propose?—I think the restrictions should be as few as possible, but I do not say we should expect landlords to abandon restrictions.

54,230. Is there any sale for hay and straw in Fifeshire?—Yes; but tenant farmers generally purchase straw instead of selling it.

54,231. Are seeds kept down for more than one year?—It is the practice, and more the practice now than formerly. The practice has been extended in late years. There is a desire in particular upon ordinary lands—I do not say the most fertile—to allow lying as long in rotation as will pay.

The witness then withdrew.

Mr. J. Mitchell. 10 June 1895.

Mr. JOHN MITCHELL called in and examined.

54,232. (*Sir Nigel Kingscote.*) Where is your farm?—In North Fifeshire.

54,233. You are a tenant farmer?—Yes.

54,234. Farming how many acres?—460 acres.

54,235. What kind of land?—Most of it is arable.

54,236. Any hill grazing?—About 100 acres.

The Agricultural Holdings Act.

54,237. What is your opinion of the Agricultural Holdings Act?—I concur almost entirely with what has been reported in the papers by Mr. Hope, one of the Assistant Commissioners. I have read the report.

54,238. And you agree with it?—I agree with it almost altogether, but I held the opinion before I saw the report.

54,239. One condition you strongly recommend is the scheduling of the condition of holdings on new tenancies by official valuers?—Yes.

54,240. How is that to be recorded?—It is to be kept in the court of the county town.

54,241-2. And at any time would be available?—Yes.

Tenure.

54,243. What do you think about leases?—I approve of 19 years, with perhaps two breaks during the currency at the option of the landlord and tenant.

State loans.

54,244. You advocate also loans from the State for improvements at a lower rate of interest?—Yes. Previously 6½ per cent. was charged for passing a loan for drainage. That was charged upon the occupying tenant. That 6½ was the interest of capital paid in 25 years. The occupying tenant paying 6½ per cent. paid the greater part of the outlay, which I think was very unfair, seeing that the drains last more than 40 or 50 years.

54,245. It was only through the landlord. The landlord borrowed the money?—Yes; but he saddled the tenant with it. He could not help himself.

54,246. Have you found that the drainage has lasted more than 25 years?—Yes; more especially where there has been a declivity. In sand land it has got choked up with oxide of iron, and perhaps does not last more than 19 years. It ought to be reduced in 25 years or so. But generally in Scotland those tile drains are running still after being 40 or 50 years in.

54,247. Do you advocate the lending of money for the tenant as well as the landlord?—Yes. I think the landlord should be security for the money.

Sale by live-weight.

54,248. You advocate the sale of cattle by live weight?—Yes. Seeing that everything else is sold by weight, why not cattle by the hundredweight?

54,249. Would you like to see it compulsory by weight?—It is difficult to make it compulsory, but why not make it compulsory that the seller should declare the weight to the purchaser?

54,250. Would you have the machine inspected?—I would have it inspected to see that it was correct. I do not care what kind of machine it is so as it is correct.

54,251. What about those dial machines?—Those dial machines, being regulated by water, are very uncertain, especially in winter.

Sale of foreign meat.

54,252. I think you would like to see that no one would sell imported meat without a license?—I think that is the only way. You cannot mark foreign meat, and there is no other way of preventing it than by making them take out a license.

54,253. (*Lord Cobham.*) How would you get a conviction?—I think the only way to prevent the foreign being sold as home would be to prevent foreign being sold along with home meat in the same markets. Foreign carcases coming in should be sold by themselves.

54,254. Do you mean that they should be impounded and that someone should see that they are sold as foreign meat?—Yes.

54,255. (*Sir Nigel Kingscote.*) Do you mean that it must be sold at the ports where it is landed as foreign meat?—Yes.

54,256. Afterwards when it came to be sold you would make no difference?—I would make the salesman have a license displayed in a conspicuous place in his premises. In every place where it was sold he should have a license, and display it so that every person coming in might see that it was foreign meat.

54,257. If it is sold as foreign meat at the port where it is landed, how are you going to trace that meat when it comes into hands to be retailed?—There is great difficulty there; but if it was sold at any port where it was landed it would be easily detected if any retailer of home meat bought that foreign meat, if he were not licensed to sell foreign meat.

54,258. Wherever it is sold by retail you want it to be sold by a man with a license?—Yes.

54,259. (*Lord Cobham.*) I do not see how you are to prevent it being sold as home meat. Supposing an ordinary buyer comes in and buys it as foreign meat, what is to prevent him selling it as home meat?—If a penalty was put upon him he would be found out the same as in other cases.

54,260. (*Sir Nigel Kingscote.*) Can you distinguish between home and foreign meat?—No; I do not think it——

54,261. How, then, would you get a conviction?—By him having been seen to buy it at the place where it was sold.

Tuberculosis.

54,262. As to tuberculosis, you want compensation for animals killed on account of it?—I think compensation should be paid to the owner of it, provided the animal looked healthy when it was bought.

54,263. Paid by whom?—By the authority in the town where it was confiscated.

Sale of foreign meat.

54,264. You suggest that imported meat should be inspected at the port of landing by experts for the detection of tubercle. How would that be done?—I think it would be the same as for pleuro-pneomonia—under the same regulation. The great objection I have to scheduling tuberculosis is, that it has never been proved that it will, perhaps, come from a severe cold, the same as a man who has caught a severe cold and takes consumption.

54,265. At all events, for those that are bought as healthy, and have it, the owners should be compensated when they are killed?—Yes.

54,266. As to the inspection of foreign meat on landing?—Diseased carcases are confiscated in the slaughter-houses of certain towns, and yet you allow foreign meat to come in without inspection, which would be the surest means of detecting it. It says in the same report that the butchers contaminate the carcases by their knives in dressing. Foreign meat comes in, and these carcases may have been, before they were dressed, tuberculous, and so they should be inspected.

54,267. What I understand you to advocate is that all dead meat landed at the port should be inspected by experts?—Yes.

Milk from abroad.

54,268. What do you say about milk? Would you let foreign milk come in?—No, seeing that in the report of the committee it is said that milk is the most ready means of spreading tuberculosis, unless the authorities, where that milk came from, were sure the animal was free from disease.

54,269. If they were able to prove that the sanitary restrictions imposed upon home-produced milk were imposed equally upon foreign milk you would not allow it to come into this country?—No.

54,270. As to local taxation, has it increased or not?—It has increased to a considerable extent.

Rates.

54,271. Can you tell us what your rates were 15 years ago?—In 1856 the average burgh and county rate was 1*s.* 8½*d.* In 1893 it was 2*s.* 0¾*d.*—that was 4½*d.* per £ on the rental.

54,272. (*Mr. Dalton.*) Your rates have gone up. Which rate has increased?—The parochial rate in 1881 was 1*s.* 1½*d.*, and in 1893, 1*s.* 1½*d.* The burgh rate is inclined to fall. The county rate is increasing very much.

54,273. (*Sir Nigel Kingscote.*) How much has it increased?—The county rate was 7*d.* in 1881. It is 11*d.* this year.

54,274. Do you, as a tenant farmer, pay all that, or does it fall upon your landlord?—I pay about the half.

Digitized by Google

Mr. J. Mitchell.
10 June 1895.

54,275. (*Mr. Dalton.*) You do not pay county rate, do you?—No.

54,276. (*Sir Nigel Kingscote.*) Putting these three rates together, the increase is 4½*d.*?—Yes.

54,277. You are apprehensive there will be an increase now?—It is very likely.

Competition for farms.

54,278. Are there many farms vacant in your part of the world?—Several this year are being let just now.

54,279. Do they find tenants for them?—There is a great demand for farms at present. For one for which I am manager, I think there have been 20 applications.

54,280. How do you account for it?—There are more farmers than farms.

54,281. That does not look as if agricultural depression was felt in your part of the world?—It does not look like it. The agricultural depression was brought about by bad seasons and prices, but we have had several fine seasons.

54,282. Have rents fallen in your neighbourhood?—Between 30 and 40 per cent.

54,283. Are they going down or rising now?—They are rising on account of the competition for farms, but not on account of increased prices.

54,284. Are most of those competitors old or young farmers—people trained to farming?—Young men trained to farming who wish to get into farms, and also old farmers.

54,285. Have they sufficient capital?—Generally, but a few have not sufficient capital, and yet offer for farms.

54,286. Will they give larger rents than the others?—Well, sometimes they do.

54,287. But I suppose landlords will not take them if they know they have not sufficient capital?—They sometimes do.

54,288. (*Mr. Whitehead.*) What is the size of the farms in your district?—On one side a holding in our district is about 200 acres. We have them from 100 to 500 acres.

54,289. Who have done better, the larger or the smaller owners?—It is hard to say.

54,290. Is there any difference?—I do not say.

54,291. What courses are cultivated?—Generally the farms have been managed upon a seven years shift—two years' grass, one year's turnips, one potatoes, and the other for grain crops.

Sale by live-weight.

54,292. (*Mr. Clay.*) I see you advocate cattle being sold by live weight. Would that be an advantage to the farmer?—I think so. There have been only 25 per cent. over the live weight, while from 75 to 80 per cent. have been below it.

54,293. Just now he is a good deal in the dark. The butcher is at the weighing trade every day in the week, and the farmers are only selling a few times a year?—Yes and they are so far at the mercy of the butcher.

54,294. Do you know any other way of getting out of it than making it compulsory?—No. You have the sale yards already, and I think it should be compulsory upon the seller to announce the weight before he takes a bid.

54,295. Just as in the corn market a sworn man is, so you would have a weigher in each market?—Yes.

54,296. In regard to the home and foreign cattle, you would require separate markets for them?—Yes.

54,297. You consider it very unfair to the home consumer that he is paying for home and getting foreign meat?—Yes.

54,298. You think every butcher selling foreign meat should take out a license?—I think that would be a check.

Tenure.

54,299. (*Mr. Gilmour.*) You favour a 19 years' lease?—I hold that a 19 years' lease is the best for landlord and tenant, so that the tenant may have full value for his improvements and so that the landlord may have full value for his land.

54,300. Would you have any break?—Yes. Something may take place in family matters, and so on, to induce him to break.

Mr. J. Mitchell.
10 June 1895.

54,301. Have you not generally found that the break must start a new arrangement between landlord and tenant, either on one side or the other?—Immediately after or during the depression, leases were begun with these breaks. A good many people took advantage of them and left at the end of the five years after exhausting a good farm.

54,302. How would you prevent a man now coming into a farm and doing the same thing?—I think taking a note of what was in the farm when he entered and when he left would meet that.

54,303. Would this official valuer be the sole judge of the value of the farm? Would his decision be subject to appeal to other valuators?—No. If he was a man acquainted with his work I think his opinion would be sufficient.

54,304. Do you think there would be any difference between the opinion of one man who had valued the farm at the beginning, and since died, and another who valued it before the end of the lease?—I think it as practical a man going over the ground as the former one could come very nearly to an opinion as to the difference.

54,304*a*. Practically, your suggestions agree with the suggestions of the Chamber of Agriculture?—Yes.

Claims and counter-claims.

54,305. Have you thought out thoroughly the question of claim and counter-claim—as to whether these should be given on the same day?—I think as nearly as possible they should, so that the claim should be made public and opened on a certain day.

54,306. Do not you think that would lead to high counterclaims being made, owing to the want of knowledge of the claims the tenant was making?—I think it would be perfectly fair that both should do it unknown to the other—not knowing what the other's claim was.

54,307. That would mean that both claims should come in about the time of the expiry of the tenancy?—Both claims should be lodged with the county clerk, say, and lie there for a time.

54,308. It could be done with probably less expense, do not you think, when he was on the farm?—He would require to consider everything before he put in his claim.

Contracting out of the Act.

54,309. Would you make an agreement between landlord and tenant contracting out of the Act to be illegal?—No. I think that if landlord and tenant did make an agreement between themselves it would save a good deal of trouble then.

54,310. You would not have that applied too strictly when it came to be acted upon?—No.

54,311. (*Mr. Clay.*) If the agreement was not fair and according to the spirit of the Act?—It ought then to be broken.

54,312. (*Mr. Gilmour.*) If two men consider at the beginning of a bargain, would you have that original contract interfered with by any official interference?—I think altogether it must conform to the Agricultural Holdings Act.

54,313. Supposing that by the end of 19 years an idea changes and this is brought forward as not a fair and reasonable arrangement, is that to be overridden by an official arbiter brought in, who said the tenant could get a little more or less?—If it was conformable to the spirit of the Act.

54,314. You are in favour of it being a fair and reasonable arrangement for estates, to lay down proportions for dealing with these different compensations?—Yes.

54,315. Among the Fife farmers, what do you think is the chief help that could be given to them at the present time under any legislation?—I cannot say altogether in regard to that.

54,316. Do the majority of them, for instance, think that the greatest help they can get from the labours of this Commission is going to be an amendment of the Agricultural Holdings Act?—I do not think it is going to help us very far except as I have said before, by getting money at a smaller rate of interest for agricultural improvements.

Laying land down to grass.

54,317. What about laying down land in grass?—As to laying down land for grass, I think that is the best way of improving the land for three or four years. If a tenant has done that he should be compensated for the land lying in grass.

Digitized by Google

Mr. J. Mitchell. 10 June 1895.

The schedules.

54,318. Have you been asked as to the question of the schedules? We have had a witness saying that he would have the schedules abolished altogether, and let the tenant do anything during his tenancy but let it?—I am not of that opinion. I think the landlord should be consulted as in the case of buildings, &c.

54,319. Do you consider that it ought to be put out of Part I. into Part III.—the laying down of permanent pasture?—What I have said was regarding land lying perhaps three or four years in grass; but in the case of land lying permanently in meadow, land where the crops are not of the same value as if grown upon harder land, then I think the landlord is entitled to be consulted.

Scheduling the condition of farms.

54,320. (*Mr. Lambert.*) You wish to have the schedules of the condition of holdings on new tenancies made by official valuers?—That is the condition of the farm at entry, by an official valuer.

54,321. Do you want to make that compulsory? Because, supposing a landlord and tenant want to have that condition recorded by anybody else, would you admit that?—No. It would not be the same value. Where a landlord and tenant agree to compensation perhaps there would be no difference.

54,322. The record of condition would be of value in all cases?—If the landlord and tenant made a bargain conforming to the Agricultural Holdings Act then it would not be necessary to have a value. If the tenant had to take his decision as final then it would not be necessary to have an official valuation.

54,323. Do you think it would be desirable to get rid of this official record of the valuation of the farm?—If the landlord and tenant made an agreement they would do so.

Milk from abroad.

54,324. (*Mr. Dalton.*) I think you are proposing that milk should not be imported into this country because we are not certain that the sanitary regulations are good in the country from which it comes?—Yes. It is said that tuberculosis is spread by milk.

54,325. Have you any reason to believe that tuberculosis is as prevalent in the country from which the milk is imported as it is in Scotland? What country does most of the milk come from?—I suppose from France, Belgium, and Norway. I am ignorant altogether of the place where the milk comes from, but I say that until we are satisfied that these cows were free from tubercles the milk should not be imported.

54,326. The milk in England is not always carefully examined by the sanitary authorities. These inspections vary very much in various parts of the country?—It is not so much the inspection of milk, but the Commission says that where the udder is diseased it spreads tuberculosis. I think there should be an inspection of the dairies.

54,327. At present, the sale of tuberculous milk is allowed in England?—My suggestion is for the future, after legislation is brought into England.

Inspection of dairies.

54,328. The same as to inspection of dairies, you would wait until the law is more strictly enforced in England?—I say it is unfair to allow the milk to come here, considering what the Commission says.

54,329. You are aware that the medical officer of health when he inspects a shop inspects the foreign as well as the home meat. He goes into the shop and inspects all the meat that is there, and if he finds bad meat there he condemns it. He does not know, I suppose, whether it is foreign or home?—The carcases are inspected in the slaughter-house.

Mr. J. Mitchel 10 June 1895

54,330. Where are you speaking of? That is not general?—No; but I expect that after that recommendation of the Commission it will be in every town.

54,331. Then your recommendation does not come into force until the recommendations of the Commission are enforced?—No.

54,332. In the majority of towns there would be the inspection you mention, though in certain towns it is not general?—Yes.

Rates.

54,333. I think you said the average fall of the rents in your district has been 30 to 40 per cent. and that the rates have risen from 1*s.* 8*d.* to 2*s.* You must be paying very much less now on rates in a particular farm than what you were paying before the fall began, because 1*s.* 8*d.* on 100*l.* valuation comes to less than 2*s.* or 2*s.* 6*d.* on a smaller rent?—There is no doubt we are paying a smaller sum.

Wages.

54,334. What are the wages in your district?—They will average fully 18*s.* a week.

54,335. They have risen considerably?—Considerably.

54,336. (*Lord Cobham.*) You will have to add to the 18*s.* to get the full wage?—It is scarcely 1*l.*

54,337. (*Mr. Dalton.*) Another witness from Fife has said very nearly 23*s.*?—If you take farms generally, I think they will bring the wage up to at least 1*l.*, but I do not think it will be 23*s.*

54,338. (*Mr. Dalton.*) What is the value of land?—23*s.* to 30*s.* the imperial acre.

Bad seasons.

54,339. (*Captain Thomas.*) I think you said the depression was due to a certain extent to bad seasons?—The depression was due at that time to bad seasons as much as low prices. Rents came down even after that cycle of bad seasons.

Cost of wheat-growing.

54,340. At how much per quarter can you grow wheat to pay in this part of the country?—2*l.* a quarter to make it pay.

54,341. You have been selling it at about half?—I have not been selling it, but eating it.

Laying land down to grass.

54,342. Have you laid any of your land in grass?—It has lain three years in grass. I know a very great improvement in it as compared with the two years.

54,343. What does it cost per acre to lay it down?—It costs very little more. You would have natural grass.

54,344. Does it cost more for permanent pasture?—It would do perfectly well for permanent pasture.

54,345. You think it would pay better to graze the land than keep it always going?—Yes. I break it up regularly after the three years.

54,346. I wanted to know whether this land was to be permanent pasture which you have been laying down?—You get more off it after it is broken up for a year or two, and the extra year makes it produce better then.

54,347. (*Chairman.*) You have not laid down land with the view of keeping it in permanent pasture? You mean to plough it up in three years?—Exactly.

54,348. You think that is a more paying process than laying it down for permanent pasture?—I think so.

Witness then withdrew.

Mr. A. Smith.

Mr. Andrew Smith called in and examined.

Mr. A. Smith.

54,349. (*Lord Cobham.*) Where is your farm?—I am a tenant farmer at Longniddry, East Lothian.

54,350. What is the size and nature of your farm?—The farm we live at is about 360 acres. It is wholly arable, although a little bit of it lies in permanent pasture. We have another farm in Roxburghshire.

Effect of depression in East Lothian.

54,351. In East Lothian are there many proofs of agricultural depression?—There is no doubt of it.

54,352. What are these proofs?—Well, the land is lower rented and is being starved and farmed in an insufficient manner. That is especially so in the medium and worse classes of land. The best land has been kept up.

54,353. Do you see any difference in that respect between the farms that have been taken by recent tenants and the farms still being farmed by old tenants?—I think so. I think the new tenants are not farming generally as well as the old tenants did.

54,354. Do you attribute it to less skill or capital on their part?—They seem to adopt cheaper means of cultivation.

54,355. Is there a considerable falling off in the cultivation of the land?—I think so.

54,356-7. Do the statistics, you think, show that there is less cattle on the land?—I cannot say.

54,358. Do you see less building and draining going on now?—It is quite a rare thing to see draining going on. There is also less building.

54,359. Is there much draining requires to be done? Yes; a good deal has been choked up by sand.

Digitized by Google

Mr. A. Smith. 10 June 1895.

54,359*a*. Are good buildings getting into bad order to such an extent that the tenants have been hampered in their business?—I think so.

54,360–1. The tenants do not keep up the buildings?—I think some landlords cannot help themselves. All tenants are expected during the lease to keep the buildings in tenantable use. Some landlords are taking farms into their own hands and setting them down to grass, and leaving the buildings alone, rather than put new buildings up.

Causes of depression.

54,362. What has been the cause of the depression in your district?—Low prices for agricultural produce generally, due to foreign competition; and increased cost of production, caused by the enhanced price of labour. Increased taxation, bad trade and strikes, have also done harm.

54,363. There is a decrease in prices, but farming requisites are much cheaper?—Manures and cakes are cheaper, and upon good farms rents have fallen from 20 to 40 per cent., and in some cases rather more.

54,364. Would you maintain, therefore, that, with rents lowered to such an extent and with considerably reduced prices of many farming requisites, the cost of production is greater than 15 years ago?—I think so.

Cost of labour.

54,365. How much has the labour bill gone up on your farms?—Female labour has gone up 50 per cent., and male labour has risen something like 33 to 40 per cent. within the last 30 years.

53,366. Is there a sufficient amount of it?—Not of female labour.

54,367. Is the quality good?—The quality of the male labour is fairly good.

54,368. There has been no reduction of hours?—No.

54,369. You do not find that the machinery has displaced labourers?—I do not think so. It makes the work easier to do, but I think it requires as many hands.

Rates.

54,370. About rates and taxes during the last 15 years—have they increased?—I have only been in this farm at Longniddry nine years. They have not increased much in that time; perhaps about 10 per cent.

54,371. Do you grow good malting barley?—Yes; fairly good.

Malt tax.

54,372. What is the effect of the abolition of the malt tax?—I think it has lowered prices of home barleys at least 6*s*. per quarter.

54,373. Who has got the advantage?—The foreigners and the brewers only, I think.

54,374. What do you think the loss to the grower has been?—About 30*s*. an acre upon average land.

54,375–6. How often have you a crop?—Once in every five or six years.

54,377. Have you got any suggested remedies to this serious state of things—I mean as regards the abolition of the malt tax?—I should suggest that it should remain in the same shape as before.

54,378. And that the beer duty should be abolished?—I think so.

Wheat cultivation.

54,379. Do you still continue to grow wheat?—Yes, a little. We require the straw, at any rate, for thatching and covering potatoes, and so on.

54,380. Do you consume the whole of the produce off the farm?—We can sell a portion. We consume the whole of the straw, but we sell the bulk of the wheat.

54,380*a*. At present prices you do not see your way to give up the cultivation of wheat altogether?—No, because it divides the labour over the season.

54,381. You find the straw still indispensable?—For some things.

Price of wool.

54,382. Have you suffered much by the fall in wool? Considerably.

54,383–4. How far have the prices fallen?—I have got as high as 2*s*. about 1864 or 1865, and the same wool is now selling at 10*d*. or 10½*d*., and it has been that for a considerable time.

Rates.

54,385. Do you think that much benefit could be done to the agricultural interest by an alteration of the incidence of rates and taxes on land?—I think it would help us.

54,386. How would you do it?—I would be inclined to tax means, and substance, and house property a little higher.

Mr. A. Smith. 10 June 1895.

54,387. Do you think there are difficulties?—I think there are difficulties, but that they might be overcome.

54,388. But you have not a scheme?—Not quite.

54,389. Would you assist local rates in any way?—I do not think that you can assist them much.

54,390. I mean by adding State subsidies to them?—I cannot see my way to that.

Import duties.

54,391. Would you impose protective duties?—I think if there was an imported duty equal to what agriculturists pay in rates and taxes on the grain they produce, or about 1*s*. a quarter—if that small sum were imposed on the 22 millions of wheat alone which is annually imported, it would raise 1,100,000*l*. We import about 8 million sacks of flour, and if that was put at 1*s*. the sack they would raise about a million and a half. These sums would help to reduce our rates, and without reducing the consumption or preventing food coming to our shores.

54,392. Do you think it is certain that it would not affect the price of food to any extent whatever?—I do not think it would affect it very much.

54,393. Who would really pay that 1*s*. a quarter?—The foreigner would, I expect.

54,394–5. If that is true of 1*s*. a quarter, would not it be true of 2*s*. or 10*s*. or 12*s*. a quarter?—If you raise it very much you might help to raise it here, but I do not think 1*s*. would raise the price of food in this country.

54,396. You are not a protectionist to more than that extent?—No.

State loans.

54,397. Do you think that landowners are now prevented from improving their estates by the crippled state of their resources, and that the State should do something towards assisting them?—I think so.

54,398. If money was lent to them at 3 or 3½ per cent. more would be done than at present?—I think a great deal more.

54,399. That would necessitate the charge being spread over generations?—Yes, but it would not be a heavy one, and would enable properties to be kept up.

54,400. Do you find that drains last 50 years?—That depends upon the nature of the soil. Some might run for 50, and others not for over 10.

Fixity of tenure.

54,401. What do you think of fixity of tenure?—I do not believe in it. I think the present system is good. I would rather have an agreement from year to year under a good landlord.

Restrictions in leases.

54,402. Do you think that tenants are too much restricted in cropping? Would freedom of cropping benefit them?—I do not think so in a general way. I have never suffered much from it myself.

54,403. Have you seen farms injured by close cropping?—Yes, and the tenants being the worse of it in the long run.

54,404. Are you allowed freedom of sale in farm products?—I can sell one-third of the straw, the whole of the hay, and all the potatoes.

54,405. Do you consider that sufficient?—Yes.

54,406. And do you sell all you are allowed to sell?—We rarely sell straw or hay, but sell the potatoes.

54,407–8. Is that the usual practice in the district?—I believe it is on the estate I am on. I cannot speak of the district. I do not think many of them can sell straw, but they can all sell hay and potatoes.

54,409. Have you to give an equivalent in the shape of manures to the land?—Yes.

The Agricultural Holdings Act.

54,410. Is the Holdings Act much valued in East Lothian?—No, it is not.

54,411. Is there much done under it?—Some persons will not make claims rather than be bothered with it.

54,412. When claims have been made have they been settled satisfactorily to the parties?—Not as a rule.

54,413. You think amendments should be made in the Act?—I think the tenant should be compensated for all improvements made during his tenancy, including the laying down of the land to permanent pasture; and that claims and counter-claims should be lodged with the sheriff of the county in which the farm is situated on the same day.

54,414. What alterations would you make in the schedules to the Act?—I would allow laying down

Mr. A. Smith. 10 June 1895.

land with permanent grass without the consent of the landlord.

54,415. You would put the laying down of permanent pasture into Part III., and only that?—Yes; I think only that.

Compensation for permanent pasture.

54,416. Do you think that the laying down of permanent pasture has been impeded a good deal by the consent of the landlord not being given?—I think it has. I was in difficulty myself with a former landlord. I wanted to lay down a field in pasture and he would not give his consent. I laid it down without his consent, but got nothing for it.

54,417. Was it a suitable field?—Everyone who saw it said what a suitable field it was.
